Mr. ROSTENKOWSKI. I yield to the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. I join with the gentleman in the well and my colleagues in paying tribute to our late colleague, Congressman DAN RONAN. There is no question that he was a very compassionate friend, a great legislator, an honest political leader, and a dedicated son. We were all inspired to witness the deep devotion he had for his ailing mother, and to note the times he would leave here on weekends to fly back home to be with her as she was trying to recuperate from her illness.

We marveled and admired his quiet counsel here in this Chamber. President Nixon could very well have been speaking of DAN RONAN today when he delivered that beautiful eulogy about a "politician" in the rotunda in relation to another one of our colleagues. The President said that work in a committee does not necessarily provide headlines, but provides great legislation.

DAN RONAN was a quiet Member in this Chamber. He did not participate frequently in debate, but he was a dedicated Member. He spent a great deal of time in his committee, and he was a well informed Member because he spent a great deal of time here in this Chamber listening to debate. You could always find out from DAN RONAN the complex structure of issues that come before this House because he did his homework well. He studied the reports. He was an impressive and effective political leader in one of the finest political organizations in Chicago, the 30th ward. He was a committeeman. He took on that difficult job of providing political leadership.

Too often we tend to malign those who take on such great responsibility, forgetting that, without political leaders, this democracy could not very long survive as a free nation. Someone has to do the job, and DAN RONAN was willing to do that job as a leader. We are going to miss him.

As my colleague from southern Illinois said a little while ago, DAN was an effective member of the Interstate and Foreign Commerce Committee. I had occasion to discuss with him many of the problems that confront our city—the jet noise at O'Hare Field, the heavy traffic at O'Hare Field, the heavy traffic into our docks, the problems the St. Lawrence Seaway is now encountering, the state of our harbor facilities. DAN RONAN was a quiet man, but, as you sat and discussed with him these various big issues, you could not help but be impressed and amazed about how well he knew his subject and how well informed he was. He was a giant among legislators.

This House is going to miss him. The people of Chicago are going to miss him. The people of Illinois are going to miss him, and the people of his district are going to miss him.

Mrs. Pucinski joins me in extending our deepest condolences to his mother and his family on his untimely death. It is a great loss to all of us.

Mr. DAWSON. Mr. Speaker, it is with a feeling of deep emotion that I rise today to join my colleagues in paying tribute to the outstanding life of public service of our late fellow-Chicagoan, Hon. DANIEL J. RONAN.

In such a brief span of years, DAN RONAN has served the city of his birth, his State, his beloved country, and his God with honor and distinction; and he has suddenly departed this life leaving us, his friends and admirers, saddened of heart but enriched by having known him.

Long before this day, the people of Illinois, particularly the citizens of Chicago and Cook County, had paid tribute to DAN RONAN. He was their choice as representative in the Illinois General Assembly for 3 years; as city alderman for 13 years; and as Sixth District Representative in the U.S. Congress for 3 consecutive terms.

DAN RONAN'S was a life of public service, spanning a quarter century, devoted to the cause of justice and dignity for all mankind. It seems fitting, therefore, to recall words from that immortal address delivered more than a century ago by another devoted public servant from Illinois:

> The world will little note, nor long remember what we say here, but it can never forget what they did here.

And a little later, Lincoln said:

> It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced.

To the members of the Ronan family, I extend deep and sincere sympathy and I share their great loss.

Mr. KLUCZYNSKI. Mr. Speaker, the untimely death of Representative DANIEL J. RONAN has left his friends and colleagues with hearts bowed in deepest sorrow.

As a dedicated public servant, DAN pursued his career with a firm faith, an unwavering hope for a better world, and unflinching courage.

As a fellow citizen of the great State of Illinois, I was privileged to know, DAN better than most. He was an intensely proud man yet his pride was tempered by humility. He was proud of his participation as a crytographer in World War II, yet humble because his life had been spared in that great conflict, which was fought for freedom and the dignity of man.

He was proud of his public service as an Illinois State Representative and as alderman of Chicago, yet humble before the people who gave him their trust and support.

He was proud to be a Member of the House of Representatives and of his seat on the important Committee on Interstate and Foreign Commerce, yet grateful and humble in the knowledge that he had been given the opportunity to serve his country and State.

From his record it will be seen that Representative RONAN was an active, earnest, and zealous worker. But his labors in behalf of better government and the institutions of democracy, which he loved so well, were not limited to the faithful performance of official duties.

He went out of his way to help those less fortunate than himself. He was generous with his time and talent. With an open heart and hand, he was a constant source of comfort and ministration to those in need of assistance.

DANIEL RONAN was a man who did his own thinking. Forming his own opinions only after careful investigation, he was firm and fearless in defending his conclusions when once they were formed. When he felt called upon to defend what he believed to be right, or to expose what seemed to him wrong, he did so with all the power of his great intellect, regardless of the consequences to himself.

My dear friend DAN RONAN was a splendid example of that noblest work of God—an honest man. He was honest in his public and private obligations, honest and sincere in his convictions, honest and faithful in the performance of every duty.

Let us who survive him emulate his virtues and profit by the bright example which he has left us.

Mr. YATES. Mr. Speaker, Congressman DANIEL J. RONAN was a friend of mine. We spent many hours together as fellow Members of the House, and I will always look back on those occasions with keen pleasure, with great nostalgia. That he was taken so unexpectedly from his family, his friends, his colleagues here in the House, and the Nation which he served is a great tragedy.

DAN RONAN was a warm, generous dedicated man whose compassion and sense of justice won for him the respect of all who knew him. Though his term of service in the House spanned only 5 years, he had already established a reputation for fairness and candor in handling his official duties.

DAN RONAN was a Representative who provided forward looking, progressive leadership to his district and his Nation. Before his election to the Congress he

was an alderman for 13 years and served in that office in an exceptionally able fashion.

When he died, he was still a young man with much to offer and our country will be poorer because he is gone.

Personally, I feel his loss very deeply. I will not forget his ready smile and his hearty handshake, his understanding and his sense of humor. DAN RONAN was a good man, a man who cared about people and about his country. I will miss him very much.

Mr. ERLENBORN. Mr. Speaker, it is with sadness that I speak of the death of my Illinois colleague, Representative DANIEL J. RONAN, of Chicago.

It is difficult, sometimes, for people to understand how legislators can have friends among the opposition; but these are people who have not known DAN RONAN. He was a quiet, hard-working Member of Congress who enjoyed the respect of those who knew him—those on both sides of the aisle.

His sudden passing came as a shock. It grieves me to realize that we shall see him no more.

Mr. STAGGERS. Mr. Speaker, an extraordinarily honorable and useful career in public service was brought to an untimely end on August 13, 1969, with the death of DAN RONAN. The House was shocked by the news of his passing just after it had recessed for the summer intermission. In all humility we offer this belated expression of deep sympathy to his sorrowing mother, to his legion of admiring friends, and to his constituents in the great city of Chicago, who had been so capably and brilliantly served by him in a number of prominent posts. They will all miss him, as all of us do in this legislative assembly of the Nation.

Like many of his colleagues in the House of Representatives, DAN RONAN began his public service in the Armed Forces of the United States during World War II—specifically in the Air Force, which attracted so many of the gifted youth of our country in that unfortunate episode of human vanity and arrogance brought into being by the enemies of freedom across the seas. As an expert cryptographer, he filled a delicate and responsible position in the Asian theater during most of the war.

Returning to civil life, he was almost immediately called upon to serve his district in the State Legislature of Illinois. In 1951 he was elected alderman in Chicago, and in that position he busied himself with the problems of the big city for 13 years. Having established a reputation as an indefatigable and selfless worker for the general good, it was only natural that his people should ask him to represent them in Washington, where he came at the opening of the 89th Congress.

The Interstate and Foreign Commerce Committee was fortunate in having Congressman RONAN take a seat on the committee. His intimate and extensive knowledge of the problems of urban transportation and communication were peculiarly usefu' in the numerous legislative proposals for their solution. What might be termed a hobby with him was an attempt to work out some practical answer to the vital need for mass transportation in a crowded city such as Chicago. Other areas in which he provided useful information to the committee included the improvement of railway facilities, passenger safety, and improved television reception. With other Members, he took the lead in the attempt to bar transcontinental air flights from National Airport in Washington.

We shall sadly miss his genial and friendly disposition as well as his wise counsel. His associates unite in ascribing to him "strength without arrogance, courage without ferocity, the virtues of a man without his vices." And we shall carry with us throughout the coming years "that best portion of a good man's life; his little, nameless, unremembered acts of kindness and of love."

Mr. O'NEILL of Massachusetts. Mr. Speaker, I join my colleagues in mourning for DANIEL RONAN. We, in the House, the people of his district, and all of the Nation have lost a responsible and dedicated Representative.

DAN RONAN was always interested in government. He served on the local level as a State representative and alderman. As a Congressman, he constantly strove for better living and working conditions for the people living in Chicago's west side. He sought to lighten their daily burdens and, at the same time, sought long-range solutions to complex urban problems. The people in these areas knew that they had a friend in DAN RONAN.

Appropriately, he spent much time delving into transportation problems, not only to help Chicago, but the entire country. These problems were not just part of his job, but real problems which deeply concerned him personally.

With our big cities in such turmoil today, our Nation certainly could not afford to lose his talent. I offer my sympathy to his family and friends. We all miss him and his contributions to our work.

Mrs. REID of Illinois. Mr. Speaker, those of us from the State of Illinois were particularly saddened to learn of the passing on August 13 of our colleague, DANIEL J. RONAN.

DAN RONAN was serving his third term in the House of Representatives and he had earned the respect, friendship, and admiration of all who knew him. He was highly regarded for his work on the Subcommittee on Transportation and Aeronautics of the House Committee on Interstate and Foreign Commerce. Prior to his election to the Congress he had served for 13 years as an alderman, city of Chicago, and as a State representative. To the people of his district, State, and Nation he was, in the best sense, a public servant; and his loss will be deeply felt.

DANIEL RONAN was the kind of man who gave himself unsparingly to his work and yet always had an equal amount of devotion for his friends and colleagues. We mourn him and shall miss him. I extend my sincere sympathy to his family.

Mr. MIKVA. Mr. Speaker, DAN RONAN was a gentle soul. His smile and his greeting were always easy. There was almost a shyness about him, a surprising quality for one who had been as successful in the political arena as had DAN RONAN. In fact, the easygoing nature was a part of his political reputation. Nobody disliked DAN RONAN; he never gave anyone any cause.

DAN RONAN served at every level of government—State, local, and Federal. His views were formed in those crucibles, and he was an urban Congressman in the best sense of the word. He was aware that the big cities of our country could not make it alone. He was aware that State government had limited wherewithal to help solve urban problems. The sprawling constituency, city and suburban, that DAN RONAN represented was fortunate to have his wise voice in the councils of this Congress.

I had special reason to be grateful to DAN RONAN. As the next most junior member of our delegation, he seemed especially conscious and aware of the adjustment problems of a freshman Congressman. His encouragement and kindness were muchly appreciated in these early days of my first term, and will be sorely missed.

The gentle Congressman from the Sixth District of Illinois is no longer with us, and we are all the poorer for losing him.

Mr. HANLEY. Mr. Speaker, like most of my colleagues, I was shocked and deeply saddened to learn of the sudden death of my good friend, DAN RONAN, of Illinois, last month. A gentle, witty, and generous person, he was at the same time a skilled and humane legislator.

DAN and I came to Congress together in January of 1965, and in the intervening years we become good friends. He was always conscious of his role not only as a Member of Congress but more importantly as a human being who had an obligation to other human beings. He was one of the kindest men it has been my pleasure to know.

Death, as we are told, comes like a thief in the night. But when it strikes one close to us, one who is in the prime of his life and career, it carries with it a certain added element of shock and disbelief. Such, of course, was the reaction to DAN RONAN'S passing.

I join with my colleagues and his legion of friends and admirers in extending my prayers and sympathy to his beloved mother and family.

Mr. RAILSBACK. Mr. Speaker, I am most proud to be able to say that I was associated with DANIEL RONAN. He was a very humble and unassuming man who was held in high esteem by me and all of his colleagues who knew him. He was attentive and industrious so far as his legislative work was concerned, and the State of Illinois and our country will sorely miss his fine talents.

Mr. MURPHY of New York. Mr. Speaker, the people of Chicago and the Nation lost an unusually fine legislator with the untimely death of DAN RONAN. He was my friend and my colleague on the House Interstate and Foreign Commerce Committee. As you have said, Mr. Speaker, he was "one of the most dedicated Members of the House." DAN RONAN, suddenly taken from us at the early age of 55, was the kind of man who was never too busy to work with the people and to sit down with them and discuss their problems. He was a truly dedicated public servant and his death is a great personal loss to me. Mr. Speaker, I in-

clude the following Community Publications editorial on the death of DAN RONAN:

CONGRESSMAN RONAN—FRIEND TO ALL

In the untimely death of Cong. Daniel J. Ronan of the sixth district of the West Side has lost one of its most popular, effective and conscientious public officials of the post-World War II era.

We at Community Publications feel the loss deeply because we worked closely with him on many public projects, particularly when he was alderman of the 30th ward. He was always eager to lend his considerable effort to a worthy project suggested by someone else and by the same token others, including this newspaper, had no trouble whipping up enthusiasm for a project he proposed because it was always in the public interest and deserving of everyone's support.

Though he could handle himself well as a public speaker when the occasion demanded, Cong. Ronan was not one who attempted to sway Congress, the City council or the General Assembly—all of whose hallowed halls in which he served—by mere oratory.

While others talked, Cong. Ronan was digging up facts and figures, consulting with individuals on a personal, man-to-man basis or calmly taking part in a committee discussion of issues.

His willingness to listen to all sides of all questions and his quiet manner in making his own views felt won Cong. Ronan a legion of friends. It was in this area that he gained his wide popularity as a political leader and his effectiveness as a public official.

This was particularly evident in his home ward, the 30th, where in recent years he had demonstrated his ability to deal fairly with both races. He earned and received the respect of everyone and it was no accident that his ward escaped most of the conflict that broke out in other wards of the city with a similar makeup.

It is a tragedy, indeed, that Cong. Ronan was struck down at the comparatively young age of 55. For while he had risen to a considerable height in the political field, there are many who feel that his skill in the art of government would have carried him even further. We are among those who share this view. Certainly he was on the threshold of his career in Congress, where he was just gaining the seniority necessary to earn the important committee assignments.

In his 14 years as 30th ward alderman, Cong. Ronan was responsible for a virtual face-lifting of the ward. It was during this time that installation of a modern sewer system was completed, extensive street lighting installed, streets resurfaced, and several small parks created. He was most active in his support of youth programs, a fact which caused the Lexon league to name their baseball park in his honor.

Cong. Ronan's death will come as a heavy blow to his aged mother, to whom he had been devoted. To her and other members of the family we extend our deepest sympathy.

We hope the residents of the 30th ward, the 30th Ward Democratic organization, of which he was committeeman, and the Sixth district will do as well in picking his successor as they did when they selected him as their leader. Cong. Ronan's will be hard shoes to fill.

Mr. RODINO. Mr. Speaker, it is with a deep sense of loss that I join today in mourning the untimely passing of our distinguished colleague, the Honorable DANIEL J. RONAN.

I was privileged to know DAN as a warm friend, whose counsel I valued greatly. He was a man of outstanding ability, deep compassion, and courage. It was these qualities that stamped his service in the House, and endeared him to his constituency. Throughout his tenure, DAN gave completely of himself in order to try to bring fulfillment to the high ideals which motivated him, and earned the respect and admiration of all who had the good fortune of working with him. In knowing DAN RONAN, all our lives were made more meaningful.

Mr. SPRINGER. Mr. Speaker, our late colleague DAN RONAN, whose untimely death occurred during the August recess, served his country well in war and peace. He had 4 years in active duty with the Army Air Corps in World War II. His political career began in 1948 with his election as State representative and he subsequently served as a Chicago alderman before his first election to Congress in 1964.

I came to know DAN well during our service together on the Interstate and Foreign Commerce Committee. We belonged to different parties, but our political preferences never affected our cordial personal relationship. DAN's passing is a great loss to our committee and to the Illinois delegation.

Mr. COLLIER. Mr. Speaker, I wish to join my colleagues in expressing my sorrow and condolences to the family of my good friend DANIEL J. RONAN, who passed away on August 13.

The contributions which DAN made in his active and very successful political career have been well documented by others who have spoken before me today. It is a record of which his family and many friends and associates can be justifiably proud. But I shall personally cherish his memory in terms of the quiet sense of dedication in which he pursued his duties and responsibilities in public life.

DAN RONAN was as fine a gentleman as any man I have met in my lifetime, either in or outside of the political arena. He was a man of compassion, yet one who never compromised his convictions. He was particularly interested in youth and did much to help young people through his personal efforts and financial contributions to various recreational and educational activities.

I shall miss DAN as an esteemed colleague in the U.S. House of Representatives and as a friend for whom I held the highest regard from the time it was my privilege and pleasure to know him.

Mr. MURPHY of Illinois. Mr. Speaker, I rise to join with my colleagues in paying tribute to the memory of DANIEL J. RONAN, who represented the Sixth District of Illinois in the U.S. House of Representatives.

DANIEL RONAN was born in the city of Chicago and educated in its parochial schools. During World War II, he served his country as a cryptographer in the China-Burma-India theater with the Army Air Force. Upon his return from service, he did postgraduate work at Loyola University and in 1948 was elected representative to the Illinois State Assembly. As a State assemblyman, he distinguished himself by working to promote stronger laws on narcotics and gun control.

Congressman RONAN and I became friends while we served together in the Chicago City Council. He was elected to the council in 1951 and was appointed to the committee on planning and housing of which I was chairman. He served as my vice chairman and I also appointed him chairman of a special subcommittee on housing. In 1964, after 14 years on the city council, DANIEL RONAN was elected to the U.S. Congress. He was reelected in 1966 and again in 1968. For a number of years, we also represented our respective wards on the Cook County Democratic Central Committee. Throughout my many years of association with DANIEL RONAN, I developed a deep and abiding respect for his talents and legislative abilities.

Mr. Speaker, Mrs. Murphy joins me in extending condolences to his mother and two sisters on the loss of this great American.

Mr. FINDLEY. Mr. Speaker, a good friend and colleague has departed from us. DAN RONAN, a distinguished Representative from my own State of Illinois, is no longer with us. He will be sorely missed, not only by his constituents in the Sixth District, whom he so ably served, but also by those of us in the House of Representatives who were privileged to serve with him.

Although DAN RONAN was not of the same political party as I, nevertheless we were both members of the same team from the State of Illinois. DAN was an especially valuable friend and counselor to the members of the delegation. In the few years that he was with us, he was always alert to serve the needs of the people who elected him.

He had dedicated his whole life to public service. Like many of us, he was a veteran of World War II. Later, he gained a keen knowledge of local administration and urban problems from his service with the city of Chicago. Beginning in 1965, he continued his distinguished career of public service in this body.

The city of Chicago, the people of Illinois, and all Americans have lost a truly dedicated public servant.

Mr. McCLORY. Mr. Speaker, it is my privilege to join in respectful tribute to our late colleague, DANIEL J. RONAN. He and I shared many things in common as well as our service in the 89th, 90th, and 91st Congresses.

Our earliest association was in the Illinois General Assembly where we served together from 1951 to 1952. During this term he was elected to the Chicago City Council and did not return to the general assembly.

During my service as chairman of the State senate's committee on highways and traffic regulations, he was chairman of the Chicago City Council's Committee on Traffic and Public Safety. Our interests remained congenial and we had reason to work together for the public benefit.

DAN RONAN came to the 89th Congress one term after I had been elected to the 88th. We were fortunate enough to be reelected so that we came to this 91st Congress at the same time. Outside the walls of this Chamber, we met frequently and discussed our mutual interest in crime prevention, stronger laws on nar-

cotics and gun control, transportation regulations, and improved airline service between Washington and the State of Illinois. We had long been interested in urban and regional planning—he as a member of the Chicago Plan Commission and I as a supporter of the Northeastern Illinois Metropolitan Area Planning Commission. And so we talked about our home communities for whose betterment we were working.

Mr. Speaker, DAN RONAN left his work, his thinking and planning suddenly. He left to those of us who knew him well the legacy of conscientious application to his responsibilities as a citizen and a public official—in the Chicago City Council, the Illinois General Assembly, and the Congress of the United States.

Family and friends from Illinois and around the Nation mourn the passing of Congressman DANIEL J. RONAN. To his bereaved mother and beloved sisters, I extend my sympathy and affection.

Mr. FRIEDEL. Mr. Speaker, it is with deep sorrow that I join my colleagues in the House today in paying tribute to the late Congressman DANIEL J. RONAN, from the Sixth District of Illinois. It is a tragedy that DAN RONAN was struck down at the comparatively young age of 55.

He was elected at age 34 to represent the district of the Chicago West Side in the Illinois General Assembly. This post he held until 1951, when he was elected alderman from the 30th ward to the Chicago City Council. He served with distinction in that body for 14 years. As an alderman, he was one of the most popular, effective, and conscientious public officials of the post World War II era.

Upon his election to the 89th Congress in 1964, he was assigned to the House Committee on Interstate and Foreign Commerce, and in turn to the Subcommittee on Transportation and Aeronautics, of which I have the honor of being chairman. In committee work we have the opportunity to know and evaluate each other. More often than not, I found DAN RONAN quietly digging up facts and figures, and at all times willing to listen to all sides of all questions, before making up his mind.

It is true that he had risen to a considerable height in the political field, but many felt that his skill in the legislative field would have carried him even further. Certainly he was on the threshold of his career in Congress, where he was just gaining the seniority necessary to earn important committee assignments.

Congressman RONAN'S death came as a great shock to all of us who served with him. Mrs. Friedel and I extend our deepest sympathy to his mother and other members of his family.

Mr. BOGGS. Mr. Speaker, permit me to join my colleagues on both sides of the aisle in honoring the memory of our good friend and colleague, Congressman DANIEL RONAN, of Illinois.

The State of Illinois—and indeed the United States—lost a devoted and able leader with the tragic and untimely passing of Congressman DAN RONAN.

I was in DAN RONAN'S home city of Chicago when the sad news of his death reached me, and I was a witness to the great sense of loss which swept over that great city.

A great loss it was, for DAN RONAN had devoted most of his adult life in the able service of his city, his State, and his Nation, and the people of Chicago knew it.

As a member of the armed services during World War II, as an Illinois State representative, as an alderman of the city of Chicago, and finally as the Congressman of the Sixth District of Illinois, DAN RONAN gave generously of his rich resources of leadership.

I think it appropriate that we remember DAN RONAN for what he was: a gifted and compassionate human being who devoted his life to the service of his fellow man, a public official who dedicated his life to the precept that American institutions can and will work, if people care enough.

DAN RONAN was a gifted leader who cared about people and for this reason his loss is especially grievous. This Nation can never have enough DAN RONAN'S.

Mrs. Boggs joins me in mourning the loss of a good friend and a remarkable man.

Mr. RANDALL. Mr. Speaker, for some reason I did not learn of the special order of yesterday, Tuesday September 9, when our colleagues eulogized our dear departed friend from Illinois, DANIEL J. RONAN. I regret I was not on the floor to join in paying tribute to his life and accomplishments. However, it is not too late to express my words of tribute to my friend, who was a distinguished Member of the House of Representatives and enjoyed a wide popularity among his fellow Members.

Although DAN at the time of his passing had served for only a few years, he made an imprint upon the minds and hearts of those who knew him. I say this is true because he possessed that rare quality of peace of mind which showed through into a continuously pleasant and cheerful disposition.

It was not my privilege to serve with him upon any of his committee assignments. I only knew him as a Member with whom I enjoyed visiting while sitting on the floor of the House. I can truthfully report in every instance after a conversation with DAN, I came away feeling better and with a more optimistic outlook. So frequently one of our fellow colleagues will say to us when we are engaged in thought over a serious matter and with a frown on our face, "cheer up. It just cannot be that bad." It was that kind of a statement DAN so frequently made to his colleagues. I think this attitude best reflects his great heart and spirit of optimism.

He was burdened with all the cares of office that the rest of us have. He had to make the same decisions as each of us. His headaches, I am sure, were as great as any of ours. But I shall remember DAN RONAN with a pleasant memory of one who refused to take himself so seriously as to indulge in a pessimistic attitude toward his problems or the problems of his office.

Because of DAN'S outlook on life and the counsel that he so frequently gave to those of us with whom he talked, he will be missed more than we now realize. His departure from our midst will be a loss to all of us. I am sure I am right in this appraisal because he seemed to be able to pass on to those around him his own peace of mind.

Now, that he is gone those of us who survive him should find it worthwhile to emulate his virtue of optimism and to try to follow the example he provided for us. I join with my colleagues in extending sympathy to his dear mother and family.

Mr. ANDERSON of Illinois. Mr. Speaker, recently, I lost a dear friend and a colleague, a valued member of the Illinois congressional delegation, the Honorable DANIEL J. RONAN. DAN came to Congress in 1965, after a long and distinguished career in the government of our home State of Illinois. He served first for two terms as a State representative and then as an alderman for the city of Chicago from 1951 until 1954. Here in the Congress DAN proved an able and effective member of the House Committee on Interstate and Foreign Commerce.

His sudden and untimely death sincerely saddened all of us who had worked with him and who had grown to respect him over the past 5 years. To his mother, Mrs. Justina Ronan, go my personal and deepest sympathies.

Mr. DANIELS of New Jersey. Mr. Speaker, I wish to join my colleagues in expressing my sorrow over the passing of our friend DAN RONAN of Illinois.

DAN was a quiet man. He worked studiously representing the interests of his constituents in Washington. He had been active in politics most of his working life as an alderman and as a representative in his State legislature. He understood the rigors and responsibilities of a political career.

He had been with us in the House only 3 years. We knew him as a friendly man, eager to learn when he first joined us and eager to help in the difficult work after he learned the ropes. His main concern always, was to represent his people as effectively as he could.

DAN RONAN was a good legislator. We need such men and we shall miss him very much.

Mrs. Daniels and I extend to the members of the family of the late DAN RONAN our sincere condolences.

Mr. ROONEY of New York. Mr. Speaker, it was a profound shock to learn of the untimely death of the Honorable DANIEL J. RONAN who for the past 5 years so ably represented the people of the Sixth Congressional District of Illinois. Although DAN RONAN was just midway through his third term in this body he had devoted his lifetime to public service. At 34, in 1948, he was elected to the Illinois General Assembly where he served 3 years until he was elected alderman in the city of Chicago. He spent the next 14 years serving in that municipal capacity until he was elected to this House of Representatives. DAN was a quiet and unassuming man with an infectious sense of humor and wit that will be missed. We shall all miss him. To his loving mother and sisters and family I extend our deepest sympathy and prayers in their great loss.

GENERAL LEAVE TO EXTEND

Mr. ROSTENKOWSKI. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the subject of my special order.

The SPEAKER pro tempore (Mr. KLUCZYNSKI). Is there objection to the request of the gentleman from Illinois?

There was no objection.

AMERICAN BANKERS ASSOCIATION HOLDS STUDENTS HOSTAGE IN ORDER TO INCREASE INTEREST RATES—BIG BANKERS BONUS BILL PROPOSED INSTEAD OF SOURCES OF AVAILABLE CAPITAL AT LOWER INTEREST RATES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. PATMAN) is recognized for 15 minutes.

Mr. PATMAN. Mr. Speaker, the Committee on Education and Labor, under the distinguished chairman, the gentleman from Kentucky (Mr. PERKINS) has done an admirable job in trying to make certain that loans are available for higher education purposes. It is because of the many hours that the committee has devoted to this problem that I find it is with great reluctance that I must oppose H.R. 13194. This legislation is presently scheduled to come before the House next Monday under suspension of the rules.

Quite clearly, the Congress must act to help students obtain funds for higher education but the legislative vehicle before this body on Monday is not the answer nor is the procedure under which the House is being asked to consider the legislation.

I am opposed to H.R. 13194 for a number of reasons:

First. Banks are making record profits and therefore do not need any interest subsidy.

Second. Instead of fighting for higher interest, we should be fighting for additional sources of capital that could do the job at lower interest rates.

Third. If this bill passes, it will be the first time Congress has authorized the payment of 10 percent interest on a Government-guaranteed obligation. The Government will guarantee the payments and the banks will collect the interest.

Fourth. Because most colleges are now in session and students have arranged financing, for at least the first semester, there is no emergency and the legislation should be reconsidered under a realistic time frame.

Fifth. The Department of Health, Education, and Welfare has not sought alternative methods for running this program other than raising interest rates. There are sources of enormous capital that could be used.

Sixth. The costs of this program, which could amount to $126 million in slightly more than 2 years, could be reduced by exploring alternative methods.

Seventh. An establishment of a 10-percent guaranteed interest rate would force banks to increase interest rates on other loans or refuse to make any loans for necessary items such as housing at less than a 10-percent rate.

Eighth. The legislation should not be retroactive to July 1 of this year nor should the interest subsidy be paid more than once on any individual loan.

Ninth. The gag rule under which this bill will be brought before the House does not permit amendment.

Tenth. If we vote for this bill under the gag rule as proposed, we will date the interest payments back to July 1, 1969, in order to carry out a promise to the big bankers' lobby.

BANKS MAKE RECORD PROFITS

In the simplest terms, it has been argued that this legislation is necessary so that banks can "at least break even" on the student loans, which presently have legislative ceiling of 7 percent interest. It is thus contended that the banks are losing money on the student loans. But I ask the Members of this body, if the banks are losing as much money on these loans as they contend, why is it that bank profits are up from 20 to 30 percent over last year with some banks recording profit increases as much as 60 percent?

In short, what the banks are trying to do is to refuse to make student loans so that Congress will give them more money with which to line their pockets.

BIG BANKERS BONUS BILL

Mr. Speaker, ever since the student guarantee loan program was put into operation, the banks have used the program as a lever to personal gain. It must be remembered that last year the American Bankers Association told Congress unless they received a placement fee of $35 for each loan, there would be no more college loans. Rather than going along with the placement fee, Congress raised the statutory rate on these loans 1 percent. Now, only a year later, the bankers are back with open wallets. Once again we are told in no uncertain terms "give us more money or we cut off student loans." It is bad enough that we are being blackmailed by the bankers but it is even worse that the administration is playing right into the bankers' hands by waiting until the final minute to rush the legislation to Congress. Unless this legislation is enacted, we are told between 150,000 to 200,000 students will be denied loans.

IS THERE AN EMERGENCY?

I do not believe that the problem is that grave and while there may be many students who are having difficulty obtaining loans, I strongly question the 150,000 to 200,000 figure. It would also seem that now that colleges have begun their fall semester, there is no need to rush this legislation through but rather it is time that the administration in general and the Department of Health, Education, and Welfare in particular seek alternative ways to run the loan program without having to depend upon individuals who are not satisfied with making a normal profit.

On two separate occasions, in testimony before the Education and Labor Committee, I have suggested that HEW should consider arrangements with the numerous pension plans throughout the country to interest them in the student loan program. This idea was endorsed by Commissioner Howe last year when he appeared before the House Education and Labor Committee. However, HEW has done little, if anything, in this area, and from their past efforts, it would appear that they do not plan to work to interest pension plans in the program.

Mr. Speaker, there may well be a submerged reason why HEW is so strongly supporting the bankers' plan for an interest subsidy for student loans. In the Insured Loans Branch of the Office of Education, at least three of the major sections or departments are headed by bankers and it is also my understanding that a number of bankers are being hired for various other positions within the Branch. These bankers are being brought into the agency with no experience and given jobs that should properly go to career employees of the Department. Perhaps the reason that the career employees are not getting the jobs is that they are more interested in the students' welfare than the banks' welfare.

COULD COST TAXPAYERS MILLIONS

If this legislation is hastily enacted, it could cost the taxpayers many extra millions of dollars. According to the committee report on the legislation, if the full 3-percent market adjustment rate is used, by the end of fiscal year 1972, it will have cost more than $126 million to pay the bank subsidy. Of course, it will be argued that the 3-percent subsidy is a maximum. However, this legislation should be considered as if the full 3 percent will be paid because that is exactly what is going to happen. True, HEW may start out with only a 1- or 1½-percent subsidy payment to the banks but it will not be long before the American Bankers Association puts on its guns and masks and tells HEW that unless the banks receive the full 3-percent subsidy, there will be no more student loans. If we can expect to pay out more than $126 million in bank subsidies by 1972, what will those figures be after that date? Thus, if it takes 10 years to repay a college loan, the Government will be paying out a 3-percent subsidy every year, which means at the end of the loan, the banker will receive not only the original principal amount back but 100 percent in interest charges. Why should the banks receive a multiyear subsidy after a loan has been made? For instance, if a bank lends a student $1,000 in his freshman year, and a 3-percent subsidy payment is made, the bank will receive a 10-percent yield on that loan until it has been repaid. Since repayment does not begin until after the student graduates, or in some cases even later, it can easily be seen the huge amount of interest that must be paid, even though the bank had only a one-time cost for this loan. If it is the will of this Congress that the banks should be subsidized to higher profits, the subsidy should be limited solely to the first year of the loan. This would severely limit the possibility of the banks manipulating maturities in order to gain more in the way of market adjustment payments.

The enactment of H.R. 13194 could also have a damaging effect on all inter-

est rates since it would provide banks with a guaranteed 10-percent source of income. What will happen to mortgage loans and other worthwhile loans that now carry an interest rate below 10 percent? The banks can use the argument that these loans must be increased to 10 percent in order to provide them with the profit return that they would make on student loans. We may be helping a few students get loans but at the same time cause irreparable damage to all other types of loans. The Members of this body should consider that carefully before voting on this legislation on Monday.

BANKS COULD SUBVERT BILL'S INTENT

There are also several other basic financial problems with this legislation. For instance, it provides that the market adjustment payments will be made for loans that are outstanding at the end of each 3-month period. It will be quite easy for the banks to cram all their lending activities into the final few days of the quarter and thus qualify for a subsidy based on a 3-month period, when in actuality, the loans were on the books for only a few days.

Also, objectionable is the retroactive feature of this legislation. Officials of HEW and the administration are runing around telling bankers that this legislation will be passed retroactive to July 1, 1969. This body should not be held accountable for promises made by the executive branch which are made to force the Congress to pass this legislation. The effective date of the legislation should not be July 1, 1969, but rather the date that the bill is signed by the President. Because of these promises or predictions which certain administration officials have been making, we are still faced with the problem of not being able to find out whether or not the 7-percent rate is adequate. It may very well be that the 7-percent rate is adequate. We will never know if we pass this legislation. We may, in fact, be handing out hundreds of millions of dollars where such a handout is not necessary.

If this legislation were not to be brought up under suspension, I had intended to offer several amendments designed to truly help the college student and once and for all put an end to the yearly problem of blackmail by the banking industry. There is a simple answer to the problem. The U.S. Government maintains huge interest-free deposits in our Nation's commercial banking system. These deposits reach approximately $10 billion a year. It was my plan to attach an amendment to this legislation, in the form of a substitute, that would have required commercial banks to place a certain percentage of their lendable funds in student loans. This plan would not cost the Government a penny and since the banks do not want to give up their free deposits, they would rapidly begin to make the student and small business loans.

But because I will be prohibited from offering amendments, my only course is to ask that the bill be defeated.

Mr. Speaker, I want to make it clear that my remarks do not reflect upon the members of the Education and Labor Committee. Under the guidance of Chairman PERKINS and the Special Education Subcommittee chairlady, the gentlewoman from Oregon (Mrs. GREEN), the committee has strived to bring some order to the problem of student loans. Unfortunately, the committee has not had all the tools available with which to tackle the problem. Given these handicaps, the committee has done an outstanding job. I would only ask that the committee now take time, when there is no emergency, to work this problem out with HEW so that we will not be faced with the same problem next year when the banks want to increase the market adjustment rate from 3 percent to 5 or 6 percent.

AMERICAN MARIGOLD: OUR NATIONAL FLOWER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. MCDONALD) is recognized for 5 minutes.

Mr. MCDONALD of Michigan. Mr. Speaker, the great voice is stilled, but his toil in behalf of his country made such a record of achievement that he became a legend in life.

It is not my purpose today to recall the great career of Senator Everett McKinley Dirksen, a man loved and respected by all on both sides of the aisles of Congress.

I wish to take these few minutes to pay homage to his memory by calling upon Congress to grant him that wish in death which he failed to see fulfilled in life.

As we all know, Senator Dirksen sought over a period of years to have the American marigold designated our national flower.

He noted that among its virtues was an appearance representing not just beauty but a rugged humility of character. This latter aspect certainly is in the tradition of one of the virtues that made a great nation out of a bleak wilderness.

The marigold is native to the United States, first blossoming in New Mexico as a wild weed. It grew also in a number of countries south of the border before being taken to Africa and France for development.

In recent years, the marigold has undergone a remarkable transformation with the development of a hybrid bearing immense flowers of as much as 5 and 6 inches.

Dr. H. M. Cathey, head of ornamental investigations for the Department of Agriculture, advises me that in his opinion this hybrid is one of the major developments in garden flowers in a quarter of a century.

It bears such names as "Toreador," "First Lady," "Doubloon," and "Double Eagle."

Mr. Speaker, I can think of no more beautiful way to honor the memory of Senator Dirksen than by designating such a magnificent creation as the national flower of the United States.

In the hope that other Members of this House and of the Senate join in these sentiments, I am today offering a joint resolution calling for designation of the American marigold as our national flower, the text of which follows:

H.J. RES. 891

Joint resolution designating the American marigold (Tagetes erecta) as the national flower emblem of the United States

Whereas the peoples of the world have from time immemorial adopted emblems—flags, birds, flowers—for their countries, representative of their national virtues; and

Whereas the people of the United States have similarly adopted emblems—the American flag and the American eagle—to represent the virtues of this country; and

Whereas each of the fifty sovereign States of the United States, in addition to its State flag has a floral emblem which it cherishes as its own; and

Whereas the United States is the only major country in the world without a floral emblem; and

Whereas the American marigold represents the character of the United States more appropriately as an emblem than does any other flower in that it is an American native; grown in abundance in the home gardens of every State in the Union yet not the floral emblem of any State in the Union; grown easily and quickly from seed; already acknowledged as a symbol of religious faith; and a flower in its very appearance representing not just beauty but a rugged humility of character: Therefore be it

Resolved by the House of Representatives and Senate of the United States of America in Congress assembled, That the flower commonly known as the American marigold is hereby designated and adopted as the national floral emblem of the United States, and the President is requested to declare such fact by proclamation.

ONE WAY TO SAVE MONEY—JUST REPAIR AND RESTORE THE WEST FRONT OF THE CAPITOL RATHER THAN EXTENDING IT

(Mr. STRATTON asked and was given permission to extend his remarks at this point in the RECORD and include extraneous matter.)

Mr. STRATTON. Mr. Speaker, the old familiar drive to extend the west front of the Capitol—a project that would add 4½ acres of additional area to the Capitol structure, would cover up the last remaining portion of the original historic Capitol Building, largely destroy the historic architecture of the west front, and add to the Capitol Building two restaurants, two movie theaters, additional committee rooms, an escalator and a couple of dozen hideaway offices for favored Members of Congress—all at a cost of no less than $45 million—is on once again.

Older Members of the House will recall that this proposal, first unveiled in 1966, was vigorously opposed by myself and others at the time. A national Sunday supplement magazine attacked the idea and a National Committee To Preserve the U.S. Capitol was formed in opposition. As a result the plan was shelved and the House leadership assured us it would not be revived until after the Vietnam war had ended and the resulting budgetary situation has eased.

Nevertheless, something has suddenly changed. The Commission for the Extension of the Capitol has now recommended the expenditure of $2 million in the current budget to finance full working plans for the construction of this extension project. The Speaker himself urged the Appropriations Committee to reopen its legislative hearings and to

take action on this proposal, in spite of the fact that the Vietnam war is still on, the budgetary and inflationary situations are even more critical now than they were in 1966, and the President had just ordered a 75-percent cutback in Federal construction projects. The Subcommittee on Legislative Appropriations held a new hearing on this request on Monday and I testified in opposition to the proposal, just as I opposed it in 1966.

Nevertheless, the subcommittee voted unanimously to appropriate the additional $2 million, and the legislative bill incorporating this item is expected to come to the floor of this House for action next week.

At that time I intend to offer an amendment to the committee bill to delete the $2 million for detailed studies of the proposed expansion plan and substitute for it $100,000 to pay for a study of what needs to be done to repair the Capitol, keep it from crumbling, and restore it as much as possible to its original condition, together with an estimate of the cost of this kind of job.

Incredible as it may seem, the Congress has never had any careful, competent study made of what would be necessary to repair the Capitol and how much it would cost. All we have available to us is a study that would expand the Capitol in a very massive way, in the way I have already referred to, and we are being told that this is the only possible way to keep the Capitol from crumbling around our heads. Now, obviously we do not need an escalator to keep the building from crumbling, and we do not need two extra restaurants to do that job. So there must be a simpler and cheaper way of saving the west front than the elaborate expansion project recommended by the Capitol Architect and the Commission for the Extension of the Capitol. I say we ought to spend the money to find out just how that simple repair job can best be done. If by spending $100,000 now we can save $5 or $10 million in ultimate construction costs, it will be well worth it.

Oh, we will be told that we must approve the expansion project because of the dangerous cracks developing in the west wall and the danger that the Capitol might collapse. Yet the interesting thing is that even if the House approves the $2 million appropriation recommended by the subcommittee it will be another year or more before a single brick is moved or a single step is taken to keep anything from crumbling, because the $2 million is just for plans, and plans do not represent construction work. Therefore, if we have a year or so available to us to draw up plans, we certainly have 6 or 8 months to consider the alternate possibility of saving the Capitol by some more reasonable and less extravagant means.

Not everybody may be interested in the niceties of architectural beauty, I realize, but I am sure everyone is well aware of the desirability of avoiding all unnecessary spending at a time of serious governmental inflation. I believe we can save the west front more cheaply than the elaborate expansion scheme would do. And the American Institute of Architects, which includes about 80 percent of the members of the architectural profession, also believes the same thing. Does not it make sense for us to take a look at this proposal before we take the first step down the road to what could very well result in the expenditure of $60 to $70 million of taxpayers money at a time when we can ill afford to spend such sums?

They do not start a new weapons system over in the Pentagon without considering several "options," and trying to select the one that is most effective at the least cost. Should we in the Congress do anything less in connection with structural repairs on our own Capitol?

I do hope that Members of this House will study this issue and support my amendment when the time comes. To provide further background on this important controversy, I am including at this point in the RECORD my full testimony before the legislative Appropriations Subcommittee, including an important letter from the American Institute of Architects, and also a copy of a recent newsletter of mine on this same subject.

The items referred to follow:

STATEMENT OF CONGRESSMAN SAMUEL S. STRATTON IN OPPOSITION TO PROPOSED EXTENSION OF WEST FRONT OF THE CAPITOL BEFORE LEGISLATIVE APPROPRIATIONS SUBCOMMITTEE, SEPTEMBER 8, 1969

Mr. Chairman, I appear here this morning in opposition to what I understand is a request this Committee has received from the Commission for the Extension of the Capitol for $2 million to finance complete planning for the projected extension of the West Front as proposed by the Architect and the firm of Thompson & Lichtner, Engineers.

This request and the action of this subcommittee in scheduling this hearing come to me as something of a surprise in view of the assurances that were given to me and to the House some time ago that nothing would be done on the West Front until after the Vietnam war. But the war is still on, and our budgetary and inflationary pictures are even far more serious now than when that commitment was originally made. In fact the President of the United States has only recently curtailed Federal construction projects by 75 percent in an effort to stem inflation.

My opposition to the West Front Extension is, of course, no secret to members of this subcommittee. Let me summarize my position briefly, however. I oppose the extension for three reasons:

First, because it would cover up for all time the last remaining portion of the original historic Capitol building, and would also seriously alter the basic architecture of the original West Front in a way that the extension of the East Front never did. I believe we have an obligation to do everything possible to maintain the basic structure of this building as a national shrine, and ought not to destroy it, hide it, or alter it other than what is absolutely necessary to preserve it from deteriorating or collapsing.

Second, I do not believe we ought to add on any additional spaces within the present Capitol, however desirable those spaces might be in themselves. It may be more convenient not to have to walk over from the Rayburn Building, but I do not believe the Capitol should be expected to provide any more office spaces or restaurant spaces now that we have the Rayburn Building; and I certainly do not think the Capitol should be expected to include a visitors' center when we are already in the process of creating such a center in the old Union Station.

Third, I believe the west front extension scheme espoused by the Architect is just too costly for our needs. When it was first proposed in 1966 the estimate was $34 million. Mr. Stewart has now advised this subcommittee that the same project today will cost $45 million. On the basis of his advance estimates of the costs of the east front and the Rayburn Building, however, I would think a reasonable estimate of the final cost would run close to $70–$80 million. That is just too much to spend in the light of all our other priority needs.

The argument is being made today, however, and I assume it underlines the sudden request made to this subcommittee that fresh cracks are now developing in the west front and that unless this familiar extension project is begun without further delay the building will shortly collapse about us. Let me make it clear that I do not dispute the fact that the west front is in need of repair. Indeed I appeared before this subcommittee two years ago to urge that funds be appropriated to make some needed repairs on the building. Although my request was not approved by the subcommittee, I was pleased to see last year that the Architect finally did get around to cleaning up the West Front, removing the bird droppings, and at last repainting the sandstone.

But the nub of my own position, Mr. Chairman, and the most incredible part of the whole west front extension story, is that no one has ever seriously studied what would be the minimum amount we would need to do to repair the west front, restore it to safe condition, and just how much that job would cost.

Instead we have only one plan which calls for a vast 4½ acre extension of the west front to include two restaurants and two theaters, several other rooms and additional offices, and even an escalator. And we are being told that the only possible way in which we can prevent the west front from collapsing is to implement in full all this elaborate expansion scheme.

But this is nonsense. Obviously no one can seriously suggest it would be impossible to prevent the west front from collapsing unless we install escalators or additional resturants inside it. Of course the firm that developed the expansion plan claims that theirs is the only way the Capitol can be saved, but they have an obvious interest in their own project. We need the truth.

Over in the Pentagon they have a system known as cost-effectiveness. I am sure it is not a completely fool-proof system, but it does have an element of good business sense. Before they embark on developing a new weapon, they take a look at the weapon and then at alternative ways of dealing with the same problem, and then they compare the different alternatives both as to their relative cost and their relative effectiveness. This ends up by presenting our Pentagon planners with several "options," and from these options they can then select the best one in terms of greatest effectiveness and lowest cost.

This is what I think we ought to have over here on this side of the river too, Mr. Chairman. Before we take the first $2 million step down the long road toward an ultimate expenditure of $60 to $70 million, doesn't it make sense for us to pause for just a moment to take a careful look at all the other options? Isn't there any other way we can repair and restore the Capitol without spending as much money as this 4½ acre restaurant cum escalator expansion project would involve? Isn't there some way we can keep the Capitol from falling down around the heads of Members of Congress without destroying its basic architecture or hiding the last remaining section of a very historical structure? Isn't it possible that we can repair the Capitol at a lesser cost than what we would have to pay to transform it into a giant Howard Johnson?

The blunt fact is, Mr. Chairman, that no one has paused to look into this simple question. I think we should look into it and therefore I urge this subcommittee not to appropriate the $2 million to start down the road on a $70 million dollar project, but rather to appropriate $100,000 for an independent, competent engineering study of exactly what is the minimum we need to do to prevent the West Front from collapsing, and what is the reliable cost for such a project.

I am, of course, not an architect myself, but the American Institute of Architects says that they are convinced that this restoration job can be done more cheaply than the expansion project, and they are convinced that a reliable survey can be completed in a reasonable amount of time at a cost not to exceed $100,000. After all, we have already spent $447,835 in preliminary surveys of this expansion project and the elaborate model associated with it which is now enshrined in Statuary Hall. Surely it makes sense to spend another $100,000 if the end result will be to save us, let us say $10 or $15 million and at the same time preserve a historic building relatively intact.

Last year, the late Senator Bob Bartlett of Alaska wrote to the American Institute of Architects to ask them for certain comments on an address made by Mr. Mario Campioli, Assistant Architect of the Capitol, before a convention of the American Registered Architects. Mr. Campioli was defending the thesis that the only way to prevent the collapse of the West Front was to get the restaurant-escalator expansion project rolling. Senator Bartlett wrote the AIA to ask them to comment on Mr. Campioli's statements. As the closing part of my remarks, I would like to read and include in the RECORD the letter which the AIA had prepared for Senator Bartlett, but which, because of his untimely death, they sent instead to me.

The letter follows:

"THE AMERICAN INSTITUTE OF ARCHITECTS,

"St. Louis, Mo., February 17, 1969.

"Hon. SAMUEL S. STRATTON,
"U.S. House of Representatives,
"Washington, D.C.

"DEAR CONGRESSMAN STRATTON: This is my belated reply to the late Senator E. L. Bartlett's letter of November 25, 1968, (enclosed), in which he asked the American Institute of Architects to comment on a speech given by Mario E. Campioli, Assistant Architect of the Capitol, before the Convention of American Registered Architects. Since you have long been interested in plans for correcting the condition of the West Front of the Capitol, I am directing my reply to you.

"The American Institute of Architects believes that the West Front of the Capitol can and should be restored in its present location using existing sandstone where possible or new sandstone where necessary. Like any prudent owner, Congress should commission an impartial structural engineer to study all aspects of restoration and to recommend a program for restoration complete with cost and risk evaluations and detailing any disruption of Capitol activities. Only then will Congress be able to make an effective comparison between restoration and extension.

"The questions which Senator Bartlett asked illuminate one glaring fact: no one knows exactly what restoration will entail.

"The engineering report prepared in 1964 by Thompson and Lichtner (which was commissioned by the Architect of the Capitol) is devoted solely to the feasibility of extension—nowhere does it state that restoration is impossible. This report professionally justifies extension but does not professionally analyze the expected risk, cost and disruption factors which would be encountered in restoration.

"Without the benefit of a feasibility study we and the members of Congress can do no better than to make educated guesses about the risk, cost, and the extent of restoration needed. Yet, we are certain that restoration is possible. On this basis, then we answer Senator Bartlett's questions which were prompted by the picture of horribles painted by Mr. Campioli.

"Will restoration of the existing structure entail vacating the entire West Front 'for a period of five to ten years'?

"By using modern technological developments, the entire West Front would not have to be vacated 'for a period of five to ten years.' Only those spaces immediately adjacent to active restoration would have to be vacated.

"Is it true that there would be no limit on risk or cost, if the West Front were restored rather than extended?

"Of course, there would be a limit to cost and risk of restoration. We firmly believe restoration will prove much less costly than extension (much structural repair must be done in either event). A feasibility study would provide Congress with cost information.

"Does the structural preservation of the Capitol indicate an extension of the building to the West?

"The structural preservation of the Capitol does not necessarily indicate an extension to the West. Structural preservation can be accomplished by several means, including either restoration *or* extension. We strongly urge Congress to choose restoration.

"Senator Bartlett also asks: 'Am I mistaken in believing that nothing of the original Capitol building will remain if the West Front were extended?' The Senator was not mistaken: the West Front is the last remaining exterior portion of the original Capitol building. And for this very reason, we argue that Congress should restore the West Front.

"As you know, the West Front of the original Capitol building is substantially unchanged from its appearance in 1825. In that year, Charles Bulfinch completed the West Front of the Capitol, slightly modifying William Thornton's prize-winning design of 1793. In 1800, under the direction of James Hoban, the north wing of the original Capitol—Congress House—was completed and the legislators moved in. In 1807, the south wing was finished under the charge of Benjamin Latrobe. Bulfinch then completed Thornton's conception of the Capitol by construction of the central portion, including its West Front. For reasons of economy, President George Washington chose sandstone as the building material.

"In 1851, Thomas Walter began to add the present House and Senate chamber to the north and south wings. At this time, too he designed the present steel dome to replace Bulfinch's low brass dome which was dwarfed by the new wings.

"No further changes were made in the Capitol until the late 1950's when the Associate Architects, commissioned by the Architect of the Capitol, J. George Stewart, extended the original East Front 32½ feet in order to eliminate the impression that the huge dome overhung the original central portico. In so doing, Mr. Stewart also replaced the sandstone of the East Front with marble. Thus, even though the original East Front was preserved as an interior wall, it has disappeared from view.

"Now the Architect of the Capitol and Speaker McCormack want to extend the West Front in the same manner: replacing sandstone with marble and preserving the West Front as an interior wall. If this is done, all vestiges of the original Capitol will be buried beneath marble.

"Since 1800, parts of the West Front have witnessed the unfolding of the story of the United States as a Nation. Surely, now when Americans are beginning to appreciate the heritage of their past, we can afford to restore the West Front in its original place for historical reasons.

"Thus, we urge restoration in order to bequeath to the future a reliable representation of an original portion of the Capitol in the place where it was built. Restoring the wall in its present position is important to preserve a position in time without change: a position in time which will be credible to generations of Americans now and in the future. Certainly in our hierarchy of buildings there is none more important to our Nation than the Capitol. If a small portion of it is not worth restoring, what is?

"Finally, Senator Bartlett inquired about The Institute's consistency in supporting restoration of the West Front. Once again he points to the AIA MEMO (see enclosed article) of January, 1958, which stated in part: 'It is believed that the space requirements could be better filled—and at far less cost—by leaving the East Front alone and instead developing a proposed scheme for expansion of the West side of the building.' The above quotation was contained in an article reporting the activities of the Committee on the Preservation of the Capitol which was not an AIA committee, but composed of a group of architects (some AIA members), architectural historians, as well as other prominent citizens outside the profession, to rally support against the proposed extension of the East Front of the Capitol. This quotation is entirely out of context and misrepresents The Institute's long-standing position in favor of restoration. The American Institute of Architects has never officially or unofficially espoused any proposal for extending the West Front of the Capitol. While opposing destruction of the historic East Front, and reporting activities of that nature, The Institute has been cast by proponents of a West Front extension, in the position of recommending extension of the West Front.

"In 1958, we urged restoration of the East Front for historical reasons. Now, extension of the East Front makes stronger our historical argument in favor of preserving the West Front as the last remaining exterior portion of the original Capitol. Only Congress can and should make the decision to restore the West Front. In so doing, Congress should not let its current and future space needs (which can and should be accommodated elsewhere) dictate; rather it should consider what our Capitol means to Americans now and will mean to future generations of Americans.

"I feel that the controversy over restoration or extension of the West Front of the Capitol poignantly emphasizes the need for a professional commission to plan the comprehensive development of Capitol Hill. I hope that legislation such as S.J. Res. 74, which passed the Senate last year, will be reintroduced this session and enacted into law. Only then will there be an orderly resolution of controversies such as this.

"I appreciate the opportunity to express once again The Institute's position on this most important matter.

"Sincerely yours,

"GEORGE F. KASSABAUM,
"President."

SAVE THE NATIONAL CAPITOL

(Congressman STRATTON's weekly report from Washington)

The drive is on again to destroy the historic West Front of the U.S. Capitol—something even the British couldn't do in 1814—and replace it with a new structure embodying two super Howard Johnsons and a movie theater. I intend to do all I can to stop it, and I need your help.

The plan is an old one, first unveiled 3½ years ago with a price tag of $34 million. But public indignation, including an article in a national Sunday supplement and formation of a Committee of One Million to Preserve

the United States Capitol, finally shelved the scheme. House leaders assured us nothing would be done to provide funds for this monstrosity until after the Viet Nam war. A week before Congress left on its August recess a ranking Appropriations Committee member told me no move would be made this year on the West Front extension.

But something happened last week, and the Appropriations Committee opens hearings Monday on a plan to spend $2 million to get the scheme rolling again even though the war is still on and President Nixon just ordered a massive cutback in Federal construction. What happened, I hear, is that Speaker McCormack sent a letter to the committee urging them to get going on the West Front. So despite all the assurances, the hearings are on and I am scheduled to testify strongly in opposition.

I'm against the plan for two reasons. First is the cost. To cover up the last remaining portion of the original historic Capitol and add on two big restaurants, a movie theater, and a couple dozen hideaway offices for favored Congressmen was estimated at $34 million back in 1966. The Capitol architect (who isn't really an architect) now says the cost has jumped to $45 million. Knowing his track record on cost estimates I'd guess the final tab would be a lot closer to $70 or $80 million. We just can't afford that kind of extravagance today.

An argument is made that such an expenditure is urgent because otherwise the Capitol dome might come crashing down around our heads any day. The American Institute of Architects tells us this just ain't so. To be sure, there has been some deterioration in the Capitol's external walls, as happens in any 169-year-old building. I'm much in favor of doing whatever needs to be done to fix those crumbling portions. *But the incredible part of the West Front extension story is that in all these years no one has ever spent a dime to find out how much it would cost to just repair it instead of expanding it.*

Let's repair it, yes! But let's not destroy it, hide it, extend it, or transform it. That, basically, is what the argument is all about.

ATLANTIC-PACIFIC INTEROCEANIC CANAL STUDY COMMISSION—FIFTH ANNUAL REPORT COMMENTARY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 30 minutes.

Mr. FLOOD. Mr. Speaker, on August 6, 1969, the President transmitted to the Congress the fifth annual report of the Atlantic-Pacific Interoceanic Canal Study Commission covering the period July 1, 1968, to June 30, 1969, stating that this body will render its final report not later than December 1, 1970.

On previous occasions after transmission to the Congress of the first four annual reports by this study group, I commented at length on each of them in statements in the CONGRESSIONAL RECORD as follows: August 25, 1965, page 21855; September 27, 1966, page 24061; August 15, 1967, page 22730; and October 11, 1968, page H9934, temporary. In line with past practices, I shall do so again on the fifth annual report.

The current sea-level canal inquiry is being conducted pursuant to Public Law 88–609, 88th Congress, approved September 22, 1964, as amended, which law provides for a full and complete investigation to determine the feasibility of and the best site for the construction of an interoceanic canal of so-called sea level design. The 1964 statute does not authorize the study of any other design.

It will be noted from the report that the indicated inquiry is not of an independent character but one rooted in the executive branch of our Government. Its activities have been directed toward advancing the age-old dream of a canal at sea level. The so-called Study Commission is not an independent body, appointed by the President by and with the advice and consent of the Senate, but merely a part-time consulting board hired by the executive branch of our Government. Moreover, its chairman is the Honorable Robert B. Anderson, who was also the chief negotiator for the discredited 1967 proposed giveaway treaties with Panama.

While the report presents a picture of the supposedly comprehensive nature of the canal studies, it certainly is not a disinterested study, but one directed toward justifying the predetermined objective of a canal at sea level under a statute prepared and enacted under the direction of sea level advocates and which precluded the study of any other type of canal other than the so-called sea level design.

As I have stated on other occasions, much of the work of the Study Commission has been a waste of the taxpayers' money in knocking over "straw" proposals such as the Atro-Truando route in Colombia, which were included in the investigations as potential sea level projects. The report also serves to confuse the real issues in the problem of increased transit capacity by emphasizing detailed studies of various proposals other than the solution that applies—the completion of the improved third locks project, on which more than $75 million has been expended. Nor does it even specifically mention this project for the major increase of capacity and operational improvement other than as a vague allusion.

One of the major developments during the past year was the publication in the January 1969 issue of Bio Science, with the support of the National Science Foundation, of an article by Dr. John C. Briggs, respected professor and chairman of the department of zoology of the University of South Florida, of an article on "The Sea Level Panama Canal: Potential Biological Catastrophe." In this article, Dr. Briggs concludes that because of invasions through a sea level waterway by 6,000 marine species from the Atlantic into the Eastern Pacific, and 4,000 species from the Pacific into the Western Atlantic, there would be large-scale extinction of marine life, involving international complications with nations depending upon the sea as a source of food, such as fish and other sea animates.

In the April issue of Bio Science, is an exchange of letters between the executive director of the sea level canal study group, Col. John P. Sheffey, and the author of the article. The director took exception to the conclusions of the article and Dr. Briggs ably refuted the counterarguments of Colonel Sheffey, concluding with a call for biologists of the Nation to support a canal plan that would retain a fresh water barrier between the Atlantic and Pacific Oceans. Legislation for such plan in the form of bills for the Panama Canal Modernization Act, introduced and now pending in both Houses of the Congress, have gained strong support among independent engineers, geologists, nuclear experts, navigators, biologists, and others.

A reading of the fifth annual report will disclose that it is significant not so much for what it says, but for what it fails to state. In order to facilitate its examination, I have prepared a commentary on some of its highlights, which will be quoted later. The page numbers used in the commentary are those of the study commission's print and my comments aim at both clarification and amplification.

The whole effort of the current study group from first to last has been directed at determining all the questions involved in the canal situation by administrative processes and not by those of congressional character. The goals toward which the group strives, if achieved, would not only drive the United States from the isthmus but would lead to a Communist takeover of Panama, sparking like takeovers in other Latin American countries.

The report makes no reference to the critical posture of the world at large, with war clouds all around the horizon. It absolutely ignores the crucial conditions now obtaining at home and abroad and appears ready not only to acquiesce in giving away what we now own but also any new canal that we may construct, both in violation of the U.S. Constitution—article IV, section 3, clause 2. Nothing could be better calculated to destroy the influence of the United States in the Western Hemisphere than the adoption of the plans that the current study group is striving to have the President and the Congress approve.

In these connections, the recent announcement of the pending nomination of Robert M. Sayre as U.S. Ambassador to Panama is most significant, for he was an active participant with Walter W. Rostow in the formulation of the three proposed new canal treaties that would surrender the jugular vein of the Americas.

Mr. Speaker, I would urge all Members of the Congress to read the entire fifth annual report, which has been distributed; also my evaluations of previous reports. My Comments on some of the highlights of the current report follow:

COMMENTARY

Page 1, par. 4, first sentence:

"The report on the technical feasibility and cost of both sea-level and lock canals on Route 8, generally along the border between Nicaragua and Costa Rica, has been completed in draft."

Comment. From this statement it would appear that there is a sensible choice at Nicaragua as to the type of canal that should be constructed there. Is this a fact or an assumption? Every competent study of the Nicaragua Canal has utilized the fresh water Lake Nicaragua about 105 feet above mean sea level as part of the project, which requires locks near each end; and which, therefore, is not a sea level project but a lake-lock type.

In this connection, attention is invited to Ho. Doc No. 139, 72d Congress, which con-

tains the report of the 1929–31 survey by Lt. Col. Dan I. Sultan. That report concluded that a lock and lake type canal at Nicaragua is feasible. It did not recommend construction of any sea level type there.

Page 3, lines 1–3:

". . . the cost of a lock canal through Lake Nicaragua would be more than the cost of a sea-level canal on Route 10 or Route 14. (Canal Zone or Chorrera)."

Comment. Regardless of the truth or falsity of this statement, cost is only one of the factors involved. It would be more appropriate if a competent comparison were made between the lake-lock type canal at Nicaragua and the so-called sea-level design at that site from the operating as well as engineering viewpoints.

Page 3, par. 2, first sentence:

"The investigation thus far on Route 10, some five miles outside the westerly border of the Canal Zone, indicates that conventional construction of a sea-level canal along this route is technically feasible."

Comment. The plan currently contemplated for such project would consist of three sections in Panamanian territory each about 15 miles in length, the center section having two separate channels, with the sections divided by two tidal locks. Experienced navigators oppose this plan for reasons of operations. Moreover, it would require a new treaty with Panama with a huge indemnity that would have to be added to the costs of acquiring the right of way and of construction. Moreover, there would be no protecting frame as now obtains with reference to the present canal; and without such frame such proposal, if adopted, would be a failure in maintenance, operation, sanitation and protection.

Page 3, par. 2, last sentence:

"The major advantage of Route 10 is that construction on it would not interfere with the continued operation of the present Panama Canal."

Comment. It would appear from this statement that the objective of the current study group is to have two canals close together, one in the Canal Zone (present canal) and the other in Panama. Such duplication of facilities would be impossible to justify.

Page 3, par. 3, lines 5–6:

"A sea-level canal near the present canal would involve the minimum costs for new supporting installations. . . ."

Comment. With the exception of its two ends, such canal in the Canal Zone Territory would be a new canal. Its adoption would involve the negotiation of a new treaty with Panama to determine the specific conditions for its construction, slide dangers, and "heavy maintenance problems (perhaps insuperable)" that would develop because of "higher banks through a longer distance". (See E. S. Randolph, "An Engineer's Evaluation of Isthmian Canal Policy", U.S. Naval Institute Proceedings, April, 1956, pp. 395–99.)

Page 3, par. 3, lines 7–8:

". . . but construction on Route 14 (Canal Zone) could create problems in maintaining the high-level lock canal in operation during the construction period."

Comment. This assertion minimizes the dangers involved. The 1960 report of the Board of Consultants, Isthmian Canal Studies, makes the following significant statements:

"16. We are doubtful if any reasonable plan to construct a sea level canal in the Canal Zone could be carried through without serious danger of a long interruption to traffic at the time of cutover from the present lock canal.

"* * * We are extremely doubtful of the stability of the slopes (proposed in the 1947 report), during the very short period of unwatering the present lakes. In our opinion, slides of the first magnitude could easily result from the use of such slopes, in the short period of unwatering." (Ho. Rept. No. 1960, 86th Congress, 2d Session, p. 5).

Page 5, par. 2, second sentence:

"Both the Stevens Institute of Technology and the Naval Ship Research and Development Center are conducting studies and model tests for the Commission to determine the relationships of ship characteristics, channel design, and currents."

Comment. Extensive tests in this field were made during 1946–48 at the Taylor Model Basin, Carderock, Md. The use of Panama Canal pilots in conducting them provided a higher degree of practicality than usually obtains in theoretical tests. (See *Transactions* of the American Society of Civil Engineers, Vol. 114 (1949), pp. 685–733, for a summary of the results.)

Page 5, par. 2, third sentence:

"While it obviously would be desirable to reduce or eliminate tidal currents, conclusions as to the necessity for tidal controls in a sea-level canal have not as yet been reached."

Comment. Regardless of whether the present canal study group has reached its conclusions on this point, all competently prepared plans for a sea level type of canal in the Canal Zone have provided for such controls in the form of tidal locks or navigation passes. In this connection, it should be noted that the Suez Canal has a record of accidents in which vessels ground at both ends, with the bow on one bank and the stern on the other.

The proposed Panama Sea Level Project (Route 10 or 14) would not provide a fresh water barrier, regardless of the number of locks required.

Page 5, last par., first sentence:

"The opening of an unobstructed channel between the oceans would allow a far greater exchange of marine life between the oceans than take place through the Panama Canal."

Comment. This may be true. Recent studies predict that in such a waterway 6,000 Atlantic species would invade the Eastern Pacific and 4,000 Pacific species would invade the Western Atlantic, with large scale extinction and international consequences. In fact, Dr. John C. Briggs, Professor and Chairman of the Department of Zoology of the University of South Florida, on August 11, 1969, wrote me that "the sea-level canal project poses one of the most important, if not *the* most important, conservation problem of our time." (Italic by author).

Page 5, last par., third sentence:

"The Commission has now requested the National Academy of Sciences to propose a program of long-term ecological studies to be conducted if the decision is made to construct a sea-level isthmian canal."

Comment. A recent article of basic importance on this subject by Dr. John C. Briggs, with the support of the National Science Foundation, supplies much information on the ecological subject. In a subsequent discussion, Dr. Briggs ably refutes the counter argument of the Executive Director of the Sea Level Canal Study Commission. (See John C. Briggs, "The Sea-Level Panama Canal: Potential Biological Catastrophe", *Bio Science,* January, 1969, pp. 44–47; and Sheffey-Briggs exchange of letters, *Bio Science,* April, 1969, pp 300–301.)

Page 7, par. 2, second sentence:

"Should the past twenty years' growth rate of all traffic continue unabated, the demand for transits would be approaching the capacity of the present Panama Canal around 1985."

Comment. For many years, Panama Canal authorities estimated that increased capacity would be needed by 1970, and, to meet this need, had planned to construct a third set of locks. Such project was authorized without adequate inquiry in 1939 at an estimated cost of $277,000,000. Construction was started in 1940 and pushed vigorously until suspended in May, 1942. Total expenditures on this project were $76,357,405, with substantial completion of lock site excavations at Gatun on the Atlantic side and Miraflores on the Pacific. No excavation was accomplished at Pedro Miguel.

In addition, the current program for the enlargement of Gaillard Cut is due for completion in 1970 at an estimated cost of $81,257,097. These two projects together represent a total expenditure of more than $157 million for the major modernization of the existing Panama Canal.

Such modernization should meet traffic needs "for the next 75 years or more" and legislation for it has been introduced in both House and Senate, and is now pending. This legislation would provide for a set of larger locks for larger ships, but not for ships designed to escape tolls and which are already plying around Cape Horn and Cape of Good Hope, the latter the alternative to the closed Suez Canal.

Page 7, par. 2, last sentence:

"Another factor to be considered is the constraint of the ship size limitation of the present Panama Canal on the movement of raw materials in bulk carriers."

Comment. This statement ignores important facts. The huge bulk carriers now being constructed are so designed to avoid passage through any type of canal for the reason that it is more economical to route them around Cape Horn or the Cape of Good Hope than to pay transit tolls.

Page 7, last par., third sentence:

"A canal large enough to transit all U.S. Navy aircraft carriers would add speed and flexibility to deployment of naval forces."

Comment. This statement also ignores important facts. Our Naval planners long ago eliminated transit of the Panama Canal as a military characteristic in the design of our largest war vessels for the reason that any type of canal is vulnerable to destruction by nuclear attack. Moreover, we have a two ocean Navy.

Page 7, last par., last sentence:

"A sea-level canal's lesser vulnerability to all forms of attack, short of complete closure by nuclear weapons, has been found to give it marked defense advantage in comparison with a high-level lock canal."

Comment. Because the principal arguments for a so-called sea-level canal historically have been those of relative vulnerability, I wish to elaborate. In 1905–06, the main contention of sea-level advocates was the "threat of naval gunfire"; in 1939, it was the fear of possible "enemy bombing attack"; in 1945–47, it was hysteria over the "atomic bomb and other new weapon dangers"; in 1964, it was "sabotage" with "two sticks of dynamite"; and in 1969, it is defense against "surprise attack", as well as "sabotage". No doubt we can expect new bugbears as new weapon systems are developed.

As I have stated on many occasions, the true criteria for deciding upon the question of type is not one of "inherent resistance" to attack as may be embodied in design, but what is best for operations and navigation. Where our statesmen have based their decisions on what is best for these two factors, they have been right and their work has stood the test of time. Where they have not, they have erred, at times with tragic consequences, for example, the 1939 Third Locks Project.

Moreover, the simple facts are that any canal is vulnerable to nuclear attack unless fully protected therefrom. We have gone through four great wars without injury to the Canal. In the future as in the past, we must protect the canal by active measures and not by passive design features. Therefore, the argument as to vulnerability of the present canal is specious and insincere.

Page 9, par. 2:

"In November 1968, the Government of Panama created its own Canal Study Commission, giving it the mission of studying the problems related to a canal through Panamanian territory. Its functions include that of evaluating the data made available from the U.S. Commission's site surveys in Panama."

Comment. In view of the limited resources of the Republic of Panama, its long record of revolutionary violence and political instability, and failure in such simple matters as sanitation, it is hardly realistic to expect anything productive to eventuate from such study in relation to a project of the magnitude of an interoceanic canal. Moreover, under provisions of the 1903 Treaty, the United States exercises all the rights, power and authority over the U.S. owned Canal Zone territory and Panama Canal to the entire exclusion of the exercise by Panama of any such rights, power and authority.

Page 9, last par.:

As a result of the changes of government in Panama since June 1967, action has been suspended on the proposed new treaties with Panama completed in draft at that time. The treaty terms for the construction, operation, and defense of a new sea-level canal will be of major importance in the determination of the feasibility of its construction by the United States. Therefore, for each of the routes under consideration, the Commission will take cognizance of possible treaty terms in formulating its final recommendations.

Comment. The texts of the three proposed canal treaties were published in statements to the Senate by Senator Thurmond in the *Congressional Records* of July 17, 21 and 27, 1967. In both Panama and the United States, they aroused strong opposition, with some 150 members of the House introducing resolutions in opposition.

Chairman Robert B. Anderson of the Canal Study was also chairman of U.S. negotiating team. It is noted that the Fifth Annual Report does not make any recommendations adverse to the three proposed treaties, which provide for the eventual surrender to Panama without compensation not only of the existing canal but also of any new canal that the United States may construct at the expense of our taxpayers.

As evidence of Panamanian instability attention is invited to my statement in the *Congressional Record* of August 7, 1969, entitled "Panama: Land of Endemic Revolution Requires Objective Evaluation."

Page 1–1, top par.:

Public law 88–609, 88th Congress, S. 2701, September 22, 1964, 78 Stat. 990, as amended by: Public Law 89–453, 89th Congress, S. 2469, June 17, 1966, 80 Stat. 203; Public Law 90–244, 90th Congress, S. 1566, January 2, 1968, 81 Stat. 781; and, Public Law 90–359, 90th Congress, H.R. 15190, June 22, 1968, 82 Stat. 249.

Comment. This attempt at legislative history is far from adequate. As to Public Law 88–609, in the Senate, it was passed by voice vote without debate; in the House, I appeared before the Committee on Merchant Marine and Fisheries and strongly opposed it. Despite my efforts, the House hearings were never printed and it was called upon to enact this important statute without the benefit of published hearings.

For additional information, attention is invited to two of my addresses in the House on April 1 and July 29, 1965, on "Interoceanic Canal Problem: Inquiry or Cover Up?", which will be found on pages 428–52 and 454–16 of my volume on *Isthmian Canal Policy Questions* published as H. Doc. No. 474, 89th Congress.

Page 2–1, numbered par. 3:

"The period of July 1, 1970 to December 1, 1970 will be used to coordinate the draft of the final report with other Federal agencies *prior to its being printed for presentation to the President not later than December 1, 1970.*" (Emphasis supplied.)

Comment. This statement suggests the intention of securing the publication of the report of the current sea level canal study before it is transmitted to the Congress. Under the law, the final report is required to be submitted to the President for transmittal to the Congress not later than December 1, 1970. Publication by the Government Printing Office requires the authorization of the Congress.

In the case of the 1947 report, its basic fallacies were so glaring that the Congress never authorized its printing. So far there are no indications that the report of the current study will be any more palatable to informed members of the Congress than the 1947 report. In fact, informed officials in our government do not expect anything of common sense to result.

Page 7–2, numbered par. 1, third sentence:

"Modernization of the present Panama Canal, including new locks, is also being examined to obtain a comparison between sea-level canal alternatives and an improved lock canal."

Comment. Public Law 88–609, approved September 22, 1964, provides for an investigation and study to determine the feasibility of, and most suitable site for a sea-level canal. The inclusion by the current canal panel of a study for the major modernization of the present Panama Canal is usurption of authority, probably subject to court action.

Page 7–2, numbered par. 3:

"3. The following alternatives are being considered in the engineering study:

"a. Constructing a sea-level canal by conventional excavation methods.

"b. Constructing a sea-level canal by a combination of nuclear and conventional excavation methods.

"c. Modernizing the present Panama Canal to increase the transit capacity for anticipated future intercoastal and interoceanic ship traffic."

Comment. As regards subparagraph b, attention is invited to the book, *The Constructive Uses of Nuclear Explosives,* by Teller, Talley, Higgins and Johnson, published by McGraw-Hill in 1968. This volume makes available essential information for independent engineers and geologists in evaluating or refuting the claims of sea level advocates.

In respect to subparagraph c, this is not clearly stated. Does it mean simply the repair and improvement of the existing canal structures, or does it contemplate the elimination of the Pedro Miguel Locks with the consolidation of all Pacific Locks south of Miraflores?

Legislation introduced in the present Congress, House and Senate, deals with the problem of Panama Canal Modernization in a realistic manner. Any proposal that fails to eliminate the locks at Pedro Miguel is fatally inadequate.

For additional information as regards the needed modernization, attention is invited to my statement in the Congressional Record of February 19, 1969, on "Panama Canal Modernization: Time for Action Has Come", which includes the text of the proposed modernization legislation. The report fails to make any reference thereto and by ignoring such proposed legislation, its authors evidently hope to avoid proper consideration by the Congress of the grave questions involved.

HURRICANE CAMILLE RESTORATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from West Virginia (Mr. STAGGERS) is recognized for 15 minutes.

Mr. STAGGERS. Mr. Speaker, it has been most gratifying to note the speed with which the Federal Government, as well as State and private agencies, has moved into the areas overwhelmed by the wind and flood connected with Hurricane Camille. After devastating the gulf areas of our Southern States, the hurricane seemed to lose much of its force as it moved northward. Unexpectedly during the night it turned sharply eastward and passed over West Virginia and Virginia on its way to the Atlantic Coast, leaving a recordbreaking flood of rain in its wake. The damage to property as well as to human life in its path can hardly be believed.

In my own Second District of West Virginia, the southern tier of counties caught the brunt of the storm. Without warning torrents of water rushed down the valleys, carrying away people asleep in their homes. The picture of destruction has been pretty well publicized.

It is with a thankful heart that I report the prompt action of the Federal departments in bringing help. HUD immediately arranged to bring in a number of temporary shelters to provide housing not otherwise available. A large sum from the President's disaster relief fund was provided. Other agencies of a semi-public or private nature rushed men and materials to the scene. Mr. Speaker, I wish publicly to thank all these agencies and organizations for their efforts to bring relief to a stricken portion of the Nation. While it is the normal reaction of Americans to desperate need, one cannot fail to be impressed by the speed with which it was brought to bear on the situation.

It might be noted that Federal contributions to relief in disaster situations have been made possible through the foresight of Congress in setting up relief organizations and funds. Both the Congress and the administration should share in the credit for what has been done.

So far as I know, all areas affected by the storm were given similar treatment. It is a magnificent tribute to the benevolence and good will of this great Nation.

Notwithstanding the generosity already shown, the need is still very great. Whole towns and villages have been swept away. The number of missing persons is still great. Survivors have lost everything they possessed. With these thoughts in mind, I have introduced H.R. 13612, which would appropriate a special fund for the help of victims of Hurricane Camille. It is my understanding that several of my colleagues have proposed similar measures. I trust that the Congress will respond favorably to this appeal.

CLEAN WATER RESTORATION ACT

(Mr. DINGELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DINGELL. Mr. Speaker, I wish to place in the RECORD at this point additional correspondence from Governors and State agencies regarding the necessity of fully funding the Clean Water Restoration Act. This correspondence was generated by a letter I sent to State Governors June 6, 1969. I inserted replies from some 30 Governors in the RECORD on July 10, 1969, on pages 19102 to 19121, and additional letters on July 28, 1969, on pages 20924 to 20926.

The correspondence today reveals that the New England Governors' Conference urges full appropriation of $1

billion for fiscal 1970 authorized in the Clean Water Restoration Act; the Governors of Florida and Georgia regard the situation in their States as crucial; the Governor of Indiana says construction in his State barely keeps up with the population increase; the Governor of Idaho foresees a slowdown, and so on. The correspondence demonstrates a truly national need, and a growing national recognition of the need.

I also include a recent press release, which I hope all will find informative:

NOTICE

DEPARTMENT OF NATURAL RESOURCES,
Lansing, Mich., August 18, 1969.

The Natural Resources Commission of the State of Michigan unanimously approved the enclosed resolution pertaining to the Federal sewage treatment works grant program authorized by the Clean Water Restoration Act of 1966, at the August 15, 1969, meeting held at the Holiday Inn, Marquette, Michigan.

The Chairman of the Commission has instructed me to bring this matter to your attention for your kind consideration.

Sincerely,

SAMUEL A. MILSTEIN,
Executive Assistant.

RESOLUTION ON SEWAGE TREATMENT WORKS GRANT PROGRAM

(Adopted by the Natural Resources Commismission, August 15, 1969, Marquette, Mich.)

Whereas the $335 million Clean Water Bonding Program approved by the voters of Michigan in November of 1968 was directly based on the level of funds authorized for the Federal sewage treatment works grant program by the Clean Water Restoration Act of 1966; and

Whereas appropriations for the Federal grant program have fallen far short of the level originally authorized resulting in delays in the construction of needed sewage treatment works and a reduction of the ultimate impact of the Michigan Clean Water Bonding Program; and

Whereas adequate financing is essential for an effective pollution control program: Now, therefore, be it

Resolved, That the Michigan Natural Resources Commission hereby respectfully urges the Michigan Congressional delegation and other organizations to support full funding of the sewage treatment works grant program in fiscal year 1970 to the level originally authorized by the Clean Water Restoration Act.

AUGUST SCHOLLE,
Chairman.
CARL T. JOHNSON,
Member.
E. M. LAITALA,
Member.
ROBERT C. MCLAUGHLIN,
Member.
HARRY H. WHITELEY,
Member.

It was moved by Mr. Johnson, supported by Mr. Whiteley, that the above resolution be approved. The question being stated by the Chair, the motion prevailed.

IOWA STATE DEPARTMENT OF HEALTH,
Des Moines, Iowa, August 12, 1969.

The Honorable JOHN D. DINGELL,
Congress of the United States, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN DINGELL: Governor Ray has asked that I reply to your letter of June 6, 1969 regarding the effect of funding of the construction grant program on the water pollution control program in the State of Iowa.

During the early years of the grants program subsequent to 1956 the State of Iowa was receiving only approximately $700,000 annually as compared with the $3,200,000 allocation now received under the $214 million national appropriation. Priorities for grant funds were given to communities with the greatest water pollution control need but approximately one third of the communities proceeded without Federal assistance during the early years of the program. Likewise, many communities received much less than 30% grant due to early limitations on maximum grants.

Construction grant funds under the $214 million appropriation have been ample to fund all Iowa projects on a 30% basis. The State of Iowa has approached 100% treatment of the municipal sewered population for a number of years and a major share of the federal funds are utilized in expansion of treatment plants in the larger cities. The state has averaged construction of 30 to 50 treatment plant projects annually and Federal funding has been ample during recent years to support our water pollution control program, although for the current year priorities have again become necessary.

Legislation to establish a program of 25% state aid to municipalities for sewage treatment plant construction failed to pass during the last Iowa legislative session. In the event this state aid program should be adopted, there would be a need for increased federal assistance to fund the 50% federal share for which the state would be eligible.

I hope this information will be helpful to you and we will be glad to furnish additional information.

Very truly yours,

R. J. SCHLIEKELMAN,
Director, Water Pollution Division.

STATE OF IDAHO,
Boise, Idaho, August 13, 1969.

Hon. JOHN D. DINGELL,
Member of Congress, Rayburn House Office Building, Washington, D.C.

DEAR REPRESENTATIVE DINGELL: I share your interest and concern over the fact that construction grant appropriations under the Federal Clean Water Restoration Act have been grossly short of the authorizations contained in the Act.

Although the grant level of such appropriations has not been a major handicap in the construction program in the State of Idaho up to the present time, we do anticipate that failure to appropriate at a significantly higher level in the next few years will certainly slow down our clean-up program. We are also aware that the present funding level has severely handicapped the clean-up programs of some of our neighboring states.

Sincerely,

DON SAMUELSON,
Governor.

STATE OF INDIANA,
Indianapolis, Ind., August 19, 1969.

Hon. JOHN D. DINGELL,
Member of Congress, House of Representatives, Rayburn House Office Building, Washington, D.C.

DEAR CONGRESSMAN DINGELL: Reference is made to your letter of June 6, 1969, relative to the effect of past federal funding on Indiana's water pollution abatement program. The lack of adequate federal grant funds has been the major deterrent to our program. This has become acute in the past few years.

Each year since the grant program was initiated in 1956 we have received applications for more funds than were available. In the earlier days of the program the requests usually amounted to from two to three times the amount of money available. Following the enactment of the 1966 amendments which increase the authorization and provided for an increase in the federal grant from 30% to 50% if the state gave a 25% grant, the 1967 Indiana Legislature appropriated $8.6 million for state grants for the 1967–69 biennium. This appropriation was sufficient to match Indiana's federal allotment from a $300 million appropriation for 1967–68 and $400 million for 1968–69.

In 1967–68 we received 57 applications for $17.2 million in federal funds, on a 50% basis. However, only $4.9 million were allotted to Indiana. In 1968–69 we received 93 applications for $31.5 million federal funds. Only $5.2 million were received. As a result a considerable portion of the $8.6 million state funds which were available reverted to the state general fund.

The 1969 Indiana Legislature appropriated $3.0 million for 1969–70 which is sufficient to match our allotment from a $250 million federal appropriation. It appropriated $3.5 for 1960–71. The experiences of the previous biennium were a major factor in determining the amount of state funds appropriated for the current biennium.

The 1969–70 applications for federal and state funds are now on file. There are 135 applications for $44.3 million in federal funds. Priorities have been established by the Stream Pollution Control Board. A copy of the priority list is attached hereto. Since Indiana receives only $5 million from a $214 million appropriation a glance at the table will show we can satisfy only the first four applications.

It is obvious the lack of federal grant funds has slowed our program. In fact, our rate of construction for the past two years, and our apparent rate for this year, is barely keeping pace with population expansion.

The Indiana Constitution does not permit bonding of the state. Consequently we cannot raise the money to pre-finance the federal grant as New York and a few other states have done.

Sincerely,

EDGAR D. WHITCOMB,
Governor of Indiana.

EXECUTIVE DEPARTMENT,
Atlanta, Ga., August 12, 1969.

The Honorable JOHN D. DINGELL,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DINGELL: Your letter dated July 21, 1969, in reference to my views on the impact of present funding for the construction grant program under the Clean Water Restoration Act, was greatly appreciated.

The Georgia State Water Quality Board in its letter dated July 21, 1969, and the Georgia Department of Public Health in its letter dated July 29, 1969, have provided you with details of the effects of present funding. On behalf of the people of Georgia, I urge you to press for increased funds for the construction grant program. Without this help, we and other states face a frightening future in our fight against water pollution.

If I can be of further assistance to you, please do not hesitate calling.

With kindest personal regards, I am

Sincerely,

LESTER MADDOX,
Governor.

STATE OF FLORIDA,
August 20, 1969.

Honorable JOHN D. DINGELL,
U.S. Congress,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: Florida for the past several years has required at least twice the amount of federal funds available from the Clean Water Restoration Act. In fiscal year 1968–69, the State could have used more than three times the amount allocated. Florida's allocation in FY 1968–69 was $5,695,400. There was an additional sum of some $4,000,000 available from previous years from municipalities whose grant applications could not be approved for one reason or another. There will be no surplus this year.

Some 75 grant applications totaling more than $17,000,000 were received during this fiscal year which is ending. The State has been able to recommend funding on only 26 of these. An additional 18 applications have been certified to the Federal Water Pollution Control Administration as reimbursable. Because of the squeeze on funds, the State had to set a limit of funds for any individual project of no higher than 25 percent of the federal allocation. Florida's water quality standards require all sources of municipal and industrial waste attain a treatment efficiency of 90 percent or better no later than January 1, 1973. This early deadline is expected to increase the pressures in this State for more federal funds to aid in sewage treatment plant expansion and improvement. Other sources of funds, such as bonds, are becoming increasingly hard to obtain, especially for the smaller communities in the State. The cost of money has risen sharply and is still climbing.

This brief outline shows that the situation regarding availability of federal funds for water pollution control and abatement shortly is critical in Florida. The State has not taken up the slack left by the under-funding at the Federal level. It is my hope that we will move more vigorously at the State level. A strong presentation will be made to the Legislature next April for a State grant program. However, even this will not serve to lessen the need for Federal funds to carry on this important battle. Let me assure you of support from this office in your attempts to secure full funding for the Clean Water Restoration Act for Fiscal year 1970.

Sincerely,

CLAUDE R. KIRK, Jr.,
Governor.

STATE OF MAINE,
Augusta, Maine, August 19, 1969.

Hon. JOHN D. DINGELL,
Member of Congress, Congress of the United States, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN DINGELL: Recently, an article in the Conservation Foundation Newsletter was brought to my attention in which it was stated that you and six other Congressmen were pushing a drive for the full $1 billion authorization for waste treatment plant construction. My letter to you of June 19th detailed Maine's deep interest in having the full authorization funded.

Subsequently, a resolution was introduced by me and unanimously passed by the New England Governor's Conference, of which I am Chairman, calling upon the New England Congressional Delegation to support efforts for further Federal funding and specifically, to work for the full authorization of $1 billion. I am enclosing a copy of the resolution for you.

Any suggestions you might have as to how we could be helpful to you in your effort would be appreciated.

Sincerely yours,

KENNETH M. CURTIS,
Governor.

RESOLUTION

Whereas, the continued pollution of our region's lakes, rivers, estuaries, and coastline is a serious threat to the economic vitality, environment and public health of our six States; and

Whereas, each New England State has demonstrated leadership and determination in attempting to resolve these critical water quality problems through the development of water quality standards on interstate and intrastate waters; through regional cooperative action and the establishment of one of the Nation's first interstate water pollution compacts and also one of the first river basins commissions; through substantial State aid to local communities for the construction of waste treatment facilities and prefinancing of the Federal share of these facilities; and

Whereas, the Federal Government after enactment of strong water pollution control legislation has not appropriated the funds authorized under that legislation required to assist in the task of restoring the quality of this region's polluted water; and

Whereas, the National fiscal gap over the past five years between the appropriations and authorizations under that legislation amounts to a total of one billion five hundred twelve million dollars;

Now therefore be it resolved, that, the Governors of the New England States call upon the members of the New England Congressional Delegation to support all reasonable methods designed to resolve this crucial financial problem. Specifically, we urge Congress to fund the full authorization under the existing program and that we oppose any move to reduce the current 50 to 55 percent level of Federal support to individual projects as now established under the Water Pollution Control Act.

Be it further resolved that, we urge that the Congress seriously consider long term financing of the Federal share of the cost of water pollution control facilities in order to extend Federal assistance to the maximum number of projects within allocated funds if these allocated funds remain significantly below the authorization; provided that, the Federal obligations incurred as a result of State pre-financing of the Federal share are assumed by the Federal Government.

MORE THAN THIRD OF CONGRESSMEN JOIN REPRESENTATIVE DINGELL'S CLEAN WATER CAMPAIGN

The number of Congressmen signing up to vote for full $1 billion funding of the Clean Water Restoration Act is certain to grow when the House of Representatives resumes sessions this week, Rep. John D. Dingell, Democrat, of Michigan's 16th Congressional District, predicted today.

"This is truly a national campaign we have going," Rep. Dingell said. "We have more than 160 members—more than a third of the House—enlisted now. They come from all parts of the country and represent all shades of opinion.

"I am particularly pleased that 40 Republicans already have joined our drive. We are making a bipartisan appeal for a bipartisan cause.

"What we are saying is that all Americans want their water supplies restored to decent purity, and we believe that the country can afford the cost."

Rep. Dingell spoke for a bipartisan group of seven Congressmen who, on June 2, launched a drive for $1 billion in Federal aid for State and local water purification projects. The $1 billion was authorized for 1970 in the Clean Water Restoration Act passed in 1966, and throughout the land, States and cities have gone ahead with construction plans on the assumption that Congress would make the money available.

But Congress appropriated only $214 million of $700 million scheduled for this year, and the Budget Bureau is asking only $214 million instead of the $1 billion scheduled for 1970. Meanwhile, a backlog of more than 4500 State and local water treatments projects calling for $2.3 billion Federal aid is piling up.

The $200 million water treatment modernization program of the City of Detroit system has fallen two years behind schedule, partly for lack of Federal funds. Modernization programs of Trenton, Riverview, Grosse Ile, South Rockwood and other cities not served by the Detroit system will be delayed if money is not forthcoming soon.

The State of Michigan, so far, has avoided delay by advancing the expected Federal share of its $540 million program. But if Federal money is not provided, Michigan will be able to complete only half of its present water purification plans.

Rep. Dingell's group plans to propose an amendment appropriating the $1 billion when the annual Public Works appropriation bill comes to the House floor for passage. Besides Rep. Dingell, they are: Reps. John A. Blatnik, D., Minn.; John P. Saylor, R., Pa.; Michael A. Feighan, D., Ohio; Paul N. McCloskey, R., Calif.; Henry D. Reuss, D., Wis.; and Jim Wright, D., Texas.

THE ARTS AND POLITICAL CRAFTS

(Mr. MORSE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MORSE. Mr. Speaker, I could not have been more delighted at President Nixon's appointment of Nancy Hanks to be the new Chairman of the National Council on the Arts. In Nancy Hanks, the President has found a person uniquely qualified to direct the Government's effort in this area.

Miss Hanks has had extensive experience in Washington, especially in the White House during the Eisenhower administration. Her credentials in the arts are widely recognized. She served as head of the Associated Council of the Arts, a private organization which supports the arts. Most recently, she was associated with the Rockefeller brothers special projects funds where she was primarily responsible for turning out a comprehensive report on financing the performing arts.

In the Washington Post for Sunday, September 7, there appeared the following editorial regarding Miss Hanks' appointment and I include it at this point in the RECORD:

THE ARTS AND POLITICAL CRAFTS

Miss Nancy Hanks is a neat catch as chairman of the National Council on the Arts, the fledgling agency that steers federal money into culture. Her role in producing the comprehensive Rockefeller Fund report on financing the performing arts, and her most recent post as head of the main private national organization that supports the arts, comprise fine credentials. For her charm as well as her savvy, she has the respect of the pros in the field. The Nixon administration had erred gratuitously by dismissing Miss Hanks' predecessor, Roger Stevens, six months ago simply because he was a Democrat. In the interim, the staff at the council began to disintegrate and planning for the current year was paralyzed. But the appointment of Miss Hanks makes for a good recovery.

In nominating her, President Nixon said: "One of the important goals of my administration is the further advance in the cultural development of our nation." To honor these words, he will have to do much more than name an attractive arts council chairman. At once, he will have to remove the $1 million lid which his Budget Bureau is reported to have placed on the council's budget, for which the House has already approved $4.25 million. A President who removes most of the council's money can scarcely pretend to be "advancing" culture. Moreover, with Miss Hanks' counsel, the President must take the opportunity, which arises next year when the council's authority runs out, to put federal support of the national culture life on a solid foundation. We would like to believe that without a presidential commitment to do these things, a person of Miss Hanks' stature would not have signed up.

NIXON ADMINISTRATION FOREIGN POLICY

(Mr. MORSE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MORSE. Mr. Speaker, last week the distinguished Under Secretary of State, Elliot L. Richardson, spoke before the International Studies Association in New York City. Under Secretary Richardson provided a comprehensive review of the foreign policy of the Nixon administration, with particular emphasis on its objectives and strategies. I think our colleagues will be most interested in Mr. Richardson's remarks.

The Under Secretary points out that President Nixon has begun to forge a distinct and fundamental change in the course of American foreign policy with long-range goals within the framework of which immediate decisions can be more rationally made. Recognizing that changing environments require changing policies, the Nixon administration seeks to preserve an important degree of flexibility with which to meet new circumstances and new situations.

We have already seen some indications of the new policy Mr. Richardson speaks of. During his visit to Asia, President Nixon took care to point out that, while the United States would retain its interest in the Pacific and would continue to play a role there, the nature of that role and that interest would be updated to fit the requirements of the present.

The hallmark of this new policy is that the United States will limit its commitments abroad to those which it can "prudently and realistically keep."

I include, Mr. Speaker, Under Secretary Richardson's remarks at this point in the RECORD, and I commend it to our colleagues' attention:

ADDRESS BY THE HONORABLE ELLIOT L. RICHARDSON, UNDER SECRETARY OF STATE, BEFORE THE INTERNATIONAL STUDIES ASSOCIATION, BILTMORE HOTEL, NEW YORK CITY, SEPTEMBER 5, 1969

I would like to discuss with you today the foreign policy of the Nixon administration. It has been taking shape for seven or eight months now, a sufficient and appropriate time to make some observations on its overall strategies and objectives.

The policies of every administration reflect the interaction between the philosophy and temperament of the man who is President, and the mood, pressures and requirements of the moment in history in which he leads the nation. In the case of this administration, and in international affairs particularly, the views and experience of the President and the needs of the moment represent a particularly beneficial blending.

I think this is true for several reasons: For one, President Nixon is a highly trained and sophisticated foreign affairs expert, whose professional experience goes back for a quarter of a century. He served, for example, on the Herter Committee which developed the Marshall Plan. In the sixteen years before his assuming the Presidency—eight as Vice President and eight as a private citizen—he traveled extensively and became intimately familiar with many world leaders and their problems. The President's political support, moreover, so representative of the broad middle body of American thought, gives him a degree of flexibility in his dealings with other nations that would be denied to someone who represented either political extreme.

Mr. Nixon himself recently observed that one of the weaknesses of American foreign policy has been that "too often we react rather precipitously to events as they occur. We fail to have the perspective and the long range view that is essential for a policy that will be viable." The President's reinvigoration of the National Security Council system has helped to insure that our policies will not lack these attributes. On this score, incidentally, I am obliged to disappoint those journalists who delight in fomenting feuds: relations between the NSC staff and State are vigorous and constructive, and the objective of taking into account all the national interests in foreign policy making is being achieved.

Finally, like people in many other lands, Americans are disillusioned by rhetoric, bored with false drama, and tired of exaggerated hopes and overblown undertakings. They are looking for stability, not adventurism. Not himself given to flamboyance, the President has sensed and responded to their mood.

The general nature of the policy that has emerged from this blending of the President's views, experience, and temperament with the exigencies of the period has often been characterized by observers in the press, academic community, and elsewhere as pragmatic and flexible. So far as it goes, this is a fair enough assessment. Certainly there has been no unfolding of elaborate schemes for their own sake, no flourish of simplistic slogans, no promulgation of a "grand design." In this time of rapidly shifting events, when each region, country and situation poses different problems and presents different requirements, any foreign policy *not* capable of flexible and pragmatic adjustment is in trouble almost by definition.

What seems to have become somewhat overshadowed in this concentration on pragmatism, however, is the fact that under this administration American foreign policy has entered upon a distinct new era, one marked by some quite fundamental changes in course, emphasis, and direction. Definite long range goals are being set against which the wisdom of shorter range decisions can be judged. Flexibility, in other words, must not be confused with drift. Under the President's direction a cohesive and dynamic new policy is being crafted to fit the requirements of changed circumstances.

To make clearer where we are going, let's take a quick backward look at where we have been.

Having added, at Hiroshima and Nagasaki, a new dimension to war in World War II, the United States could not in its aftermath escape a new dimension of responsibility for peace. During the decade of the fifties, therefore, we extended the protection afforded by our capacity for massive retaliation over most of the free world, organizing in the process a number of regional alliances.

On the whole the system has worked—and is still working—to deter massive or blatant aggression. By the end of the fifties, however, it began to be apparent that the capacity for massive retaliation was not an answer to small, conventional wars; it followed that wars of insurgency, abetted by Communist organizers and aided by Communist arms, could become instruments of Communist aggression. There was good reason, moreover, to doubt that our allies and friends could defend themselves against such wars by themselves; without the threat of American military intervention there was a risk that they would fall under Communist domination. And so in the early sixties we moved to close this "loophole" in our security system. Vietnam was a logical, if not inevitable, product of this policy.

Now that the sixties are ending, we have come to see in sharper focus the hard realities which affect American capacity to help our friends and allies combat insurgency, whether or not externally assisted. Fortunately, at the same time, other circumstances have so changed as to restrict the kinds of help that are needed. Both of these factors have important implications for U.S. policy, as Mr. Nixon himself, writing in the October 1967 issue of Foreign Affairs, was among the first to point out.

The Vietnam experience has made clear the difficulties involved in applying a policy of American intervention in insurgency wars. It has demonstrated that the effectiveness of any government, even with our help, in controlling insurgency is depedent on the broad-based support of its own people. And this in turn has underlined the importance for any such government of domestic programs responsive to the social demands upon which insurgency feeds. We cannot, it now seems clear, do the job of fighting insurgency for someone else. We cannot provide the indigenous will and resolution, or the toughness and durability that are needed if this kind of warfare is to be waged successfully.

Foremost, meanwhile, among the developments making dependency on American help less necessary has been the growth in strength and confidence of the newly independent nations, particularly those of Asia. Since emerging from colonialism, these nations have shown a growing capacity to protect their independence. Despite troubling growing pains, population problems, and economic difficulties, their demonstrated nationalist ardor, regardless of their particular ideology or form of government, makes outside domination difficult to accomplish and harder to maintain.

In the light of these developments, the President has made clear that the nature of our assistance to nations threatened by internal subversion will hereafter depend on the realities of each separate situation. In some cases assistance in economic and political development may be enough. In other cases aid in the form of training and equipment may be necessary. But the job of countering insurgency in the field is one which must be conducted by the government concerned, making use of its popular support, its resources, and its men. Large-scale intervention from abroad is, of course, something else again and must be considered against the backdrop of the total obligations and interests of the American people.

This, in essence, was the message the President carried to the nations of Asia. It was a message of support and encouragement of their new strength and nascent regional awakening and cooperation. It was a reassurance that United States commitments in Asia remain unchanged. It was a reminder that we will continue to play a role as a Pacific power. But it was also a declaration that the character of our participation is being updated.

As he said in Bangkok:

"Our determination to honor our commitments is fully consistent with our conviction that the nations of Asia can and must increasingly shoulder the responsibility for achieving peace and progress in the area.

"The challenge to our wisdom is to support the Asian countries' efforts to defend and develop themselves, without attempting to take from them the responsibilities which should be theirs.

"For if domination by the aggressor can destroy the freedom of a nation, too much dependence on a protector can eventually erode its dignity."

The new developments and changed circumstances to which the President addressed himself in Asia have their counterparts, of course, throughout the world. Among these, the most important, perhaps, is the tendency on the part of developed and underdeveloped countries alike to focus increasing attention on internal problems. The goals of economic growth, technological development, expansion of educational opportunity, and easing of urban pressures absorb their minds and energies. Their student populations reflect and reinforce those preoccupa-

tions. Among the by-products are waning ideological fervor and, in the developed countries at least, growing impatience with the diversion of limited resources into "nonproductive" military uses. This inward focus, nevertheless, cannot shut out the outside world, which is reflected back by every significant economic and technological undertaking. Indeed, it may well turn out that the most important by-product of national introspection is an awareness of global interdependence.

Neither the U.S. nor the USSR has been immune from these developments. On our country, their impact is felt in the pressing demands of neglected domestic problems, which have become powerful competitors with the claims of external security. In the USSR, efforts to cope with agricultural deficiencies and to meet growing consumer demands are undoubtedly having some effect on Soviet society. Most Soviet young people the New York Times reported on Tuesday, seem almost burgeois in their desire for more and better material things. They work by day and study by night, saving for vacations, clothes and better apartments.

It would be dangerous, however, to gamble on the proposition that the material aspirations of these young people have fundamentally altered the nature or objectives of the Soviet state. Its actions in Czechoslovakia and its repression of its own intelligentsia bear melancholy witness to the contrary. But the Soviets also have good reason to seek some relief from the enormous and ever-increasing costs of modern strategic weapons systems. With their massive nuclear stockpile, they may now share our own realization that overkill multiplied by overkill still equals overkill.

This, at any rate, is important among the factors which have led President Nixon to open the door to an "era of negotiation." In heading into this era, we are prepared to "take risks for peace—but calculated risks not foolish risks." We shall not bargain away our security for vague improvements in the "international atmosphere." Progress in East-West relations can only come out of hard bargaining on real issues. A detent that exists only in "atmosphere" without being related to substantive improvements in the relationship between the powers is worse than no improvement at all. It tempts us to lower our readiness, while providing no really concrete basis for a reduction in tensions.

If tensions are to be *genuinely* lowered, progress will have to be made in the solution of outstanding issues of a concrete nature—issues such as access to Berlin and European security; a Middle East settlement; a permanent resolution of the Vietnam conflict; or in the strategic arms limitation talks. This is the reason also that we and our NATO allies have insisted that a European Security Conference might be useful only after specific items to be negotiated have been nailed down. The final communique of the NATO Foreign Ministers issued at their April meeting made this point very explicitly. It said: "The allies propose, while remaining in close consultation, to explore with the Soviet Union and the other countries of Eastern Europe which concrete issues best lend themselves to fruitful negotiation and an early resolution."

The manner in which the Soviet Union reacts to our specific proposals on specific issues will afford a test of its basic intentions. If their responses seem reasonable and their approach to the conduct of negotiations appears to be in good faith, then grounds will have been established to move forward. But no single step ahead can in itself bring an end to East-West tensions. Identifying, negotiating, and resolving disputed situations must be a continuing process, one that will take time, patience and ingenuity. Genuine progress will be achieved only if both sides are satisfied at each step along the way that their security has not been jeopardized.

Whatever, at any rate, may be the progress of our negotiations with the Soviet Union, we shall, in the meanwhile, continue to pursue two parallel objectives. One—closely related to the fulfillment of our treaty obligations—is to strengthen our relations with our friends. This was one of the objectives of the President's trips to Europe and Asia. His European trip, for example, assured our NATO allies that we view the alliance as an evolving partnership, one which is capable of growing to meet changed needs. In the President's words, we see it not as "the temporary pooling of selfish interests" but "a continuing process of cooperation." The full and genuine consultation he promised has reinvigorated our relationships in Europe and brought forth greater frankness and trust on both sides.

The other objective is to improve our relations with countries not aligned with us, including those that are hostile. This, of course, was the purpose of the President's visit to Romania, and the overwhelming reception given him there was a graphic indication of the warmth many Eastern Europeans feel toward America.

In the case of Communist China, long-run improvement in our relations is in our own national interest. We do not seek to exploit for our own advantage the hostility between the Soviet Union and the Peoples Republic. Ideological differences between the two Communist giants are not our affair. We could not fail to be deeply concerned, however, with an escalation of this quarrel into a massive breach of international peace and security.

Our national security would in the long run be prejudiced by associating ourselves with either side against the other. Each is highly sensitive about American efforts to improve relations with the other. We intend, nevertheless, to pursue a long term course of progressively developing better relations with both. We are not, in other words, going to let Communist Chinese invective deter us from seeking agreements with the Soviet Union where those are in our interest. Conversely, we are not going to let Soviet apprehensions prevent us from attempting to bring China out of its angry, alienated shell.

Firmness toward our commitments, realism toward change, and respect for other nations can be seen in varying combinations in all of this Administration's approaches to the problems of foreign policy. Although the United States no longer has the overwhelmingly onesided margin of strength that was ours in the shattered postwar world, we are still a great power, and we have a vital stake in international peace and stability. We cannot shrink from the responsibilities that this fact and the nature of our worldwide interests bring to us. As President Nixon told the Governors on Monday, "The new strategy for the seventies . . . means maintaining defense forces strong enough to keep the peace—while not allowing wasteful expenditures to drain away resources we need for progress. It means limiting our commitments abroad to those we can prudently and realistically keep. It means helping other free nations maintain their own security but not rushing in to do for them what they can and should do for themselves."

These, in broad profile, are the directions the foreign policy of this Administration are now taking. The unfolding international situation presents us with difficult choices and makes exacting demands. But it also holds before us unparalleled opportunity to achieve the peace which, in the words of the President's inaugural address, "is not victory over any other people, but the peace that comes with healing in its wings; with compassion for those who have opposed us; with the opportunity for all the peoples of this earth to choose their own destiny."

KEEP COOL WITH COAL

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SAYLOR. Mr. Speaker, I wish to extend to those colleagues who are residents of our Atlantic megalopolis my congratulations upon enjoying a cool summer. My congratulations are occasioned by the temperature tantrums thrown by the electric utilities in recent weeks. One major cause of the inadequacies of these utility companies has been their overoptimistic reliance upon the availability of nuclear generating capacity to meet the high electrical power demands of consumers.

Every time the temperature reached a high level, the request to cut down on the use of electricity went out to consumers. At the very time when fans and air conditioners were needed most, we were asked to forgo their use. The consumer—and by this I mean not only the individual citizen, but business and Government as well—has been victimized by the electric power industry's fascination with nuclear energy.

The time may come when the technology for nuclear power generation has become reliable enough and safe enough to make a meaningful contribution to our expanding requirements for electricity. That time is not yet in sight, however.

A 640,000-kilowatt nuclear generating plant at Oyster Creek, N.J., was expected to be on line but delays have now put that project more than 2 years behind schedule.

Similarly, a new nuclear facility at Indian Point in Buchanan, N.Y., was to be delivered to Consolidated Edison earlier this year, but will not be available for about 2 more years due to construction problems and a lack of skilled workers.

In other instances, delays and cost increases have contributed to an overall deterioration of the power situation. In the face of growing power demands and the lack of expected nuclear generating capacity, older conventional equipment has been increasingly subject to breakdowns.

What nuclear energy has generated in abundance is not power, but problems.

Those in the utility industry who have locked their development planning to the emergence of nuclear technology now find themselves in a very uncomfortable position. Being human, they have cast about and found a scapegoat—the conservationist.

Dr. Seaborg, Chairman of the Atomic Energy Commission, has characterized those who have historically been concerned with environmental factors as guilty of "irrational thinking and activity based on misinformation and unfounded fears."

Con Ed's Charles F. Luce has heroically shifted the blame for the shortage of electric power to conservationists, stating:

> We're not constructing a single plant that someone is not objecting to.

He added "the pendulum has swung too far" in favoring protectors of the environment, but—

> There's no reason why we can't have power and not louse up the environment.

His latter point has been dramatically proved by those in the power industry who have maintained a flexible attitude toward energy sources.

In Pennsylvania the Keystone operations of the Pennsylvania Electric Co. utilize the tremendous energy available in coal to generate electricity which is then distributed throughout the Eastern United States. Penelec too, had considered use of atomic energy, but wisely decided that the day of the useful atom had not arrived, and that wish power would not run an air conditioner or light a lamp.

Power company executives are finding that if consumer demands for electricity are to be met in the next few years, there is a need to return to the available technology and abundant energy source which are characteristic of coal.

My colleagues may wish to reverse the usual situation by writing a letter to their constituents—at least those in the electric power industry—and in that letter pass along this refreshing thought—"Keep cool with coal."

GUN CONTROL—PENNSYLVANIA ASSEMBLYMAN'S VIEW

(Mr. SAYLOR asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, I have often directed our colleagues' attention to matters dealing with the drive for gun confiscation in America, and I will continue to do so until the gun control lobby finally admits that their attempts to infringe upon the rights of the individual is not the way to solve the problem of firearms violence in America. Today, I feel honored to bring to the attention of our colleagues an article on the subject of gun control, which was written by a close friend in the Pennsylvania House of Representatives.

Representative George W. Alexander of Clarion County, Pa., has been a leader in the battle against the gun controllers in the Pennsylvania house since 1962. He writes a regular newspaper column which appears in the Oil City Derrick. A current article expresses his and my anger and disgust with the recent report and recommendations of the National Commission on the Causes and Prevention of Violence. It is a pleasure to recommend this article to our colleagues:

[From the Oil City (Pa.) Derrick, Aug. 13, 1969]

FROM THE STATE HOUSE—NEW GUN LAW IGNORED IN SEVERAL COURT CASES

(By George Alexander)

Years ago it was taught to me not to do certain things when you are angry. At least to try to refrain from certain things when your blood pressure is up. Things like fighting, arguing, writing or reporting, you should lay off when seeing red. The reason given (especially for fighting) was that when you are angry you lose. Over the years this teaching, while not always heeded, has proven correct in most cases.

But right now I'm breaking the rules, disregarding the teaching and writing with admitted anger, plus disgust. And although the anger is mixed with disgust, the anger remains undiluted.

I'm admitting being fed up, completely fed up, with the ever-recurring attempts, both federal and State, to legislate on so-called gun control measures. If I figured myself a criminal I imagine I would be the opposite of angry; meaning happy. Happy to know any so-called gun control registration, or confiscation would be right smack up my criminal alley. But because I figure myself just an average citizen, minus criminal tendencies, but certainly concerned about criminals and their actions, I am far from happy, just plain angry. To put it bluntly and to the point, I wonder what the hell is going on.

Within recent months we of the Pennsylvania General Assembly passed legislation, and the Governor signed it into law, whereby any criminal committing certain crimes with the use of any kind of gun, was to be given stronger sentences by the courts. Mandated sentenced. What happened? In numerous cases, since this law became law, courts have ignored and by-passed this new law. Criminals using guns will get light sentences or parole.

Just a few days ago, July 28th, the National Commission on the Causes and Prevention of Violence issued a statement on firearms and violence. This statement went on to propose legislation which would restrict the use and possession of handguns (revolvers and pistols). They recommended the confiscation, by States, of 90 per cent of the handguns in private ownership. The next day, July 29, 34 bi-partisan members of the House, including this one, introduced a resolution (H.R. 128). The resolution was worded in part as follows:

"Handguns are widely used for sporting purposes. The citizens of the United States of America possess the constitutional rights to bear arms; therefore be it resolved, that the General Assembly of the Commonwealth of Pennsylvania express its opposition to the statement issued July 28, 1969 by the National Commission on the Causes and Prevention of Violence; and be it further resolved that copies of this resolution be transmitted to the members of said Commission and to each Senator and Representative from Pennsylvania in the Congress of the United States of America".

It just so happens I am one of many who use a handgun for hunting purposes. My .357 Magnum has performed well. However, while this method of hunting is important and enjoyable to me and many others, that is not really the important issue. The issue is why try to take any gun from, or make it awfully hard to own, for thousands of law-abiding citizens?

I repeat, I'm angry. Completely fed up with the "do-gooder, big-brother" stuff that is so prevalent in 1969 legislation, national or State.

Because thousands of people are killed yearly in cars, should you as the owner of a car be forced to turn in your car and buy a horse and buggy? Or walk? Because criminals, who will get guns no matter what the laws are, and use them unlawfully, should the thousands of law-abiding gun owners be penalized?

Guns, by themselves, don't break laws or kill people, it's the criminal using a gun unlawfully. Let's aim at him. And if criminals knew beforehand they would be aimed at literally, fewer crimes would be committed.

Concern has been expressed by the beforementioned Commission, and other sources, over the increase in the sale of handguns in the United States recently. To any law abiding citizen seeing, hearing about, and experiencing present day lawlessness in the form of rioting, burning, rape, and just plain trouble making, this increased sale is certainly understandable.

The increase in sales is because of needed, desired, and rightful protection. A person caught in the middle needs and has the right of protection. A handgun is not only protection, it could often prove to be a deterrent. A fly swatter won't do the job.

Let's cease attempting to destroy, alter or lessen the long-standing right of law-abiding citizens to bear arms. We built quite a country respecting such rights.

I've already admitted present angriness. If some day in the future, for some reason, an agent, or an officer, or some type of bureaucrat came to confiscate the guns I own, for no other reason than ownership, the anger I now feel might be rated bush league.

On a wall in front of my desk is a well-worded Pennsylvania Fish Commission poster. It reads:—

"Bless Your Heart—Relax—Go Fishing."

Perhaps today I should have heeded the poster.

H.R. 13694, A BILL TO CREATE THE HOME OWNERS MORTGAGE LOAN CORPORATION FOR DIRECT FEDERAL LOANS TO MODERATE INCOME FAMILIES

(Mrs. SULLIVAN asked and was given permission to extend her remarks at this point in the RECORD and to include extraneous matter.)

Mrs. SULLIVAN. Mr. Speaker, I have today introduced H.R. 13694, a bill to create the Home Owners Mortgage Loan Corporation, an independent agency authorized to make direct loans to creditworthy families in the middle-income range who cannot otherwise obtain home financing at reasonable rates of interest.

As the ranking Member of the Subcommittee on Housing of the House Committee on Banking and Currency, and as a member of the National Commission To Study Mortgage Interest Rates created by Public Law 90–301, I have become convinced that our many programs to assure a decent home for every American family cannot succeed in their objectives during periods of tight money, such as the present, without the ready availability of new sources of mortgage funds at reasonable rates.

It appears obvious that the only avenue for assuring the availability of such funds is the Federal Government. This bill says, in effect, that if private lenders cannot provide adequate mortgage funds at reasonable rates, the Government must do so, and will do so.

COSPONSORED BY HOUSING SUBCOMMITTEE CHAIRMAN BARRETT

Joining me in introducing this far-reaching measure—a drastic but absolutely necessary cure for today's unconscionably high mortgage rates—is the distinguished gentleman from Pennsylvania, the Honorable WILLIAM A. BARRETT, chairman of the Subcommittee on Housing of the House Committee on Banking and Currency.

Congressman BARRETT's cosponsorship of this bill is indeed heartening to me and assures that this measure will be seriously considered in the Housing Subcommittee. It is not intended as a "gimmick" to "jawbone" present high interest rates down on the threat that we might act; it is put forward as both an immediate and long-range solution for recurring crises in home financing. It is a permanent solution, not a temporary expedient, for tight money as it affects homeownership.

HOLC SAVED HOMES; HOMLC CAN PROVIDE NEW ONES

The Home Owners Loan Corporation, launched in the early days of the Roosevelt New Deal, enabled millions of Depression-era American families to remain homeowners, by providing them with direct loans for refinancing so that they could avoid eviction and save their existing homes from foreclosure. The Home Owners Mortgage Loan Corporation can enable millions of today's middle-income families to achieve homeownership, not otherwise available to them in periods like the present, through direct loans on terms they can afford.

The HOMLC, although an independent agency with its own board of directors, will operate through existing Federal Housing Administration offices, so it will have no elaborate administrative structure. It will function only during periods when private mortgage lenders are unable or unwilling to provide housing loans to the average family at reasonable rates.

We must bring interest rates down, and hold them, to a level the average family can afford, so that it no longer costs them more to finance a home than to build it.

FLEXIBLE MAXIMUM INCOME CEILINGS, INTEREST RATES

The bill defines "moderate income" eligible families as those with incomes of $12,000 or less, a figure which could later be raised or lowered by the proposed Home Owners Mortgage Loan Corporation. The maximum interest rate to be charged by the Federal Government would be 6½ percent, or less. Loans as high as $24,000 for up to 30 years could be included under the program.

The Sullivan-Barrett bill would authorize appropriations of $2 billion a year for 5 years to establish a basic capitalization of $10 billion.

Thereafter, if repayments on outstanding loans or investment income did not provide a loan pool of at least $2 billion a year, additional appropriations would be authorized.

The proposed HOMLC would have a board of directors of nine members, including the Commissioner of FHA. The board would set all policies. At least five of the nine board members would be private citizens who would be paid on a per diem basis only when actually engaged in board business. The officers of the Corporation would be drawn from among the public members.

MEETING THE NEEDS OF MIDDLE-INCOME FAMILIES

Mr. Speaker, we have numerous programs for assisting our lowest income families to obtain good housing through subsidized rentals or subsidized mortgages. The average family—above the public housing income level—is dependent entirely upon the free market for its housing. This group is completely at the mercy of the current tight money squeeze. There is no existing avenue of help. This bill would prove help to that family, without subsidy, by utilizing the Government's vast borrowing power to obtain loans at reasonable rates.

The National Commission To Study Mortgage Interest Rates, which was created by Congress last year to recommend policies to assure an "adequate supply of mortgage credit at rates of interest the American family can afford," made no effective proposals for bringing down interest rates, and as Congressman WRIGHT PATMAN and I said in our dissenting views in that Commission, it gave the Federal Government "no alternative but to become the mortgage banker of last resort." This bill establishes the machinery for carrying out that judgment.

The preamble, or statement of policy of H.R. 13694, the proposed Home Owners Mortgage Loan Corporation Act, expresses its purpose in these words:

FINDINGS AND PURPOSE

SEC. 2. The Congress finds that the many programs of Government, intended to assure good housing for the American family at prices it can afford, are incapable of achieving their goals during recurring periods of tight money and high interest rates. Many credit-worthy families are being and have been denied mortgage financing on reasonable terms, not because of their inability to repay the obligation but because private funds needed for home financing have been diverted into other investment avenues. Such funds as are available for home mortgages are frequently offered only at unconscionable rates of interest. It is therefore the policy of the Congress and the purpose of this Act to stabilize mortgage availability and establish machinery for assuring moderate income families access to mortgage financing within their means, and thus to enable the average family to achieve its goal of home ownership, by providing direct housing loans through a Federal instrumentality to individuals in those instances where private enterprise cannot or will not extend loans at reasonable rates to credit-worthy applicants.

THE FIGHT FOR PURE WATER

(Mr. McCARTHY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. McCARTHY. Mr. Speaker, when Congress passed the Clean Water Restoration Act of 1966, we authorized a strong program to clean up the water resources in this country. Federal law requires the States to adopt water quality standards to be implemented by State and local governments within certain prescribed time limits. Millions of local dollars have been invested in waste treatment facilities, on the understanding that matching Federal funds would be available. But Congress has failed to honor the promise made in the Clean Water Restoration Act. For fiscal 1967 we appropriated the $150 million authorized in this act, but for fiscal 1968 we voted only $203 million of the $450 million authorized. Last year only $214 million of the authorized $700 million was approved. And for fiscal 1970 the administration request remains at $214 million against an authorized $1 billion.

Mr. Speaker, this governmental spectacle reminds me of the show "Promises, Promises." I share the view of the New York Times that it is hypocritical to enact grandiose programs and then undermine them by slashing appropriations vital to their fulfillment. I also believe that it is very unfair of the Federal Government to encourage States to embark on sound programs to clean up their waters and then oblige them to reduce the scope of those projects when we do not fulfill our part of the bargain.

The importance of full funding of the Clean Water Act is recognized throughout the country, and there is a good deal of support here in the House for an appropriation of $1 billion for fiscal 1970. To say that it has bipartisan support is to understate the situation, for support comes not only from the more liberal Members of both parties, but also from individuals and groups who generally favor reduced Government spending on all levels. Governor Reagan, of California, certainly one of our more fiscally conservative State leaders, has indicated his support for efforts to secure full funding.

I would like to insert in the RECORD at this time two editorials from the New York Times—dated August 25, 1969, and September 8, 1969—which urge the administration to revise upward the budget request of $214 million and urge the Congress to approve the full $1 billion authorized by the Clean Water Act:

[From the New York Times, Aug. 25, 1969]

THE FIGHT FOR PURE WATER

One of the few hopeful aspects of the presently vacationing Congress is its increased awareness that purifying the nation's water will take more money and speedier action than the Administration seems prepared to devote to that great objective. Urged on by a Citizens Crusade for Clean Waters, 162 Representatives are pledged to vote for an appropriation for sewage facilities that equals the sums authorized by Congress when it passed a major anti-pollution act three years ago.

That measure to provide matching grants to state and local governments for building waste treatment plants, called for an outlay of $450 million the first year, $700 million in the second and $1-billion for the current year. When it came to actual appropriations, however, only $417-million was voted for the first two years combined, and only $214 million is allotted in the current Administration budget. One result is that states that embarked on sound programs to clean up their lakes and rivers are forced to reduce the scope of those projects when what is desperately needed is their expansion.

The revolt in the House of Representatives, which has enrolled five committee chairmen, the majority whip, and a number of fiscal conservatives, is doubly significant. It rejects the hypocritical Congressional practice of passing grandiose programs only to undermine them later by quietly slashing the appropriations that are vital to their fulfillment. And more far-reaching, it is a sign that on Capitol Hill, as elsewhere, men are coming to understand that if they do not plan for a future of pure air and water, they need not plan for a future at all.

[From the New York Times, Sept. 8, 1969]

HALF-WAY STEP

The Department of the Interior has announced a commendable reversal in the Government's handling of those who pollute the country's waters. The department intends to return now to those abatement hearings which it abandoned last spring as mere "yelling and screaming" sessions.

This time, however, there will be something behind the abatement process that promises better results than either fruitless yelling or cozy talks. If an individual or company is found guilty of violations which it fails to correct in 180 days, the Interior Department itself will sue for a mandatory court injunction instead of leaving that recourse, as formerly, to the doubtful initiative of the state.

We are relieved by this evidence that the "New Federalism" has not wiped out a lively awareness in Washington that state govern-

ment can be sluggish and local government impotent, on this front at least. That comfort would be more substantial, however, if the Administration likewise reversed its decision to seek only $214 million from Congress to support the Federal grant program for the construction of waste treatment plants instead of the $1 billion which Congress itself originally authorized for fiscal 1970. Governors and mayors from Delaware to Hawaii have already protested this glaringly false economy, including the financially prudent Ronald Reagan of California.

If cities are prevented, for lack of Federal help, from meeting the anti-pollution requirements of the law, it will be difficult to say the least, for Federal agencies to keep private industries in line. Why, they will be all too ready to ask, should they be penalized for adding pollutants to rivers which are already turgid with municipal waste? A fair question, we think, for the Administration.

LABOR DAY SPEECH BY W. A. "TONY" BOYLE

(Mr. WAMPLER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAMPLER. Mr. Speaker, I was recently honored to participate in a Labor Day celebration on September 1 at Elkhorn City, Ky., with Mr. W. A. "Tony" Boyle. Mr. Boyle is the president of the United Mine Workers of America, and he is one of the most respected and courageous labor leaders in our country.

Approximately 15,000 coal miners and their families were at Elkhorn City for this celebration, which was sponsored by districts 28 and 30 of the United Mine Workers of America. These two districts are composed of the membership of 50 locals in southwest Virginia and about 70 locals in eastern Kentucky.

Mr. Carson Hibbitts, of Norton, Va., is president of districts 28 and 30, and he introduced Mr. Boyle. As the representative of the Ninth Congressional District of Virginia, I have the privilege of representing the counties where district 28 of the UMW of A is located.

Prior to the Elkhorn City celebration, Mr. Boyle spoke at Logan, W. Va. I insert in the CONGRESSIONAL RECORD the remarks made by Mr. Boyle in these two coal mining areas:

W. A. BOYLE'S 1969 LABOR DAY ADDRESS DELIVERED SEPTEMBER 1, 1969 AT LOGAN, W. VA. AND ELKHORN CITY, KY.

Fellow mineworkers and friends: In Labor Day's Hall of Fame the members of the United Mine Workers of America, both past and present, stand the tallest.

Ours is a proud heritage.

The real spirit that is Labor Day was born right here in the coal fields long, long years before the day was formally declared a national holiday for the working man by the United States Congress in 1894. It was born of the sweat and blood and danger-filled days of those thousands of coal miners who preceded us and welded together our great union, the United Mine Workers of America. We have learned over the years—sometimes the hard way—that without our union we are less than serfs in this free Nation.

On this Labor Day, 1969—let us remember that lesson.

As we relax and enjoy ourselves this day, let us not forget the hard struggles of the past that have brought us to this moment in our history. Once again we are faced with troubled times.

We are faced today with an administration in Washington that is conservative and business minded. We of labor—the United Mine Workers and other unions—can expect little favor from that administration. Whatever we get in the years ahead will come only as a result of our own efforts.

This is an administration that has already been proved a master at juggling words and at stalling. Its attitude is well-expressed in the occupational safety message recently sent by the President to Congress. Stripped bare of verbiage, the President's message again calls upon the Congress to enact a law that would, in effect, turn over the problem to the States.

We coal miners have lived with inadequate state laws too long and we are sick of them. We serve notice now that we will not continue to live with this kind of law. If this administration fails to approve for the coal industry a Federal law that produces dust-free and safe mines, we will take action in our collective bargaining agreement. We serve notice now that dust-free and safe mines is our number one objective. We inform both the Congress and the administration that we will wait no longer.

We serve notice upon the coal operators here and now that we will begin new discussions on the intent and meaning of the mine safety clause in our present contract. We will wait no longer for the industry to move against the needless hazards and terrors of the mines. I am calling a union-industry conference in Washington, D.C. within the next few weeks. What the operators agree to at that conference will determine our future course.

We warn the coal operators here and now that if we have to close unsafe mines, as permitted under our present contract, we will do so! We warn the operators that as far as we are concerned a mine having excessive dust or gas is an unsafe mine. We intend to win a Federal law limiting dust to no more than three milligrams, and we will not permit such a law to become a dead letter. We will train our safety committees in their rights under the law. We will see to it that the law is enforced to the very letter.

We will mount a huge lobbying effort to show Congress that we mean business. We will bring hundreds of miners to Washington to lobby for the Federal law.

The United Mine Workers will soon expand the activities of our safety division to work even more closely with our rank and file safety committees. We are beginning a training session for our safety committees in district 31, and we intend to expand this training program throughout the union.

We have established a department of occupational health in our union. You will be hearing lots about that department and its work. We know you will like what you hear.

Two weeks ago I sent a letter to an official of Consolidation Coal Company informing the industry that unless it works with the union to insure safe and healthful mine working conditions, it will face a confrontation with our union. This letter was sent after learning that the operators are worried because of their inability to recruit 50,000 new coal miners over the next five years.

The industry's answer to this tremendous manpower problem has been to show glamor movies even to kids in the third grade. We have informed Consolidation Coal and we now take this occasion to inform all other operators, that all the glamor movies in the world won't solve the coming manpower crunch in coal.

The children of today's coal miners are leaving the mining areas. They have seen their fathers face death beneath the ground. They have seen too many of their elders cough out their lives with black lung. They know too many who are sick, or maimed or who have been left fatherless by mine accidents.

It will do the coal operators little good to sit on their unmined piles of black gold five or ten years hence. There are no profits in unmined coal. Sound economics alone should induce the mine operators to make mining a safe and healthful occupation.

While coal mine health and safety is of major concern, we of the United Mine Workers share other concerns with the working people of this Nation. We know from past experience that the lash of unemployment has been used to drive us into the coal pits and to prevent escape by our children, on this Labor Day 1969 we would be less than true to ourselves if we were not disturbed by the recessionary policies being followed by the Nixon administration.

Interest rates in this Nation have reached an all-time high. With the blessing of the administration, the Federal Reserve Board is making it impossible for the average worker to buy a home. Public construction—badly needed in the mining regions—is being cut back. The administration is fighting to reduce the Federal allotment for public education—something urgently needed in the coal mining areas.

This high interest rate policy has not stabilized prices. Although we are no longer forced to buy at the company store, the prices we now pay in the supermarket make yesterdays company-store gouging look quaint. Prices go up month by month, and miners' wives feel the burden every time they buy groceries. High interest rates, which are reflected in every price transaction, adds to inflationary pressures.

There is no question that if these high-interest policies of the administration are carried far enough, we will have a recession. The United Mine Workers, therefore, will join with all unions in fighting these policies. We believe that we can have stable prices without unemployment, and we will fight for policies that will produce this result. We will have to put first things first—education before space exploration for example.

The recent moon-landing was indeed a wonder of American technology. And it proved we can do almost anything we choose to commit our resources to achieve. Now that we have gone to the moon, let us lower our sights to the earth below. We just cannot spend eight billion dollars a year to reach Mars. Let's treat the space program as a science program, as so many leading scientists have advised, and put it back in its proper perspective. While it won't have the drama of a moon-shot, it will permit us to divert important resources to the earth's problems.

We need new resources right here in Appalachia, in the coal country. The Appalachian program has constructed highways, but the tourists just travel through. Many of you knew this country as children; it was beautiful then, and it can be beautiful again.

Miners—both working and retired—should not be forced to live with smoldering culm heaps and polluted streams. We need to fill up and seal the abandoned mines. We need re-forestation and the restoration of clean waters. If our children are to remain at home, we must make this land fit for their habitation.

We can bring in tourism to these mountains if we develop programs that restore all the beauty that God put here. The United Mine Workers believes that it will do God's work by fighting to restore this area. We will mount a legislative drive for a Federal program of restoration and for funds to carry it out.

I have had the privilege of serving as the president of the United Mine Workers of America for the past six years. During that period, our union has negotiated three new industry-wide contracts with the coal operators. Despite the vilification now heaped upon us by our critics, we have in this period developed an arms-length relationship with the coal industry. We have shown in negotiations that there are two sides to the bargaining table—theirs and ours. If anybody thinks otherwise, let them ask the coal operators!

There are two aspects to our relationship with the coal industry, on the one hand, we

have an adversary relationship in our battle to win a fair and just share of the fruits of this industry for the coal miners. On the other hand, we have a common interest with the employers in research, marketing and the maintenance of an expanding industry—provided, of course, that such expansion benefits the miner and does not take place at his expense.

A look at the wage contracts negotiated in the past six years is the best proof that we have conducted our negotiations at arms-length. Our wages today range from $28 to $33 per day. One month from today each working bituminous miner will receive an increase of $2 per day. And by the time this present contract terminates in 1971, we will have a wage of $37 per day.

Your union increased the number of paid holidays, gained extended vacations with pay for thousands of working miners, improved our seniority, won pay for jury duty, made the coal operators agree to provide and pay for wash houses and won many, many other improvements.

Yes, we have worked with the operators to combat the encroachments in America on the use of deadly atomic energy for power plants. We did so both for the preservation of the coal industry and our jobs, and because America does not know what horrors it faces from the disposal of radioactive wastes from these plants.

Yes, we cooperated with the operators for more efficient coal product research. We even cooperated with the operators for more efficient marketing arrangements. We cooperated because these things are good for coal miners.

And if that kind of cooperation be treason, let our critics make the most of it! A prominent political figure in American life once said "Let's look at the record." The record of our union on wages and other benefits for its members speaks for itself. At the risk of being charged with being political at this Labor day celebration, I would like to quote a certain officer of this union who shall remain unnamed, here is what that officer had to say at our last constitutional convention, and I quote: "There have been two contracts negotiated under the great leadership of our distinguished president, and I say this without fear of contradiction from anyone; there is more bread and butter, there are more pork chops and potatoes in those contracts in that short period of time than any negotiator in the country has ever negotiated."

While that's fulsome praise indeed, the argument isn't whether or not this union administration merits such praise, but if that's a sweetheart deal, let this same officer and our other critics explain away both the words of the speaker and the outcry and complaint of the mine operators *because* of our gains.

But the past is meaningless unless it is prelude to the future, to a tomorrow. I place the coal industry on notice now that we are getting ready for that tomorrow! The United Mine Workers, despite past gains, has tremendous catching up to to do to lead this Nation once again in wages and working conditions. We intend to do *just that* because we merit *just that*. Our contract terminates two years from now and two years from now there better be a real concession on the part of the operators or there will be a confrontation with a determined membership of this union!

The productivity of the coal miner is possibly the highest in the Nation. Our industry employed more than 600,000 miners in 1950. Automation and mechanization has reduced the work force to 150,000 working miners. This reduced work force today produces far more black gold than the big 1950 work force. The coal industry, in general, has become prosperous and highly profitable. The demand for bituminous coal grows and grows as this Nation requires ever-more electric power, steel and chemical products directly dependent upon coal, while coal may no longer be the sole fuel, its domain extends farther than ever. American coal is produced so efficiently that we can and do export coal throughout the world.

The United Mine Workers of America on this Labor Lay 1969 notifies this Nation that its wage goal for the men who dig its coal is $50 per day. This is not an excessive goal. We intend to achieve it by the end of our next contract if not before. If a doctor, a psychiatrist, a lawyer, an actor or other professional is worth $50 an hour or more, the men who risk their lives in the highly skilled work in coal mines are worth far more than $50 per day.

But the $50 daily wage is only a start. With the kind of productivity being achieved in the mines, this coal industry can afford now to pay a guaranteed annual wage. We promise now that we will win this goal in 1971, hopefully in peaceful negotiations but otherwise if the operators so choose.

While your union achieved better seniority in the 1968 contract, we still have an important distance to go. We will move in that direction in the coming contract. We intend to make it clear that seniority shall permit a mine worker to take any job in any classification for which he is qualified or can become qualified through training at company expense.

If we win the kind of strong mine-safety law we want, we intend to write miners' rights to enforce the law in our next contract. If, for any reason, we fail to win the kind of Federal law we want, we intend to write our objectives for mine health and safety into the next contract. This is a striking issue. We will not take less than the maximum possible health and safety in the mines.

The mine workers' welfare fund has provided highly important benefits to the Nation's miners, but the basic 40 cents per ton royalty has remained unchanged since 1952, the time has come for improvement.

I became a trustee of the fund only recently following the death of our beloved John L. Lewis. In that position, I called for and won a pension increase of $35 monthly. Incidentally, the operators' trustee was fired after the increase was won.

I intend to seek and develop an actuarially sound pension and welfare fund that will accomplish the following:

(1) Increase the pension to $200 monthly.

(2) Provide hospital, medical care and wage payments to injured miners as long as they cannot work.

(3) Provide pension benefits as well as medical care for miners physically unable to work because of black lung, regardless of their age.

(4) Provide widows of coal miners with pension benefits for life or unitl they remarry.

(5) Provide dental care as part of the fund's medical program.

Because of the hazards of their occupation, miners are ineligible for group health and accident insurance benefits. Unlike other industrial workers in major industries, they are not covered by hospitalization, surgical and major medical plans. Nor are there provisions for sick pay such as are commonly enjoyed in other mass industries. Yet, the miner needs this kind of help most because of the hazards he faces.

The mine workers' welfare fund was created to fill the gap, and, up to now, has been able to do an important part of the job. More than two and one-half billion dollars has been paid to fund beneficiaries since 1946. Last year, the pension fund paid out $101 million in pensions, and $50 million to clinics, hospitals and doctors for medical care. It was not enough, but more than 100,000 received benefits.

Our ultimate goal must be the equivalent of the health, medical and lost-wage benefits paid in other industries, as well as pensions that rise with improved living standards and higher living costs. We will make a new beginning in 1971 in the next contract. If it is necessary to double the present royalty to the welfare fund to achieve the five points outlined here, the UMWA will fight to win that amount of royalty increase.

There has been much propaganda about the welfare fund and fat salaries it is supposed to pay. Yet, our doctors and lawyers are not paid even as much as they might earn in similar positions elsewhere, and when all is counted up, total administrative costs for the fund amounted to only 3 percent of disbursements last year.

We have been criticized for our ownership position in the National Bank of Washington, but that position has permitted us to operate this union without increasing dues, or assessing our members. It has been a good investment for our union and its members, and it has given us the financial strength needed to stand up to the coal operators.

New situations and changing circumstances require new solutions and innovation, the time has come in our union to begin to invest part of our resources consistent with safeguarding your union's assets and the assets of the welfare fund, for the direct welfare of miners.

The United Mine Workers of America intends to develop low and moderate income housing for working and retired miners. We intend to use every Government program available to that end. We know that we shall not end inadequate miners' housing overnight, but we shall make a beginning. We intend to consult with other unions that have undertaken such programs and with housing experts.

We will put up seed money to start housing programs where seed money alone will do the job. We will provide mortgage money at the best possible rates where that is required. We will work with Government agencies where matching money is needed.

The present structure and operation of the United Mine Workers Union has served us well under yesterday's conditions. We have inherited that structure from our predecessors but it is inadequate to meet the needs of today and tomorrow. The time has come for major change leading to greater membership participation in all union affairs and at all union levels. We must determine what structural changes would best serve our membership.

These problems will not be easily resolved. I propose therefore to name a commission of UMWA officers, together with rank and file members from each district and qualified staff experts, to examine the problem and to make recommendations for change at our next convention, if outside consultants are required to find solutions, the commission would be provided with their services. I propose also, that the recommendations of the commission be published and a copy made available to every member. There would be but one objective—make the United Mine Workers an effective democratic servant of its members.

I propose also that the United Mine Workers re-examine its jurisdiction. The commission should seek better to define that jurisdiction. The time may well have arrived for this union to change its name to "United Mine and Allied Workers of America." We would not seek to raid any organized plant, but we would organize the unorganized in plants which use coal for production and product purposes. We want no more district 50's, but we want to aid workers in the coal-consuming industries with our strength, and to aid miners with the strength of those whose work depends upon coal.

Let us begin now with active organizing campaigns in the unorganized sector of our industry and the other areas of mining and industry which are closely allied. That will require new manpower and new kinds of planning. This matter will be brought before the international executive board in the near future. We have made a start in the department of organization that was created

during my tenure. We have begun to view the workers in plants producing synthetic gas and oil from coal as part of the mining industry. We have some such workers under UMWA contract now. We cannot stand still. We must provide the manpower to sustain a never-ending organizing drive.

The United Mine Workers must help to develop new leadership from its ranks to work in the locals, in the districts and as representatives and officers of our union. We need trained officers on the job. Local officers—especially our new generation—require training. We will need organizers and international representatives able to cope with today's emerging problems.

I propose that we establish a department of education and manpower development to conduct an education and development program. As part of its activity, I propose that the department operate a mine workers' study center. Such a center would include accommodations for away-from-home study, for courses that run up to two weeks in length. Study courses would deal with such matters as labor and UMWA history, legislation, union structure and operation, grievance procedure, mine safety, contract analysis, contract negotiation and the like.

In the future our union will need many kinds of trained staff members, and I, for one, believe that most can be developed from our union's membership and their children. The department of education, in the course of its activities, will discover much of the talent we need. Through the study center and through on-the-job training, we can and will meet our union's needs from our own union family.

From here on, I intend to spend as much time as possible in the field. Knowing myself, I am certain that I will do much talking. But I plan to listen, and listen hard. There will be many new ideas to build our union and to improve the lot of the United Mine Workers membership. You will find me receptive to ideas and to your answers to our needs.

Whatever happens in the months and years ahead, we must guard with all our might the unity of the Mine Workers' Union. While some may express a passing interest in your welfare, your strength and your hope lies in the great organization we have forged over these many years. We will need change, but change must be constructive.

We face great challenges from changing technology, new social forces and changing values. I have faith that the problems that we will face in the time ahead can and will be met and overcome by the unity of purpose of the Nation's coal miners.

We have overcome adversity for all our lives.

We shall overcome in the world of today.

We shall, united, overcome the challenges of tomorrow.

Thank you very much.

STRANGLING TAX REFORM IN ITS CRADLE

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, last month the House, in response to the outcry of millions of taxpayers, passed and sent to the Senate a major tax reform measure. This bill, acclaimed by so many knowledgeable citizens, would appreciably alleviate unfair burdens now being borne by lower and middle-income taxpayers. Loopholes were narrowed or closed entirely. A fairer share of the tax burden was shifted to where it belongs; on major corporate and wealthy interests, many of whom have been escaping taxation entirely, to the outrage of the Nation at large. Eagerly an expectant country awaited the administration's position on this bill, hoping for positive support which would have guaranteed tax relief to so many who so desperately yearn for it. We have waited in vain.

For the administration strode forward, leaned over the cradle of tax reform and placed a pillow of vested interest over its face in an attempt to strangle it. Showing its true proprivilege colors the administration wants to alter the bill in favor of the rich and corporations at expense of staggering lower and middle-income taxpayers, particularly the latter. This is an appallingly brazen coup, ignoring human needs, tax justice and a coast-to-coast outcry demanding reform. It is a deliberate effort to ruin our best work, handing back to the rich almost all we have at last succeeded in beginning to take away from them. The gentle labors of Jehovah pale before the destruction this proposal would wreak.

First, the President wants to actually reduce the corporate tax rate by 2 percent, beginning in 1971 and completing the gift by 1972. Should he succeed, corporate tax payments would be lowered by $1.6 billion by then. Simultaneously, the average taxpayer would lose $2.5 billion in benefits granted by the House-passed bill. These proposals are an open book, filled with blank pages.

Tax-free municipal bonds would remain untaxed under the President's plan. This would continue to allow multimillionaires to obtain huge incomes from such sources, while completely evading Federal income tax. How about that sweet little plum? Stricter tax treatment of capital gains would be eliminated. A low-income allowance aimed at assisting those with earnings under $11,000 is revised and reduced. A large increase in the standard deduction, benefiting those who do not own their own homes, is reduced. So our hard-pressed apartment dweller will end up by receiving nothing, another example of this administration's contempt for cities and those who live in them. Tax relief for single persons over 35 is lowered by one-third. Wealthy Americans who feared the House bill would trim their profit-filled sails can rest easy, for the President is very solicitous of their good life. He has proposed a 50-percent ceiling on earned income, so they may keep their integrity, bacon, and profits intact.

Figures and counterproposals will now fill the air for weeks. Average citizens will shake their heads in confusion, only vaguely aware of what is transpiring from within. I would not blame them for being confused. Anyone would be. Yet there is one basic conclusion emerging from all this. After the House passed a bill which would measurably help people now being taxed most, the President decided to support a series of changes which deprive them of tax relief. Instead, he wants to aid the wealthy and major business enterprises. Does this make sense? Then so will the Archbishop of Canterbury run off tonight and become a circus acrobat.

Is it not touching to see our administration worry so much about those poor little waifs on Wall Street? Poor, barefooted stock brokers plodding through the snow, clutching tattered rags around their poor shivering bodies, have moved the President to the quick. After all, $75,000 a year is not an awful lot to struggle by on, is it? It costs wheelbarrows of money to support a yacht, buy emeralds and sables and take lengthy cruises. How can millions of middle-income Americans who make those big $7,500 to $15,000 salaries begrudge a millionaire his profits? So the President will rescue those persecuted coupon clippers and slam the door in the face of the slavering wolf of tax reform. Poor tax reform. Always a bridesmaid, and never a bride. President Nixon will aim his bouquet at a far more eminent member of the wedding.

Mr. Speaker, I fervently hope the public is aware of what is being done to it by these proposals. Let its voice be heard. The present Government of our country is obsessed with 19th century economics, and is bringing economic ruin upon the Nation. Prosperity deteriorates before our eyes. Men are losing their jobs. Homes and other necessities are increasingly out of the reach of millions. All the while, the administration is worrying about how to better help out the rich. Heaven help us if this is the logic governing the reasoning of our elected leaders. They are carrying on a holy war against working people and horsesense.

TALES OF ARABIAN NIGHTS: SYRIAN PIRATES AND IRAQI ASSASSINS

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, just as there are individuals who by their acts become outlaws, so there are nations which, by their policies and actions, violate all accepted norms of international behavior. The truth of these accusations is amply illustrated by recent events in the Middle East. It is one thing to observe these happenings. It is quite another to allow them to go unpunished.

On August 29, a U.S.-flag aircraft owned and operated by Trans World Airlines en route from Rome to Tel Aviv, was hijacked by Arab terrorists and forced to fly to Syria. It carried 113 passengers and crew, among them six citizens of Israel; four women and two men. After a terror-ridden flight, ending in detonation and destruction of the plane, the Israelis began their inevitable ordeal. After 60 hours of detention, the Israeli women were released. As of this moment, the two Israeli men are still in Syrian custody, tender as it must be. This of course is a complete violation of all formal and unwritten codes of accepted international behavior. I am astounded that our Government has allowed this pirate state, run by a bloodthirsty coterie of Communist stooges, to insult and defy our Nation, flag, and international conventions we are a party to.

This is the very same Syrian regime which is inexorably persecuting the 4,000 remaining Jews within its borders to the ultimate degree. The same regime which races through the most menacing powder keg since the Balkans in 1914; uttering loud childish shouts, waving torches and throwing lighted matches around. This is the regime which acts as a Soviet satellite, allowing them to utilize Aleppo as a

naval base. Now it blandly contravenes basic international conventions and dares the United States to do something about it. Much credit is due the International Federation of Airline Pilots' Associations for their prompt, no-nonsense stand on behalf of international law. The United States can do no less than follow their example and demand Syria's adherence to these conventions.

From Syrian pirates we move to the bleak darkness inhabited by Iraqi murderers. Some 2,500 Jews survive in Iraq, living in the shadow of the gallows which so aptly symbolizes the essence of that unhappy country's present regime.

About 80 of Iraq's hostage Jewish population are already believed to be in prison. The rest live in terror of further orgies of public executions which have already sickened the world. Torture and discrimination are their daily lot, combined with censorship, economic discrimination, constant surveillance, and denunciation by informers. Of 51 people already executed by this coterie of sadistic killers, 11 were Jews. In addition, it is reliably stated that at least seven other Iraqi Jews have been tortured to death in Baghdad jails.

While such atrocities are being perpetrated, at least 1,500 Egyptian Jews are suffering similar fates under the heavy hand of an increasingly desperate Nasser regime.

What is the response of the United Nations to all this accumulated evidence of Arab brutality and nationally focused hatred? It yields to Arab refusals to permit investigation of the plight of Jews in Arab lands. A U.N. Commission has toured the Middle East, investigating the condition of Arabs in areas administered by Israel, lending a solemn ear and aura of respectability to the most fanciful fevered imaginings and distorted accusations the Arab mentality can conjure up. Except for Adolph Eichmann, not a single death sentence has been passed in Israel. Israeli conduct is an open, fair book to thousands of impartial observers, including innumerable journalists.

So here we have some of the more memorable modern tales of the Arabian Nights. Instead of genies, incense, gardens of the night, and fabulous treasures of the east, we recoil in distaste from assassins, jingoism, torments, and hatreds let loose by these modern demons. It is an old story of persecution in a new setting, and the world beats its breast from afar as the torment of innocents proceeds apace. Is there justice? Is there fairness? Not for the Jews of Arab lands. Not at the hands of the United Nations. Not, it seems, from the United States, either.

LOGAN COUNTY CAN HEAR AND COMPARE BOTH JOSEPH YABLONSKI AND W. A. BOYLE

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, Logan County annually ranks at the top or right near the top among all counties in the United States in its production of coal. It is entirely fitting that both candidates for president of the United Mine Workers of America should come personally to Logan to be seen, heard, and judged by all the people of this coal-rich county. Since Mr. Boyle was in Logan on Labor Day, the people of the entire county will have an equal opportunity to come and hear Mr. Joseph Yablonski, also a candidate for president of the United Mine Workers of America when he appears at Midelburg Island Stadium at 3:30 p.m. on Sunday afternoon, September 14.

It is my understanding that several of the leaders in the West Virginia black lung movement, including Dr. Donald Rasmussen and Dr. H. A. Wells—who pioneered in directing the searchlight of attention on the need for new health and safety legislation to protect coal miners—will also be present and speak at next Sunday's meeting. It is also possible that Dr. I. E. Buff may be present, depending on his plans for a foreign trip to inspect coal mines in other countries.

The legislation which is now pending in Congress designed to strengthen the coal mine health and safety protection of the coal miners cannot be fully effective without two important factors: First, effective enforcement; and second, a strong and aggressive United Mine Workers of America to insure that the rules and regulations pertaining to health and safety are interpreted and enforced to the fullest degree throughout the coal industry, and in such a way as to provide the best protection for every individual coal miner.

The only way that all those concerned with improved coal mine health and safety can get to size up those who will be responsible officers of the UMWA is to attend meetings like the Labor Day meeting, and next Sunday's meeting at Logan High School at 3:30 p.m.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. COLLINS (at the request of Mr. GERALD R. FORD), for today, on account of official business.

Mr. PRICE of Texas (at the request of Mr. GERALD R. FORD), for September 11, and 12, 1969, on account of official business.

Mr. SAYLOR (at the request of Mr. GERALD R. FORD), for September 10, 1969, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PATMAN, for 15 minutes, today, to revise and extend his remarks and to include extraneous matter.

Mr. MCDONALD of Michigan (at the request of Mr. DENNIS), for 5 minutes, on September 9, to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. ANDERSON of California) and to revise and extend their remarks and include extraneous matter:)

Mr. DENT, for 10 minutes, today.
Mr. FLOOD, for 30 minutes, today.
Mr. ADDABBO, for 15 minutes, today.
Mr. STAGGERS, for 15 minutes, today.
Mr. GONZALEZ, for 10 minutes, today.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. RYAN and to include extraneous matter during his remarks in general debate on House Joint Resolution 247.

Mr. BERRY immediately following Mr. SMITH of California during consideration of House Resolution 491.

(The following Members (at the request of Mr. DENNIS) and to include extraneous matter:)

Mr. KEITH in three instances.
Mr. WYATT.
Mr. MIZE.
Mr. SNYDER in 10 instances.
Mr. DERWINSKI in three instances.
Mr. WYMAN in two instances.
Mr. TALCOTT in three instances.
Mr. MAILLIARD.
Mr. STEIGER of Wisconsin in two instances.
Mr. SCOTT.

(The following Members (at the request of Mr. ANDERSON of California) and to include extraneous matter:)

Mr. MONAGAN in two instances.
Mr. FISHER in four instances.
Mr. FRASER.
Mr. ADDABBO in two instances.
Mr. FLOOD in three instances.
Mr. RARICK in four instances.
Mr. CORMAN.
Mr. HECHLER of West Virginia in two instances.
Mr. KASTENMEIER in two instances.
Mr. DINGELL in two instances.
Mr. ASHLEY in two instances.
Mr. MIKVA in two instances.
Mr. GONZALEZ in two instances.
Mr. PICKLE.
Mr. MURPHY of New York in two instances.
Mr. O'NEILL of Massachusetts in two instances.
Mr. MINISH in two instances.
Mr. BINGHAM.
Mr. BROWN of California.

BILL PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, a bill of the House of the following title:

H.R. 7206. An act to adjust the salaries of the Vice President of the United States and certain officers of the Congress.

ADJOURNMENT

Mr. ANDERSON of California. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 31 minutes p.m.), the House adjourned until tomorrow, Wednesday, September 10, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1124. A letter from the Acting Administrator, Foreign Agricultural Service, Department of Agriculture, transmitting a report of agreements signed under Public Law 480 in July and August 1969, for foreign currencies, pursuant to the provisions of Public Law 85–128; to the Committee on Agriculture.

1125. A letter from the Comptroller General of the United States, transmitting a report on the potential for savings by reduction of aircraft engine procurement, Department of the Navy and Department of the Air Force; to the Committee on Government Operations.

1126. A letter from the Under Secretary of Agriculture, transmitting a draft of proposed legislation to modify the boundaries of the Santa Fe, Cibola, and Carson National Forests in the State of New Mexico, and for other purposes; to the Committee on Interior and Insular Affairs.

1127. A letter from the Assistant Secretary for Administration, Department of Commerce, transmitting the report of the Department on commissary activities outside the continental United States for fiscal year 1969, pursuant to the provisions of 5 U.S.C. 596a; to the Committee on Interstate and Foreign Commerce.

1128. A letter from the Attorney General, transmitting a report on the administration of the Foreign Agents Registration Act for calendar year 1968, pursuant to the provisions of that act; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DULSKI: Committee on Post Office and Civil Service. H.R. 13000. A bill to implement the Federal employee pay comparability system, to establish a Federal Employee Salary Commission and a Board of Arbitration, and for other purposes; with an amendment (Rept. No. 91–480). Referred to the Committee of the Whole House on the State of the Union.

Mr. YOUNG: House Resolution 534. A resolution providing for the consideration of H.R. 474. Committee on Rules. An act to establish a Commission on Government Procurement. (Rept. No. 91–481). Referred to the House Calendar.

Mr. DELANEY: House Resolution 535. A resolution providing for the consideration of H.R. 13300. Committee on Rules. A bill to amend the Railroad Retirement Act of 1937 and the Railroad Retirement Tax Act to provide for the extension of supplemental annuities and the mandatory retirement of employees, and for other purposes. (Rept. No. 91–482). Referred to the House Calendar.

Mr. MADDEN: House Resolution 536. A resolution providing for the consideration of H.R. 8449. Committee on Rules. A bill to amend the act entitled "An Act to promote the safety of employees and travelers upon railroads by limiting the hours of service of employees thereon," approved March 4, 1907. (Rept. No. 91–483). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BUSH:

H.R. 13682. A bill to amend the Federal Meat Inspection Act; to the Committee on Agriculture.

By Mr. CLARK:

H.R. 13683. A bill to amend the Tariff Schedules of the United States with respect to the rate of duty on whole skins of mink; to the Committee on Ways and Means.

H.R. 13684. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. DELLENBACK:

H.R. 13685. A bill to amend the Gun Control Act of 1968 to provide that certain records of the sale or delivery of firearms and ammunition shall be maintained for a period of only one year and shall thereafter be destroyed; to the Committee on the Judiciary.

By Mr. GALLAGHER (for himself, Mr. BARING, Mr. BIAGGI, Mr. BRASCO, Mr. BURKE of Florida, Mr. BUTTON, Mr. BYRNE of Pennsylvania, Mr. CHAPPELL, Mr. CLARK, Mr. COLLINS, Mr. DANIELS of New Jersey, Mr. DUNCAN, Mr. FARBSTEIN, Mr. FREY, Mr. FRIEDEL, Mr. FULTON of Tennessee, Mr. GRIFFIN, Mr. HAYS, Mr. HELSTOSKI, Mr. HORTON, Mr. MCKNEALLY, Mr. NIX, Mr. O'NEAL of Georgia, and Mr. PETTIS):

H.R. 13686. A bill to amend the Internal Revenue Code of 1954 to increase the penalties for the unlawful transportation of narcotic drugs and make it unlawful to solicit the assistance of or use a person under the age of 18 in the unlawful trafficking of any such drug; to the Committee on Ways and Means.

By Mr. GALLAGHER (for himself, Mr. PODELL, Mr. POWELL, Mr. RODINO, Mr. SANDMAN, Mr. SCHNEEBELI, Mr. SLACK, Mr. STEED, Mr. THOMSON of Wisconsin, Mr. WAGGONNER, Mr. WHITEHURST, Mr. WYDLER, and Mr. ZION):

H.R. 13687. A bill to amend the Internal Revenue Code of 1954 to increase the penalties for the unlawful transportation of narcotic drugs and to make it unlawful to solicit the assistance of or use a person under the age of 18 in the unlawful trafficking of any such drug; to the Committee on Ways and Means.

By Mr. GONZALEZ:

H.R. 13688. A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title; to the Committee on Veterans' Affairs.

By Mr. McMILLAN (for himself, Mr. ABERNETHY, and Mr. DOWDY):

H.R. 13689. A bill to reorganize the courts of the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr McMILLAN (for himself, Mr. ABERNETHY, and Mr. DOWDY):

H.R. 13690. A bill to amend the District of Columbia Bail Agency Act to increase the effectiveness of the Bail Agency, and for other purposes; to the Committee on the District of Columbia.

By Mr. MATSUNAGA:

H.R. 13691. A bill to establish a national program of assistance to the States with the goal of achieving equalized excellence in schools throughout the Nation over a 10-year period; to the Committee on Education and Labor.

By Mr. MONTGOMERY:

H.R. 13692. A bill to amend title 38 of the United States Code to provide insurance for any veteran receiving a specially adapted housing grant which will pay, upon the death of the veteran, the remaining balance on any of certain obligations assumed with respect to such housing; to the Committee on Veterans' Affairs.

By Mr. SISK:

H.R. 13693. A bill to provide for the orderly expansion of trade in manufactured products; to the Committee on Ways and Means.

By Mrs. SULLIVAN (for herself, and Mr. BARRETT):

H.R. 13694. A bill to assist in meeting the housing goals of the American people by creating the Home Owners Mortgage Loan Corporation; to the Committee on Banking and Currency.

By Mr. ZION:

H.R. 13695. A bill to amend the Social Security Act to permit payment to title 19 recipients for certain medical and dental services; to the Committee on Ways and Means.

By Mr. DONOHUE:

H.R. 13696. A bill to amend the Military Personnel and Civilian Employees' Claims Act of 1964, as amended, with respect to the settlement of claims against the United States by civilian officers and employees for damage to, or loss of, personal property incident to their services; to the Committee on the Judiciary.

By Mr. EDWARDS of California:

H.R. 13697. A bill to amend chapters 31, 34, and 35 of title 38, United States Code, in order to increase the rates of vocational rehabilitation, educational assistance and special training allowance paid to eligible veterans and persons under such chapters; to the Committee on Veterans' Affairs.

By Mr. FISHER (for himself, Mr. CASEY, Mr. WHITE, and Mr. WOLD):

H.R. 13698. A bill to provide for orderly trade in iron and steel mill products; to the Committee on Ways and Means.

By Mr. HANLEY:

H.R. 13699. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. McMILLAN:

H.R. 13700. A bill to amend chapter 17 of title 11 of the District of Columbia Code to revise the provisions relating to the retirement of the judges of the courts of the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. MINISH:

H.R. 13701. A bill to amend the Foreign Assistance Act, as amended, to authorize the Secretary of State to participate in the development of a large prototype desalting plant in Israel, and for other purposes; to the Committee on Foreign Affairs.

By Mr. MOLLOHAN:

H.R. 13702. A bill to provide for the orderly marketing of flat glass imported into the United States by affording foreign supplying nations a fair share of the growth or change in the U.S. flat glass market; to the Committee on Ways and Means.

By Mr. MURPHY of Illinois:

H.R. 13703. A bill to amend title XVIII of the Social Security Act to provide payment for chiropractors' services under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. NICHOLS:

H.R. 13704. A bill to amend the Packers and Stockyards Act of 1921, as amended, so as to more adequately cover the egg industry, and for other purposes; to the Committee on Agriculture.

By Mr. ROYBAL:

H.R. 13705. A bill to amend title 5, United States Code, to include as creditable service for civil service retirement purposes service as an enrollee of the Civilian Conservation Corps, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. SCOTT:

H.R. 13706. A bill to amend title 38 of the United States Code to extend by one year the period in which certain guaranty and insurance entitlement may be used by World War II veterans; to the Committee on Veterans' Affairs.

By Mr. ULLMAN:

H.R. 13707. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

By Mr. WHITEHURST:

H.R. 13708. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

By Mr. CLAY:

H.J. Res. 890. A resolution proposing an amendment to the Constitution of the United States providing for the election of the President and the Vice President; to the Committee on the Judiciary.

By Mr. McDONALD of Michigan:

H.J. Res. 891. A resolution designating the American marigold (*Tagetes erecta*) as the national floral emblem of the United States; to the Committee on House Administration.

By Mr. ABBITT:

H. Con. Res. 327. A resolution protesting the treatment of American servicemen held prisoner by the Government of North Vietnam and backing the administration in its efforts on behalf of these servicemen held captive by the North Vietnamese Government; to the Committee on Foreign Affairs.

By Mr. CLARK:

H. Con. Res. 328. A resolution expressing the sense of Congress relating to films and broadcasts which defame, stereotype, ridicule, demean, or degrade ethnic, racial, and religious groups; to the Committee on Interstate and Foreign Commerce.

By Mr. CELLER:

H. Res. 537. A resolution to provide funds for the Committee on the Judiciary; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DADDARIO:

H.R. 13709. A bill for the relief of Francine Zimmerman; to the Committee on the Judiciary.

By Mr. ST GERMAIN:

H.R. 13710. A bill for the relief of Salvatore Taormina; to the Committee on the Judiciary.

By Mr. SCHEUER:

H.R. 13711. A bill for the relief of Dr. Ernesto Tanguilig; to the Committee on the Judiciary.

By Mr. SMITH of New York:

H.R. 13712. A bill for the relief of Vincenzo Pellicano; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

230. By Mr. COUGHLIN: Petition of resolution of the council of the city of Philadelphia regarding right of farm workers to bargain collectively; to the Committee on Education and Labor.

231. By Mr. COUGHLIN: Petition of resolution of Township of Lower Merion, Montgomery County, Pa., regarding tax status of municipal bonds; to the Committee on Ways and Means.

232. By the SPEAKER: Petition of Allan Feinblum, New York, N.Y., relative to observation of the birthday of M. K. Gandhi; to the Committee on the Judiciary.

233. By the SPEAKER: Petition of the Marshall Chamber of Commerce, Marshall, Tex., et al., relative to the unsolicited mailing of pornographic literature; to the Committee on Post Office and Civil Service.

EXTENSIONS OF REMARKS

TELEPHONE CONSUMERS NEED ADVOCATE

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 9, 1969

Mr. METCALF. Mr. President, Florida consumers are dissatisfied with the General Telephone Co. of Florida. The Florida Public Service Commission is holding hearings regarding the company's rates and service, and the public is responding in large numbers to voice its complaints on the subject. But, as the St. Petersburg Independent aptly points out, there exists no public advocate to represent the interests of the people:

Only one side has attorneys. Only one side has access to the records. Only one side is able to produce reams of statistics to back up its arguments.

The utility has a built-in advantage for its side of the case. Having just participated in hearings on S. 607, a measure which would provide for the service of a Utility Consumers' Counsel in just such an instance, I ask unanimous consent to have printed in the RECORD this pertinent editorial from the St. Petersburg Independent of July 31.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENTEL REAPS HARVEST OF ILL WILL

We hope General Telephone Co. of Florida and the Public Service Commission (PSC) are learning the lessons being taught at a series of public hearings in the Tampa Bay area.

The lessons are being driven home with the authority of a schoolmaster with a long ruler in his hand.

The lesson for General Telephone is that inadequate service, unkept promises and high rates are the basic ingredients for a revolt of telephone users.

Both in Tampa and St. Petersburg, large crowds have turned out to tell of the problems they have had with phone service. These people were only those who had detailed information of what they considered inadequate services and who were anxious to tell the PSC about it. How many more people are dissatisfied but simply could or would not attend the hearings is not known.

The lessons for the PSC is that there is indeed a general dissatisfaction with telephone service in Tampa and St. Petersburg, and that the people, given a fair opportunity to air their complaints, are only too happy to tell commissioners what is wrong.

Such large crowds have turned out for these hearings and so many people are anxious to be heard that it is conceivable the commissioners may never be able to complete the hearings if the present format of allowing the public to be heard first is continued.

The hearings have not been noted for their decorum and formality. At times they have resembled ancient Roman circuses with the audience cheering and clapping each time a witness made a thrust at the company.

This points up the need for a public advocate. The rules of the commission for such hearings are the same as those of the Circuit Court.

But only one side has attorneys. Only one side has access to the records. Only one side is able to produce reams of statistics to back up its arguments.

Attorneys for GenTel will have the opportunity to cross examine opposing witnesses, which will create a hardship on many of them since they will have to miss another day's work in order to appear. But who will have the opportunity to cross examine telephone company executives? Does every member of the complaining public have this right?

A public advocate could do a great deal to simplify the proceedings by screening witnesses and vigorously contesting evidence presented by the utility.

It must now be evident to both GenTel and the PSC that telephone subscribers in this area are angry and dissatisfied.

They know they are paying high prices for service inferior to that in almost all areas of the country.

Time simply has caught up with General Telephone Co. of Florida. The people who are forced to buy their service have had enough.

In 1971, the St. Petersburg freeholders will vote on renewing the company's franchise in the city. Company officials must now be looking forward to that date with concern for it is obvious the opposition is beginning to jell.

The company must stand on its record. It may be too late for GenTel to build a record that will meet public acceptance.

The public, at last, is getting the message across.

EMERGENCY MEDICAL SERVICE GETS HIGH PRIORITY IN JACKSONVILLE

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. BENNETT. Mr. Speaker, John M. Waters, Jr., director of public safety, Jacksonville, Fla., recently addressed the third International Congress on Medical and Related Aspects of Motor Vehicle Accidents, and his address was reported in the August 1969 edition of Traffic Safety. This dedicated public official has in his remarks set out the realistic program which Jacksonville has inaugurated to provide quick, efficient services for sick and injured. The program may well serve as a model for other large cities; and therefore, I include here the article as it appeared in Traffic Safety:

EMERGENCY MEDICAL SERVICE GETS HIGH PRIORITY IN JACKSONVILLE

Providing emergency medical services is a growing problem in all areas of the world in which the use of the automobile is increasing. It is a complicated problem in the large cities, where heavy traffic often impedes the transfer of the injured from the scene of the accident to a treatment center.

There are several fundamental differences between the problem in this country and that facing our friends in some other countries.

First, we have an acute shortage of physicians and nurses, and little prospect of remedying this matter in the foreseeable future. The shortage is not merely in numbers but in capabilities, for specialization has greatly reduced the percentage of physicians capable of coping with severe trauma or acute medical episodes outside their specialty. Therefore, we will rarely find a physician treating an accident patient outside the hospital.

Next, we must realize the size of our country, and the millions of miles of roads in it. What might be a practical alerting system on the autobahn between Hamburg and Kiel would provide prohibitively expensive for the highway of more than 1,000 miles between Chicago and Denver. Any suggested general highway improvements are deterred by the very massiveness of the system and the consequent costs of improvements.

Fortunately, our telephone system is widespread and in nearly all cases efficient, and along most roads, we can find homes and places of business with phones. In a city, it is highly improbable that a crash could occur without someone being aware of it and phoning in.

Lastly, our problem is complicated by the number of cars, now in excess of 100 million and increasing steadily. It has become a deadly race between our efforts to reduce the accident rates and the increasing exposure that raises the number of deaths and injuries.

While there are some basic differences between our situation and that of other countries, there are also mutual problems. I can testify from a recent trip to Europe that their cities have traffic congestion just as we do, though it seldom approaches anywhere in the world what exists in New York City. Likewise, I imagine that cities everywhere are faced with the problems of increasing costs without a comparable increase in tax revenues. Our American cities are caught in what seems to be almost an insolvable dilemma as to how to provide all the services required without bankrupting the taxpayer.

Oddly enough, until less than five years ago, there was no concerted national effort to do much about automobile accidents, which by then were claiming 50,000 dead yearly. In sharp contrast, we, probably to a greater degree than any other nation, have for over 100 years maintained an extensive rescue system for ships at sea, and in later years for aircraft. Cost has not been a deterrent to this complex and efficient rescue system; and, although only 3,000 non-combat people were lost at sea and in the air in our areas of responsibility in the last year recorded, the Coast Guard incurred a cost of $34,000 for every seaman and airman saved, while the Air Force in Viet Nam paid out $48,000 per save. While cheap in terms of human life, the highway victim in comparison had little or nothing spent to rescue him, and thousands died needlessly. It often became literally true that a citizen could be safer on a boat sinking 20 miles at sea than he could in a wreck in the middle of one of our largest cities.

As an example, several years ago a tanker fire occurred in New York harbor. The injured were evacuated in less than 10 minutes by Coast Guard helicopters from the ship. Yet a pedestrian, struck by an automobile in the incurring confusion, could not be reached by an ambulance for nearly 45 minutes due to the traffic congestion.

The National Highway Safety Act of 1966 was a sweeping one, aimed at all facets of highway safety. One of them was the medical care and transportation of those injured on the highway. In early 1967, I was loaned from the Coast Guard, where I had been chief of the search and rescue division, to the newly created National Highway Safety Bureau (NHSB) to see if the methods and techniques of our military system could be applied to our highway problem at the state and city level. We made a great deal of progress in the next 18 months, initiated considerable research and passed out volumes of guidance to the states. In the summer of 1968, I elected to retire from the military, left the NHSB and became director of public safety of Jacksonville, Fla. In this position, I think I am well situated to evaluate the problem from both sides of the hill, compare theory with practice and report on our progress in emergency medical services in a dynamic and forward looking city. Some of our "Ivory Tower" thinking from Washington has been battered a bit, but on the whole, I think we may develop a system which, though not ideal, will be unsurpassed in this country.

At the very outset I ran into realism with a jolt, and the jolt was produced by one main factor—money. We, like every major city in this country, are fighting a desperate rearguard action against rising costs. Most cities are retreating; I like to think that we are holding our own, and in at least one sector, emergency medical services (EMS), are advancing on a fairly broad front. In order to do so, we have had to take a realistic approach, discard the merely desirable and stick to the essentials. This involved not only some hard-nosed management decisions, but a quick separation of facts from myths.

Jacksonville is a city unique in many ways, the most notable being the recent "consolidation" of the City of Jacksonville and Duval County, in which the county was abolished, the city limits extended to the county line and several sets of duplicating governments replaced by one. Now we have one mayor, one police department, one fire department and a unified chain of command. The creation of one governmental unity to replace many has not only greatly simplified government and avoided duplication and confusion but has made us into the largest city in the world geographically, with an area of 848 square miles and a population of 525,000 people. It consists of dense urban areas, rural terrain, rivers and ocean, express highways and city streets. The city contains three large military bases and two colleges, with a third university building. The implication of this large group of over 50,000 sailors and students for the auto accident rate is clear. Jacksonville serves as the gateway to the Florida vacationland for the entire East Coast and much of the Midwest, and out-of-state transient traffic is very heavy. As a resort, the city and its beaches draw hundreds of thousands in the summer months. A large retired population contributes to the medical problems. More than 125,000 of the city's population are medically indigent.

In 1967, faced with inadequate ambulance service provided mostly by morticians, the city took over emergency ambulance services. The fire department was directed to operate it, and a federal grant was obtained to assist in purchasing 10 ambulances and operating them for the first year. This has resulted in largely solving the emergency ambulance problem in Jacksonville, and has been done at a considerable lower cost than in most other cities of similar size. With all 10 ambulances deployed, 90 per cent of the citizens of Jacksonville are within a seven-minute response time of quality ambulance service.

The National Highway Safety Bureau has stated that an efficient highway EMS system (outside the hospital) consists of communications, emergency care at the scene, transportation and command and control. One more item should have been included here—the physician and hospital team, and their role in definitive medical care. This omission was a calculated policy of the NHSB to avoid any implication that the government was entering further into the world of professional medicine. Yet, we have major problems in our hospitals, and they must be solved before we can have an efficient emergency medical services system.

Communications. The matter of communications in a city EMS system is no great mystery. The simple fact is that most calls for help come by phone into our fire department or police operations centers, and the fire center promptly dispatches an ambulance. Our problem is greatly simplified since we went into a consolidated form of government, abolishing the county and small suburbs. All dispatching is done by one city fire department operations center. It is silly to set up a special center to handle medical calls only. The already established centers in any city, whether they be police or fire, can do a highly effective job of dispatching; after all, that is their 24-hour job. We found that most of our citizens did not know emergency telephone numbers and usually called the telephone operator for help. Delays sometimes resulted. To remedy this, we are sending out in our regular city electrical billings two gummed labels containing the number for fire and ambulance (same), police and suicide control. We are urging that these be stuck on each phone in every home and business. This will give our citizens direct dialing service to the people who can help. In July, 1970, we are installing the "911" universal emergency number, but this does not invalidate the stickers on the phones; in fact, by dialing the number on the sticker, you avoid the screening switchboard used by the "911" number.

We have replaced all the old fire alarm pull boxes with emergency telephones. In our main city area, they are located on every other corner. One simply opens the box picks up the phone, and talks directly to the fire operations center. A large wall chart in the center shows a light where the street phone is in use, so our men know the location immediately. When called on these phones, we can dispatch police, firemen, ambulances or auto repairmen to the caller. An interesting phenomena is that our fire false alarm rate has dropped from 90 per cent to less than 5 per cent since we installed these phones. People apparently cannot lie well over a phone while they are being recorded on tape. An equally great advantage is that people can tell us in advance what their trouble is. In the old pull box days, a fire alarm pulled in mid-city required us to dispatch a full assignment of fire equipment adequate to deal with a large building fire, even though the trouble may have been only an auto with ignition wires afire. Now, knowing the trouble in advance, we can respond appropriately. We intend to add more of these street emergency phones, primarily in our ghetto areas, where most homes do not have phones, and one on the corner will provide emergency communications for the whole neighborhood in time of trouble. We have these emergency phones at every cutoff, from the main expressways. The highway department is putting up signs on the highways pointing out that the emergency phones are at the exits. Furthermore, we have placed large signs over each such phone to let people know they are for public use. Many people thought they were either the old pull type fire alarms, or were for use of police and firemen only.

The placing of emergency telephones at one mile intervals along the highways is a thing we cannot financially afford in this country. I have seen this arrangement on European highways; but, as I pointed out in the beginning, we have many more miles of road. In our city, we have placed emergency phones at the exits from the major express highways and are placing signs on the highways pointing out their locations. Actually, in most cases within the city, crashes are generally accompanied by traffic congestion, and it is amazing how sensitive the people living along the road are to this. We quickly hear by phone from citizens liv-

ing nearby and dispatch police cars and ambulances. So I don't worry too much about delays in alerting on our highways in Jacksonville.

In a couple of places, notably on Highway 295 around the Maryland area of Washington, D.C., they have placed, at one-mile intervals, pushbutton boxes, which are cheaper to install than telephones. One can push buttons marked "Police," "Service," or "Fire," and wait until the radio signal is received at a center and a patrol car is dispatched. In practice, the motorists, many of whom merely wish information, will not wait, and over 30 percent of calls are false alarms. The cost in patrol cars running out to investigate is high, and the frustrations of the waiting motorists immeasurable. This is a system that was fine in theory but fell flat in actual application. It has all the drawbacks of the old fire-pull alarm system, which is 50 years behind the new street phone alarm system we are using in Jacksonville.

There has also been a great deal of talk about use of radios in taxicabs, fleet trucks and municipal equipment to broadcast a radio alert in case of wrecks or other trouble. The Motorola Co. sponsored one such program called Community Radio Watch, and we participated in Jacksonville. The results have been mediocre, and the real need for such an organization is doubtful. People traveling with two-way radios in their vehicles will radio in to their own dispatching center of their own free will if they see something, though the chance that a radio vehicle will come along when needed is fairly remote. In eight months, though my car is radio equipped. I have reported one wreck and several stalled motorists who had not been previously reported. With a rising crime rate, and a limited police force, we feel our radio patrol cars are more needed in the high-crime-incidence areas than on the highways.

As a result, nearly all alerting is going to be by phone with only a very small minority of cases by radio.

Dispatching. Let me again stress that in a large city, ambulance dispatching should be handled by the fire or police department operations center, depending on which is providing the service. Even where municipal ambulances are not provided, and private ambulances are used, they should be dispatched for emergency calls by the city center. I favor the fire department operations center doing it, because they don't have as many total calls daily as do the police. The use of private ambulances on routine patient transfer calls is no real concern of ours. However, if it is an emergency run, we either dispatch the private ambulance from the fire operations center, or they inform us if they have been called by a private party. The fire department is responsible for emergency ambulance service, but we may need backup from private operators on occasion.

When an ambulance is dispatched, all times are kept on a running card punched by a time machine. All conversations, radio and telephone, are recorded on 24-hour tapes. The center has direct "red phone" connections with every hospital emergency room in the city and can quickly determine load condition and readiness to receive patients. In serious cases, we alert the receiving hospital while the ambulance is still outbound, following this up with an estimated time of arrival when received. All of our ambulances have two-way radio communications, not only with the operations center, but with the emergency rooms of all the hospitals. This was an easily solved problem. We found that the hospitals all had a civil defense radio in each emergency room. We, therefore, put the civil defense frequency crystal on one channel in all of our ambulance radios, and we were in business. We perform a radio check with very hospital at a set time each morning, then the volume of the radio in the emergency room is turned all the way down and the set left on. When an ambulance operator wishes to talk with the emergency room, he asks center, which tells the emergency room by "red phone." "Call rescue seven." The emergency room nurse then merely turns up the radio volume and calls to establish communication. We have actually had little use for this, as our men usually know what to do in first aid, and center can relay needed information quickly to the emergency rooms. However, we expect the use of direct communications with the emergency room to pick up as our cardiac program progresses.

We feel that with our new $600,000 fire operation center, our regular and emergency phone systems, and a flexible and efficient radio system, our communications and dispatching problems are solved. The proof of the matter is the satisfaction of our citizenry, and the average response time in the city area is less than five minutes from call until arrival of an ambulance. In remote areas where ambulance response time may be delayed, we dispatch a fire engine company to render first aid until the ambulance arrives.

I have mentioned that in area we are the largest city in the world, 848 square miles extending 37 miles east and west, and 33 miles north and south. To cover this large an area might seem an insurmountable problem with our resources. However, we have relatively light traffic as it is spread over such a large area, and the fast express highways allow our ambulances to travel at speeds up to 80 m.p.h., nearly as fast as a helicopter. As a result, one of our ambulances may be able to reach a patient 10 miles away faster than one in New York City could arrive at a scene one mile away.

Transportation. Our ambulancese are not luxury jobs but practical cabins mounted on one-ton Chevrolet chassis. Complete with equipment, they run about $12,500 each. Our last four are in full conformance with the "Medical Requirements for Ambulance Design and Equipment" of the National Academy of Science, both as to vehicle and equipment; in fact, we have already exceeded the equipment requirements. From an economy viewpoint, these ambulances are winners. Not only are they cheaper initially than the large custom jobs, but every two or three years we simply insert a new chassis and have a new vehicle. We expect the cabin to last through three chassis. These ambulances have plenty of working space and ample stowage space for both medical and extrication equipment. Our ambulance personnel carry out all except heavy extracation. The primary drawback of this type ambulance is that it rides roughly on bad roads, and a fast run can be excruciatingly painful for a person with broken bones. In such cases, we return at a slow speed without lights or siren. In fact, 80 per cent of our return runs are made in this manner, for we emphasize treating and stabilizing the patient on scene and returning at a safe speed whenever possible. Outbound, we seldom have enough information to determine the seriousness of the case, and such runs are made with light and siren; we never forget, however, that running a red light still leaves us as the responsible party should an accident occur, and street intersections are crossed at reduced speeds.

Emergency Case. In Jacksonville we have a long and intensive training program for rescue ambulance personnel, and we have long tenure with little or no turnover. Without the latter, we could not afford the training. The firemen have good pay and exceptionally good working hours. To participate in the rescue program, a fireman must volunteer for the duty; have two years on the department with excellent record, and hold an American Red Cross Advanced First Aid card. He then passes through five stages of training:

Stage One: Review of advanced first aid procedures (20 hours);

Stage Two: Advanced procedures taught by 25 doctors (30 hours);

Stage Three: Extrication from autos, aircraft and trains (25 hours);

Stage Four: Hospital training in ER's, intensive care units, and OB (50 hours);

Stage Five: Hospital training in emergency cardiac care (231 hours).

This program is, we believe, the most advanced of any in the country. In the beginning, much of it was done in the men's off time. When this became burdensome and the men began seeking extra compensation, we began basing our ambulances at the hospitals, where training can be obtained on the job while the men are between calls. Our first trials of hospital basing have been an unqualified success, enthusiastically supported by both the medical staffs and the ambulance personnel. If there is one message I wish to give to anyone planning a similar program, it is to *base your ambulances at hospitals,* while at the same time keeping them under control of the operations center for dispatching. Our men sleep at some of the hospitals; at others, they are there during daylight hours, returning to the fire stations at night. The emergency room staffs have been surprised, not only at the ability of the ambulance personnel to help them in the emergency room, but at the rapidity with which the men absorb the training. In a city in which we have a severe shortage of doctors and nurses, the presence of two trained emergency medical technicians in the emergency room, when not on runs, has proved a boon. At the same time, our men are receiving excellent training, and I might add that this is only made possible by the enthusiastic cooperation of our fine doctors and nurses, and the strong support of our medical society.

At a recent meeting of the American College of Surgeons and of the American Academy of Orthopedic Surgeons, it was recommended that this concept of the highly trained ambulance attendant be adopted. It was also recommended that the emergency medical technician be adopted as a full member of the medical team, and that appropriate job description and training courses be prepared. The training recommended was similar to that I have just outlined. It would appear that the training of these men and their acceptance as part of the professional team offers a partial solution to the acute shortage of nurses in our emergency rooms and intensive care units. Certainly, our Armed Forces hospital corpsmen carry out functions even in advance of that allowed nurses in some locations, and the emergency medical technician, with similar training and under supervision of a physician, could carry out many functions now required of physicians and nurses when not on ambulance runs.

As a result of this training, I have every confidence in the ability of these rescue ambulance personnel of the fire department to handle nearly any first aid situation. Twenty-nine babies have been delivered without mishap. I have accompanied our ambulances to attempted suicides, to acutely ill patients, heart attacks and many severe auto crashes. At these crashes, it is most satisfying to watch the men work. No one is moved until his airway is checked, he is splinted and bleeding has stopped and backboards have been inserted. Then, in the words of our chief of rescue, "We do not extricate a seriously injured victim, we disassemble the car around him." In most cases, the care at the scene is so complete that the trip to the hospital is at regular road speeds without siren or lights. Once at the hospital, the victims are kept on the special backboards until after x-ray, for x-ray will penetrate the material.

Hospital Emergency Departments. Surveys in a number of our states have indicated gross deficiencies in the emergency departments of many of our hospitals. Long delays in treatment of patients may be common, and

the quality of care poor. With an increasingly transient population, many of whom have no family doctor, the emergency room has become the focal point for an increasingly large number of patients, only a minority of whom are actual emergencies. This crowding aggravates an already poor situation, with the result that treatment in the emergency rooms of the nation's hospitals may often be as inept and as backward as is the majority of ambulance service. The need for reform is great. I will go a step further. In the very near future in some areas, highly trained emergency medical technicians manning rescue ambulances are going to be more proficient in doing their job of emergency care and transportation than are some hospital emergency departments in providing the definitive treatment with which they are charged. While we municipal officials are searching for ways to improve rescue, care and transportation outside the hospitals, the medical and hospital professionals needs to do some deep soul searching. I think that in our city we are progressing well here, but much still remains to be done, especially in obtaining sufficient physicians and nurses. One trend that is on the increase is the formation of groups of physicians devoted to emergency practice only. Such a group, consisting usually of four physicians alternating on eight hour watches, perform all emergency room services, turning the patient over to his regular doctor or to a specialist after emergency care is administered and the patient stabilized. This system insures the presence in the emergency room of a physician and relieves the rest of the hospital staff of having to rotate on duty in the emergency room.

Private Ambulances. In our city, we have a number of private ambulance services, including a number of funeral directors. For the most part, they are not interested in emergency service. Some funeral homes haul chronically ill patients to and from hospitals free, realizing that they will get the funeral business later. I see nothing wrong with the practice, especially when it involves indigents. Florida is one of the few states that has an ambulance law, but it is a weak one. We realize that our private ambulance operators can neither afford the salaries nor the equipment to render service comparable to that given by our fire department rescue service. Yet, if they are going to engage in emergency service at all, we must insist on minimum standards. A new city ambulance law is now pending before the city council, and I am confident that it will pass. It will be a major step forward in eliminating marginal and untrained operators, and we intend to enforce it strictly. Those remaining in the emergency business will do so under the supervision of the department of public safety and the health department.

Despite the widespread criticism of private ambulance service, I have seen a number of fine services, well managed, well trained and efficient. Private enterprise can give quality service if it has a franchise to eliminate destructve competition, a subsidy when required, and is under government inspection. However, for sophisticated treatment, such as we describe later for heart attack patients, few private ambulance companies can afford the equipment or retain the highly trained personnel required. Such procedures must be carried out in our cities by government. We regard emergency ambulance service in the same category as police and fire protection. In fact, we make more ambulance runs yearly than fire runs.

Costs. To operate 10 rescue ambulances, we require 66 men, a chief of the rescue branch, a training supervisor and a secretary. Personnel services, including fringe benefits and pensions, total $595,481 yearly. Each private, for example, is paid $8,357 yearly, including benefits. Commodities total $22,986, and other direct costs about $16,000. Each ambulance costs us $63,447 per year to run, of which 94 per cent is for personnel. The predominance in personnel costs and the great disparity between public and private salaries are what separate private and public ambulance service. Yet, if we are to have quality, we must pay enough to get high type individuals and retain them. Ambulance service costs, like all medical costs, are skyrocketing. We are attempting to defray this in many ways. We charge $17.50 per run, and are going to raise the fee to $22.50, primarily to discourage needless calls. Our collection rate, which is running at about 40 per cent, must be raised, and we are looking for ways to do this. We are receiving a subsidy from the NHSB of $11,890 per ambulance, which helps defray expenses. Lastly, as the number of runs increases, the cost per run decreases. We estimate that by 1970, we will be making 13,000 emergency runs yearly. The cost breaks down as follows:

Cost per run	$48 85
NHSB subsidy	9. 15
Fee collected	9. 00
Tax supported	30. 70
Total	48. 85

In summation, the total cost of operating a first rate emergency ambulance system in our city is 76 cents per capita.

Our figures are considerably below those given for government operated services in the NHSB publication, *Economics of Highway Emergency Ambulance Services,* and well below those of most other cities of similar size. Most of this difference can be attributed to the difference in salary scales for firemen in southern cities as compared with those in the north. In my opinion, the NHSB economics study, while generally an excellent one, errs on the high side in estimating costs of ambulance service and on the low side in estimating the number of ambulances required to service a certain number of persons. Almost certainly more ambulances are required to service the 525,000 people in our 850-square-mile city than would be needed for the same number of people in a city of 50 square miles. The number needed and the money the city can afford to devote to the service must vary with the peculiarities of each city.

Helicopters. Despite my continual protests, I have acquired a reputation over the past few years as the man who advocates replacing ground ambulances with helicopters. Nothing could be further from the truth. I see little use for helicopters in a dense urban area, or where adequate and efficient ground ambulance service is available. If a ground ambulance can reach a patient in 10 minutes, there is no need for a helicopter. On the other hand, I do see need for helicopters in remote or inaccessible areas and in transporting critically ill patients of all kinds from outlying community hospitals to major medical centers. To determine the feasibility of this (which the military has long ago determined for their people) for civilian use, I recommended in 1967 that arrangements be made for use of military helicopters from some 200 continental military bases to aid in severe civilian injury cases. Although the various military services were amiable, the proposal was bungled and mishandled by bureaucrats in Washington, with the result that finally only the commandant of the Coast Guard took action, issuing an order to his operational commanders to cooperate whenever possible with state authorities in aiding highway victims. In other cases, agreements have been made between local authorities and nearby military base commanders, though helicopters are in short supply due to the Viet Nam war.

No one doubts that the helicopter can do a superb job of medico evacuation. The problem is one of costs. We cannot justify a helicopter just to evacuate highway injured. We can, however, in certain localities, use one economically (1,000 hours yearly or more) if we use it for highway rescue, sea and land rescue, police and highway patrol, apprehension of lawbreakers, riot control, accident investigation, cardiac and inter-hospital transport, fire control (both urban and forest), photo missions and administrative flying. These missions would be assigned on a priority basis, with rescue as top priority. Until we utilize the helicopter on such a basis, with firm central control, or unless we can obtain use of available military helicopters, I see little prospect of widespread and successful use of these machines in EMS.

Operation Heartbeat—Answer to the Greatest Threat. For the months I was with the NHSB, my attention was devoted to the highway victim and, as a result, trauma. For 20 years before that in the Coast Guard, I had been concerned with aid to the distressed at sea and in the air. Naturally when I came to Jacksonville, it was with visions of starting up vigorous programs in these fields. But when I asked for the vital statistics for the past year, it caused a realignment of my thinking and a drastic change in perspective.

In 1968, in Jacksonville, 26 persons died in water accidents; 139 in traffic mishaps, and, far overshadowing these, 1,497 of heart disease. Not only was heart disease by far the greatest killer of Jacksonville citizens, but in EKG tests of 10,000 of our citizens made by the Heartmobile of the American Heart Society in February, 1969, one of every three of our citizens tested showed signs of cardiac abnormalities. The greatest single life threat to a citizen in Jacksonville today is not the criminal on the street, nor fire in the home, nor death on the highway, it is an acute myocardial infarction. We must consider the cardiovascular "accident" along with traffic accidents.

One cardiologist, in reflecting the prevalent attitude of physicians, recently stated: "If I suspect a cardiac condition, I will have the patient meet me at the emergency room. If I went to the home, I simply wouldn't have the equipment with me to properly diagnose and treat him. I would have to transfer him to the emergency room anyway."

Logical as this reasoning is, it is cold comfort to the hundreds of thousands of people who will suffer heart attacks to realize that they must make it to a hospital on their own, or rely on an ambulance crew to get them there.

Nationally, due to the poor quality of ambulance services, not only can long delays in response be expected, but the attendants may be poorly trained and incapable of rendering meaningful help. In many cases, they will not have minimum equipment even by present lax standards.

That definitive treatment can be effectively given in the field and in ambulances has been proved in a number of locales, but to date it has been given by physicians and nurses. Belfast, Ireland; Waveney Hospital, North Ireland, and St. Vincent's in New York are among facilities reporting on this procedure. A number of other groups are planning or are experimenting with telemetry of EKG's from the field or ambulance in the hospital so that physicians in the hospital can read an EKG and recommend to the rescue crew further action. One report on telemetry estimates that of 16 patients DOA (dead on arrival) on whom telemetry readings were received, 11 may have been salvageable with proper therapy, which was not available. Waveney reports that of 95 heart attack patients transported, not a single death occurred in transport, due undoubtedly, in many cases, to the presence of proper equipment and trained medical personnel. In all of these cases, however, physicians with proper equipment were operating in a relatively small area. These conditions do not prevail in Jacksonville, where

we are faced with providing care to the largest city area in the world, and with little likelihood of physicians or nurses accompanying the emergency rescue ambulance.

The president of the medical society appointed an advisory committee of some of the city's leading cardiologists to work with us on this matter. A number of alternatives were explored by the committee. From these discussions, a plan was evolved to equip all of our 10 ambulances with necessary equipment and trained para-medical personnel to allow quick access to any place in the city in which one of our citizens suffers a heart attack. An early plan to employ two large cardiac ambulances staffed by physicians and nurses was abandoned when it became evident that the time required for two centrally located vehicles to reach the suburbs would be excessive, and that we could not provide properly qualified physicians for this service due to the acute shortage in the city. It was agreed that if more definitive treatment were to be given cardiac victims outside the hospital, it would have to be by our rescue personnel. They would require not only special equipment but, more importantly, special training. This proposal was presented to the executive committee of the county medical society, and after consultation with the American Medical Association, the executive committee has formally endorsed the program, contingent on proper training of the rescue personnel. The training syllabus and methods of training have now been developed by the cardiac advisory committee and planning is already well underway.

This concept is a bold one in medical care. Already, inquiries have been received from many parts of the country. To the more conservative who have doubts about the wisdom of the program, it is well to remember that only two or three years ago grave doubts were expressed as to the feasibility of utilizing nurses in intensive care units to administer treatment to heart patients. Now it is a commonly accepted practice, but its coming was expedited because of the shortage of physicians to carry out these functions. This same shortage makes it imperative that we expedite the training and equipping of our rescue personnel to deal with cardiac emergencies outside the hospital.

At this time, more than 50 of our rescue ambulance personnel are engaged in hospital training. The time required to fully train a man for this type of work is in excess of 200 hours, but it has already become evident that the high type of personnel we are utilizing quickly learn the procedures taught. No man will be allowed to perform any procedure until he has been thoroughly checked out and certified by medical professionals. The amount of responsibility placed on the rescue personnel will be greatly increased as their training progresses.

The extent of treatment will be determined by the patient's condition. In many cases, a cardiac victim can simply be transported to the nearest suitable hospital. In others, his condition may be such that an attempt to transport him would be fatal, and the rescue crew will carry out CPR and defibrillate when necessary. In addition, after consultation with a physician, by radio and telemetry, of EKG, they will administer drugs when directed by the physician. At this point, the rescue crewmen will basically be performing the same function in their portable intensive care (IC) unit, as does the nurse in the hospital IC unit.

The training of the personnel will require time and will be a continuing process. The equipment is being procured now. We believe the number of people saved will be considerable. If we can bring to the hospital, alive, every patient we take into the ambulance with a detectable pulse and breathing, our program will be a great success. We believe this goal is attainable. We believe the chance is worth the $51,000 of special equipment for our ambulances and special crew training involved. Compare the cost for this city of over half a million with a heart transplant cost of $30,000. If we save only one person, the equipment will have been paid for.

In summary, hundreds of our citizens are going to suffer heart attacks outside hospitals, and the majority who fail to survive will not have medical help. Due to the shortage of doctors, and their inability to give definitive treatment without equipment and outside the hospital environment, doctors will not go to the scene of the attack. The initial treatment during the critical first hour is going to have to be given by properly equipped and trained emergency medical technicians, and the patient delivered alive to hospital intentive care units, where chance of survival is high. We feel that this is the pattern of the future, and we intend to pursue it vigorously.

Providing emergency care to a large city is a complex and never ending job, and we must be prepared for anything. We feel that our progress has been great. In addition to being known as the Bold New City of the South and an All-American City, we hope that Jacksonville will also become known as the safest place in the country to have an accident or a heart attack.

SOVIET SUPPORT OF GUERRILLA ACTIONS IN LATIN AMERICA

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 9, 1969

Mr. THURMOND. Mr. President, in recent weeks various stories have appeared in the press saying that the Soviets no longer had any interest in promoting guerrilla style insurrections in Latin America. Similar statements have alleged that Cuba is no longer a base for subversion and some commentators even say that it is time to normalize relations with Cuba.

In my judgment, such statements are merely wishful thinking which do not accord with the determined campaign of subversion which is now being waged against the responsible governments of Latin America. The facts of the situation have been put forward in an article in the current Human Events by Mr. Paul Bethel, who has frequently appeared before Senate committees as an expert witness on Latin American affairs. Mr. Bethel's article cites dates and facts based upon newspaper reports and official intelligence sources of the Latin American government's concern. Mr. Bethel concludes:

(1) That the Communists are indeed behind terrorist and guerrilla attacks in Latin America; and (2) That the Soviet Union has both the policy and the plan to assault free nations of our hemisphere.

Mr. Bethel's article was obviously written before the recent kidnapping of Ambassador C. Burke Elbrick in Brazil. This kind of gangster activity is typical of the operations now being conducted in Latin America. It is remarkable that news reports say that the so-called 15 political prisoners for whom the Ambassador was held hostage are reported to be going to Cuba from Mexico. I find it shocking that the news media continuously refers to these men as political prisoners as though they were members of a political opposition put in jail for their views. The facts do not seem to bear out this designation. One of those exchanged, for example, was arrested 6 months ago and charged with directing the machinegun assassination plotted against U.S. Capt. Charles R. Chandler in Sao Paulo. Others are identified Communist Party leaders and leaders of violent demonstrations.

Mr. Bethel's article, on the other hand, clearly cites the specifics about the pro-Soviet connection of revolutionary leaders throughout Latin America and his article deserves a careful reading by all those concerned with the future of the Western Hemisphere.

Mr. President, I ask unanimous consent that the article "Liberals Call for U.S. Pull-Back in Latin America" from Human Events of September 13, 1969 be printed in the RECORD at the conclusion of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIBERALS CALL FOR U.S. PULL-BACK IN LATIN AMERICA

(By Mr. Paul Bethel)

In yet another assault on America's commitment against Communist aggression, a small but powerful group of people is proposing that the United States retire its military missions from Latin America and terminate military aid to our friends. Sen. Frank Church (D.-Idaho) has used his Subcommittee on Latin America to the Senate Foreign Relations Committee as a very effective platform to propagate these views. A stream of liberals, many of whom served under President Kennedy, are willing and ready to oblige him—among them Ralph Dungan, ambassador to Chile 1964–67; David Bronheim, a former coordinator of the Alliance for Progress; and George Lodge, an assistant secretary of labor under Eisenhower and JFK.

Bronheim straight-facedly told the Church subcommittee: "Demonstrations and rebellions today in Latin America are not led by Communists nor encouraged by Russia." And further: "The Russians today do not have a policy for fomenting guerrilla was in Latin America, and, accordingly, rebels and demonstrators alike look on the local Moscow-line Communists as reactionaries." Bronheim, who directs the Ford Foundation-financed Center for Inter-American Relations in New York, stressed again: "My point is simply the insurgency threat today is not from the Communists." Period.

Ralph Dungan, who is largely responsible for U.S. support of Chile's Christian Democrats despite their steady march toward Marxism, had this to say: "The principal threat to the United States in Latin America is not communism but a form of Nasserism which tends to grow in Latin American republics." (This may be considered a variation on the "agrarian reformer" theme used in the 1940s to describe Mao Tse-tung's Communist legions, I suppose.) Dungan arrives at this astonishing conclusion: "To continue to assist the Latin American military means to encourage insurrection rather than to insure stability."

Mr. Lodge is equally uninformed: "The organization of the Communist party in Latin America does not constitute a revolutionary force or even a serious threat to American interests." Referring to Brazil, Lodge states: "The most radical elements are not the Communists, but the priests."

For his part, Sen. Church extends the attack on U.S. military assistance to Latin America with the comment that it is a "hydra-headed monster that has very strong support in Congress, in the State Department and even in the White House." For which, we might add, thank God. Uninformed and irrational attacks on the military—any military, anywhere—have reached serious proportions and threaten the very security of our country and that of our allies.

What about the facts?

With no more research than a mere reading of news dispatches and official statements, Sen. Church, Mr. Bronheim, et al., would learn (1) that the Communists are indeed behind terrorist and guerrilla attacks in Latin America; and (2) that the Soviet Union has both a policy *and* a plan to assault free nations of our hemisphere. Let's examine just a few bits of evidence, all taken from published reports:

Colombia's *El Tiempo* reported on January 12 that the government (ruled, incidentally, by the Liberal party) had "discovered an international Communist subversive plot which extends to Mexico, Bolivia, Peru, Venezuela, Brazil and Colombia." *El Tiempo* reported in the same edition that "70 guerrilla delegates from five countries met in the Andes Mountains along the Venezuelan-Colombian border to 'integrate' their activities in a continental war of subversion and terror." The meeting took place between December 20–31 last year and was attended by three Soviet KGB agents, one identified by the government as B. Tarascov.

On January 13 Venezuela's minister of interior, Reinaldo Leandro Mora, confirmed the *El Tiempo* story, saying that his information "fully coincides with the reports published in the Bogotá daily."

Urban riots, which the Bronheim-Lodge-Dungan axis concludes have not received support or encouragement from Communists, convulsed five Colombian cities last January and left 13 killed and 200 arrested. They were the direct result of plans made at the guerrilla conference.

Citing another Bogotá daily, *El Espectador*, that two members of the Soviet Embassy attended a meeting of Marxist labor leaders which planned those riots, *El Tiempo* went on to say on January 19: "The rioters received instructions from the Central Committee of the pro-Soviet Communist party in Bogotá to take advantage of a labor dispute involving a hike in bus fares to create a waive of terror." The signal to start the riots was given by radio from Havana. President Lleras Restrepo was able to control the situation only after mobilizing tens of troops and placing the five cities under a form of martial law.

Moreover, President Lleras discovered that an official from the Soviet Embassy in Havana periodically traveled to Mexico City to turn over money to a Castroite courier. The courier then took the funds to Bogotá for the purpose of supporting Communist guerrilas. One was captured at El Dorado airport in Bogotá with $100,000 in U.S. money together with Soviet plans to intensify both urban and rural guerrilla wars in Columbia, Venezuela, Bolivia and Panama.

These initial Soviet beginnings in creating a united "continental guerrilla force" have advanced considerably over the following six months.

On July 1 the French news service AFP moved this starling story. Said AFP over a Bogotá dateline: "Military sources here revealed today that Colombian and Venezuelan guerrillas recently merged. They did so on the recommendation of the Soviet Union. Venezuelan Pompilio Figueredo has announced that the Soivet Union is prepared to finance these rebel groups on the condition that the merger will formally take place to put an end to ideological quarrels among the group which had been divided between pro-Chinese, pro-Soviets and pro-Castroities." In other words, the Soviet Union has consolidated the guerrilla groups under its command.

El Espectador had more to say on the subject. "According to military intelligence sources," reported the Bogotá daily, "Commander Pompilio Figueredo was said to be able to deliver $1 million in U.S. currency in the name of the Soviet Union to achieve the unification of the guerrilla struggle."

Moreover, *El Espectador* reported that "the Soviet Union submitted the name of Manuel Marulanda (alias "Tiro Fijo") as commander-in-chief, and Castroite Fabio Vasquez as his deputy." AFP also quotes the Colombian intelligence sources on the $1-million figure, then adds that other subversive civilian groups have been brought into the new front, identifying them as "the Worker-Student-Peasant Movement, and 'progressive' priests." "Tiro Fijo" is a member of the Politburo of the Soviet-controlled Colombian Communist party which also works hand-in-glove with Fidel Castro.

On August 5 *El Tiempo* charged the Kremlin with financing two Communist meetings "disguised as student assemblies," and organized by something called the "World Federation of Democratic Youth." The purpose of those meetings, *El Tiempo* reported, "is to adopt measures for uninterrupted promotion of subversion. Though Peking-line and Camilista supporters will be present at the conferences, actually they are financed and organized by the Moscow line."

Among the subjects to be treated at the October 9–12 meeting is the distribution of funds made available by the USSR for maintaining guerrilla movements and a membership drive within universities, schools, labor unions and the like.

Soviet intrigue extends southward toward the tip of the continent. In Brazil, Gov. Abreu Sodre of São Paulo State said recently that terrorists operating in his country receive both local and foreign aid from Communists.

The governor's statement came on the heels of the discovery of a Castro-Communist training camp containing a powerful radio transmitter capable of reaching Cuba, a helicopter landing site and large amounts of arms and ammunition.

Thirty-two members of the Revolutionary Movement of October 8 were captured, including a Paraguayan who had received guerrilla training in Cuba. The movement, called "MR–8," was found to be operating on funds provided initially by Cuba and Russia plus money taken in bank robberies by urban terrorists who had been trained in the art in Cuba.

On August 4 Bolivia's morning paper, *El Diario*, quoted a captured guerrilla to the effect that former Vice President Juan Lechín (a far-leftist) was recruiting guerrilla candidates for training in Cuba. The guerrillas, identified as Félix Melgar Antelo, had been enlisted by Lechín, trained in Cuba and then returned to a ready-made organization of subversion set up in his absence. He stated that Cuba is now elaborately equipped to support guerrilla subversives—with false passports, disguises, money and sophisticated equipment of all sort.

Soviet-Cuban coordination in spreading guerrilla wars, urban terrorism and the like was exposed only recently by a Castro defector, Orlando Castro Hidalgo. He revealed that Cuban intelligence is under the absolute control of the Soviet Union, and said that as a member of that service in Paris he supplied Latin American revolutionaries and guerrilla leaders with money, passports and hideouts.

Castro Hidalgo also stated that the myth that Castro is easing up on his export of guerrilla wars is nonsense; to the contrary, it is proceeding with greater finesse under Soviet supervision (explaining, in part at least, the Soviet interest in creating a united guerrilla front in Latin America).

On July 11 Argentina's prestigious paper, *La Prensa*, published a detailed plan for the Communist conquest of eight countries—Eucador, Peru, Argentina, Venezuela, Brazil, Bolivia, Uruguay and Colombia. Citing intelligence reports from Uruguay, Argentina and Peru, *La Prensa* revealed that the plot had been approved "by a central revolutionary committee of Castro-Maoist Communists" which met in Montevideo, Uruguay, last June to follow up the guerrilla conference held six months earlier in Colombia.

The plan contains a combination of sophisticated subversion and military action. It is worth reproducing in condensed form:

"Universities: Catholic Universities will be the true motor of actions planned and carried out in the streets. The demand: 'Change the universities; change the political structure of the nation!'

"The Church: It is now publicly recognized to be revolutionary and reformist. . . . It must be made to declare, from the pulpit and every other suitable place, this new orientation for the masses. To support this goal, we must have 1,500 active clergymen to convert the Church into the major base for the revolutionary movement of the left. The slogan: 'Each hour a disturbance, on each street corner a riot!'

"Workers: Make demands for privilieges and wages that will shake the capitalist regime. Government of the workers and the overthrow of the system of government by politicians and militarists!

"Professors and Teachers: Professors must be surrounded and made to work in harmony with the priests.

"Campesinos: It is a proven fact that these are the most difficult to incorporate into our movement. They must, therefore, be directed by local priests in the interior of the country and made to occupy the land."

It is perhaps necessary to add that *La Prensa* is no stooge of President Juan Carlos Onganía; Publisher Gainza Paz established his integrity long ago when he steadfastly opposed Juan Perón and was sent into exile for years.

In any event, Communist (and specifically, Soviet) complicity in guerrilla wars and the advancement of continental subversion on a well-organized basis is so obvious as to be ostentatious—making hash out of the incredible therories proffered by the Bronstein-Lodge-Dungan trio.

Indeed, in many Latin countries only the police and military establishment stand against Soviet intrigue and the formidable array of cold-and-hot-war weaponry the Communists employ. Thus, Venezuela's defense minister, Martin Garcia Villamil, acknowledged the importance of U.S. aid when he declared on August 12 that Communist subversion was on the march in Latin American countries and that "the technical advice of U.S. military missions is useful to the armed forces of our country."

Opposing the Church-Lodge-Dungan-Bronheim assault on both common sense and the U.S. military is the House Subcommittee on Inter-American Affairs. In recent hearings Gen. George R. Mather pointed out defense costs of 15 Latin American nations averaged only 10.9 per cent of national budgets last year—less than 2 per cent of their gross national product. What is more, the money going to the military is to replace antiquated equipment, some of it dating back to pre-World War II days. Little or no expansion is being made in military forces, though such expansion would seem to be badly needed at this point.

Many Washington officials are concerned over the testimony given to the Church subcommittee by Messrs. Dungan, Bronheim and Lodge. For example, Mr. Bronheim was a key member of Gov. Rockefeller's recent mission

to Latin America on behalf of President Nixon. If the report—which was submitted by the governor last week, but not made public—contains the prejudices and unsupported theories as expressed by Mr. Broheim before the Senate, then the credibility of the whole report will be very much open to question.

Those liberals who constantly deplore the shrinking image of the United States in the eyes of Latins, and allege that it stems from unwarranted U.S. support to Latin American military dictators, had better take a long look at the display of intellectual dishonesty, ignorance or just plain naivete as it appeared in the Senate.

There are many points on which one can agree with Mr. Bronheim, as, for example, "the leading mythology which claims that the very poor and oppressed are an explosive element and that by improving their lives they will be less explosive." But all that Mr. Bronheim has done is to substitute his own mythology that communism is no driving force in Latin America and that the best way to handle problems there is to cut off military aid.

This slack-jawed, lazy-minded view is aptly described in the editorial appearing in the July 6 edition of *O Estado do Brasil:* "To hold that the armed forces are a factor of instability [referring to Mr. Dungan's testimony] is similar to arguing that communism is a force compatible with the exercise of democracy. And that, in résumé, is what those who testified before the U.S. Senate wanted to prove."

The editorial concludes: "It remains only to say that if the characterization as 'doves' and 'hawks' is apt for the two currents of thought on American policy, the personalities we mention in this commentary [Dungan, Bronheim, Lodge] in all justice deserve to be included in a category that is not at all novel: that of ostriches."

"THE MAN NOBODY SAW"

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. CORMAN. Mr. Speaker, several months ago I had the privilege of being in the audience at the Smithsonian Auditorium to view a play entitled "The Man Nobody Saw." This was a production of the Plays for Living Division of the Family Service Association of America, and was inspired by the report of the Kerner Commission.

Ben W. Gilbert, a Washington Post staff writer, explored the meaning of the drama in a recent Post article. He offers the opinion that the drama is "an acknowledgment of what the Kerner Commission has called the 'destructive environment unknown to most white Americans' that segregation and poverty have created in the Nation's ghettos."

I was deeply affected by the play. Millions of Americans, black and white, should have the opportunity to see it. Perhaps to do so would make well-intentioned white Americans aware that sympathy and outrage at the plight of black Americans are not enough; that, more important, there must be recognition of the way white America, consciously or unconsciously, influences ghetto life. For, until white America permits this awareness to surface and accepts it, racism cannot be erased.

Mr. Whitney M. Young, Jr., executive director of the National Urban League, and Mrs. Adelaide Eisenmann, coordinator of the National Capital pilot demonstration project responsible for the 14 organizations involved in staging this production, are to be particularly commended for their efforts. Should Mr. Young and Mrs. Eisenmann achieve their goal in having this play performed again, hopefully throughout the Nation, I would recommend it highly to my colleagues. But in the meantime, Mr. Gilbert's review captures the full essence and meaning of the play, and because of the drama's deep and subtle meaning, I want to bring his review to the attention of my colleagues. Mr. Speaker, I insert the review at this point in the RECORD:

A DRAMA EXPLORES MEANING OF RACISM

(By Ben W. Gilbert)

The young black lawyer turns to the two white courtroom witnesses, a man and a woman, and angrily charges that they are guilty of the violent crimes for which his black client, Nathan Richardson, is on trial. It is the opening scene of "The Man Nobody Saw" at the Smithsonian Auditorium.

The lawyer's charge appears too stark, too shocking to reach many persons in the audience yet. The two white actors who will play a succession of roles no doubt will turn out to be mean, horribly racist persons whose outrageous behavior will confirm the lawyer's charge and thereby establish the innocence of the defendant who is both black and poor. And then, the audience will be asked to decide what should be done with the white characters.

But no, it turns out that the whites portrayed are generally well-intentioned, ordinary persons—insensitive, perhaps, but not hateful. They fail to realize the impact of their casual, occasionally prejudicial, but seldom overtly hostile actions on the young Negro family, Richardson, his wife who is a domestic, and their two children.

Is this failure of whites to understand this lack of sensitivity and empathy, racism? The unasked question becomes the central problem of the play and a key element of the audience discussion to follow. The Kerner commission whose report inspired the play said that white society is "deeply implicated" in the ghetto, but is not aware of the part it plays. Tom Wicker of the New York Times in an introduction to the riot report said that "until the fact of white racism is admitted, it cannot conceivably be expunged." The design of the play is to produce that awareness.

A white widow's husband, an accountant, was a hospital trustee who saw that the institution ran on a "sound fiscal basis," a policy that deprived Richardson's mother who died in childbirth of prenatal care. The widow does volunteer work at the adoption center where there is nothing to do for black children including Richardson.

A white father favors bussing black children to the school his youngsters attend, but does not show up for the crucial vote because his wife is opposed. So Richardson loses an educational chance. Richardson is turned away at the union hall because he lacks qualifications to be a journeyman and there are no openings for apprentices. An employer refuses to give him a job requiring little training because he lacks experience.

The whites in the audience begin to feel sorry for the Richardsons. They are making such an enormous effort, but get absolutely nowhere. Some notion of what it means to be both black and poor reaches the audience. It is not long before the white spectator senses that he too is on trial. It is becoming evident that he shares responsibility for the plight of the Richardsons. Does that make him a racist? That's a tough question and the audience is becoming uneasy.

The play moves rapidly to a predictable climax. A banker has just refused to grant Richardson a mortgage loan to enable him to become a partner in a small dry cleaning plant. He goes berserk after learning that his younger child has succumbed to rat bites in the family's frightful hovel.

Mrs. Richardson, who is one of the victims of her husband's rage, reacts to the shattering of his hopes for independence and says how hard it is to see her husband "made meaner and smaller" each day. But, she won't press charges against him, although the authorities want her to, because she is glad to find he can still fight back.

Discussion leaders ask audience groupings to write on index cards what they think the play means to them. Outrage and frustration are typical answers. The Richardsons are trapped by the system. Acknowledgment of guilt is slow to appear, but it is there. A few whites in the audience of 450 find it all too painful and depart.

The leaders probe gently. What can be done about it? Clear-cut answers do not emerge, but that is not surprising. Nevertheless, there is evident identification of the problem and the system that produced it, thereby providing a better understanding of what is meant by the charge of white racism.

Although the charges against Richardson are serious—"arson, assault, attacking his wife, felonious stealing and other acts of an incendiary nature," a thread of compassion ties the audience to him and focuses discussion on his plight, rather than his offense, an acknowledgement of what the Kerner commission has called the "destructive environment unknown to most white Americans" that segregation and poverty (and white racism) have created in the Nation's ghettos.

In a discussion guide prepared for the evening, Whitney Young, executive director of the National Urban League, defines white racism as "the effect of white institutions on the life of the ghetto . . . the things that more or less well-meaning white people do, unknowingly and unthinkingly, that cripple lives in the black community."

"White racism," Young says, "doesn't mean that Americans in any large numbers want to lynch Negroes or send blacks back to Africa, but it does mean that the vast majority of white Americans . . . to make basic assumptions of their own superiority . . . to justify actions injurious to black citizens."

Although the play by Elizabeth Blake, a production of the Plays for Living division of the Family Service Association of America, was prepared primarily for white audiences, the group at the Smithsonian literally was mixed.

The sponsors, of course, hoped that the audience took away more than an emotional jolt and would want to see the play shown to other community groups. There was some evidence of members of the audience being affected. For instance, one black woman, a Federal employe, reported that a white co-worker came to her the next day to discuss the meaning of the play.

"You know," the black woman reported, "I felt that she saw me for the first time."

THE APPALACHIAN POWER CO. ASSISTS AN ANTIMUNICIPAL POLITICAL GROUP

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 9, 1969

Mr. METCALF. Mr. President, I have on previous occasions described the situation that exists in Danville, Va., as a classic example of the struggle of a small, municipally owned electric system against takeover by a large investor-

owned utility, in this case Appalachian Power Co., a subsidiary of American Electric Power.

The accusation had been made by the Danville City Council that the New Day for Danville Committee, which was waging the fight against local power bond referendums, was being assisted financially by the Appalachian Power Co.

I have received correspondence from Mr. John W. Daniel, chairman of the New Day for Danville Committee, concerning his denial at a recent Senate hearing that Appalachian Power had in any way assisted the political activities of the committee, along with correspondence from the advertising agency of Cochran, Harding, & Stuart, indicating that through an "error in billing and payment" the Appalachian Power Co. had paid printing and mailing expenses for the committee.

Mr. President, I ask unanimous consent that the correspondence be printed in the RECORD.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

NEW DAY FOR DANVILLE COMMITTEE,
Danville, Va., March 26, 1969.

Hon. LEE METCALF,
U.S. Senate,
Washington, D.C.

DEAR SENATOR METCALF: We certainly appreciate your Committee hearing our side of the Danville story pertaining to the various power bond issues.

As promised during our appearance before your Committee on March 19th, we submit the following information from our records. To the date of this letter, we have received 302 contributions to our New Day for Danville Committee ranging from $1.00 on up. The total amount received to date is $3,818.25. In reviewing the above contributions, we do not find that Appalachian Power Co., American Electric Power Co. or any official of these companies are listed among the contributors, and to our knowledge we have not received any contribution from any employees of either power company.

Hope the above is the information you desire.

Very truly yours,

JOHN W. DANIEL,
Chairman.

JULY 19, 1969.

Mr. JOHN W. DANIEL,
Chairman, New Day for Danville Committee,
Danville, Va.

DEAR MR. DANIEL: Enclosed is evidence introduced this week in the Federal Power Commission proceedings regarding Appalachian Power Company. This statement, by Russell E. Faudree, Jr.,* an FPC auditor, deals in part with the New Day for Danville Committee. The information he put in evidence does not accord with that which you furnished the Subcommittee in your appearance last March and subsequent statement.

When I concluded hearings on S. 607 on 9 July, I stated that the record will be open for two weeks. However, I shall keep the record open until Monday, July 28, in the event that you wish to amend your denials of assistance from Appalachian Power and submit additional financial data regarding the New Day for Danville Committee.

Very truly yours,

LEE METCALF.

*Text of Mr. Faudree's report printed in CONGRESSIONAL RECORD of July 24, 1969.

NEW DAY FOR DANVILLE COMMITTEE,
Danville, Va., July 25, 1969.

Hon. LEE METCALF,
U.S. Senate,
Committee on Government Operations,
Washington, D.C.

DEAR SENATOR METCALF: On returning to Danville on July 24th I found your letter of July 19th.

In regard to your offer to change my "denials of assistance from Appalachian Power" given in testimony before your subcommittee on March 19, 1969:

My testimony stands as given. I was not then aware that Appalachian had—through a mistake in billing—paid a bill which should have been sent to the New Day For Danville Committee. As soon as the local press printed a report of the FPC Audit of Appalachian expenditures showing this payment, I asked the Committee's advertising agency to determine if this had happened. When the agency informed me that it had occurred (see enclosed letter), I made arrangements to take care of this expenditure out of Committee funds.

I repeat, my testimony given before your sub-committee stands as given, as it represented the facts as I knew them at the time.

I am enclosing a statement I released to local news media the day after the story on the FPC audit was printed.

Very truly yours,

JOHN W. DANIEL,
Chairman.

COCHRAN HARDEN & STUART, INC.,
Greensboro, N.C., July 21, 1969.

JOHN W. DANIEL,
Chairman, New Day For Danville Committee.

DEAR MR. DANIEL: I am sorry that I was out of town Friday (July 18) when you tried to contact me. When I returned to the office today I found a clipping from the Danville Register that you had sent to me. I was so surprised as you were to read that Appalachian Power Co. had allegedly paid some bills for the New Day For Danville Committee. On checking into the matter, I discovered that indeed the expense for printing the Committee's first letter, the labor involved in folding and stuffing the letter and the postage for mailing it had been paid for by Appalachian.

I regret that this happened as I know it has caused you some undeserved personal embarrassment. And I especially regret it because you told me repeatedly that the Committee was paying all of its expenses, in that you and the committee were fighting for a principle and "not fighting any battles for Appalachian."

I have requested Appalachian to bill our agency for any expenses involved in getting out the first mailing, and as soon as this bill is received I will in turn render a statement to the Committee.

Once again, Mr. Daniel, let me say how much I regret this error in billing and payment; and I hope this method of re-payment will meet with your approval.

Cordially,

JERRY REECE.

NEWS RELEASE FOR NEW DAY FOR DANVILLE COMMITTEE

(Statement by John W. Daniel, July 19, 1969)

I have not knowingly made any misstatement of fact as to anything that the New Day for Danville Committee has been concerned with.

When I appeared before the Metcalf Sub-Committee in Washington on March 19, 1969, I knew that the New Day's letter to the people of Danville had been prepared by the New Day Committee and had gone out. It was my understanding that all expenses in connection with this letter were to be billed to the Committee by Cochran Harden & Stuart, Inc., the advertising agency which had been employed by the Committee to assist with its publicity.

Subsequently, in April, the Committee received from Cochran Harden & Stuart, Inc. the invoice appearing below which contained an item of $783.56 for "design, layout and printing of envelopes and letterhead (paid to Stuart Studio)." It was my belief that this item included all expenses in connection with the Committee's letter.

The newspaper story published Friday, July 18th, was the first I knew that the $298 cost of printing the letter was separately paid by Appalachian and not included in the bill rendered the Committee by Cochran Harden & Stuart, Inc.

The bill above referred to is as follows:

Conferences and creative time for account executive (Jerry Reece)	$1,335.00
Advertising bill paid by CHS	1,260.25
Outside services purchased by CHS:	
Production of jingle, taping of radio spots (paid to Sound Creators)	337.50
Voice for spots (paid to William Alspaugh)	100.00
Art, production and layouts for newspaper ads (paid to Stuart Studio)	2,385.99

This entire bill has been paid by the Committee and I remain personally responsible on a note used to raise the money to pay it.

The committee and Appalachian Power Company both had a clear right to spend money to inform the people and to get their views across. The City Government evidently felt that it had the same right since it did not hesitate to expend a large amount of the taxpayers money in promoting the Power Bond Issue.

It would be only fair for the City to consent to have the amount it has spent in this matter revealed by an independent audit.

TRITUTE TO THE HONORABLE CHARLES S. JOELSON

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. GILBERT. Mr. Speaker, it is with mixed feelings that I watch my friend, CHARLES S. JOELSON, leave the House of Representatives and return to his home State of New Jersey to assume the position of judge of the superior court.

My feelings are mixed because I will be losing a warm and valuable friend but I am pleased because "CHUCK'S" long and capable years of service to the people of New Jersey are again being recognized by this new appointment.

I have enjoyed working with "CHUCK" JOELSON and in the 8 years we have served together, I have come to think of him as one of my closest friends. We in the Halls of Congress will be losing an able legislator who has served with distinction on the Education and Labor

Committee and the Appropriations Committee.

I wish to join with my other colleagues today in the House of Representatives in wishing "CHUCK" JOELSON all the very best in the years to come.

ON ASSESSING HO CHI MINH

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. MIKVA. Mr. Speaker, this body has heard some discussion in recent days over the assessment by his own countrymen of the career of North Vietnamese Leader Ho Chi Minh. It has unfortunately been implied that to recognize Ho's standing as a nationalist and patriot in his own country is somehow to praise him and to dishonor the memory of American soldiers who have died in South Vietnam.

In light of this line of argument, I was interested to note in reading through one edition of a paper from my home town, the Chicago Daily News, two columns which treated—one seriously and one humorously—the significance of Ho Chi Minh's career and of his death. The widely read publisher and columnist John S. Knight had a column under the headline "Yes, Ho Was a Red, But Also a Firm Nationalist." One of Chicago's most talented writers and humorists, Mr. Mike Royko, has made somewhat the same point mixed with some shrewd observations about the attitude of Americans toward the war in South Vietnam.

It has been said, Mr. Speaker, that a Member's comments about Ho Chi Minh's standing among his own countrymen reflects adversely on his qualifications to sit in this body. I submit that this is no more true than that John S. Knight's comments reflect adversely on his qualifications as a publisher or Mike Royko's on his qualifications as a columnist and journalist. The most important point, however, is that this body must remain, as it has traditionally been, a forum in which all opinions may be heard and all voices raised without fear of misrepresentation or recrimination. To the extent that this freedom of comment and debate is hindered or restricted, all the Members of this House and all the people of this Nation are the losers.

The articles referred to follow:

YES, HO WAS A RED, BUT ALSO A FIRM NATIONALIST

(By John S. Knight)

The death of Ho Chi Minh marks a milestone in the history of Indochina.

Ho was a dedicated Communist, trained in Moscow. But he was likewise a confirmed nationalist who roused his people with the cry for independence of his homeland.

In his youth, this ruthless, intelligent and resourceful man was impressed by President Woodrow Wilson's 14 points as enunciated at Versailles. He sought unsuccessfully to petition the Versailles conference with similar guarantees for these freedoms in Vietnam.

When spurned, Ho turned to Communism as the only effective way to gain his objective.

Ho's further frustration came in 1946 when the French reneged on an agreement to permit the Democratic Republic of Vietnam to become part of the French union as a free state within the Indochina Federation.

Ho had been recognized by the French as chief of state and was promised a plebiscite in the south on the question of unified Vietnam under his leadership.

France's repudiation of this agreement brought on a 7-year war. Until the victory of Dien Bien Phu, Ho received no official diplomatic recognition from either Communist China or Russia.

The cease-fire accord signed at Geneva divided Vietnam at the 17th Parallel, creating a North and a South Vietnam. Elections were promised as a means of unifying the country.

Although a party of the Geneva accord, the United States declined to sign it. South Vietnam, also a nonsignatory, refused to hold the elections. It was Gen. Eisenhower's opinion at the time that if elections had been held, Ho would have received about 80 per cent of the vote.

The United States made a lamentable mistake in appraising the Vietnam situation following World War II.

Ho had collaborated with American O.S.S. agents during the Japanese occupation. He hoped, and with some cause, that the Americans might support Vietnamese independence after the Japanese defeat.

Franklin D. Roosevelt had declared his distaste of colonialism and remarked that Vietnam must never be returned to the French.

Yet the United States sided with the French and supported return of their colonial power to Indochina. At that time, popular opinion in this country was imbued by the fear of a monolithic communism which might one day dominate the world.

We had learned nothing from the French fiasco and even less about the impossibility of shooting down either nationalism or communism with superior fire power.

And that, ladies and gentlemen, is why we are today in Vietnam—uncertain, bewildered, boastfully reciting the huge enemy casualties one day and pleading in Paris with North Vietnam for peace on the next.

No one can be sure yet whether Ho's passing will raise or diminish our hopes for an end to the fighting.

This will largely depend upon Ho's successors, all tough and seasoned disciples of their fallen leader's philosophy. But the impression persists that they may lack the old man's tenacity of purpose and even find it to their advantage to become less dogmatic at Paris.

After a proper interval, President Nixon should take the initiative.

This is not the hour to make threats, belabor the past and snarl over trivia.

Rather we should be generous in our proposals and seek a workable compromise which may not satisfy the hard liners on either side.

Of prime importance is to devise a way to bring the fighting to an end as we, together with other nations, strive for solutions which can alleviate world tensions and bring to all of Vietnam the democratic processes so essential to the welfare and progress of that beleaguered land.

In my various editorial capacities, I have published Drew Pearson's column since 1934 and often to the disgust of some readers.

In explanation as to "Why you print that so-and-so," the reply has always been made that while Drew is sometimes careless with the facts, he nevertheless manages to dig up pertinent information we don't get from any other source.

And Pearson never took exception to the editor's authority to set him straight, point out errors or simply toss the offending column in the round file.

On his more than 50 libel suits, Drew once wrote me: "I am rather proud of them because it would be fairly easy to settle and instead I have spent an awful lot of money and even more time proving I was right. I suppose some day I'll get set back on my heels, but I'm still going to fight them anyway."

Drew Pearson's exposes of men in public life demanded great courage. Presidents called him nasty names, the late Joe McCarthy kicked him in the groin, accused him of being a Communist and inspired a successful boycott of his radio program.

The columnist's revelations led to the censure of Sen. Thomas J. Dodd of Connecticut. Pearson was denied a Pulitzer Prize, although recommended by the jury, because of distaste for the methods he used.

Withal, Drew Pearson was a quiet, self-effacing man with the manners of a diplomat and the conscience of his Quaker birthright.

His faults notwithstanding, Drew Pearson's crusades turned the light on the dark crevices of government where lesser men sought to conceal their deceits.

WE'VE RUN OUT OF "BAD GUYS"

(By Mike Royko)

The day after President Truman announced that Hitler was finally dead, the Illinois Legislature happily passed this resolution:

"We hereby commend Hitler on the one good act of his career . . . and condemn him for not having died 56 years ago."

British radio marked the event by quoting Shakespeare: "The day is over. That bloody dog is dead."

Everyone was happy. Strangers bought each other drinks, celebrated, cheered. People beamed and talked about it on the street. It couldn't have happened to a more deserving monster, they all agreed.

The reaction was the same, on a lesser scale, when Mussolini got his. And when Tojo tried to kill himself, people hoped he'd survive, which he did, because they wanted to see him hanged, which he was.

And why not? Next to a total victory over the enemy nation, there's nothing as encouraging as the death of the enemy nation's leader.

That's why I couldn't wait to get downtown after I turned on the radio and heard that Ho Chi Minh had died.

Stuffing my pockets with confetti and party noisemakers, donning a red-white-and-blue straw hat, and humming a medley of George M. Cohan songs, I set out to join in the patriotic outbursts I was sure would be sweeping the Loop.

Strangely, I couldn't find any happy crowds gathering at State and Madison. People went about their business as if nothing wonderful had happened.

And in the bars, nobody made "V" signs with their hands, drank a toast, or sang "Roll me over in the clover. . . ."

So I hurried to the office to read the papers and make sure I hadn't misunderstood the radio announcer.

No mistake. It was right there in black and white. Ho was dead, all right.

At least, I thought, there would be the satisfaction of reading about the monster's end. I began looking for the stories quoting out national leaders about what a great victory for freedom his demise was; about how death was too good for this Red octopus who tried to crush us in the tentacles of international communism. I wanted to savor the editorials that would say the world can rest a little easier today, and that this terrible man left a dark splat on the pages of history.

But the situation got even more confusing.

The President hadn't even commented on Ho's death. Hardly anyone in public life said anything. There were no sardonic resolutions being passed by legislatures anywhere.

Even more remarkable, some stories and editorials described him as being a "George Washington to millions of Vietnamese."

One editorial talked about his "unrelenting and unswerving fight of more than 30 years to free all of Vietnam from foreign domination."

A hard-bitten war correspondent who had spent more than two years in the thick of the Vietnam battles, described Ho as being "venerable, bearded, ancient, gracious, grandfatherly."

And the most flag-waving paper in town, which I had expected to verbally dance on his grave, didn't say one editorial word.

Just about the only harsh comment I could find was the rather obvious fact that he was a big Communist. But even that was tempered by the observation that he was even more of a Vietnam nationalist than a Communist.

Unbelievable as it was, there is no getting around it: He came off sounding better than some of the people who are on our side.

What kind of patriotism is that? Common sense alone should tell us that he was a fiend of the darkest evil. Why else would we be killing his followers by the hundreds of thousands, and losing more than 30,000 of our own men doing it? If that many of his followers are bad enough to deserve killing, imagine what he, the leader, was like?

And the fact that we've been at it longer than we were in World War II should be prima facie evidence that he was probably the most evil man in the world, because if he wasn't, why aren't we fighting the guy who is?

I hope the next time we get into a limited war, we find an enemy with a more hateful leader. After all, we do have freedom of choice.

NEWSLETTER

HON. WILLIAM LLOYD SCOTT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. SCOTT. Mr. Speaker, in an effort to keep the people of the Eighth District informed I send out a newsletter to all who request it and am inserting at this point in the RECORD a copy of the September issue for the information of the membership:

YOUR CONGRESSMAN BILL SCOTT REPORTS

CONGRESSIONAL VACATIONS

The Congress was in recess for three weeks and reconvened last Wednesday. This is a departure from the usual procedure of having a continuous session beginning in January. However, the sessions have become so long that they almost run throughout the year, and some of the younger Members with school age children urged a vacation time during the summer which they could share with their families.

Inez and I spent a portion of the time on our boat on the Potomac, some of the time working around the house, but the entire vacation within the district. We also had an opportunity to attend some activities sponsored by civic groups, to spend some time in the district office at Fredericksburg, and the remainder in the Washington office.

ELECTORAL REFORM

A most important measure is now before the House of Representatives for consideration. It proposes to amend the constitution to provide for the direct election of the President and the Vice President and to eliminate the electoral college. Under the proposal, a single vote would be cast for two persons who have consented to the joining of their names as candidates for the offices of President and Vice President. No candidate could consent to the joining of his name with more than one person. The pair of persons receiving the greatest number of votes for President and Vice President would be elected, provided however, that if no one received at least 40% of the whole number of votes cast, there would be a run-off election between the two pairs of persons who received the highest and second highest number of votes. While a 2/3rd vote is required for passage, the measure is popular and will probably be approved in the House of Representatives. The Senate Judiciary Subcommittee on Constitutional Amendments, however, has recommended a different plan for electing the President and the Vice President. Under its proposal, known as the "District Plan, the President and Vice President would be selected by receiving the greater number of votes in a majority of each of the 435 Congressional Districts in the country, and in addition, a majority of the at large votes corresponding with the two Senators from each state.

The present electoral system for electing the President and Vice President was a compromise which grew out of the Constitutional Convention of 1787. Some wanted the President to be elected directly by the people while others felt that the selection should be made by either the Congress or the State Legislature. However, the present method provides that the Chief Executive be chosen by electors equal to the 535 members of both Houses of the Congress plus three electors from the District of Columbia, and in order to be elected President or Vice President, a candidate must receive a majority of all electoral votes.

Certainly a direct vote of the people is a democratic way of selecting our two top government executives. However, in our cities we have bloc voting to a great extent and the District Plan adopted by the Senate Committee has considerable appeal. The measure was scheduled to be considered for the balance of the week with the understanding that if final action were not taken, it would go over for further consideration next week. Some rescheduling may be made because of the death of Senator Dirksen. This should be one of the most interesting and important matters considered by the Congress in recent years and I want to hear arguments on the proposed amendments, but do intend to vote for abolishing the present electoral system.

FUTURE ACTIVITIES

The President has indicated that many public projects financed in whole or in part by the federal government will be curtailed, and I am not sure at this time what effect, if any, this determination will have upon any proposal within our district. However, inflation is a matter that concerns us all, and especially a person on a fixed salary or a retirement income. Therefore, it seems reasonable to support efforts to control spending and to establish a stable dollar. Another proposal of the President relates to welfare. He speaks of transferring people from the welfare roll to the payroll and the key word in his plan appears to be "work." We would all agree that there is an obligation to support persons unable to care for themselves because of age, mental or physical deficiencies, but as I understand the President's proposal, it will be to encourage persons to obtain employment in private industry and develop a plan whereby it will be in their financial interest to work rather than stay on relief. A provision is also included for job training and a person able to work who will not accept training or a job will be eliminated from the welfare roles.

NATIONAL CEMETERY

The Committee on Veterans Affairs will conduct a hearing on September 23 at 10:00 a.m., on H.R. 8818, to provide for the establishment of a national cemetery adjacent to the Manassas Battlefield Park. During the past century, Arlington has become an outstanding and cherished national shrine commemorating the lives and services of members of the armed forces. A number of constituents have expressed concern about the limited burial space there and the restrictions recently established. Even under the restricted rules, however, Arlington will be completely filled by 1985. The suggestion was made that an auxiliary be established at the Manassas Battlefield Park as a supplement to Arlington. Of course, the battlefield is already an historical shrine in view of the first and second battles of Bull Run or Manassas during the Civil War. However, a heroes' cemetery such as exists at Arlington would relieve the present congestion and provide a buffer area against encroachment by commercial interests. My bill would authorize the acquisition of not more than 500 acres of land to meet present and future burial needs. Even though I know your views on this proposal because of the annual questionnaire and personal contact, you may want to share them with the Chairman of the committee conducting the hearing. He is Congressman Olin Teague, Chairman, Committee on Veterans Affairs, House of Representatives, Washington, D.C. 20515.

GOVERNMENT EMPLOYEES

The Committee on Post Office and Civil Service has favorably reported a bill to establish a Federal Employee Salary Commission to fix future federal employees' salaries, subject to appeal to a Board of Arbitration and ultimately a Congressional veto. It provides an additional pay raise for postal workers but none for other government employees. Each year, the commission would report its recommendations to the Congress on the first of February and these recommendations would become law unless vetoed by the Congress within thirty days. The Postal Employees Union generally support the measure but other Government Unions oppose it. There is considerable doubt in my mind as to whether the Congress and the President should abdicate their jurisdiction over federal salaries. The responsibility for developing a budget rests with the President and government employees' salaries constitute a large portion of the budget. Therefore, it does not seem reasonable to have these salaries determined without any opportunity for him to pass upon them, and none is provided in the bill. As Congress has a responsibility to appropriate funds, it seems reasonable that it would also have a voice in determining the amount of salaries. However, there should be an opportunity to amend or rewrite the measure when it is considered on the floor of the House, and I am not sure of how the final version will read.

FLOOD RELIEF

Six counties in our Congressional District were affected by the recent heavy rainfall and flooding. Although other areas of Virginia suffered more damage, these counties are said to qualify for federal assistance. Assistance, if needed, is available through the Small Business Administration (SBA), the Department of Agriculture, and, of course, the various private agencies. The SBA regional office in Richmond can take applications for loans to repair businesses and homes damaged or destroyed by the storms and floods. Loans may be made direct or in cooperation with local banks. In some cases, the SBA will guarantee a loan made directly by a bank. It must be pointed out that emergency loans are for emergency purposes only, such as to replace furniture destroyed in the flood or to repair homes damaged by the flood. In addition to its vital role in feeding victims of the storm, the Department of Agriculture also provides aid for farmers. Emergency loans are available through FHA, and feedgrain is available on an interim basis for farmers whose stores were affected by the storm. The six counties eligible for these services include Caroline, Charles City, Goochland, Hanover, New Kent, and Louisa. Information and literature can be obtained through the appropriate agency or through this office.

AMONG OUR CORRESPONDENCE

A constituent wrote regarding the inadequacy of the postal facilities at Dumfries indicating that persons parking at the facility had to back out into U.S. Route 1. The Postmaster General, however, advised on September 5 that the department is proposing construction of a new facility for the community and that a report will be sent at an early date.

If you are not presently receiving the newsletter and would like copies each month, please let us know. However, if you are already on the mailing list and are regularly receiving it no further action on your part is necessary.

SOMETHING TO PONDER

Noah didn't wait for his ship to come in; he built his own.

JUDGE TO JUSTICE

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. KEITH. Mr. Speaker, the nomination of Judge Clement Haynsworth to the U.S. Supreme Court has drawn a certain amount of fire, as every Supreme Court nomination does. In Judge Haynsworth's case the critics argue that he has "dragged his feet" on civil rights in his earlier decisions in the South.

The critics are finding it difficult to gain much support in their efforts to block the nomination of the judge, for the simple reason that they have a poor case. Those who have examined Judge Haynsworth's overall record find it to be a fair and progressive one. While one might quarrel with some of his earlier civil rights rulings, the majority of his decisions in this area—and certainly most that he has made in recent years—show an outstanding degree of fairness and regard for the merit of the individual case.

Although a southerner, Judge Haynsworth has drawn editorial praise from every end of the country, including my own area of New England. The Boston Herald Traveler recently ran such an editorial, and I am glad for the opportunity to bring it to the attention of my colleagues:

JUDGE TO JUSTICE

President Nixon's nomination of Judge Clement F. Haynsworth Jr. of South Carolina to be an Associate Justice of the Supreme Court seems to be an excellent choice.

Mr. Haynsworth, the chief judge of the U.S. Court of Appeals for the Fourth District, meets superbly what President Nixon considers the qualifications for the nation's highest tribunal: He is prudent, fair-minded, erudite and keen.

These qualifications should commend Judge Haynsworth to the U.S. Senate, notwithstanding complaints from some liberal and civil rights leaders about some of Judge Haynsworth's earlier decisions.

Mr. Haynsworth himself is the first to concede that he has, like most men, changed his mind over the years, and although some of his earlier opinions showed conservatism and caution in civil rights cases, he cannot be categorized as a foot-dragger in the federal judiciary's steady expansion of civil liberties. In 1965, for example, he decreed the integration of the South Carolina Dental Society.

Judge Haynsworth, the fifth generation of the same family that has produced esteemed members of the bar in South Carolina, has shown that he likes to decide each case on its merits and its constitutionality. His judicial temperament and scholarship have earned him a reputation as a distinguished jurist, a reputation which we hope his tenure on the Supreme Court will further embellish.

DESALTING PLANT IN ISRAEL

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. MINISH. Mr. Speaker, I am today introducing legislation to amend the Foreign Assistance Act to authorize the United States to participate in the development of a large desalting plant in Israel. The proposal presently is pending before the House Foreign Affairs Committee and I urge favorable consideration of this worthwhile project by the members of that body.

The project in question is a dual purpose power and desalting plant designed to eventually produce 40 million gallons of fresh water per day. Under the legislation, the U.S. Government would extend $40 million to Israel to pay half the cost of constructing the water plant and half the cost of 5 years' operation. Israel would cover the balance for the water plant and assume the entire cost of the power facility. A conservative estimate has placed the projects total cost to Israel at approximately $100 million.

Israel anticipates a severe water shortage in the next decade and must seek assistance in the development of freshwater conversion methods. By necessity, Israel maintains a large defense force at great expense to her citizens. Unlike the Arab governments, Israel is not receiving free arms assistance from any nation. When available, essential armaments must be purchased at staggering costs from the few nations willing and able to cooperate toward the goal of a free, sovereign, secure Israel at peace with her neighbors.

The development in Israel of the world's first major desalination installation promises rich dividends to the United States in return for a modest investment. A critical shortage of fresh water for home and industrial use will confront much of the world, including parts of the United States, in future decades if a solid beginning of research and development in desalting is not made promptly. As former President Lyndon Johnson said on February 6, 1964:

Our own water problems in this country are not yet solved. We, like Israel, need to find cheap ways of converting salt water to fresh water, so let us work together.

Israel constitutes the ideal setting for a prototype project in desalination to benefit all mankind. Anticipating a severe water problem, the Israel Government already has begun to acquire skill and experience in the management of her meager water supply and the production of fresh water. Moreover, Israel has consistently demonstrated an outstanding ability in science, economic growth, and agriculture. Her strides in all areas of endeavor over the short span of two decades serve as indisputable testimony to her ability to tackle and to overcome the most difficult obstacles.

Mr. Speaker, the inclusion of this legislation in the Foreign Assistance Act of 1969 will mark a giant step in the world's effort to assure a more peaceful and a more prosperous future for all mankind.

EULOGY OF THE LATE EDWARD A. KELLY

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. McCORMACK. Mr. Speaker, recent weeks have seen the passing of distinguished Americans whose service to the Nation can never be fully measured. Not least among these stands the name of Edward A. Kelly, dear friend and honored colleague of whose life it is my privilege to speak on this occasion.

To an exceptional degree, Edward Kelly was very much a part of the dramatic event which shaped American—and therefore world—history during the great years of the New Deal and the Second World War, an era crucial to the survival of this Nation and, indeed, of those ideals and values which our Judaeo-Christian tradition has held before men's eyes through centuries of struggle—freedom, justice, and compassion. Edward Kelly came to the Congress of the United States in 1931 in the heart of the depression. Always a vigorous supporter of President Franklin D. Roosevelt, he served not only in the 72d but in the five succeeding Congresses until his defeat in 1942. In 1945 he returned to the city on his election to the 79th Congress. Defeated in his bid for the 80th Congress in 1946, he was able to look back upon some 14 years of distinguished service in this House, years of triumph and of defeat alike, years which marked the recovery of our people from the most serious economic crisis of our history and which prepared them for the fierce time of testing which began at Pearl Harbor and culminated at Berlin and Hiroshima. It was Edward Kelly's privilege to serve in this body during that time and to participate in the shaping of decisions, national and international, which were to vindicate the cause of representative government in the never-ending conflict with tyranny and oppression.

Edward Kelly was a man loyal to party, in the best tradition of American political life. He recognized that the two-party system is an effective means to the common good. In this spirit he served his party tirelessly. Born in the city of Chicago in 1892, he was a lifelong Democrat who, at the age of only 23, was elected president of the 32d ward of his party organization. Political and civic responsibility were for him a way of life. From 1944 to 1946 he served with distinction on the Chicago Planning Committee. From 1943 to 1945 he was assistant to the

chief justice of the Chicago municipal court.

His patriotic zeal found expression in the Great War: from 1917 to 1919 he served with the American Expeditionary Force in Battery D of the 32d Field Artillery, including 9 months overseas. Prior to the coming of the war, he had attended business college—in 1911. From 1916 to 1920, barring the war years, he was an accountant for the Illinois Steel Co. The experience thus acquired led him into real estate and insurance brokerage; in 1920 he organized the E. A. Kelly Co. This interest, which gave him practical insight into the problems of industry, continued, and in 1947 he returned to the field of industrial real estate as a broker, following his retirement from Congress.

He is remembered today with respect and affection not only by the people of the Third District of Illinois whom he served for so many years but by all who came into contact with him in this House, where he was a member of the Interstate and Foreign Commerce Committee.

To his family—his dear wife, the former Rosemary Eulert; his two brothers and three sisters; his children—Robert, formerly of the U.S. Naval Academy and all-American halfback at Notre Dame, Edward A. Jr., and Rosemary; and to his eight grandchildren—I extend deepest sympathy in their and our loss. Surely they may find consolation not only in the assurances of faith but also in the honored memory of his life, a life characterized by loyalty, service, and fidelity, ideals which, precious in every generation, constitute a noble legacy to us all.

THE 747 GENERATION

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. MAILLIARD. Mr. Speaker, we have survived, happily, the changes 10 years of the jet transport age have wrought. It was in the autumn of 1958 when Pan American World Airways inaugurated jet service between the United States and Europe with 707 aircraft. Before the year is out Pan Am will bring still another new sophistication to international air transport with the introduction of the gigantic and breathtaking 747 service.

I am pleased, Mr. Speaker, to report that this new 747 service will have its inauguration on a Pan Am flight from San Francisco to Hawaii. Shortly thereafter, according to Pan Am's president, Jeeb Halaby, Pan Am will be flying nonstop from San Francisco to Tokyo.

I am pleased to place in the RECORD the text of Mr. Halaby's timely address before the Commonwealth Club in San Francisco concerning the future of air transport as it concerns the San Francisco gateway:

THE 747 GENERATION

(By Najeeb E. Halaby)

Thank you, Mr. Chairman. It's a great job to be here with San Franciscoans, classmates and friends, and probably a few competitors and critics as well. We are very happy to say that we are going to usher this 747 generation in—just about Christmas time—by offering you flights from San Francisco to Hawaii. Shortly thereafter we'll be flying from San Francisco to Tokyo, perhaps without even a fuel stop all the way, with this fabulous space jet.

When you hear the word space jet, you think maybe of astronauts, you think maybe of jets, you think of space. And that's the real thing we're going to sell—all of us airlines are going to fly this airplane. Since our boys are on the way to the moon, I think this is an auspicious day to make predictions. Considering what is happening within these last few years, I can't think of anything that would be way out any more and, on the other hand, if any company president makes predictions that may be considered way in, he may find himself in trouble with the SEC. Even after skipping a dividend.

I'm going to try to talk to you about something that is here and now, and to intrigue you with a little bit of the future. All of our lives will be affected by two great motions, or tides, I think. The mystery of life itself is now being seen in a completely new perspective, and the mastery of change which is engulfing us in so many ways, with so many vortices all around the world. A big order, I think, but let me try.

The Boeing 747 is hardly a small machine, as our chairman pointed out. It's I think a bird that will bear people all over the world, all over this great universe of ours, and it will I guess, create a generation gap in the sense of the difference between what we've been accustomed to and what we'll become accustomed to.

Now, as Mr. Dinkelspiel said, it is only a bit more than a triple size 707 with a bump on its nose, but it will fly about 50 miles an hour faster. It's startingly quiet, and leaves no trail of black smoke for the neighbors to be irritated by. All of these things are more than new makeup on an old lady. Some airline friends of ours have tried to change personalities by painting themselves up a bit, and I must admit it gets initial attention, if that's what you need.

But the payoff comes from what's underneath the paint and that applies to an airplane as much as to a lady. The first generation of commercial jets, the 707s, DC–8s were very productive and amazingly reliable. They provided a new perimeter—a sort of an expanded envelope for human activity. They really have, through their technology, enlarged all of our lives. Unhappily, as more and more people flock to these airplanes, the airports became too crowded, the terminals too small, the airport access routes too cluttered and clogged. In a sense, we've had almost too much success.

Now we're only beginning to face up realistically to these problems, explore better ways to exploit the great technological advance that this first generation of jets has offered. And along comes the Boeing 747, as one magazine puts it—ready or not. And after seeing one, I suppose some of you might ask who needs it. Especially those harassed airport managers who have to accommodate this giant bird.

On the other hand, go back to the railroads. Visualize—perhaps 80 or 90 years ago—the possibilities of high speed transportation, when somebody, or maybe a whole group of railroaders, woke up screaming at this new state of the art, and said—who needs it?—and they didn't provide it. Therefore, I think something is far worse than the unwillingness to face this rapidly changing state of the art, and that's to block it out.

So today, and tomorrow, we have the lunar excursion above us. And, by the way, as of last night, we had 36,000 applications for the first Pan Am moon flight. They are all in the computer by number, and they are real people and they are from all over the world. It's fascinating that there is this much vision and courage. Some of them propose to pay later, unfortunately. One letter from a young man in Australia said, "I'd like the reservation now, and I will send you the check in 1984."

I suppose in some respects things may be easier getting out to San Francisco International Airport for that first moon flight, too. Bart will be working by then, and I hope it will be extended to the airport, and maybe even to the moonport. All of us here remember what flying was like only a decade ago. In his generous introduction, Mr. Dinkelspiel pointed out that I'd had the privilege as a Lt. JG in the Navy to fly a propellerless airplane across the United States, just about 15 years ago. It really was a startling event. I recall, contrary to all regulations of the Navy and FAA and everyone else, that flying a little formation at a discreet distance from commercial airliner, we got in fairly close and the co-pilot looked over and saw this propless beast, off his wing, and he damn near fainted.

The prospect, too, of an airplane taxiing without any propellers into an airport, was a rather scary one then. I think 10 years ago, millions of people weren't quite aware that they'd stepped into a mobile decade. The engineers even then were rolling doodles off their drawing boards, but a lot of them never got airborne. There were lots of brainstorming sessions—many of them here in San Francisco as the aerodynamicists and electronicists of the area planned our future.

One of those impossible doodles did take off just a short time ago for a nonstop flight from Seattle to Paris. It was the first 747 to fly the ocean, and that particular airplane will be delivered to us in September of this year. It drove up next door to another doodle called the Concorde Supersonic Transport—a fabulous partnership across the Channel between two great nations and their technologies. And due, but not present at the Paris Air Show, was another doodle—from Moscow. The TU144, designed by a very brilliant engineer, Andre Nicolavitch Tuppelef, who at 81, with his son, designed this fabulous supersonic transport which has now been tested at supersonic speeds. We have to face the possibility that it will be flying first across Siberia and then across the Atlantic in competition with our airliners and those of the rest of the world.

We've been invited to go and see it, and it will be for an antique test pilot, a very exciting adventure. This moment in Paris was a bit sad because our supersonic airliner is still in a paper debate, and although Europeans have two designs and three airplanes flying, it looks as though it will be in the late 70s, before we are able to field one. It may be a serious and expensive mistake. We've certainly given our friends abroad a gift of lead time, and they've been doing it, and they've been developing a machine that is as inevitable in man's future as time.

I'm a great believer, as I think most of the members of this great commonwealth club of California are, in meeting and talking to each other. I don't think it's realistic to carry on a love affair by telephone. I don't think major corporations can do business with full success around the globe, by memo. And I don't think it's possible for nations to live in peace without being able to exchange citizens freely and en masse.

And I would predict that this 747 is going to be the greatest people to people machine man has ever devised. We are only a few weeks away from putting it into service, and, of course, there are only a few who have ever heard of this very creative beast. Many think it carries over 500 people which, I suppose, it could if you were interested only in cattle steerage. Some think it's a supersonic plane, with devastating sonic boom. It isn't.

Many think they will be herded like cattle, and dropped off at airports with a perfunctory anonymity of baggage. Many are convinced they'll never see their baggage again. And a few indicate that it's just too big to

fly safely—it'll fall. I mention these specific untruisms, not at random, but after market research has disclosed some of these contemporary preliminary misconceptions.

Now our motives as a public service organization are very plain really—to satisfy a growing public demand around the world. And that's why we've advanced 250 million dollars to date, on the purchase price of the first of these planes. We have 33 on order, and at 20 million dollars a copy, plus the ground facilities and supporting equipment, we will have a billion dollar investment, by the end of 1972.

Now we do need currently to conserve some cash and that interest rate, that Wells and Bevay and others seem to be thriving on, makes us conserve a little money and maybe we would have to pass a dividend. But that's no indication of any weakness in our financial strength or in our resolve and our expectation for the future. A short term dip in the airline business has never deterred the long term growth.

Now 27 other airlines of the world have ordered this airplane, and the total for 16 foreign carriers and the other U.S. carriers is now 150 of these spacious jets, as Boeing calls them. That's a lot of money, of course. It's a very good positive factor in our balance of payments. It's only a beginning, however. A constant renewal is part of our airline business, and we look ahead to the supersonic transport with some trepidation, but with confidence that it's really an intercontinental time machine of the highest order.

And then later, as the astronauts have proved, a kind of hypersonic, many times the speed of sound, and finally space ships. Some people say you shouldn't talk about space transportation until you have solved the problems of getting people in and out of the airplane comfortably with their baggage at the same time and the same place. And I agree. That's our primary emphasis. But, there is a concept now emerging, which we will hear more and more about in the next few days. It's the concept of boosters that can be re-used, of a space station which is like an airport in space with frequent trips between the orbiting station and various points on the moon, which will be points for laboratory experimentation and very serious and expensive exploration. And finally, toward the end of the century, when we are only 30 years older than we are now, there will be sightseeing trips out into the universe for the affluent curious.

No more fantastic really than the first jet flight 20–30 years ago. Coming back to the 747, you could put 500 souls on board this bird, but that would be doing it the inconsiderate way. That would be making it a really steerage kind of airplane. We intend about 360 passengers divided into five compartments. You will not feel as though you were going into a subway train or even into a crowded theatre. You will be airborne in a series of lobbies or salons.

The way the load factors are working out these days on the airlines, with less than half of the seats sold last year, only about 75 per cent of the time will the airplane be more than half full. So you will get up and roam around and choose your seats. And you will eat, sleep and work. Upstairs there will be a very handsome lounge.

Below, there will be a huge cargo deck, a hold that can carry almost as much cargo as a full 707 does today. A new cabin service, and for those of you who are addicted to watching birds in flight, will be a full load, 14 beautiful stewardae. We are having a hard time coming up with a good name for this airplane. 747 sounds kind of numerical. Some say it should be called the Superjet. Boeing calls it the spacious jet. Even the space jet has suggested itself.

Fortunately, these huge four-engine airplanes are not going to be providing a noisy New Year. They appear to be quieter than expected, and certainly with all that power, the airplane will climb out of the airport fairly rapidly. It will do the work of almost three 707s, and yet it can use the same airport runway.

I think this machine is going to change our lives qualitatively as well. I think by this very massive exchange of people, we can, for example, have airborne schools and colleges. Instead of going for a term to Florence or Vienna, you can literally take a whole high school class to a school abroad, and take a 90-day semester. After all, there's no better way to get understanding than the eyeball to eyeball, mouth to mouth, hand to hand, mind to mind approach.

Let's start it back in high school and college. Let's see the world. Let's understand it. Let's penetrate a lot of the old myths and shibboleths that our generation has carried around with us.

I think we'll see new cities created by these big airplanes, just as San Francisco to a large extent was created by ships, and Chicago by trains. The airport will pace the development. It's really falling a little behind this great new bird, provided by private enterprise and relatively private technology. The future, in other words, is full of prospect and promise.

Knowing this technology is available, we also know that the world wants to travel. For example, there are three and a half billion people in the world, and I would estimate that not more than two per cent of the three and a half billion have ever been in an airplane. That gives us 98 per cent of three and a half billion which over the next 30 years will grow to six to seven billion unless we make planned parenthood a reality.

The race between the pill and the airplane and the plow will be an interesting one. You might say why would an airline executive be interested in birth control? And I would tell you very frankly that we are interested because we want a healthy, well-fed, well-heeled population in the world that can fly on our airplanes. I think that's the kind of world in which peace will prosper.

We'll see in the next 10 years, three times as many people flying airplanes as now. We will see many of these big and these faster planes here. Now what are you going to do about it? You the leadership of a nest of aviation, certainly for Pan Am, one of our three greatest stations, what are you going to do to convert this technology to the users of mankind?

I suggest there are some things that you can do now by meeting the challenge posed by technology. I think first is to recognize and understand the problem. We are more and more dependent on the airplane. There are less and less alternative methods of travel. Therefore, let's try to develop the airplane in such a way that it serves all of us. I think for that purpose you need an enlightened public and certainly the Commonwealth Club is one of the enlighteners of the public in our country.

We need, I believe, a master regional plan for transportation, and work on that is being done in your various bay area groups. I think that from the moon, Neil Armstrong, would look back and see how tiny we are, how compressed we are, how absolutely inconsequential the fences and barriers of counties and cities and jurisdictions thrown around our communities of interest must look from that distance.

Maybe we can take that kind of perspective about some of our bay area problems. We have to, as I see it, organize for the development and operation of a regional transportation system. We have to fund such a plan, as a third step. If there's no more bond money available for this purpose, then you've got to look toward some not-for-profit-authority, with a sound basis for issuing tax exempt bonds to get on with the conversion of technology to serve the public.

We need an airport rapid transit link to serve not only the city but the whole community and the economy that develops from it. Whether it's an extension of Bart, down across the old red car right away, whether it's the GE monorail, whether it's the West Bay Plan, I don't know. But, I do know that in Cleveland it only takes 18 minutes to get to the airport. And I do know that we have a plan even in Manhattan (which is not the ideal politically-organized community in the world) to get from the Penn Station to JFK in less than 25 minutes.

Then, within the airport, it should not be an ordeal; it should be another step in smooth and safe and comfortable transportation. Cargo is going to develop very rapidly; we're going to have to move off the airport some of the warehousing and distribution, and confine to the airport the actual handling of the cargo in and out of the airplane.

Finally, you're going to have to confront, as I see it, a need for something in New York we call a fourth jetport. You do have some fabulously good airports in this area. San Francisco International is one of the world's great airports; Oakland is a fine airport; San Jose is an airport that is on its way in growth. You're going to need another airport, and I'm not going to try to tell you where to put it. I am, however, urging you to be thinking about it; to be locating one or two sites and getting them under option and under zoning, and to be prepared to convert this fabulous technology of the future to your benefit.

That's a lot of optimism. Some people think this world is in a mess, and that the bigger and faster we get, the worse we are. I think that that is not so. I believe that with a little optimism and a little idealism things are moving toward a more peaceful world than two or three years ago. I think that this people to people, eyeball to eyeball, hand to hand and mind to mind generation, that technology can bring, is going to bring with it progress.

JOHN PORY: SPEAKER OF THE FIRST REPRESENTATIVE ASSEMBLY OF THE NEW WORLD

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. FLOOD. Mr. Speaker, as a Pennsylvanian with ancestral lines tracing back to early Virginia, and as a student of constitutional government, I have long been interested in the history of our legislative bodies for both the State and general governments that make up our Federal system.

The year 1969 marks the 350th anniversary of the formation in 1619 of our first legislative body—the first General Assembly of Virginia. The principal leader in organizing this first representative assembly of the new world was John Pory, a former member of Parliament, traveler, and diplomat.

Bringing to Virginia a wealth of knowledge gained by a broad background of experience and study, Pory was a natural choice for speaker of the first Virginia General Assembly over which he presided from 1619 until 1622. A brief story of his life by William S. Powell with special reference to his legislative achievements was published in a

recent issue of Cavalcade, the quarterly publication of the Virginia State Library.

In order that the indicated story may be suitably recorded in the permanent annals of the Congress, I quote it as part of my remarks:

SPEAKER JOHN PORY: A MEMBER OF PARLIAMENT HELPED ORGANIZE THE FIRST REPRESENTATIVE ASSEMBLY IN THE NEW WORLD

(By William S. Powell)

The debt which the United States owes to England for her institutions, customs, and other aspects of her heritage has often been acknowledged. There are a very few cases, however, where one can point to a special place and time, and say with any degree of certainty, that then and there a particular English practice was transplanted in America. This year marks the 350th anniversary of just such an event: the first session of Virginia's Grand Assembly, which met at Jamestown on July 30, 1619. Thus, the English form of representative government was introduced to the New World.

John Pory, the man responsible for organizing America's first representative assembly, is little known today. Yet in his time he moved in the best circles in London. As a member of Parliament he gained the political experience that would prove invaluable in the development of Virginia's political life. When the first assembly of elected representatives met at Jamestown late in July, 1619, Pory was chosen as Speaker of that body. He organized it and directed its work, drawing on his experiences in the House of Commons between 1605 and 1611.

Pory was born in the fen country of Norfolk north of London in 1572, and was the great-nephew and namesake of the master of Corpus Christi College, Cambridge. The family was not wealthy but it was well connected. Young Pory's first cousin, Temperance Flowerdew, married George Yeardley, who was to become governor of Virginia.

At the age of sixteen Pory entered Caius College, Cambridge, from which he was graduated in 1592; he was made a Master of Arts three years later and became an instructor in Greek at the college. In 1597, Pory began a period of study and work under Richard Hakluyt, the historian, and assisted him in the preparation of the final volume of his *Voyages*. The master commended the pupil as his "very honest, industrious and learned friend," and predicted that Pory's "special skill and extraordinary hope to performe great matters in the same" would be "beneficial for the common wealth." Pory soon saw a work of his own come from the press. This was *A Geographic Historie of Africa*, a translation of the work of Leo Africanus, which appeared in 1600. He also published the *Epitome of Ortelius*, based on the work of the great Flemish geographer, Abraham Ortelius. In 1605 Pory was elected to Parliament from the borough of Bridgewater in Somerset and served in that body for six years. During that time the Crown attempted to stifle the debates of the House of Commons, but the members resisted, declaring that it was an "ancient general and undoubted right of Parliament to debate fully all matters which do properly concern the subject."

When King James submitted six "Demandes" to Parliament, the members rejected some but compromised on the others. Committees were set up to consider these demands and report on them before final action was taken. Committees were established by Pory in Virginia in 1619, and the committee system has been an integral part of representative government in America to this day.

After Parliament was dissolved on February 9, 1611, Pory entered the employ of George Lord Carew, then Master General of the Ordnance. Like Pory, Carew was a member of the Virginia Company. That spring Pory was sent on a mission to Paris by Lancelot Andrewes, the Bishop of Winchester. He stayed in France until the early summer of 1613, when he travelled on to Turin in Italy. Later that summer he went on to Constantinople, where he found service with the English ambassador, Sir Paul Pindar. By January, 1617, he was back in London and was employed at Whitehall by Sir Ralph Winwood, principal Secretary of State. Later he came to the attention of Sir Dudley Carleton, the English ambassador to the Netherlands

During these years, Pory was also using his position, his knowledge, and his ability by serving certain wealthy and prominent men as a professional newsletter writer. In a day before newspapers were published in England, persons of position often relied on professional correspondents to keep them posted on important events at home and abroad. In 1605 and 1606 he seems to have served Sir Robert Cotton, the antiquarian, in this capacity; in 1610 he was corresponding with Sir Ralph Winwood, and in 1612 with George Lord Carew; all three were members of the Virginia Company. While he was at Constantinople, Pory corresponded with Sir Dudley Carleton, and from 1619 to 1622, while he was in Virginia, Pory frequently wrote to Sir Edwin Sandys, treasurer of the Virginia Company, concerning affairs in the colony.

Pory's letters, which generally were written at regular intervals of a week, are filled with comments and observations on such diverse subjects as Ben Johnson's masques and the beheading of Sir Walter Raleigh; the grisly details of his account of that execution suggest that Pory had a front row position.

Late in October, 1618, Sir George Yeardley was appointed governor of Virginia. Shortly thereafter Yeardley recommended to the Virginia Company that Pory, his wife's kinsman, be named secretary of the Virginia colony for a three year term. The Company appointed him to this post, and the new officers reached Jamestown on April 19, 1619. Almost immediately Pory was made a member of the Governor's Council.

A new day was dawning for Virginia. The new governor brought with him commissions and instructions from the Company "for the better establishinge of a Commonwealth heere." By proclamation, he let the people know "that those cruell lawes, by which we had soe longe been governed, were now abrogated, and that we were to be governed by those free lawes, which his Majesties subjects live under in Englande." Martial law was abolished, and the English common law substituted. A broad program of reform had been instituted by the Virginia Company to attract the more stable sort of settlers who were needed for the advancement of the colony. It was felt that wider interests in agriculture should be developed, as well as a system of schools, inns to accommodate newcomers, and better homes for all. A representative assembly was to be established as a part of this program, and Yeardley brought over instructions concerning it.

A call for the election of burgesses, or members of the Assembly, was issued in June and on July 30, 1619, the governor, a four-member Council, and twenty-two elected Burgesses—two from each of the eleven major settlements—gathered in the "Quire of the Churche" at Jamestown.

The Assembly began work with a minimum of formality. Pory reported that "the Governor, being sett downe in his accustomed place, those of the Counsel of Estate sate next him on both hands excepte onely the Secretary [Pory] then appointed Speaker, who sate right before him, John Twine, clerke of the Generall assembly, being placed next the Speaker, and Thomas Pierse, the Sergeant, standing at the barre, to be ready for any service the Assembly should comaund him."

In a simple opening ceremony the Rev. Richard Bucke prayed "that it would please God to guide and sanctifie all our proceedings to his owne glory and the good of this Plantation." All the Burgesses were then "intreatted to retyre themselves into the body of the Churche, which being done, . . . they were called in order and by name, and so every man (none staggering at it) tooke the oathe of Supremacy, and entered the Assembly."

The House of Commons in 1586 had asserted its right to determine the eligibility of its members; the first General Assembly in America did the same thing in 1619. The right of three members to take their seats was challenged, and after a full debate, one of them was seated. The other two were denied their places, because they represented Martin Brandon, Captain John Martin's plantation, which was exempted from the laws of the colony by a special grant.

After the matter of membership was settled, Speaker Porty "delivered in briefe to the whole assembly the occasions of their meeting," after which he "read unto them the commission for establishing the Counsell of Estate and the general Assembly, wherein their duties were described to the life." He then read to them "the greate Charter, or commission of privileges, orders and laws" brought over by Sir George Yeardley. To facilitate the consideration of the matters covered in these documents, Porty divided the provisions of the Charter into "fower books," and then read them a second time. Two committees of eight burgesses each were appointed to consider the various sections in turn. The Speaker directed these committees to determine which of the company's instructions "might conveniently putt on the habite of lawes." The legislators were also to consider "what lawes might issue out of the private conceipte of any of the Burgesses, or any other of the Colony," and to decide "what petitions were fitt to be sente home for England."

During its first session, the Virginia Assembly twice sat as a court, in accordance with parliamentary precedent. A servant was tried for "falsely accusing" his master, and Captain Henry Spelman was found guilty of having "spoke very unreverently and maliciously" against Governor Yeardley while at an Indian village.

On the final day of the session the Burgesses commended Pory for his "great paines and labour" as speaker. It was he, they said, "who not onely first formed the same Assembly and to their great ease and expedition reduced all matters to be treated of into a ready method, but also . . . wrote or dictated all orders and other expedients and is yet to write several bookes for all the General Incorporations and plantations both of the great Charter, and of all the lawes."

While in Virginia, Pory travelled widely and wrote long descriptive letters to his former patrons in England. A 500-acre plantation on the Eastern Shore was granted to him for his support in place of a salary, and he visited this property in what is now Northampton County several times. The "Secretary's Land" belonged to the office rather than the individual, and it was later held by Pory's successors.

The Secretary became interested in the possibility of iron production in the colony, and he encouraged the establishment of the ironworks at Falling Creek in what is now Chesterfield County. He criticized the wasteful process of boiling sea water to produce salt and he proposed that a more efficient method, similar to one he had observed on his visits to France and the Low Countries, be used. In the spring of 1622 the Virginia Company adopted his recommendations and sent over a "Rocheller" from France to establish more productive salt works. Pory was also interested in the production of naval stores, hemp and flax. After a voyage of exploration into what was to become North Carolina, he recommended that the pine forests which he found there might free

England from her dependence on Norway for tar, pitch, and turpentine.

Pory's three year appointment expired late in 1622, and he returned home by way of Plymouth colony in New England, and he wrote a glowing account of that settlement. While he was in New England, he "collected a small dictionarie" of the language of the local Indians and found many of their words were similar to those used by the Indians in the "South Colonie, and of the easterne shore of the bay."

In the spring of 1623, soon after Pory returned to England, he was appointed to a royal commission which was assigned the task of inquiring into the state of affairs in the colony. Pory and John Harvey, another commissioner, arrived in Virginia about the end of February, 1624, where they were met with a stiffly polite but not cordial reception. The Assembly was uncooperative, and many officials proved to be stubborn, since they were suspicious of the purposes of the commission. The commissioners returned to England late in April, taking with them a report in which they recommended various changes and improvements. When the commissioners arrived in England again, they discovered that on May 24, 1624, the Company's charter had been declared vacated, and that Virginia had come under the rule of the Crown.

Pory spent the next five or six years in London, busily engaged in his old occupation as a writer of newsletters. In addition to his regular patrons, he also corresponded from time to time with Sir Thomas Lucy and Sir Fulke Greville, Lord Brooke. Shortly after 1631 he retired to his home in Lincolnshire, where he died in the autumn of 1635. He was never married. As a young man he was said to have been "fond of the pot," and in later life he seems to have accumulated substantial personal debts.

Pory's estate, such as it was, was administered by his sister, Mrs. Anne Ellis. He left three acres of land to the church warden in his local parish with the provision that two "Commemoration Sermons" be preached each year. The church at Sutton St. Edmund, Lincolnshire, still holds Pory's land, and the rector of the local church preaches the required sermons.

His greatest legacy, however, was his work in organizing the first legislature in America. From that beginning grew the system of representative government that flourishes today, although this is a result of which Pory probably never even dreamed.

BEN WOOTEN—DYNAMIC TEXAN

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. COLLINS. Mr. Speaker, Dallas has no natural resources. We have no oil. We lack an ocean port. Our water reserves are very low. It is a hot town in the summer. It is a flat land that is a dusty place in the spring, and a mighty cold place when we get northern winds.

But Dallas has been blessed with the greatest asset of all—we have had the greatest men in the world make their homes here and dedicate their lives toward building a progressive city. One of the finest of these is Ben Wooten. In the Baptist Church, he is a plain spoken member in any session. When the final day comes on a community charity drive building a hospital, a university endowment, the United Fund or whatever we are raising money for—you can count on Ben to lay down the law as to what everyone's share is going to be, because Dallas is going over the top.

Bankers built our city by loaning folks the money. With this borrowed capital our neighbors have been able to build and repay it. When he was at the First National, they had a slogan which I always liked, "Give us an Opportunity to say yes." You will be interested in this summary of some of the highlights of the life of Ben Wooten. I think Felix McKnight, editor of the Dallas Times Herald, summed up well the 50 year anniversary of Ben H. Wooten, as follows:

Men reap rich reward from a Golden Anniversary, and the 50 years of living woven into it. But few men sense the full satisfaction five-fold.

Ben H. Wooten is about as household a word as one can get around Dallas—and the springy, 75-year-old business-civic figure is capping it all right now with an incredible performance.

He is celebrating five significant 50th anniversaries in one swoop.

If his ankle weren't bothering him a bit at the moment, he probably could go out to the golf course and celebrate it all by shooting his age. He did it two years ago by carving a 73 at Dallas Country Club.

It is quite a story about this man born Dec. 21, 1894, at R.F.D. 4, Box 22. That was a small East Texas farm seven miles northwest of Timpson.

Fifty years ago a hawk-nosed, lean second lieutenant who served as a machine-gunner in Co. A, 345th Machine Gun, 90th Division, survived the hellish battles of St. Mihiel and Meuse Argonne in World War I and was mustered out—very honorably—in July, 1919.

Fifty years ago Ben Wooten came home to the Broadway ticker tape showers and the giant pines of his East Texas and joined the American Legion—an association that has taken him in that span to the loftiest levels of the veterans' outfit.

Fifty years ago Ben Wooten, graduate of the North Texas State University he now serves as chairman of its Board of Regents, hurried out of uniform and was elected principal of the high school at Alba, Tex. (pop. 1,200).

Fifty years ago Ben Wooten suddenly, and quite characteristically, decided that he did not want to be a high school principal; tendered his resignation and started a banking career that has brought national renown.

Fifty years ago, and most importantly he notes, he married Miss Margaret Kay, the town belle of Center, Tex.—an event they prayerfully acknowledged together a couple of weeks ago.

Fifty years ago the Dallas Federal Savings & Loan Association, where he daily sits as chairman of the board, opened shop in a three-room office. Today, it is Texas' largest.

Indeed, it was the Wooten year—1919.

The golden path of Ben and Margaret Wooten started when he accepted the position of assistant cashier at the Alba National Bank in December 1919. He entered the banking business with a title—but chuckles today when confessing that there were three employees of the institution. He was the least.

"We had a good thing going at Alba. The T&P Railroad built a line to get lignite out of nearby reserves. But something happened; they played out."

Ben Wooten moved over to Farmersville with the Farmers and Merchants National Bank in 1923, and actually took off on the fascinating trip to the top in 1926 when he became a state bank examiner.

In chaotic 1932, the Federal Home Loan Banking System was created by the Congress, and Wooten became its chief examiner in Washington. Three months later he was elected president of the Federal Home Loan Bank of Little Rock, Ark.—servicing the states of Arkansas, Louisiana, Mississippi, Texas and New Mexico.

Ben Wooten, the East Texan, wanted to come home, and in 1944 he returned to Dallas as vice president of the Republic National Bank. It was the day of the two banking giants separated only by the alley that runs between Elm and Main. On Feb. 6, 1950, Ben Wooten made that walk across the alley and became president of the First National Bank.

Folks just thought, on Jan. 1, 1964, that Ben Wooten was retiring. He made another walk across the street and became chairman of the board of Dallas Federal. He sits there today as father counselor to young and driving president Lloyd Bowles.

Fifty years, says Ben Wooten, actually isn't too much time. Really just gives a man time to stretch out in several directions. Here is a man who has held every high-level civic job; hit the heights in banking; ascended to the highest positions in his Baptist church; given mightily to education and been rewarded with doctor of laws degrees from Arkansas, Baylor and North Texas State.

Service to his country has been recognized by his appointment as one of only three civilian aides-at-large to the secretary of defense. But he identifies the 50 years with Margaret Kay Wooten as the anchor anniversary. The other four just came naturally.

Ben Wooten can handle five simultaneous golden anniversaries. He is rugged—and competent.

PETER RODINO NAMED "FRIEND OF LITHUANIA"

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. MONAGAN. Mr. Speaker, on August 24 my good friend and dean of the New Jersey delegation, PETER RODINO, was awarded the "Friend of Lithuania" medal and citation at the 56th annual convention of the Knights of Lithuania. Over 400 persons attended the presentation banquet at the Robert Treat Hotel in Newark, N.J., which was presided over by the newly installed officers; Dr. Jack J. Stukas, Hillside, N.J., president; Mrs. Diane Daniels, Philadelphia, Pa., Leon Pauksta, Chicago, Ill., and Longinas Svelnis, South Boston, Mass., vice presidents; Miss Stella Sankel, Cleveland, Ohio, treasurer; and Miss Dorothy Dutkus, Maywood, N.J., secretary.

As a former recipient of this cherished award, I want to extend my most sincere congratulations to PETER, who was cited as a "recognized authority on immigration and refugee settlement, who has aided many Lithuanians, among other victims of Communist tyranny, to gain a haven in America."

Mr. Speaker, we are all aware of the continuing struggle of the brave Lithuanian people to once again taste the joys of freedom, and I want to include in the RECORD the following resolution, which was passed at the convention:

RESOLUTION

Whereas, despite its tremendous propaganda efforts, Soviet Russia continues to enslave Lithuania against the free will of her people; and

Whereas, House Concurrent Resolution 416, passed by Congress some three years ago, calls for our President to bring the question of the freedom of Lithuania and the Baltic States before the United Nations organization and further calls for free elections under

the guidance of the United Nations to take place in those countries;

Now therefore, be it resolved, that the Convention respectfully urge the Government of the United States to fulfill the conditions of House Concurrent Resolution 416 in behalf of the restoration of the independence of Lithuania and the other Baltic States;

Be it further resolved, that the Convention manifest its sincerest gratitude to the Government of the United States for its consistent and continued non-recognition of the Soviet annexation of Lithuania and the other Baltic States;

Be it further resolved, that copies of these resolutions be sent to the President of the United States, to the Secretary of State, the Honorable William Rogers, to the Ambassador of the United States Delegation at the United Nations, to the Honorable Chairmen of the Senate and House Foreign Relations Committee and to the press.

LARRY JANONIS,
Chairman.
(MRS.) SUSAN K. BORASKAS,
Secretary.

I know PETER RODINO joins me in hoping that it will some day be possible for Lithuania to once more enjoy the independent status that is hers.

THE CHANGING MOOD ON VIETNAM

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. BROWN of California. Mr. Speaker, yesterday I addressed the House on the need for new American initiative to break the stalemate which has developed in our policy toward the Vietnam war. One factor that I emphasized was the apparent changing mood of this country—at all levels, from all types of people—on the objectives we seek in Vietnam.

No longer is it possible to say that the American people are largely in favor of a military victory. Poll after poll, letter after letter indicate that a majority of Americans want us to get out of Vietnam, and the sooner the better.

An equally large shift in opinion has come right at the top of Government. As Stewart Alsop points out in the current issue of Newsweek, the Nixon administration now aims not to win the war but not to lose it either. And that is a startling reversal from all the goals of the past 4 years when the key objective was a military victory.

Certainly, as the mood changes here in the United States, it is undergoing equally subtle permutations in Hanoi. No one can tell at this point the exact effect the death of Ho will make upon the future course of negotiations, but one observer, Arthur J. Dommen of the Los Angeles Times Saigon bureau, wrote last week that the outlook may favor a somewhat softer war line from the North.

Yet, the only place where these new attitudes seemingly are not making a dent is in Saigon. There, the militarists who run both the South Vietnamese Government and the American military machine still fantasize dreams of eventual and complete victory in the field for "our side." And, as long as we procrastinate on such crucial issues as the pace of troop withdrawals and acceptance of offered cease-fires, I foresee no alteration at all in the snail's pace at which we are now moving in our efforts to reach a settlement in Southeast Asia.

Mr. Speaker, just today I have found a group of current news items and reports which go into more depth on the changing mood over Vietnam. Two of the articles, the Alsop piece from Newsweek and Dommen's story from the Los Angeles Times, I have already mentioned. In addition, I would like to insert in the RECORD two fascinating articles from this week's New Republic magazine, one, the column by T. R. B. and second, the lead editorial, "Leave or Get Out."

The items follow:

[From Newsweek, Sept. 15, 1969]

VIETNAM: THE NIXON GAME PLAN

(By Stewart Alsop)

WASHINGTON.—If the specialists in such matters are right, the death of that undoubted genius, Ho Chi Minh, is very unlikely to result in the near future in any real change in the policy line laid down by Ho. That policy line was based on a simple assumption—that domestic political pressures would sooner or later force the Nixon Administration to accept, perhaps with some light camouflage, the Communist terms for a settlement in Vietnam.

Those terms, tirelessly repeated in Paris, amounted to unconditional surrender—unilateral withdrawal of all American troops and the replacement of the anti-Communist Saigon regime with a Lublin-model Communist-front government. The Communist terms have been repeated so tirelessly that they have led the President and his advisers to a somber conclusion—that a negotiated settlement in Vietnam is simply not possible, as long as Hanoi is convinced Washington has no choice but to liquidate the war at any cost.

As this conclusion has come to seem more and more obvious and unavoidable, the President and his chief advisers have had to discard the pet theories of how to end the war which they brought with them into office. The President's pet theory was that the Russians could somehow be pressured or persuaded to arrange an acceptable settlement. Dr. Henry Kissinger's pet theory was the "two-track" idea—that a military settlement, based on mutual withdrawal, could be negotiated between Washington and Hanoi, while a political settlement was negotiated between Saigon and the NLF.

CLOUD COVER

These theories have been exploded by events. In their place, what that ardent sports fan President Nixon calls a "game plan" for Vietnam has emerged in rather clear outline, beneath a cloud cover of apparent indecision and intentional obfuscation. Barring some sudden change in the situation resulting from Ho's death, the Nixon game plan will from here on out govern American policy in Vietnam.

The purposes of the Nixon game plan are twofold. One purpose is not to win the war—which the Nixon Administration has recognized as unwinnable in any traditional sense—but (to split an infinitive) to not lose the war. The other purpose is to create the domestic political conditions necessary to persuade Hanoi that the U.S. is capable of continuing indefinitely to not lose the war.

Hanoi, in short, is to be persuaded that Washington, too, can play the waiting game, and thus eventually—if the theory behind the game plan works—an "honorable" settlement of the war will be achieved, tacitly or by negotiation. What Defense Secretary Melvin Laird likes to call "Vietnamization" of the war is the first part of the game plan.

PRESENT INTENTION

By "Vietnamization"—substituting Vietnamese infantry for American infantry—the bulk of the American ground combat forces will be withdrawn. The present intention is to reduce the total U.S. troop commitment to "around 300,000, or maybe less" before the Congressional elections in November 1970. By that time, according to the game plan, the basic mission of the American troops still in Vietnam will be to supply the Vietnamese infantry with logistic support, air- and fire-power.

Since the infantry takes almost all of the casualties, American casualties will—according to the theory—be much reduced. But President Nixon and his advisers are convinced that the draft, even more than American casualties, provides the really combustible fuel for antiwar passions, especially on the college campuses.

Therefore, the game plan calls for a determined effort to pass lottery-type draft legislation in this session of Congress. If such legislation passes, only about one boy out of three will be affected by the draft—the other two will be free to go about their business, unworried by the draft, after the age of nineteen. This, the authors of the game plan believe, would do much to cool campus passions.

If legislation cannot be passed, administrative action will be used, to the extent possible, to accomplish the same end. Everything will also be done to keep draft calls to a minimum. Finally, the Pentagon will be ordered to reduce the proportion of draftees in Vietnam—now about 29 percent of the 500,000-plus men there—to a minimum, leaving in time only volunteers or regulars to carry on the war there.

The game plan thus envisages a situation in which only one unlucky boy out of three is affected by the draft, and the unlucky one (as well as his girl friend or his fond mama) can be assured he will not be sent to Vietnam against his will. In this situation—or so the authors of the game plan reason—the passions of dissent will be stilled, and the United States can continue, if necessary for a long time, a limited effort sufficient to assure that the war will not be lost.

This plan is not stupid or irrational. But as Robert Burns pointed out, the best laid game plans of mice and men gang aft a-gley. The plan calls for a rapid withdrawal rate—around 20,000 troops a month as an average for the next year. The military are simply not going to agree willingly to such a withdrawal rate.

In June, President Nixon wanted to announce a withdrawal of 60,000 troops, but he was persuaded by the military to hold the withdrawal to 25,000. As reported last week in this magaizne, the delay in the expected withdrawal announcement in August was caused by a hassle between the White House and the Joint Chiefs on the size of the withdrawal. In short, if the Nixon game plan is to operate on schedule, the President is going to have to buck the generals.

REAL RISK

Bucking the generals is not as risky as it once was, and the President has a useful ally in Secretary Laird, who is liked by the generals and who is determined to push through his program of "Vietnamization." The real risk is that the generals could turn out to be right. What they fear as a result of the rapid rate of U.S. withdrawal envisaged in the Nixon game plan is some sort of military disaster, and the disintegration of the whole anti-Communist front in Vietnam.

That risk is of course real. Is it what Secretary of State William Rogers calls "a sensible risk for peace"? A clue to the answer to that question will be found in the soon-to-be-announced "second-slice" withdrawal. If it is 40,000 or more, that can be taken to mean that the President intends to buck the generals and push ahead with his game

plan. That in turn will mean that the President has concluded that the war, fought as it is now being fought, is poisoning the body politic of the United States; and that it is better to risk military disaster in Vietnam than political disaster in the United States.

[From the Los Angeles Times, Sept. 5, 1969]

HANOI REGIME LIKELY TO REASSESS WAR OPTIONS—WINNERS OF POWER STRUGGLE EXPECTED TO IMPOSE NEW MILITARY, DIPLOMATIC STRATEGY

(By Arthur J. Dommen)

SAIGON.—President Ho Chi Minh's death probably will force a reassessment in Hanoi of North Vietnam's options in fighting the war in the south and in negotiating in Paris.

North Vietnam can continue for a time by exploiting Ho's memory and by naming Vice President Ton Duc Thang, 81, as acting president to maintain a facade of unity among its leaders.

But one faction or the other within the Politburo probably will achieve dominance and impose its own strategy, analysts here believe.

The pressing problem of the war in the south, affecting as it does the Hanoi regime's foreign relations as well as almost every facet of its internal daily life, cannot be put off indefinitely.

STRUGGLE IN VOID

Even if the elderly Thang is named acting president—what one analyst calls the "Voroshilov solution"—the void created by Ho's death could induce a power struggle similar to that in the Soviet Union after the death of Stalin. The aging Klementi Y. Voroshilov was Soviet president, mainly a titular post, for seven years after Stalin's death in 1953 while Stalin's successors vied for power.

In case of such a struggle, Hanoi's Nikita S. Khrushchev is likely to turn out to be Le Duan, whose post of secretary general of the Vietnam Workers (Communist) Party gives him a head start.

Le Duan's preeminence seemed to be confirmed by the listing of the state funeral committee broadcast by Hanoi Radio a few hours after Ho's death. The listing provides analysts with the first lineup of the contenders for Ho's dual positions as president and party chairman. Le Duan was named head of the funeral committee over Thang.

MILITARY EMPHASIS

In the history of the debate within the Politburo, Le Duan has favored a reliance principally on carrying the war through to victory by military means. His position on the issue stems from his opposition in 1954 to the party's acceptance of partition of Vietnam, a partition that cut off the South, where Le Duan had for a time led the resistance against the French.

Opposed to this faction is a faction led by Truong Chinh, chairman of the National Assembly. Included in this faction are three other Politburo members—Le Duc Tho, Foreign Minister Nguyen Duy Trinh, and Hoang Van Hoan, a member of the Viet Minh delegation to the 1954 Geneva conference.

SOFTER WAR LINE

The members of this second faction, while they also support the use of military force in the south, reportedly believe the southern war must remain essentially a civil revolutionary war, one waged principally by southerners instead of northerners. They also think that negotiations should be pursued simultaneously with the fighting and given equal importance.

The difference in viewpoint between the two factions is basically a difference in interpretation of the mixture of political and military action. Thus, the first faction would argue that the halt to the American bombing of North Vietnam last Nov. 1 was primarily a result of the heroic fight waged by millions of North Vietnamese with guns, while the second faction would be inclined to give credit to the persistent expounding at Paris of Hanoi's "principled stand" demanding that the United States call off the bombing.

Until the new leaders have achieved a new balance of power, no new initiatives at the Paris negotiations involving risk-taking by Hanoi can be expected. This new balance of power could come about relatively quickly.

GREAT LEADER LOST

For one thing, Hanoi must take into consideration that in Ho's death it lost not only a leader whose prestige was so much greater than that of the men around him that he could settle a debate with a single word, but also a figure whose familiarity among all Vietnamese, Communist and non-Communist alike, made him a uniquely exploitable symbol in the war in the south.

"It is difficult to imagine the Viet Cong fighting for a collective leadership dominated by, say, Truong Chinh," one analyst here observed. Hanoi must find someone to replace Ho who is acceptable as a figure in the south as well as in the north and someone who is not simply a remote theoretician, but someone who can be identified with the southern struggle.

Ho's prestige from the first Indochina war as a nationalist fighter was so great that as long as he was alive Hanoi could slur over the distinction between its aim of total rule over a united Vietnam and the professed aim of the South Vietnam National Liberation Front to be fighting for an independent South Vietnam.

Ho, while president of a state whose constitution proclaimed it to be the sole legal government of all of Vietnam, could still make it look as if the struggle waged by the NLF to evict the Americans from the south was the natural sequel to the Viet Minh struggle against the French.

Of late, the contradiction between these two ideas has been sharpened by the needs of the Paris negotiations. Minister Xuan Thuy, for instance, has been known to voice in the course of a single session of the Paris conference both his support for the NLF's southern identity and the contention that any Vietnamese has the right to fight anywhere in Vietnam.

The creation of the Provisional Revolutionary Government of the Republic of South Vietnam last June appeared for a time to have tipped the balance in the direction of a separate state in the south with a "special representation" in Hanoi at the seat of the Democratic Republic of Vietnam. But this was counterbalanced by ever more strident personal appeals by Ho, even including reference to Saigon as "Ho Chi Minh City."

The only two Politburo members who have anywhere near the prestige of Ho from the war against the French are Ho's two trusted lieutenants, Premier Pham Van Dong and Defense Minister Vo Nguyen Giap. But both are outclassed in the party hierarchy and are rated outsiders in any race for supreme power.

Giap was listed in seventh place in the state funeral committee, just after Le Duc Tho, a fact that appeared to confirm reports that he had been even further downgraded.

Giap is a northerner, as is Truong Chinh. Premier Pham Van Dong and party secretary Le Duan were born in what is now South Vietnam.

The emergence of a predominantly northern leadership would create widespread distrust among the ranks of the southern insurgents, many of whom are not Communists, and aggravate Hanoi's problem in retaining control of the insurgency.

Such a situation might lead eventually to the takeover of the southern insurgency by Peking, an eventuality Hanoi may be presumed to want to avoid at all costs.

Analysts here believe that the debate on strategy within the Politburo serves to slow the progress of the Paris negotiations, and that a clear-cut victory by one faction or the other, even the "war" faction, could result in decision in Hanoi that would enable a settlement to be negotiated rapidly.

The ten Politburo members, all included in the 26-member state funeral committee broadcast by Radio Hanoi, were listed in the following order Thursday:

(1) Le Duan; (2) Ton Duc Thang; (3) Truong Chinh; (4) Pham Van Dong; (5) Pham Hung, the Politburo member in charge of directing the war in the south, who has not been seen in Hanoi since Sept. 29, 1967; (6) Le Duc Tho; (7) Vo Nguyen Giap; (8) Nguyen Duy Trinh; (9) Le Thanh Nghia, and (10) Hoang Van Hoan.

[From the New Republic magazine]

THE SHORT WAR

In the summer of 1967, I took a 10,000-mile trip across America in a battered old Rambler, asking people everywhere what they thought of the war. They didn't think much of it. It had been going on 17 years for the Vietnamese but only about two for the U.S. if you start from the big troop buildup. People shrugged; they didn't like the war but felt it had to be finished; it was bound to be short, thank God.

Then about midsummer President Johnson suddenly said that the nation faced a $25-billion deficit and that he wanted a $10-billion tax increase. Maybe it was my imagination but I thought I felt the mood stiffen. By Denver I was pretty sure of it. "President Johnson is in trouble, bad trouble," I wrote.

The war still goes on and two or three hundred Americans get killed every week. There have been several new developments. Ho Chi Minh has died. The State Department is weighing what Hanoi's chief negotiator at Paris meant when he said a sizable withdrawal of U.S. troops *might* break the deadlock (was this a signal?). In Saigon, our man Thieu picked a new premier (a general), and enlarged his cabinet (soldiers and technicians of the old regime) but didn't broaden its base which is what it agonizingly needs. Truong Dinh Dzu, the runner-up peace candidate in the September, 1967 election, got five years in jail for his presumption.

Here at home, the draft generation is going back to college. Everybody hopes they won't be violent. After all, why should they be? The country is prosperous! It is in the eighth year of the longest uninterrupted upswing in history, and the Vietnam war is fattening dividends, making big corporations bigger and pumping $30 billion a year into the economy. Why should those kids behave so uncooperatively; what's bugging them, anyway? They have nothing to lose but their lives.

"But what are we fighting for?" ask the youngsters. Ah, to be sure; that's the question. Glad you asked me that.

We are fighting, I suppose, for reasons that go back a long way. America has a yen for world-crusading, followed by resentful periods of isolationism. After World War II our ersatz partnership with Russia collapsed suddenly in angry confrontation. If you believed spheres of influence were bad, that a balance of power was a makeshift, that Soviet control was temporary, that saboteurs in the State Department had "betrayed" China, that nations would implacably put ideology ahead of national interest, and that Communism was a monolithic world conspiracy—then the war in Vietnam made sense.

So, perhaps, would any war of containment. The U.S. had very good reason for wanting to stop Moscow after the war, but it developed into a frenzy that threatened to commit the country beyond its capacity. General Douglas MacArthur warned that anyone who got the U.S. into a land war in Asia ought to have his head examined. Walter Lippmann looked at the matter with Olympian calm. He urged succeeding Pres-

idents to uphold our presence in Asia by sea and air forces and not to get bogger down in guerrilla fighting. It would be like an elephant fighting a swarm of mosquitoes, he said. Vietnam was not external aggression, he declared, but a civil war. In December, 1966, he wondered in print whether Lyndon Johnson "will not withdraw before 1968?" He wrote that "if the only way out of the quagmire is to elect a Republican it is not improbable that there will come forward a Republican to elect." Mr. Lippmann has made his share of mistakes in 60 years of journalism but as he reaches his 80th birthday, September 23, he can boast remarkable prescience on Vietnam.

The great theory of monolithic Communism fell apart when Peking and Moscow split. (There is even now talk of a preemptive Russian strike against China.) In Europe Mr. Nixon has just visited a Communist country, Rumania. This softens a little the rationale of our Asian crusade.

But there was the "domino theory." Depending on circumstances it may have validity, but then, why is the US so agonizingly alone in the war? James C. Thomson, Harvard East Asian specialist, says, "the domino theory was not merely inaccurate but also insulting to Asian nations." Again, there was Walt Rostow's theory that phased bombing would bring North Vietnam quickly to its knees. Well, it didn't. It is now almost universally acknowledged that the bombing strengthened Vietcong morale.

There was the 1964 Tonkin Gulf incident that gave LBJ the "functional equivalent of a declaration of war". Only two senators voted against the resolution, Morse and Gruening—both defeated in 1968. A startling book is just to be published, "Truth is the First Casualty: The Gulf of Tonkin Affair," by Joseph C. Goulden ($6.95; Rand McNally). I can read it with no other thought than that Congress was deceived, perhaps deliberately. Even while US retaliatory bombs were falling on North Vietnam the Administration was frantically pleading for verification that enemy patrol boats in Tonkin Gulf had actually attacked our destroyers, and getting foggy answers. In fact, in that eerie, overcast night, with fitful lightning flashes and a damaged sonar system, it is not certain that enemy boats were even present.

The public now mostly thinks the war was a mistake. One casualty is social reform at home—the poor old Great Society. Lyndon Johnson was saying only last year that the amount of money required to bring every last American up out of deep poverty was only the equivalent of a quarter of the nation's annual economic growth. In a war with bands and banners, and patriotic zeal, you can wage war on two fronts, but this was different. A taxpayers' strike doomed the double effort.

Two years ago people across America weren't bothering much about the merits of the war, the big thing was that it would be over quickly; it would be cheap and easy. Anybody could see a primitive land of 16 million couldn't stand up long against a giant of 200 million. . . .

So why fight now? Because, I suppose, we feel we have certain obligations and to save face, and because we are trapped. Is that worth 200 to 300 lives a week? Not for me, it isn't.

[From the New Republic magazine]

LEAVE OR GET OUT

After the French had more or less made up their minds to get out of Algeria, they found to their dismay that the war the young men hated and even the old men had grown to loathe went on much as before. France seemed bewitched. President Nixon may yet play de Gaulle's Algerian role and get this country out of Vietnam, but there are doubts. Not long ago, everything and everyone seemed to be converging on withdrawal. Former Defense Secretary Clark Clifford said we should get all ground troops out by end 1970; Mr. Nixon appeared to have said, in rejoinder, why wait that long? But there are still 515,000 uniformed Americans in Vietnam—and 50,000 in Thailand—and withdrawals of real magnitude from either place appear far off.

Averell Harriman has made two proposals for finding a way out of Vietnam. He suggested that heat be put on President Thieu to broaden his Saigon government so as to make it a more popular instrument, capable of concluding the fighting. By far the most effective form of pressure would be a firm timetable of large withdrawals of American forces; each time the Thieu regime balked, the timetable would not be slowed down, but speeded up. Harriman also suggested there ought to be a "cease-fire in place", deliberately cutting back the level of fighting. The prescription seems worth trying. But Thieu has reshuffled his cabinet in the opposite direction and Mr. Nixon exhibits no distress. The Thieu government is bigger, but narrower; more militant, and even less popular. In fact it looks very like a wilful slap at President Nixon's professed Vietnam policy, as well as at Hanoi and Ho Chi Minh's successors there. Yet Mr. Nixon behaves as though he now believes that if he withdraws American forces slowly, buying the Saigon generals still more time than they've been given already, they will be able to take over the fighting, and impose their military solution on Vietnam with our arms. The entire history of the war suggests this is a pipe dream; current events do, too. Thieu's army is riddled with desertion, his "pacification" is a flop and his land reforms are fraudulent. The French hung on in Vietnam until they went down in resounding defeat, but this country is stuck in a can't win, can't lose position. Thieu's position is disastrously different. Ho Chi Minh is gone, but Nguyen Van Thieu will never be Uncle. Thieu can only lose. The US choice isn't win or lose, it's leave or get out; orderly but genuine withdrawal, or cut-and-run.

THE HONORABLE CHARLES S. JOELSON

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. MURPHY of New York. Mr. Speaker, "CHUCK" JOELSON leaves the House of Representatives with the respect, admiration and affection of all who knew him. I congratulate him as he assumes the high honor of a place on the bench of the Superior Court of New Jersey. It is a sorrow, however, to contemplate working in the House without the wisdom, wit, skill, and dedication of this gifted man I am privileged to call a friend.

"CHUCK" JOELSON, intelligent and eloquent, first came to Congress in January, 1961, having been elected as the Representative of the Eighth Congressional District on November 8, 1960. He served continually—with unwavering devotion to the public interest—since that time, having been reelected to the 88th, 89th, 90th, and the present 91st Congress.

He was one of the most progressive and innovative legislators to serve in the House, as a member of the Committee on Education and Labor and later the Committee on Appropriations. He tackled every assignment with enthusiasm and creativity and the strength of character to support causes in which he believed.

"CHUCK" JOELSON is well trained in the complexities of the law, having held many important judicial positions before coming to the Congress. The gain of the judiciary of his home State is a loss for the people of this Nation who he served at all times with wisdom, virtue, and patriotism. For he was always on the human side of an issue—particularly his courageous efforts in behalf of education.

I am proud to be a friend of this outstanding Democratic statesman. Although we in the House will miss him, the people of New Jersey will indeed be fortunate to have his wise counsel and fine judgment on the bench of the Superior Court of New Jersey.

I wish him continued good health, happiness, and success.

WHITHER THE BERTH LINE?

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. FEIGHAN. Mr. Speaker, berth line trade is a most vital and irreplaceable segment of our foreign commerce—yet, there is a chance that this type of operation may be phased out of existence. Berth line operation is common carriage with regular service between given trading areas and to established destinations, as provided by the 1936 Merchant Marine Act.

The following brochure, published by the Labor-Management Maritime Committee, outlines the reasons why preservation of the berth line is essential to the continued functioning of our merchant marine fleet.

The brochure follows:

SUSTAIN THE BERTH LINE SERVICE AND THE NATIONAL MARITIME LAWS WHICH PROMOTE IT

Regular and repetitive service is the lifeblood of the general cargo trade. This is so vital to the nation that the 1936 Merchant Marine Act was enacted in principal measure to support and sustain it. Any demise or substantial deterioration of this service would disrupt the general cargo movement in U.S. foreign commerce. It would lay the nation more broadly open to the mercies of foreign flag shipping, including that of the Soviet Union. This brochure treats of the essentiality of the berth line service and some of the problems it faces.

BERTH LINE SERVICE—WHAT IT IS

Berth line operation is common carriage with regular service between given trading areas and to established destinations.

A ship is said to be on berth when it repetitively offers itself to transport cargo on an established trade route with regularity of service.

Berth lines operating under the 1936 Act receive Government support, measured only in terms of the differential cost between U.S. and foreign ship operation for a few essential items. In return, such lines—

Must confine operations to trade routes declared essential by the U.S. Government;

May not choose customers;

Must accept any general cargo offered;

Must sail on schedule even if vacant space remains;

May not normally vary from fixed and approved itineraries;

May not unilaterally increase or diminish established ranges in yearly sailing schedules;

Must receive Government approval for modifying maximum and minimum sailings;

Must operate under "efficient business principles" subject to Government examination;

Must provide modern competitive ships on a rotating replacement basis built and repaired in U.S. shipyards;

Must purchase stores, supplies, and maintenance needs in the U.S.;

Must hold customer service pre-eminent over all other factors;

Must operate under profit limitations established by law;

Must submit to profit recapture where earnings exceed established limits;

Must successfully compete with all foreign competition in the trade;

Must lay aside yearly reserves for continuing ship replacement; and

Must satisfy Government that the objectives of the 1936 Act are being met.

Berth line operation under the 1936 Merchant Marine Act, provides the best possible type of service to the nation and its citizens.

It does not necessarily provide the most profitable enterprise for those operating under its provisions.

BERTH LINE PARTICIPATION IN THE FOREIGN COMMERCE—A STABILIZING FORCE

U.S.-flag participation in foreign commerce [tonnage-wise] slid from 57.6% in 1947 to 5.6% in 1967. Some seek to place the blame on the 1936 Merchant Marine Act.

They are principally dry cargo carriers who for some 20 years have operated World War II ships purchased from the government at [tax payer-supported] bargain prices, but devoid of Government obligation or restriction.

During that 20 year period few sought to be embraced within the orbit of the 1936 Act. Nor did they appear to oppose or fault its basic provisions.

Now, however, with inadequate provision for vessel replacement, their ship capability is running out of gas.

The real toboggan slide was not in the subsidy contract berth line service but in the dry and liquid bulk transport field.

Total U.S. *dry cargo* carriage slid from 55.8% in 1947 to 6.9% in 1967. U.S. *tanker* carriage slid from 62.8% in 1947 to 3.5% in 1967.

Subsidized liner operation did not resume immediately after the war. However, during the 10 year period 1956–65, it transported [tonnage-wise] an average of 23.3% of all U.S. liner type foreign commerce (reached as high as 30.1%). This was 78.8% of all cargo carried by U.S.-flag liner ships. Dollar-wise, the percent of liner carriage by subsidy contract lines was appreciably higher.

Taking the equivalent period 1956–1965, all U.S. liner services shrank from 38.7% to 21.5% (the latter transported principally by subsidy contract lines). Non-liner carriage shrank from 13.6% to 2.9%. Tanker carriage alone shrank from 20.6% to 3.5%.

Bulk carriers represent approximately one half of all private U.S. shipping. Yet the greatest relative cargo shrinkage is in this segment where the 1936 Act has never been applied.

Reduction in the size of the U.S. bulk fleet is the principal reason; furthermore, ship replacement has been overtaken by fleet obsolescence.

Attacks of the dissident carriers on the 1936 Merchant Marine Act, as a reaction to their own dilemma, is unjustified. It resembles burning down a city to gain what has not otherwise been secured.

The Labor-Management Maritime Committee is in no wise opposed to those segments of merchant shipping not encompassed within the berth line category. Indeed, it has pled their cause in many publications and in testimony before both Houses of Congress. However, it is vigorously opposed to advancing the cause of one shipping segment at the unwarranted expense of another, as has been done by the so-called "charter advocates", or those seeking a monopoly on government cargoes.

With a world threatened by massive Russian merchant fleet expansion and with U.S.-flag participation at its lowest point in history, a way must be found to advance the cause of all segments of the American Merchant Marine, including berth lines, tramp services, dry bulk carriers, and upon proven need, tanker carriers as well. Such an advancement would provide greater employment for shipyard workers, longshoremen, and merchant seamen. The Labor-Management Maritime Committee will devote its full efforts to such a cause and the cause of the men who man the ships.

THE BERTH LINE TRADE—DESCRIPTIVE OBSERVATIONS

The berth line trade involves all general cargo transportation (including containerization).

General cargo includes all items of transport except liquid and dry bulk cargo.

As a river's channel is mandated by the topography of the terrain, so the course of berth line service is mandated by the flow patterns of general cargo.

Fixed commercial trade channels involving producers and their consumer counterparts abroad require timely and regular deliveries to meet contract agreements and compliance dates.

Thus, timely repetitive and dependable service with emphasis on its regularity is the essence of the berth line trade.

Failure to supply such service would have serious impact on the American economy.

The manufacturing and marketing complex of the nation is intricately dependent on efficient berth line services to foreign outlets.

Such services must be responsive to adjustment. The vicissitudes of time and the incidence of change erode old trade channels as the streams of progress break forth into new courses.

No period of the 20th century has wrought such volatile change as the current decade.

An age which attains the circumnavigation of the moon, struggles with an ever accelerating population explosion, and contends with unprecedented social and economic change, must expect corresponding impact upon commerce and trade.

The shipping industry is no exception.

Berth line services cannot be maximized if there is excessive containment of operations or denial of necessary flexibility for adaptation to changing times.

The regulatory rigidity of berth line operation on essential trade routes under the 1936 Act must be appreciably modified and tempered to meet today's trade developments.

Containerization and other transport innovations call for: liberality in adjusting maximum and minimum sailings; facility in modifying ports of call; and broader trade route determinations based on ultimate intermodal destinations.

Partial transport by land as an interim transit on a water-borne voyage (termed the land bridge) and a broader definition of the "commerce of the United States" are essential.

Such modifications do not impair the berth line concept. They only make liner operation more responsive to changing conditions.

PROFILES OF INCENTIVE—ADVANTAGES OF THE BERTH LINE SERVICE

Incentives in Berth Line Operation under subsidy contract

Carriers operating under subsidy contract are not guaranteed a profit. They must earn it.

Operating cost-differential support provides no advantage over lower cost foreign competition. It is only intended to equate limited items of operating expense (wages, maintenance, repairs and insurance). Under current Government practices it does not even do that.

Today's high operating costs give no assurance that freight income plus differential subsidy will provide a profit.

An unfavorable balance is a constant threat.

The incentive to achieve highest income with lowest cost is a dynamic and ever present force. Subsidy with inadequate cargo is a "go broke" formula.

Subsidy contract lines have generally shown a modest profit overall.

Incentive has been sufficiently productive to offset:

1. Uncompensated increases in operating cost;
2. Inflationary trends in the economy;
3. Ever increasing foreign competition;
4. Deficiencies in parity payments under current Government practices; and
5. Government lag in providing shipyard differential subsidy to construct new ships.

Incentive under subsidy contract has produced a commitment of over $2 billion in private funds for modern ship construction.

No such incentive is evident in any other segment of U.S. merchant shipping.

Incentives under proposed long-term "Charter/Sub-Charter" operations

Long or short term Government charters, reasonably conceived, are not objectionable. However, Government charters that underwrite all risks in shipbuilding and ship operations federalize the American Merchant Marine and destroy incentive.

Certain carriers propose to assure private financing for fleet replacement by leasing new ships to government on 20 year bareboat charters, thus guaranteeing entire construction loans. Government is then asked to subcharter the same ships back to the same carriers for operation.

With assured financing, incentive to maintain shipbuilding reserves would diminish, if not disappear.

Sub-charters may be of one or more years' duration thus eliminating any incentive to insure future vessel employment; leaves Government holding the bag.

Charter proposals let Government recover costs through profit-sharing only. If no profits, no recovery; if meager profits, meager recovery; thus a perfect insulation from normal shipping obligations—a realistic dilution of incentive.

The charter advocates ask, in addition, that all Government aid and military cargo be reserved for them. This would insure massive cargo allocation with minimum effort or incentive.

They also seek Government-established premium freight rates sufficient to guarantee a profit with minimum service.

Under such a formula, little incentive remains.

The carrot in front of the donkey is dwarfed indeed.

LOSS OF BERTH LINE SERVICES—EFFECTS UPON FOREIGN TRADE

Berth line trade is a most vital and irreplaceable segment of our foreign commerce.

Its abandonment would reset the entire general cargo movement. Smaller ports would suffer.

Lower volume trades would appreciably decline; those to South America, Africa and Australia.

Heavy volume trades would expand; those to Europe and Asia.

More profitable trade designations would be sought, eliminating those of lesser financial gain.

Some trade services would tend toward diminution or abandonment; those to underdeveloped areas of the world.

On the American side, some services would

substantially diminish due to lower revenues generated; those from the Gulf and South Atlantic ports.

Any demise of the berth service would transform liner operations into tramp services. Like the call of the wild goose, shipping services in the common carriage would tend to follow a straight course to the most rewarding financial feeding ground.

Foreign commerce outside the berth trade orbit moves under a broad canopy of commercial transport freedom.

With no mandated regularity of sailings or destinations, the nature of services may be more directly controlled by the carrier than the customer.

Such carriers may normally abandon a given service at will; may leave any given service for more lucrative trade; may delay sailings until ships are fully loaded; may choose any ports of call or embarkation; may concentrate on high rate cargo; and may otherwise maximize vessel utilization.

Non-berth line carriers have no *mandated* responsibility for the steady and regular flow of commerce, nor the commercial transport protection of given trading areas.

Berth line service under the Merchant Marine Act of 1936 operates effectively to promote such objectives.

Any loss of the service would leave general cargo shipping irreparably impaired.

FAYETTE COUNTY LEADERS

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. PICKLE. Mr. Speaker, two of my close friends passed away during the recess and I am compelled to honor and applaud their contributions to good government. Both men were among the natural leaders in La Grange and Fayette Counties, Tex.; both were young, and both died on the same tragic day.

I refer to County Judge Ike Petras and Frank Kana, first vice president of the La Grange State Bank. Both men died on Tuesday, August 19, 1969.

We had no warning. The public could not have been more shocked, or grievously saddened.

Judge Petras was in the hospital with minor surgery when complications set in. He was 49. Frank Kana was making excellent recovery of a mild heart attack when a second attack struck him. He was 42.

Judge Petras was long a leader in La Grange; he had served the county for the past 22 years. He rose from a deputy in the tax office, to district clerk to county judge. He knew his business from the ground up. He loved people; and people loved and respected Ike.

Since the day Ike Petras first grabbed the reins, he was a busy man for his people. Among his most visible projects are the beautification of the courthouse and the grounds, and the addition of an annex building in nearby Schulenburg.

The intangibles are not visible, but you can feel them. Judge Petras breathed a spirit and vigor into his central Texas home. He would not let problems sit around unsolved. I remember well his many visits to Washington. Often, he and I would visit with another close friend, President Lyndon Johnson. Once, the judge carried his fight directly to the Presidential Commission on Poverty, making a skilled presentation.

One of the most recent projects that Ike was working on was a proposed outdoor theater in La Grange. Ike wanted to present in an art form, the cultural heritage left by Czechs and Germans in Texas.

I visited with his wife Amanda during the recess and found her a woman of courage. His son and his daughter will be a close comfort; they are all strong people.

Ike died that Tuesday morning and while the town was still dazed, they received word of yet another loss. Frank Kana died that same night. He was coming back strong from a mild heart attack and no one expected anything but full, complete recovery.

I remember Frank as a young man—he was an outstanding athlete at the University of Texas. Twice he played on national championship teams and he continued to support all of the university athletic programs during his adult life.

Frank demonstrated the same competive drive in the business world. While many would have found contentment and security as a banker, Frank moved out into active civic work. He was president of the La Grange Lions and served with other organizations such as the Knights of Columbus and the chamber of commerce.

These men were good and they were good for their community. We will close the ranks somehow and continue, but we can never forget them, because, Mr. Speaker, these two men were genuine, progressive leaders who did things for their people.

PERSONAL LIBERTY IN SOUTH AFRICA

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. FRASER. Mr. Speaker, the following is an editorial which was printed in the August 20, 1969, edition of the Star of Johannesburg, South Africa. The society which is able to conceive and execute the apartheid system is a society which is insensitive to issues of personal liberty. Certainly it is heartening to see a South African newspaper raising its editorial voice against this violation of human rights.

TEN MONTHS' DETENTION

There is an indifference to personal liberty which is doing the South African judicial system no credit.

In the Pretoria Supreme Court on Monday six Bakwena from Hebron, north of Pretoria, were found not guilty of sabotage and were discharged.

It is not relevant to our complaint that this serious charge appeared to have evolved from a relatively commonplace incident—some hut-burning in protest against the appointment of an allegedly unpopular headman. The thing might have turned out to be a conspiracy of some real importance to public security.

Nor is it relevant that the evidence eventually presented to the court against these men was slight, conflicting and valueless. The court lost no time in finding that out.

No. The trouble is that these six men, together with others, were detained as long ago as last October. Since then they had, presumably, been undergoing interrogation. Judging by the experience of other detainees they were quite likely in solitary confinement. During their detention two of them died, and at the inquest on one, Nicodemus Kgwathe, allegations of a very serious nature were made, though not proved, against the police. Even when the men were at last indicted, bail was refused. All this time their families, have presumably, been without breadwinners under a situation which holds out little hope of redress.

Even allowing for the difficulties this kind of case presents, it ought not to have taken 10 months to bring some alleged hut-burners to trial or, alternatively, to discover that the case against them was a flimsy one.

STATE INITIATIVE IN MANPOWER PLANNING

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, one of the most important reasons why I have introduced the Comprehensive Manpower Act of 1969 is my firm conviction that a number of States now possess the talent and know-how to develop and implement more effective and efficient manpower programs. In my own State of Wisconsin, a number of manpower officials were talking in terms of a comprehensive manpower council long before the idea became fashionable. California, Oregon, Utah, and New York have already taken steps in this direction.

The State of Iowa, as early as last July, took significant steps to improve and coordinate its delivery of manpower services. The following excerpt is from a report prepared by the Iowa State CAMPS Staff Committee and written up by Mr. Allen Jensen, administrative assistant to the committee. Mr. Jensen is now a staff member of the National Governors' Conference. I would like to introduce this report as an example of what one State has done to develop a workable interagency manpower planning system in spite of the current chaos and confusion which characterizes our manpower programs. I am also including the excellent statement of manpower goals which the Iowa State CAMPS Staff Committee has drawn up:

REPORT OF THE IOWA STATE CAMPS STAFF COMMITTEE

The following report which has been prepared by the Iowa State CAMPS Staff Committee is presented in a rough form and can only give an indication of the effort being made in the State of Iowa to develop a truly interagency manpower planning system.

EMPHASIS ON AREA OR LOCAL INVOLVEMENT IN PLANNING

The planning system which is being developed emphasizes the involvement of 16 Area CAMPS committees whose formal membership includes representatives from 15 Area Vocational Schools, 21 Community Action Agencies, 8 district offices of the Division of Rehabilitation Education Services, 34 local Employment Service offices, 8 area offices of the State Department of Social Services and 5 Area offices of the Statewide On-the-Job Training project.

PLANS FOR PLANNING

The regional CAMPS Committee should evaluate the following document as a "Plan for Planning" and not a final Plan that spells out the planned allocation of resources of the many federal, state and local programs according to priorities of needs. Such a sophisticated Plan and the various elements of such a Plan will be submitted to the Regional CAMPS Committee as the procedures and tools of an interagency manpower Planning system are developed. It is the feeling of the State CAMPS Staff Committee that CAMPS is an ongoing planning process and cannot be effective if limited to a single *one-time* report to be completed annually.

The Regional CAMPS Committee can expect to be continually receiving additions and changes in the Iowa State CAMPS report until it will eventually be called an Iowa State CAMPS Plan.

IOWA APPROACHES CONTRARY TO NATIONAL CAMPS ISSUANCES

There are a number of approaches that were taken to the Cooperative Area Manpower Planning System in Iowa this past year that were not in agreement with the suggestions set forth in the National CAMPS Issuances. I will comment on them briefly anticipating that there will be an opportunity to discuss them in more detail personally with representatives of the National and Regional CAMPS Committees at a later date.

A. Sixteen Area CAMPS Committees were established in contrast to the one for the Des Moines metropolitan area that was recommended.

B. The State CAMPS Executive and Staff committees in Iowa are made up only of State government personnel and did not include representatives of the Federal manpower agencies.

C. The Planning system that is being developed is being developed on the premise that federally funded manpower programs cannot be planned or realistic plans developed without the involvement of the relevant decision makers concerned with State and locally financed programs. This is in contrast to what is projected as the primary focus of the National and Regional CAMPS planning activities, that is, built around federally financed manpower programs.

PRIMARY PROBLEMS CONFRONTED

The total and comprehensive approach which is being attempted in Iowa has meant that there were many people to get involved, many of whom have never been required to do any realistic planning before. It also meant that the present lack of uniformity in the boundaries of the geographic areas that are the service areas for the agencies participating in CAMPS created logistics problems and problems in data gathering for the area CAMPS committees. Just these two problems alone would be enough to require additional time to develop a realistic plan even though the Iowa State CAMPS Staff has averaged at least one meeting a week since the middle of December of last year. This again emphasized the fact that there is the need to develop a manpower planning system which is continuous in nature and that adequate and specialized planning staff be organized within each of the agencies participating in CAMPS.

INFORMATION SYSTEM DEVELOPMENT PROGRESS

As is explained in more detail in the report the State CAMPS Staff Committee is developing an interagency data or information system for use in the planning process. These efforts were primarily in the following three areas:

A. The development of categories and definitions of the manpower service activities that are a part of an interagency manpower service effort in a multi-county area or State. This provided the common language between the agencies as to their services so that they can compare and analyze and plan their activities, in such a way that will minimize the duplication of effort that sometimes may occur and likewise attempt to ensure that manpower services of particular types are not absent in other areas.

B. The needs of the job market is probably the most complete part of the report at this time and is in large part the result of the Skilled Needs Surveys that were financed and coordinated in large part by the State Department of Public Instruction through the Area Vocational Schools. Data available through the local Employment Service offices was also utilized.

C. The employability development needs of the people of the State of Iowa is in the process of being determined through a combination of a review of agency case records plus surveys and other relevant information in order to determine the mix and incidence of the needs of all of the people of the State of Iowa. One thing is unmistakenly clear and that is, that a priority item in the development of a viable and accurate manpower planning system is the development and the funding of research and survey activities and data storage and retrieval systems that will provide a more adequate measure of the relative needs between the geographic areas to be served and the priorities as to the manpower service activities needs of the people in an area.

INVOLVEMENT BY THE OFFICE OF THE GOVERNOR

The Office of the Governor has been providing the overall leadership to the development of the Cooperative Area Manpower Planning System in Iowa this year through a subdivision of the Governor's office, the Office for Planning and Programming. I would urge the members of the Regional CAMPS Committee to read the introduction to this report found in Chapter I. This introduction gives the rationale for the type and nature of the involvement of the Office of the Governor of Iowa in CAMPS.

I wish to point out again that the docu ment which follows is not a final draft of an Iowa State CAMPS plan but is only a tool that is being used by the State CAMPS Staff Committee to present some idea of the nature of the interagency manpower planning system that is being developed in Iowa.

In summary the manpower planning system being developed emphasizes:

1. local or area level involvement in the planning process

2. comprehensiveness in scope as to the service activities being planned, and

3. is cognizant of the interdependencies of Federal, State and locally financed and administered manpower programs.

GOALS FOR AREA CAMPS COMMITTEES FOR FISCAL YEAR 1969

1. Develop and implement a systematic approach to defining the role of each agency in the provision of each specific and commonly defined type of service activity.

2. Develop and implement a planning system which can for a given population determine the amount and ratios between the identified and estimated employability development and employer relations and community service needs and relate these to optimum amounts and ratios between service activities required.

3. Develop and implement an interagency service delivery system which includes (a) an interagency individual case planning system and (b) an interagency case tracking system during the process of providing services to an individual by more than one agency.

4. Develop a plan for organizing a manpower development service delivery system on a common multi-county area basis taking into account levels of specialization needed and needed location of services within the area.

TYPES OF SERVICE ACTIVITIES CHANGES THROUGH THE COOPERATIVE AREA MANPOWER PLANNING SYSTEM

1. Increase or decrease total amount of a service activity based on identified population and/or job market needs.

2. Specialization or concentration of a service activity in fewer agencies to increase efficiency and effectiveness.

3. Shifting responsibilities between agencies to achieve intra agency coupling of service activities needed to ensure continuity between services.

4. Create balance between the amounts of service activities to fit ratio between needs identified.

5. Shift to use of different type of service activity to serve some needs of population and/or job market.

RETREAT ON CIVIL RIGHTS ENFORCEMENT

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. RYAN. Mr. Speaker, 15 years after the U.S. Supreme Court desegregation decision, 5 years after the historic Civil Rights Act of 1964, the power of the Federal Government is not being fully used to achieve equality for all of our citizens—in education, in housing, in jobs, and in other areas of our national life. Not only have legislative acts and Executive orders against discrimination not been fully implemented, but civil rights protections have been undermined by administrative failures and retreats.

The latest blow to civil rights was the action of the Secretary of Health, Education, and Welfare in asking for a postponement of public school desegregation in 33 Mississippi counties—as though 15 years was not enough time in which to comply with the Supreme Court decision.

Roy Wilkins, executive director of the NAACP, in a column published in the New York Post of September 6, commented upon the latest failure of the Nixon administration to enforce equal rights. Mr. Wilkins observed:

Everyone familiar with government operations has known for months that the Nixon Administration has been playing patty-cake with civil rights . . . The law is there for the law and order regime to enforce. Or does law and order mean only containment and control of the Negro population?

I urge my colleagues to read Roy Wilkins' article, "An Unmistakable Retreat," and I urge the administration to enforce law and order for the protection of the civil rights of all Americans—black and white.

The article follows:

AN UNMISTAKABLE RETREAT

(By Roy Wilkins)

Even those who have bent over backwards trying to find some good in the civil rights policies of the Nixon Administration have been taken aback by recent developments.

The real blow came with the unprecedented letter of HEW Secretary Finch to federal court judges withdrawing the school desegregation suit against 33 Mississippi counties.

The letter said the action, prepared after analyses by HEW experts, would bring "chaos" to the school districts. It implied clearly that the districts had special problems and would not have time enough to effect desegregation. Secretary Finch asked a delay until December 1.

There might have been only the cynical (and expected) reaction from Negro citizens had not lawyers in the Civil Rights Division of the Justice Dept. held a protest meeting. The men present, reportedly as many as one-half of those employed, broadened their criticism from that on schools to include the alleged "slowdown" on the whole civil rights issue.

Nothing in these events is new—certainly not the general downward civil rights trend—except the letter of Mr. Finch and the protest meeting of the attorneys. Everyone familiar with government operations has known for months that the Nixon Administration has been playing patty-cake with civil rights. It has asserted that it is merely being "more businesslike," "more efficient" and is "streamlining" a vast confusion.

These phrases have fooled no one. They have not deceived those Southern whites who invented racial doubletalk long before President Nixon was born. They have not deceived Negroes.

Mr. Finch (whom I believe—perhaps naively—acted under pressure) stripped away uncertainty. Withdrawing a law suit is an unmistakable retreat. It is a confession of error, if not in judgment, then in timing. No matter how it is explained, it remains a backdown. The segregationists win another round.

With a hard-fisted and knowledgeable Texan in the White House, their victories were few and never in the open. With a Californian-New Yorker there, heading a party hungry for jobs and power, the going has been easier. In the background, always, has been the insatiable group of professional white Southerners whose followers are the emotional, unperceptive opponents of the idea that government should do anything for blacks.

The basic racial struggle in this country since 1865 has been to persuade the central government to protect the constitutional rights of black citizens against the subtle and overt onslaughts of the states. The racial practices imposed by whites upon blacks, while cruel and often spectacular and revolting, have been secondary.

Whenever legislation and the courts have bolstered these rights, as in the period, 1954–1968, discrimination has been beaten back. Until recently, the screams of the militants against government have been mostly heated rhetoric. But the Nixonites, by actively aiding the erosion of rights, are giving substance to stridency.

It cannot be repeated too often that the school districts in and outside the South have been on notice since May 17, 1954, to desegregate. Those communities that resisted a court decision for a decade ran finally into the Civil Rights Act of 1964. They chose still to stand pat. Under these circumstances, the "chaos" and "special problems" excuses of the Nixon Administration mean little.

The law is there for the law and order regime to enforce. Or does law and order mean only containment and control of the Negro population?

HON. BARRATT O'HARA

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. YATES. Mr. Speaker, with the passing of Barratt O'Hara the United States has lost one of its great political figures. Barratt O'Hara was one of the few truly unique public men of our age.

For Barratt O'Hara's story is not the story of a single career, but of several careers, any one of which would have proven more than a match for the capabilities of an ordinary man. Barratt O'Hara was not an ordinary man.

His life and public career spanned generations and included his participation in events that most of us have only read about in history books. Barratt O'Hara was a veteran of the Spanish-American War and was the Congress' last direct link with that historic conflict.

He was a historic figure in his own right—serving nearly 20 years in this body. His integrity, his conscientiousness, and understanding of the issues were noted and admired by his colleagues. Those of us who knew him well were not surprised at all to hear him stand in this Chamber at the age of 84 and articulate a policy for Africa and the emerging third world that was a model of foresight, humanity, and commonsense. He brought to his work on African affairs more energy and insight than men half his age.

Barratt O'Hara lived his life fully. He was a man never content to stand still. He was out in front on the important issues of his day, whether the day was in 1925 or 1965. He was a constant source of inspiration and amazement to all those who knew him. Barratt's career was legendary. It has been duplicated and matched by very few, and I doubt that many in future years will be able to achieve as much. He was truly "The Happy Warrior."

MRS. MATTIE MEISNER, CITIZEN EXTRAORDINAIRE

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. MIZE. Mr. Speaker, the generous act of Mrs. Mattie Meisner of Sabetha, Kans., in willing more than $55,000 to the Federal Government to apply on the national debt, has attracted widespread attention. I recently received the editorial page of the Painesville, Ohio, Telegraph and had my attention directed to an editorial in which the editor suggested that Mrs. Meisner be given the title of "Citizen Extraordinaire."

I heartily subscribe to this recognition for Mrs. Meisner, and insert the editorial in the RECORD, as follows:

CITIZEN EXTRAORDINAIRE

U.S. Rep. Chester L. Mize the other day was telling the House floor how he was performing "one of the most unusual chores to befall me."

Continuing in the same tone of emphasized amazement, he said, "I have been requested to serve as the middleman in a transaction, the likes of which I have not heard about before. . ."

His mission in short was to relay a check in the amount of $55,657.79 to the government. That sum represented what a constituent had left in her will to the U.S. government. She left a similar amount to the state of Kansas. Both sums, according to the deceased one's will, are to be used "for the payment of the federal debt and the debts of the State of Kansas."

So many do their utmost to be good American citizens. They have to for this nation to succeed. But this contribution by a citizen in dollars and cents is truly beyond the realm of norm.

We suggest this person, a widow, in Kansas, be remembered as more than a good citizen. Perhaps she may be given the title: Mrs. Mattie Meisner, Citizen Extraordinaire.

MARS, THE EARTH, AND COMMITMENT

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. DINGELL. Mr. Speaker, the September, 1969, issue of Nation's Cities, the official publication of the National League of Cities, ran a front cover editorial on the need to provide adequate funding for the Clean Water Restoration Act.

Entitled "Mars, the Earth, and Commitment" the editorial expresses the frustrations of local government in their efforts to meet the Nation's clean water needs.

The Clean Water Restoration Act was enacted by Congress in 1966 as a "cooperative" effort between the Federal Government, the States and local communities to get on with the necessary job of building municipal sewage treatment plants. Federal funding, however, has never been adequate and as the editorial evidences, we are reaping a harvest of frustration and bitterness from the Nation's cities. I recommend this important reading to our colleagues:

MARS, THE EARTH, AND COMMITMENT

So now they want to send men to Mars. NASA director Dr. Thomas Paine says we have the technical knowledge to do the job by 1981. All we need is the will and commitment. Well, we have the technical knowledge to correct most of our urban pollution problems—*now*. All we need is the will and commitment.

We feel the will and commitment to battle pollution have been evident in most of our municipal governments. But we can't say that about the federal government. Take, for example, the shameful way it has failed to meet its obligations under the 1966 Clean Waters Restoration Act. A total of $1.3 billion was *authorized* under the act from fiscal 1967 through 1969. But now much actually was *appropriated* to help states and local governments build wastewater treatment facilities? Only $567 million, or roughly 44 per cent. The remaining unappropriated 56 per cent is an outrageous funding gap. But during that same period, a total of $4.1 billion in wastewater treatment facilities somehow were built. Where, then, did the money come from? It came, of course, from local governments (and, in a few cases, from states), placed under the gun to meet new federal/state water quality standards set by the 1965 Water Quality Act. Now these water quality standard deadlines are fast approaching and many cities will be able to meet them only by overextending themselves financially, thus taking already limited funds away from other vital urban needs such as education, poverty, and housing.

Will Congress continue to renege on its

obligation to fully fund the 1966 act? Not if the National League of Cities and the other concerned groups joined together in the Citizens Crusade for Clean Water have anything to say about it. And not if the growing congressional support for a full $1-billion 1970 appropriation continues to gain momentum. City officials and concerned citizens throughout the nation can join this fight for full federal funding by immediately bombarding their congressmen with requests to support the $1-billion 1970 appropriation. Success in gaining increased funding is not only necessary to meet our water pollution control needs in the years ahead, but to restore local and state government confidence in the federal government's credibility. National goals for an unfouled urban environment have been enunciated by Congress many times during the past decade. But, unlike the space program, the will and commitment to achieve these goals often have not been present.

Mars can wait. Our environmental pollution control needs here on Earth cannot.

NEED NEW NATIONAL POLICY FOR WATER POLLUTION ABATEMENT

HON. WENDELL WYATT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. WYATT. Mr. Speaker, I wish to share with my colleagues, and all who are interested in water pollution control, a speech I delivered at the Downtown Rotary Club in Portland, Oreg.:

THE NEED FOR DRAMATIC NEW NATIONAL POLICY FOR WATER POLLUTION ABATEMENT

One of the programs hit hardest by the current money pinch is one which we can least afford to delay—the nation's water pollution control program. Many other problems we face will be irrelevant if we so foul our environment that it becomes an unfit place in which to live.

The pollution of our nation's waterways with municipal and industrial wastes is a problem of ever-growing magnitude. The Federal government long ago saw the grave impact on our environment of these wastes if nothing was done to halt the pollution flood. As a result we have today in Washington the Federal Water Pollution Control Administration, and a variety of programs in not only that agency, but many others, designed to combat this cancerous disease of our rivers, lakes, streams, and coastal waters.

This country will have an estimated population of 400,000,000 people by the year 2,020 . . . just fifty years from now. Pollution problems will increase proportionately; they will certainly not simply disappear.

The Federal government has been channeling millions upon millions of dollars into pollution control and abatement programs, yet at best we have done little more than hold even. Many of our rivers and lakes are no cleaner today than they were when the Federal programs were begun.

The Great Lakes, once magnificent bodies of water—useful for fishing and recreation, are steadily being degraded in quality to the point where their recreational value is becoming more and more limited. Recreation on many stretches of lakefront is forgotten. Pollution has made the water unsafe for swimmers. Successful efforts to plant Oregon Cohoe salmon in Lake Michigan have been negated by pollution which makes them unsafe to eat.

Many of our rivers are no better. The Hudson flows to the sea as a ribbon of filth. The Potomac is occasionally lovely to look at, but swimming is a real health risk. All over the nation our great natural water resources are being despoiled by an ever-growing glut of filth.

What has happened to the millions and millions of dollars we have expended in trying to combat this disease that has cost us one of our greatest national assets? It has been spent in a scatter-shot approach to the problem, using outmoded methods, and, as a result, pollution has increased at a greater rate than our efforts to clean it up.

In 1966 we in Congress authorized 3.4 billion dollars to be spent through the year 1971 on pollution abatement. This money was to be spent primarily to increase secondary sewage treatment facilities. Yet testimony has shown that to keep up with increasing needs at least $20 billion would be needed by 1972 in order to achieve this goal.

The New York Times estimated in 1966 that we must spend 75 billion dollars in the next twenty-five years if we are to conquer water pollution with the conventional approach now being used. This is an average of 3 billion dollars per year for 25 years. Yet only $200 million in federal funds is available for the current fiscal year. The pollution funding gap now stands at three quarters of a billion dollars. But even at this reduced rate of funding, there is serious question as to whether we are getting anywhere near our money's worth.

Municipal and industrial wastes dumped into rivers and lakes is the single and prime cause of pollution. It is in the treatment of these wastes that we must take our stand against pollution. These facts are well known. This is the reason so much federal emphasis has been placed on the secondary treatment of sewage wastes. You should realize, however, that 45 per cent of all United States population is still not served by secondary sewage treatment plants.

We are not failing in achieving our water pollution abatement goals for lack of will. The people in the United States overwhelmingly desire to save our environment. The fancy funding promises of the last few years by the Federal government have resulted in amazing responses from American votes, this in spite of the predictable inability of the Federal government to come up with its matching share.

The strong desire of our citizens for adequate pollution control programs is reflected by the great margins by which very large pollution control bond issues have recently been carried, in the face of general tax revulsion.

For example, the voters of the State of New York approved a one billion dollar bond issue in 1968 by a margin of 4 to 1. The people of St. Louis, Missouri, recently approved a $95,000,000 bond issue by a 5 to 1 margin. These results reflect the intense desire to improve our environment. Unfortunately, the public's desire is running ahead of the government's abilities to provide a suitable program.

Our present approach toward control of pollution is both outmoded and ineffective. Our dollars are being spent and our entire abatement program is based on a concept that cannot work, and has not worked.

This concept calls for secondary treatment of all wastes. These secondary facilities are being designed around technology 40 years old and are intended to serve for 20–30 years in the future. This results in some serious inconsistencies in national policy. By designing facilities sized for the distant future, we are imposing a tremendous financial burden on today's economy. In many cases, taking a bite this big causes us to choke and take no immediate action to alleviate today's problems. The technology commonly used as a basis for design is largely outmoded today and results in inefficient use of dollars. We are spending sizable amounts of Federal money in financing research efforts to develop improved technology making such long range projects even a more inefficient use of today's dollars.

In effect we are spending money to design facilities for the future, and at the same time are striving to make sure they are obsolete before they are built. In addition, the now-outmoded 1963 standards for pollution control are based on the concept of unlimited funding. This is falacious to the extreme in light of the tremendous fiscal burden that the Congress and the nation must face this year and in years to come. We have too many areas that require Federal aid, and too few dollars to go around. In addition, the spiral of inflation has created further spurs for Federal thrift.

So we cannot toss the needed billions into the fray against pollution and get the results we want and need. But we continue to plan as though these billions were available.

An overall master plan for meeting our needs in the year 2000 is fine, but it does not meet today's needs and it does not give us pollution abatement today. Even more, planning and building plants for that far in the future is almost impossible to finance today. Trying to meet the waste treatment needs of the next generation with today's dollars is a very heavy burden; so, in many cases, only half measures are undertaken, and pollution continues to grow.

Another weakness is that waste treatment plants built today are assumed to operate at 90% efficiency all of the time when in fact they may operate at this efficiency only 80% of the time. During the other 20% of the time the plant may be 100% ineffective to the boy wanting to swim downstream from the plant discharge pipe. A realistic evaluation of the reliability of today's treatment processes indicates that many pollution programs may fall considerably short of hoped for effectiveness and reliability.

Is the situation hopeless? Must we accept the continuing blight of pollution as inevitable? The answer is a strong and resounding NO!!!

I propose that our efforts be concentrated on altering the time accepted approaches to this problem so that reasonable dollars expended wisely will allow us to make immediate progress yet take full advantage of new technology in effectively gaining the upper hand in the pollution control problems of tomorrow.

It is time to discard outmoded, often impossible 20 year plans. It is time to stop our scattergun approach to fighting pollution. It is time to meet the needs and wishes of our people *today*, not on a "maybe" basis 20 years from now or at the end of the century.

I suggest today that the Federal government undertake a complete revision of its concept of pollution abatement. A new national policy must be adopted. I suggest new priorities be drawn. And, most of all, I suggest we use our limited funds in the most effective possible way to fight the filth in our lakes and rivers, so that we will begin to harvest the results today, instead of hoping for results in the far future.

This is not an impossibility. This is not a pipe dream. It can and should be done. And it can be done by allocating our funds under a priority system that gives the most pounds of pollution removed per dollar spent. As it is now most of the funds are distributed on a first come, first served basis, without regard to obtaining maximum returns.

To do this we must utilize the advanced technology available. We must invest, not in

old-fashioned plants that are already outmoded, but in the newest and most productive areas of waste treatment.

Our goal must be immediate high-yield pollution abatement. We must be able to see results from our efforts. It costs far less, for example, to use this technology to improve existing waste treatment plants to where they can handle waste materials at 90% efficiency 100% of the time than to build plants for twenty years in the future. And technology can keep pace. Updating existing facilities through modern methods every five years, instead of making one great expense on the basis of twenty years will give pollution abatement results *now*, and will cost less, is more easily financed and offers more flexibility for incorporating future advances in technology.

Technology developed in Oregon offers one means of achieving these intermediate goals. We have developed techniques for increasing the capacity and performance of existing primary or secondary sewage clarifiers without the need for new construction. Plastic modules of high-rate sedimentation devices can be installed in existing clarifier structures to greatly increase their capacity and efficiency. This concept has already been proven in plants as large as 45 MGD. Pollution caused by overloaded primary and secondary clarifiers can be greatly reduced by use of this concept until new plant construction can take place. Incorporation of this settling concept in new plant design will reduce the cost of new facilities when they are built. Space and capital costs of industrial waste treatment system can be reduced. The treatment of storm-water overflows can be carried out in systems much smaller and cheaper than those currently being considered. A preliminary design of a stormwater treatment system utilizing this settling concept has been laid out in which the treatment could be accomplished beneath existing city streets within existing city rights-of-way.

At the same time, our research efforts need to be given a sharper focus and more clearly defined objectives. As it is now, our federally financed research projects largely are originated by field researchers and are conceived with the primary objective of getting a Federal grant. In many instances the research makes little or no contribution to technology and provides answers to which there are no practical questions.

Pollution abatement should be a national goal of the same priority as the moon program. Neil Armstrong would never have set foot on the moon if the Apollo program had no more central direction than the pollution research program. There is only one NASA but there are 15 Federal agencies conducting pollution control research and 50 state agencies which must first review and approve new concepts before they can be put into practice. The Federal Water Pollution Control Administration should set specific goals and make specific research assignments intead of merely handing out the money to projects that often are unrelated to practical solutions.

We should make a national commitment to deal with water pollution of the same magnitude that we made a decade ago to place a man on the moon.

Waste treatment and pollution abatement must be financed on today's dollars, and it should meet today's needs. Pollution does not operate on 20 year projections. It is here and now. We must meet it here and now or it will be with us 20 years from now, after we have spent our money in vain.

For if we do not start getting results in cleaning up our waterways soon, it may be too late. It may already be too late for Lake Erie. We must demand a dollar's worth of abatement for a dollar spent. We must meet today's needs. We must utilize technology now available to lower finance costs and to create results now. We need central direction of a national research effort to develop still more advanced technology. And we must revise our Federal outlook to adopt this high-yield pollution abatement concept immediately if we are not to perish in our own wastes.

Our needs are great today. They will be greater tomorrow. We must begin to meet them today by expecting and getting immediate results from our efforts at pollution control.

The logic of the programs of the immediate past would have led the legendary Dutch boy to refuse to put his finger in the hole in the dike because he felt the optimum solution was to build a new dike. Let's plug the hole in the pollution control dike until we can afford the new dike lest we drown in a flood of pollution in the interim.

COVINGTON MARINE KILLED IN VIETNAM

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. SNYDER. Mr. Speaker, on July 25, 1969, Cpl. Michael A. Dwyer, a 20-year-old marine from Covington, became another of the valiant youths who has given his life while serving his country and protecting the free world.

The sympathy of thousands of other families who have paid this sacrifice goes out to the Dwyer family and to them also goes the gratitude of those of us whom Mike died protecting.

The Kentucky Post article of August 12, written by Sigman Byrd, which reports the loss of the 101st Upper Bluegrass young man to the war in Vietnam, follows:

MIKE WAS WONDERFUL

(By Sigman Byrd)

When word got around on July 20 that Mike Dwyer was on the hospital ship Sanctuary, folks around Scott and Martin streets, Covington, starting praying for the young Marine.

Those who didn't pray, and some who did, had masses said for Cpl. Michael A. Dwyer, USMC, who was wounded accidentally while on combat duty in Vietnam.

Mike was only 20. Up until the time he enlisted in the Marine Corps last December he neither drank nor smoked.

But at Suttmiller's Saloon, 1358 Scott, Paul Suttmiller started a fund to buy Mike a gift.

Everybody loved Mike Dwyer. He had no enemies except the enemies of his country.

Today corporal Dwyer lies in a casket covered with the national ensign at the Linnemann Funeral Home, Covington. The money collected at the neighborhood saloon went for some of the flowers beside the casket, and for a mass to be offered for the repose of his soul.

He is the 101st northern Kentucky serviceman killed in Vietnam, and Kenton County's 40th.

Visitation is 3 to 9 p.m. today. A Requiem High Mass will be sung for Corporal Dwyer at the Cathedral Basilica of the Assumption at 9 a.m. Wednesday.

Burial with military honors will be at Mother of God Cemetery.

Today at the Dwyer home, 1412 Scott, the Stars and Stripes hangs from a flagstaff bracketed to a front-porch pillar.

A mood of sadness haunts the whole neighborhood. Inside the house where the flag hangs, this sadness is particularly acute because Mike's parents, brother, sisters and grandmother don't know exactly how death came to the young Marine.

This anguish is heightened by a newspaper report about the accidental shooting and by telephone calls to newspapers.

"There's no basis for the newspaper report about how the shooting occurred," said the corporal's father, Joseph Dwyer, a machine operator for Union Light. "No details have been reported by the Marine Corps."

Yesterday, while preparing to attend the funeral of Joseph Dwyer's uncle, John Murphy of 118 Martin street, the family paused to speak of Michael.

His mother, Mrs. Alpha Dwyer, a keypunch operator at Shillito's, said:

"He was a wonderful boy. You don't find his like any more. It would be nice if there were more young men like Mike."

His sister Patricia, 18:

"To me, Mike was a kind of second Christ. He had such kind feelings toward everybody. I never heard him say anything against anybody—even if he hated something about them."

His sister Deborah, 15:

"Oh, Mike was wonderful! He was such a nice big brother!"

His father:

"I don't know. You got me stumped. I don't know how to say it."

His brother Rickey:

"Mike and I used to wrestle. The only way I could beat him was to take him by surprise. He could have let me win, but he didn't. He wanted to make a man of me."

Michael Dwyer dropped out of Holy Cross High School to enlist in the Marine Corps. He died of an accidental gunshot wound aboard the hospital ship on July 25.

His cousin, A2c Jack Huenefeld of Ft. Thomas, stationed in Vietnam, acconpanied Corporal Dwyer's body as escort.

The airman said his cousin had received a Purple Heart in Vietnam but had never told his family he had been wounded.

BARRATT O'HARA

HON. JOSEPH P. ADDABBO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. ADDABBO. Mr. Speaker, we have lost a true leader with the passing of our former colleague, Barratt O'Hara.

He lived a full and meaningful life and as a result future generations will remember him with the same admiration once so eloquently expressed by Clarence Darrow who said:

I am envious of only one thing in this world. I wish I had Barratt O'Hara's courage.

First elected to the House in 1948 at the age of 66, Barratt O'Hara arrived in Washington with the well-earned reputation of one of the Nation's leading criminal attorneys. He had defended literally hundreds of persons and never lost a defendant to the death penalty.

He had been the youngest Lieutenant Governor of Illinois—age 30—and his congressional career was to be just as outstanding as his legal career.

After serving his initial few terms on the House Banking and Currency Committee, Barratt O'Hara was appointed to the Committee on Foreign Affairs where

he became chairman of the Subcommittee on African Affairs.

He led the fight to establish the National Science Foundation and was a vigorous advocate of civil rights legislation—one of the early sponsors of anti-poll tax legislation.

We have lost a courageous colleague and our consolation lies in the legacy which he left to us—a career filled with excitement, achievements, and recognition.

THE AMERICAN DILEMMA—IS PERMISSIVENESS PROGRESSIVE?

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. WYMAN. Mr. Speaker, the extent of the existing confusion of our institutions and precepts is capably described by former Ambassador to Zambia, Robert C. Good, in an article appearing recently in the Washington Sunday Post. Ambassador Good's reactions to life and affairs in America upon his return after more than a 3-year absence furnish a concise synthesis of conditions resulting from a permissiveness syndrome since 1950.

Has this American permissiveness been progressive? Perhaps the answer to this must depend on how one views progress, but I cannot help but feel that somehow it is not progress to demand reparations from the church, or blink at the widespread use of drugs such as at the recent mass jam session at Bethel, or break criminal laws indiscriminately in the so-called cause of student expression on campus by blocking streets or throwing out deans or what have you. The list can go on and on to say nothing of outright license in print and photograph called freedom of speech but actually licentious material unbridled.

What puzzles me—if this sort of thing is felt to be progress—is the answer to the further question of where it all leads to? Where are we heading as a society, as a people, if the coming generation is to simply throw away the rule book and dance along the road of life as a little brown leaf in the wind?

It seems to me that the basic principles of honor, integrity, restraint, prudence, thrift, respect, hope, faith, charity, and courage, upon which this Nation rose to its present position of material wealth are still the best base upon which to forge the character of those who will lead us in tomorrow's world. It is difficult to see much of this in the America viewed by the Ambassador on his return, or for that matter, in the America as it exists at this hour. It is there, nevertheless, if one looks far enough below the surface and into the American home; yet, if there be any cause of urgent meaningfulness in terms of the ultimate national will, it is to restore these basic principles to the lives and times of those who so loudly proclaim that there is a generation gap incapable of transition.

I commend Ambassador Good's article to all reading the CONGRESSIONAL RECORD:

[From the Washington Post, Sept. 7, 1969]

A FLAWED DREAM HURTS UNITED STATES

(By Robert C. Good)

(NOTE.—Good resigned as ambassador to Zambia in January and returned to Washington to write a book. He found "a deeply changed America" after 3½ years abroad, and in an address to the Council on Religion and International Affairs at Denver, he took "an intensely personal, almost private, look at this restless America . . . It is the searing experience of re-entry (for which available heat shields are really quite inadequate) . . ." The following is excerpted from his speech.)

It hits you at first in innumerable trivial encounters, each inconsequential, but the cumulative impact is undeniable. It takes perceptibly longer to drive from point to point on congested streets. Spring comes and you notice more sick trees than there used to be.

An armed guard admits you to the local savings and loan, locking the door after you enter. The manager explains that they were robbed five times last year. Next to the bank there is a row of loan offices, each with an identical sign in the window: "There is no cash kept in this office; we pay all loans by check." Buses accept only tokens or exact change.

A real estate developer is advertising luxurious homes in a "maximum security" area. A friend, before you depart his home in downtown Washington at night, quotes the city's crime statistics: 1500 persons shot last year, 132 fatally.

You attend meetings bringing together white and Negro. The latter now call themselves blacks and there is healthy candor in that word, as there is assertive candor in their comment. It is all very new. White complacency and Negro reticence have disappeared.

It is easier, you discover, to define the new Negro mood than that of the white. "Telling it like it is" often means "telling it not quite like it is" as internalized anger at long last can be expressed freely, and sometimes acted out.

You listen to a Negro sociologist assert that there has been no progress but a dangerous retrogression in recent years. You are told by a Negro minister speaking from one of Washington's most eminent pulpits that in America "the fabric of justice is woven on the loom of hypocrisy." A brilliant young Negro congressman thinks aloud some unthinkable thoughts about the option of political separation for American blacks. And you wonder if you haven't been bamboozled for four long years by all those U.S. Information Agency statistics about Negro advancement.

So you double-check and discover that the advancement was real all right, but, like they say, it's become a part of the problem, not of the solution—or, more accurately, it becomes a part of the problem before it becomes a part of the solution.

So you conclude that there has been striking advance and that there remains striking inequities. And the inequities seem the more unjust because the advance proves that the situation is not immutable. Change excites expectations faster than they can be fulfilled.

Paradoxically, we are at that point where the amelioration of the problem makes it worse. Prestigious universities recruit ghetto students, federal funds promote local community action and the numbers of smart, highly vocal activists expand. With that comes new self-confidence, pride, a "renaissance of the psyche," someone has called it. And long suppressed feelings can now be expressed—in words and in action.

You spend an evening with a black doctor and his wife. She talks frankly of her vicarious enjoyment—and the almost irresistible urge to join in—when it was "Burn, baby, burn" time in Washington a year ago.

Why, you wonder—why so terribly bitter? In Denver, there is a school board election, and it provides part of the frighteningly obvious answer. The issue is school integration. A liberal board has devised techniques for achieving genuine mixing despite largely segregated neighborhoods. It involves busing some students.

Negro leaders fight hard to maintain it, giving the the lie to the notion that Negroes now want only separation. But liberal candidates are defeated by 2½ to 1. A black leader sums it up: "We now see. The dream is over. The white community is not willing to take on the commitment and make our country one and bring us together."

RAGE WITH VARIATION

Anger accumulates. It can now break surface. That is the difference four years have made.

You attend a conference at Cornell. The president—it was what you might call a command performance—explains the university's investment policy from a stage presided over by two black students wearing black gloves and carrying clubs sawed from a new 2x4. One of them impatiently seizes "Perkins," as he is adderssed by the radicals—courtesy, you discover, having quite disappeared from revolutionary rhetoric—and in the ensuing uproar you express shock to an SDS leader with lots of hair sitting near you.

He says, referring to the feelings of the blacks, "Now you know what real rage is." And you hear yourself reply, "Yes, my friends. I have just experienced it myself."

You are struck by the hyperbole which infuses our speech—full of nihilism, reeking of destruction and threatening always escalation into the real thing. The vice chairman of the National Conference on Black Power, in a letter to the editor of the "racist" Washington Post, rhapsodizes about the burning ghettos and visualizes "the flames licking the side of the Washington Post building" when the fires burn next time.

There is Ginsburg's "humane anarchy" and the celebration of "creative destruction" as war protesters burn draft records on the south side of Chicago. Ghetto spokesmen condemn social repression as "educational, institutional and psychological genocide." And a Panther tells Methodist Sunday morning worshipers in New York that "you can wait-in or sing-in all you want but . . . you put a .38 on your hip and you get respect."

Verbal extravagance seems self-fulfilling. University buildings are seized and academic men are mauled in what is euphemistically called "confrontation politics"—probably the only understatements in our contemporary lexicon. Students emerge from Willard Straight Hall carrying a small arsenal. On campuses in North Carolina and Missouri, there is actual sniping. In a California police action against student radicals, a bystander is killed. And a law officer explains with peculiar irrelevance that "we used buck shot because we ran out of bird shot."

MOMENT OF TRUTH?

So your thoughts run to the coming backlash. The most poignant warning came the other day from a black judge in Brooklyn who remonstrated with 35 white students after they had been sentenced to five days in jail for trespass of a college registrar's office:

"I don't know who appointed you to defend the cause of the Negro," he told them. "What you are doing is helping racism. You know this country is in a worse spot today than it was a year ago—because you have polarized the whole situation."

But one ought not load too much blame on the students as the law and order theme becomes the leit motif in one city after an-

other. And you wonder how America will respond as black majorities in our inner cities get on with the task of organizing themselves politically, as slum dwelling minorities always have in the past, and begin pushing their demands with added political muscle—and whether this will not be the moment of truth when the success or failure of the American experiment in nonracial democracy will be decided.

The reasons for our domestic disorientation need not detain us. I find that even the most cursory reading is filled with answers. More central to our concern is to measure the impact of our domestic problems on our national will, on our capacity to act and on our priorities.

As a nation, we are in danger of being gripped by a kind of spiritual crisis. No other word can describe it adequately because it arises from doubts about values and premises around which we have ordered our civic life and defined our national destiny.

A small minority of radicalized students promote an unprogramed revolution. It is total protest and its net impact is destructive. Militant blacks, working out the insufferable depredations and frustrations of past generations, seek a renewal of their community and a larger share of American affluence, leaving neither time to examine or inclination to serve the larger national purpose.

Young people in general seem to perceive America very differently from their elders. The mood is not one of pride and patriotism, but criticism, even condemnation. For the moment, antipatriotism is one of the symbols of this alienation—students marching to the chant: "Ho, Ho, Ho Chi Minh; only the NLF can win."

THE AMERICAN DREAM

These particular disaffections are serious enough. But I wonder if the core of the problem will not emerge among the mass of middle-aged, middle-class Americans for whom the times seem so badly disjointed. There is a palpable lack of certainty about self and society. The questions and doubts are slowly taking shape.

What has happened to the American dream? We knew things weren't perfect, but according to our doctrine, they were getting better. The democratic process might falter or throw up the occasional rascal. But the process was self-correcting and, like the idea of God in a theistic age, a premise beyond question. America might make a mistake now and then, but its essential disposition was right and progress in the longer run assured. We might momentarily be overwhelmed by forces beyond our control, but the individual by his own effort could master his fate if he tried hard enough.

Well, the trauma and the accompanying spiritual crisis arise because all of these assumptions are at least open to question if not subject to serious doubt. What Paul Valery has said of the French, we have tended to think was true of us, too: "Our special quality is to believe and feel that we are universal." Now we are not so sure. We sense we may be more or less out of control. Will, purpose, the capacity to act are in some degree crippled by doubt, apprehension, guilt and even fear.

Nothing perhaps epitomizes this condition so vividly as the new administration with its cautious probings, its endless studies, trying to determine how far it can go in this direction or in that, balancing conflicting priorities, building backfires against possible overreactions here and there—doing everything, in short, but taking the lead. The sense of unease deepens when one wonders whether at the moment, given the national mood, it can be otherwise.

Our confusion and disorientation arise from what is going on abroad as well as at home. More than anything else, I think it is our awareness in recent years of our relative powerlessness that vexes us. This is a paradox, for we have been told (rightly) that no nation in history has mobilized power equal to ours, and it was after all not many years ago that on every occasion such as this one we were telling ourselves how important it was to exercise our great power with restrained responsibility and warning of "the illusion of American omnipotence."

We are now no less powerful, but our power seems less relevant. It is not just Vietnam, where the adversary's willingness to die exceeds our capacity to kill despite the most awesome deployment of power. Almost nowhere do we seem to be able to translate power, whether physical or moral, into influence, or to link our power to the engines of change in predictable and compatible ways.

It must come to the American people as something of a psychological kick in the teeth that eight years after the inception of the Alliance for Progress, the President's special emissary is virtually barred from entering three Latin countries and 21 Latin governments tell us there is a "deep crisis" in hemispheric relations and a "growing and harmful resentment" against U.S. policies throughout the region.

In the Middle East, the combined efforts of the great powers seem unavailing and peace remains as fragile as ever. (It has been observed that in the last decade there have been in fact only two great powers, Israel and North Vietnam, both of which have been more influential in directing the course of international affairs than either the United States or the Soviet Union.)

Hannah Arendt speaks of the pervasive impotence of power. "I feel like we're living in a fairy tale," she says. "The country seems to have fallen under a spell and nothing seems to work any more . . . I believe all the large West European governments suffer the same power loss. It is very characteristic of our time that only small governments still can rely on the support of their citizens and still can solve problems because their problems are still manageable."

MUTUAL TOLERANCE

All of these revelations ought to do us some good, since unrealistic expectations about the world we are dealing with and, even more, about ourselves are unsteady foundations for policy. Also, our domestic problems should make us somewhat more tolerant of the stresses and strains in other societies.

For it is now evident that here at home we are dealing with our own "revolution of rising expectations," with the instabilities created by the "development process" and the dislocations consequent on a massive migration from rural areas to our cities, not to mention our hangovers from an essentially colonial psychology. In short, it should be apparent to us that the line between developed and developing, between stable and unstable societies is not all that distinct.

Incidentally, these realizations should work the other way, too. Heady expectations about the United States on the part of many emerging societies are probably being adulterated. That too is basically healthy.

It is by no means sure, however, that we will absorb these lessons, proceeding thereafter from new levels of wisdom. For disillusionment creates a receptivity for new illusions, and as a people we are not beyond the danger of replacing one oversimplification for another. In fact, in our present mood of self-doubt and perplexity, stereotyped answers to complex issues are again elbowing their way to the forefront of national debate.

They present themselves in now familiar evocative phrases: "military-industrial complex," "policeman to the world," "containment in passe," "overcommitment" and "get out of Vietnam." It is not that these words are meaningless. It is rather that they become symbols, fixing blame or exciting expectations rather than demanding analysis.

Take Vietnam, for example. The war has become a source of unrest so deep in our national life that we are probably expecting too much from ultimate disengagement. We have told ourselves over an over again that it has distorted our priorities, played havoc with our image abroad, radicalized our students, enflamed black militants and given rise to feelings of national guilt in sensitive sectors of our population.

All these things are in a measure true. The domestic consequences have overwhelmed the foreign—and we must withdraw. But the method and the terms of our disengagement from Vietnam will also deeply affect both our policy problems and our national life. This is why we should be patient while this administration attempts an honorable compromise.

A FURTHER TRAUMA

The danger remains very real, however, that options now being sought by our government will not be made available by Hanoi. In that case, we shall finally have to choose between continued engagement at levels that imposes a great and probably intolerable strain at home or virtual abandonment of South Vietnam under conditions that will tax the credibility of our steadfastness in many parts of the world and create a backwash of uneasiness here at home.

We are familiar with the national trauma of prosecuting this ambiguous war. We should not underestimate the national trauma which will follow hard on the realization that we have "lost" that war, particularly if our withdrawal is shortly followed by Vietcong ascendancy in the South and a blood bath as the new regime is consolidated. These developments might only serve to deepen the spiritual crisis I have alluded to, further distorting our national life and crippling our national will, with quite unpredictable effects on policy.

Even under the best of circumstances, the resolution of the Vietnam conflict will not be a cure-all. We will still face tough decisions in allocating essentially scarce resources. Perhaps the toughest of these decisions will be what weight to give to domestic as against foreign programs.

The administration has now made clear that even following the end of the Vietnam war, our savings will not be very substantial if we maintain force levels consistent with the full range of our present military commitments. My own view is that military commitments (which is to say military spending) must be selectively reduced in favor of vitally needed domestic programs.

This is not an isolationist option. It does not represent withdrawal, which, I suspect, given the character of our involvement in the world, is virtually impossible anyway. Rather it signifies that domestic and foreign policies have become, perhaps more than ever before, an integral part of one another.

Our leaders cannot pursue coherent policies and take significant initiatives abroad without a larger measure of social stability, consensus and, above all, collective self-confidence than would seem likely to obtain in America if present trends depends in part on our giving evidence at home of a people resolutely meeting the challenges of change in developing a viable and humane community.

I say all this not unmindful of our continuing and unpredictable confrontation with the Soviet Union, and the uncertainties that surround Chinese intentions in Asia; nor am I suddenly oblivious of the importance of maintaining and increasing our commitment to economic aid for the developing countries. I do not question the continuance of strategic parity, even as we seek negotiated control mechanisms with the Soviet Union. It is the sine qua non of whatever

stability remains in the international system.

But at lesser levels, the experience of the last decade would indicate that neither side is easily able to gain decisive advantage in exploiting the instability of the in-between world. Once again, this does not argue for American withdrawal. But it does suggest that our commitments (and corresponding force levels) can selectively be pared back with tolerable risks once they are analyzed rigorously in terms of interest rather than premised on some universalist doctrine of maintaining maximum stability everywhere—which is hardly a tenable objective in any event in an inherently unstable, even revolutionary, world.

A FEW FRESHETS

I must not leave this unwieldy subject without one or two concluding observations to set straight my own mood. I find myself worried but not unto distraction. The shape of the crisis I have alluded to is there for all to see. But the evidence, while presently trending badly, is not all negative. The operative adjective is "restless," not "rigid."

Here and there into the turgid mainstream of our life you find a freshet forcing its way, revealing a capacity for experimentation and newness—whether individual variations in men's sideburns (it must be accepted as a forward step that the graying sideburn is replacing the gray flannel suit in business circles) or some remarkably uninhibited forms, for example in church worship. You visit an Episcopal church in Washington where the mass is a true celebration of life, complete with drums, instrumentalists and sometimes impromptu dancing; above are psychedelic banners declaring, "Let the Risen Lord Turn You On," or "Love is a Damned Good Thing."

You learn that the counterpoint to your hangups is "doing your thing." It is often done with worrisome abandon, calculated to shock, and to dramatize and ridicule contemporary nonsense. But there is buried underneath the ridiculousness and the strident protest a thrust for self-expression which, harnessed, can be turned to enormously creative account—or, unbridled, can do a good deal of harm.

You read the polls on student attitudes and wonder if these don't reveal more than the bizarre happenings that dominated our evening television fare all spring. Eighty-four per cent of college kids place themselves in the middle ground categories of moderately conservative (19 per cent), middle-of-the-road (24 per cent) and moderately liberal (41 per cent).

Still more important, the surveys find this college generation self-motivated, deeply sensitive to injustice, service-oriented and (needless to say) anticonformist. There is an enormous potential for constructive change in all of this; it is, in truth, a little disconcerting that students should profess such splendid motivations as they go around occupying buildings, roughing up the deans and defiling the established generation.

THE CHANGING SUBURBS

Residential trends in and around Northern cities remain ominous. Yet an expert in Washington tells you that the outflow of whites to the suburbs has in the past year, and for the first time, almost been equaled by the outflow of blacks. Residential integration is still essentially a fleeting transitional phase as city neighborhoods move from white to black occupancy.

Then you go to the graduation ceremonies of the local junior high school. The integrated glee club (not as many whites as before, but still some) sings, "We Shall Overcome." It sounds as if they mean it.

Attitudes on both sides of the color line remain more malleable than perhaps we realize. You come across a CBS public opinion poll from 1968 which found 49 per cent of its Negro respondents willing to give active support to the successor of Martin Luther King, as opposed to 1 per cent to Ron Karenga, 2 per cent to Rap Brown and 4 per cent to Stokely Carmichael. Mohammed Ali tells a television interviewer: "For black people to start shooting in their fight against American society would be as silly as for you to get up and start hitting me."

Bradley loses in Los Angeles; that is bad. But 47 per cent of the population votes for a black candidate in a city where only 18 per cent of the community is Negro; that is good. In fact it is almost unprecedented. And in the New Yorker, you read Charles Evers' speech after being elected mayor of Fayette, Miss.: "All of us have won a victory in Mississippi. All the poor blacks, and all the concerned scared whites. I'm not going to belittle the whites, because they need help, just as we need help."

So the returns are not all in, not yet. This much at least can be said. We are talking about our problems. Before returning home, I had heard that there was in this country a perilous communications gap. But never before have I been exposed to such a flood-tide of communications as have swept over me since our return.

It is true that much of what is said is not being heard. The decibel level is too high, or the message too strident, or we are simply not turned on. But talking we are. With extraordinary frankness. I read that Deputy Attorney General Kleindienst has even urged police to invite militants to lecture at police academies!

No other society exposes itself to analysis, criticism and debate with the abandon practiced here. That is why we cannot yet take seriously the glib comparison between modern America and ancient Rome, by those who talk of a "decline and fall" syndrome.

OIL DEPLETION CONTROVERSY

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. FISHER. Mr. Speaker, during the course of the recent debate on the tax reform bill in the House, many of the Members enthusiastically applauded the action of the Ways and Means Committee in cutting the rate of the oil and gas percentage depletion allowance. I believe their endorsement of the provisions of H.R. 13270 that adversely affected America's natural resource industry was unwise.

Over the past several months, it has been clear to me that the critics of percentage depletion have not been willing to consider the factual considerations that fully justify the retention of the present tax incentives designed to encourage the search for oil and gas. Many things that an individual does in this life are greatly influenced by the emotions of the times, but my concern in this particular case is that the emotional appeal of eliminating a symbol may blind us to reality with the result that hasty action may produce irreparable harm. In my judgment, the action taken with regard to percentage depletion, if allowed to stand, could and would have a serious effect on the economic strength and military security of this great Nation.

In this regard, I would like to call your attention to an editorial which appeared in the St. Louis Globe-Democrat on July 30, 1969, which presents a factual point of view that must be considered in reaching an informed attitude on this important subject. I would like to insert a copy of this editorial in the RECORD at this time and urge all the Members of this body and our colleagues in the other body to evaluate objectively and dispassionately the logic and thoughts of the editorial. The editors of the Globe-Democrat have rendered an outstanding public service by publishing this thoughtful and timely editorial comment.

The editorial follows:

OIL DEPLETION CONTROVERSY

The House Ways and Means Committee, dedicated to mapping out a tough tax reform bill, has moved against the 27½ percent oil depletion allowance for income taxes. The committee has decided to recommend slashing this allowance to 20 percent.

Something of a public clamor has been drummed up against the oil depletion exemption—designed to help oil companies develop new wells. It has been a provision in the law for at least four decades.

This is a complex issue. Many feel the allowance is simply a loophole favoritism, giving huge oil corporations special tax consideration.

There is a tub-thumping drive to persuade the public they are getting gigged by big-power interests.

The assault on the depletion allowance, however, could prove a danger to national security and the United States economy.

The oil companies have offered a plausible case for retaining the allowance. Unless a better case can be made by opponents, it seems to us the 27½ percent depletion credit should be continued.

Whether imperative development of essential oil reserves could result without the full depletion program is very doubtful.

In conjunction with existing import quotas, to bar cheap foreign oil from our markets in heavy quantity, the depletion can aid the oil industry to keep the United States relatively self-sufficient in basic fuel supply.

Petroleum and gas now supply 75 percent of America's required energy. Studies indicate that by 1980 the industry will have to find virtually as much oil as has been produced since the first well was drilled in 1859. This means a drastic need for developing new resources in buried oil.

The United States Geological Survey has estimated there is still plenty of oil to be discovered in the United States. But exploratory drilling has declined sharply because of a cost-price squeeze.

The nation's security, its very operation, depends on oil. Our self sufficiency in petroleum—certainly as far as possible—should not be imperiled through dependence on Arab or other foreign oil, which could be suddenly cut off. It was, in 1967, when the Middle East crisis stopped the flow of Arabian oil to the United States.

This is a basic reason for the depletion allowance, plus the fact that all reserves are part of the industry's capital assets. Why should oil be heavily taxed on its capital, without some means of restoring that capital through new exploration. Other industry and business are not assessed income taxes on capital.

The idea that the oil industry is a profit mammoth, sucking special privilege through tax laws, is in our opinion a bugaboo. Certainly there must be profits or the industry would erode and fail.

The 21 large companies, according to a recent survey by Price Waterhouse and Co., paid a direct tax bill of $9.5 billion in 1967. This equalled 64.2 percent of these corporations' net profits before income taxes.

The total tax load of the petroleum industry has been put at 5.43 percent of gross revenues; all other corporations were taxed 4.62 percent of gross revenues.

Oil does not appear rolling up vast profits and seeking unfair tax loopholes through the depletion route. Actually return on oil's net assets was a bit less than on manufacturing companies generally.

High living standards in the United States mean we consume the most energy of any other country, and correspondingly need more reserves. Otherwise the future will find us power-crippled. It should also be remembered the depletion provision applies to some 100 other mineral products, imperative to the economy.

Not for benefit of the oil industry, but in the necessity for national security, a prospering economy and self-sufficiency in a critically essential product. It seems the 27½ percent depletion allowance should be retained by Congress.

CHARLES "CHUCK" JOELSON

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FRIEDEL. Mr. Speaker, it gives me a great deal of personal pleasure to join with my colleagues and the many friends of CHARLES S. "CHUCK" JOELSON in wishing him all the best upon assuming his new duties as a judge on the Superior Court of New Jersey.

Before being elected to the 87th Congress, "CHUCK" already had a distinguished career behind him. He attained his B.A. in 1937 from Cornell University, and in his junior year was elected to membership in Phi Beta Kappa, and received his LL.B. in 1939. He began his practice in law in his hometown of Paterson, N.J. In 1942 he enlisted in the Navy and served with distinction in the Far Eastern Branch of the Division of Naval Intelligence. Upon his release from the Navy and return to civilian life, he became counsel to the city of Paterson, then deputy attorney general, and in turn acting prosecutor of Passaic County. For 2 years he was director of criminal investigation for the entire State of New Jersey, until his election to the Congress in 1960.

He served first as a member of the House Committee on Education and Labor, and subsequently on the House Committee on Appropriations. In his duties as a legislator, he showed fair and impartial treatment in his approach to legislation before his committee and the House.

Mr. Speaker, now that "CHUCK" is returning to his chosen profession, the field of law, I am sure that he will bring to the superior court the same sense of fairness and impartial justice that he used as a Member of the House of Representatives, and extend heartiest congratulations to him for a most rewarding career on the bench.

LOWERING THE VOTING AGE

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, in the course of the history of our country, we have amended our Constitution four times to enlarge or protect the exercise of the voting franchise. On each of these historic occasions, great issues confronted the Republic. The issues involved questions of sex, race, and equality of representation. Our decisions in those moments of stress and change have been wise, serving to strengthen our political process, our form of government and our people.

Today we again confront such an issue. That issue is whether full participation in the Nation's political affairs should be extended to those under 21 years of age. While four States have moved to grant the franchise to those under 21, the balance of the States have not up to this point made such a change. But I think it is clear that more and more attention is being given to this issue. In Wisconsin, the State assembly had passed a constitutional amendment which would lower the voting age to 18.

During my 6 years in the Wisconsin Legislature, I opposed lowering the voting age. I did so for many of the reasons which are stated today by those who oppose this proposition. I will not take the time, Mr. Speaker, at this point to detail either my reasons for opposition in the past or all of my reasons for having decided that it was appropriate to extend the voting franchise to those 18 and over.

There are, it seems to me, some very basic considerations which need to be considered by the House as we pursue this matter. There are two primary considerations as one examines the question of who should or should not vote. One is the need for awareness of the issues facing this Nation and the world. The other is a matter of judgment in terms of how one goes about making a decision before casting a vote. It is my considered opinion, Mr. Speaker, that there never has been a generation better informed than the current young generation. Our exceptional educational system coupled with rapid developments in communications have produced a competitive atmosphere and a body of information that combined has educated today's students far more than ever before. The interest of students today is increasingly directed into public affairs by means both of courses taught in high school and of the opportunity to view the world being shaped through the media. The young men and women in this country today are not only better informed but their opportunity to view a wider range of topics is greater. Our society has produced a consciousness and an incisive questioning of issues that are to me, astounding. Those of us who were a part of the campus task force group found across the country some common identifiable major concerns of young people. These related to our society and its priorities to world affairs and to the kind of government and people we are.

This concern is not superficial. The kind of probing attitude revealed by young people across this land is based on candor and honesty. Thus, they are, I believe, more attuned to and knowledgeable about the political issues which face us as a people.

This argument is compelling insofar as lowering the voting age is concerned. There are some who will argue that those between 21 and 29 who now enjoy the right to vote, vote in lesser numbers than any other age group. This is, of course, true but one of the problems, I believe, is that we do not tap the knowledge that exists in those between 18 and 21 immediately upon their graduation from high school when their interest is at a peak.

The 3 years which I had at one time felt was needed for maturation today apparently serves as a time when people so seriously question the world about them that as they reach 21 they are no longer sure they want to be involved.

The tremendous enthusiasm, drive, interest, and concern our young people are exhibiting today is in danger of being directed against so many of the institutions that have served the country well in periods of past stress. The honest, forthright student of today's politics is increasingly faced with frustration when he is denied access to the process of affecting the world around him. The genuine dedication of many of today's young people to solving our Nation's problems deserves full recognition. We cannot turn a deaf ear to their suggestions, deny them their place in the political process, force them into affecting a system from without with ineffective means.

The age of 21 has since days of the Magna Carta in England been considered the time at which a person became mature and responsible. I question today whether that is, in fact, still valid. From my experiences on the college campus and in high school assemblies across the Sixth District of Wisconsin I find young people today older, more mature, more capable of asking perceptive questions and fully capable of exercising sound political judgment.

Judgment is not something that is reached magically at 21. There are those over 21 who lack judgment and yet we extend to them the franchise without qualification. I believe the vast majority of those under 21 to whom House Joint Resolution 865 would apply for Federal elections are capable of the kind of judgment which is needed to cast an intelligent vote.

To the extent that our political processes can foster trust, participation, and involvement, I believe the danger of violent confrontation can be reduced. To the extent that this Nation can foster an enchancement of quality and excellence throughout its political system, I believe creative leadership can be developed.

As in the past we have the opportunity

to extend the voting franchise to those who ought to be a part of our political system. As an increasing number of young people pay taxes, raise families, work hard for their community, State, and Nation, then they too must be recognized as full citizens. We have acted wisely in the past in recognizing ideas whose times have come. Today we have such an opportunity once again.

It is for that reason that I have joined with my colleague, the gentleman from Illinois (Mr. RAILSBACK), in cosponsoring the resolution which would extend the right to vote to those 18 and over in Federal elections.

W. AVERELL HARRIMAN

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. BINGHAM. Mr. Speaker, during the recess the New York Times magazine carried the text of a remarkable interview with that great American statesman, Ambassador W. Averell Harriman, on the Vietnam war, the Paris talks, and the road we should follow to move toward peace. I include herewith the article as it appeared in the August 24 issue of the Times magazine and commend it to my colleagues and other readers of the CONGRESSIONAL RECORD:

THE PARIS TALKS STARTED 471 DAYS AGO: HARRIMAN SUGGESTS A WAY OUT OF VIETNAM

(By Hedrick Smith)

The lanky profile of W. Averell Harriman has been a familiar sight in the highest councils of the nation since the days of the New Deal. Under four Democratic Presidents he has become a superdiplomat, a man who has dealt with Trotsky, Stalin, Khrushchev and Kosygin. His latest mission took him to Paris last year as the Johnson Administration's chief negotiator in the Vietnam peace talks.

Even at 77 and in retirement, the former New York Governor has been lobbying publicly and privately at the White House and with members of Congress and the press corps for faster and more flexible American initiatives to end the war.

I reported on Harriman in action last year in Paris and recently talked with him about his ideas on Vietnam and dealing with the Russians. In this interview Harriman is careful not to give away official secrets, but he does make some interesting disclosures—for example, that he and his deputy in Paris, Cyrus R. Vance, arranged for secret four-party talks but the agreement fell through, and that the Americans won Hanoi's approval for a roundtable only to have Saigon object. And he suggests ways of breaking the negotiating deadlock and scaling down the combat.

Harriman's comments reveal his grave doubt that the South Vietnamese President, Nguyen Van Thieu, can survive a settlement unless many more non-Communist elements are drawn into the regime, and his view of a likely settlement of the war: a share of political power for the National Liberation Front, a gradual reunification of North and South and long-term U.S. aid for Hanoi.

Governor, you've talked many times about the idea of a Southern solution in Vietnam. Is this just a polite way of saying that in the end we're going to have to settle for a coalition which includes both Saigon elements and the National Liberation Front?

HARRIMAN. I don't know what's going to come out of it. I'd always hoped we could get the people from Saigon together with the N.L.F. and put them in a room and lock the doors and throw away the key until they came out with a decision.

We had arranged—or at least we thought we had, Cy Vance and I—that we would have private talks, the four of us together, right after the first open meeting.

This wast last November in Paris?

HARRIMAN. Yes, after the end of the bombing and after we had agreed on the procedures for four-party talks with the South Vietnamese Government represented. In fact, it was so clear that we would have four-party private talks that the North Vietnamese asked if it would be possible for us to continue sometimes to have bilateral talks. I said: "Well, of course it would be, because we must have many subjects of mutual interest."

It hasn't worked out that way; both sides have been rather cautious about being unwilling to talk to each other, and it shows that each side is a bit afraid of the other. But one of the things that's absolutely essential is that the Saigon Government must broaden its base. It's not a very good negotiating team for the future of the South Vietnamese people when it represents such a narrow group.

You mean it should include many other elements, even progressives like the leftist Buddhists?

HARRIMAN. Yes. There are a number of different groups. I'm quite convinced that by far the majority of the people don't want to be taken over by the Vietcong or Hanoi; they want to be independent. The trouble is they're split a dozen different ways, and no one has been able to bring them together.

President Diem was not able to do so. That was the reason for his fall. And he got too arbitrary, put too many people in jail. And this Government is putting a lot of people in jail. I was rather startled when I heard President Thieu, coming back from meeting President Nixon at Midway, announce that he was going to punish severely anyone who suggested a coalition government.

Well, our position has been that we're not opposed to a coalition government. You remember I said in Paris a number of times that we would not impose it. We were not against it, but we would not impose it. We were against a government's being imposed either by Hanoi or by Washington.

How do you distinguish between broadening the base of the Thieu Government and what Hanoi and the N.L.F. call forming a "peace cabinet"? Are you suggesting we have to dispense with the Thieu regime?

HARRIMAN. No, I'm not. We've been urging Thieu to broaden the base, and he did to some extent when he brought in Tran Van Huong last year as Premier, and then others, but he didn't really bring together a coalition of all the anti-Vietcong forces. There are different groups, different sects, religious groups. There are two techniques, and both should be used. One is to bring in ministers that are representative of different groups, get a coalition that way. Another, possibly better technique, is to have what they once had, which is a council of notables. They could get some fellow who had great popular appeal—Big Minh,[1] for instance—to be chairman, and have it a consultative group, bring in everybody. Now, it couldn't be just a front; it would have to be consulted. Thieu would have to give up some of his arbitrary positions; he would have to really consult these people as to the kind of settlement they wanted to have.

We've been trying to persuade Thieu to broaden the base, but we've never really put heat on him, and I think that is something that ought to be done; I say put the heat on him and make him understand that this is essential for our support. I think he'd do it then.

I'm afraid that I would disagree with what the Embassy people think is enough. Some people think it's enough that he reshuffle the Cabinet and bring in two or three people who belong to certain different groups. I think he's got to bring them all into something like this council of notables, all the non-Communist groups.

There'd be some very vigorous differences of opinion between these groups, of course. But if Thieu cannot dominate the non-Communist groups, there's not much hope—is there?—for his surviving as a leader in his country, because the other side has no use for him. Thieu has been a very shrewd operator, but he hasn't got the appeal that a fellow like Big Minh has.

Do you think that broadening the base of the Saigon Government would break the present stalemate in the Paris talks, or do you think other steps are necessary?

HARRIMAN. I don't think that we'll ever come to serious negotiations until we're ready to accept the status quo, militarily and politically. The other side made it quite plain to us that they'd continue fighting as long as we continued fighting. This seems rather natural to me. If you're going to try to make a settlement you've got to accept the status quo.

I think that we ought to abandon our efforts to expand the pacification program into new areas. That's an attempt by the Saigon Government, with our support, to improve their position, to get control of more villages which were rather doubtful or were under V.C. control. As I recall it, in December, half of our combat forces were engaged in that operation. So it was a quite important activity.

But the principal object would be for our forces to go into more defensive positions, to be available if the other side attacked, but not to try, at the last minute, either to "win the war" militarily or to pacify the people. You know, there's great hope in the Embassy in Saigon that in a few more months they can do a good deal in pacification. I have grave doubts about the permanent value of this procedure.

What's more important is to consolidate our position in the areas clearly controlled by the Government, and that means getting more of the people back of the Government in the manner that I described. That has to be done or the future elections will be quite unfortunate.

You seem to imply that recognizing the political realities means recognizing that the other side is going to have a share of the political power in the South as part of any settlement. Otherwise, they won't have any interest to stop fighting.

HARRIMAN. That's right. How it can be achieved is very hard. There are certain countries that have survived with an active, vigorous Communist party. In France and Italy, for instance, you have strong Communist parties in opposition to the Government. In Finland, the Communist party is participating in the Government. There are others that were not successful in withstanding this. In the Western European countries, a number of them had Communist participation in government for a short period but

[1] Maj. Gen. Duong Van Minh, a leader of the 1963 coup that overthrew the regime of President Ngo Dinh Diem. Minh was in exile in Thailand until last fall and since then has been living quietly in Saigon.

the non-Communist forces were strong enough to throw them out.

Let's look at the military side for a moment. We've had 16 months in Paris now, and we've had a battlefield lull this summer, as we had last summer and at other periods. Do you think that the first order of business now should be getting a cease-fire in order to set the conditions for political talks?

HARRIMAN. A cease-fire is a difficult thing. We had hoped in January to—well, as a matter of fact, in November, it was very clear there was not only a lull in the fighting, but there was a disengagement in the northern two provinces of South Vietnam. Ninety per cent of the North Vietnamese troops there were taken out. Half of them went as far north as the 20th Parallel, nearly 200 miles north; the others were kept closer by, either just north of the DMZ or in Laos. There was little or no fighting, and that had been one of the most active battlegrounds. But General Abrams, our commander, was able to take advantage of their pullback to move the First Cavalry Division out of that area, the I Corps, and into the III Corps area to increase our pressure on the enemy there.

Did you feel that Hanoi was ready to proceed with some kind of formal disengagement?

HARRIMAN. We weren't sure what we could do. Our trouble was that we never could talk about military settlements with the North Vietnamese alone because they maintained that they weren't fighting; it was the N.L.F. or the V.C. that was fighting. They wanted to talk to us about a political settlement and we wouldn't talk about a political settlement without the Saigon Government represented.

So we only talked around subjects. But their act of disengagement in the North convinced us in Paris that they were ready to move further in the reduction of the level of violence, working toward a cease-fire.

Now, you have to have a cease-fire if there is to be a political settlement. We thought perhaps we could feel our way into a cease-fire by specific actions; in other words, areas of disengagement—no fighting in the I Corps area, for instance—and see how it worked.

Then we did have a very important negotiating weapon, the B–52 raids. They were extremely unhappy about the B–52 raids. They never told us how effective they were in terms of the damage they did, but the effect on the morale of the V.C., N.L.F., North Vietnamese was terrific. Suddenly out of the sky would come the most tremendous explosions, and they wanted to get rid of that.

Now, I think in return for stopping the B–52's we might well have come to an understanding that they would stop a great deal of their violence, or all of their violence in Saigon and the other cities—stop ambushing some of the highways.

This was what we hoped to achieve if the Saigon Government representation had come to Paris and been ready to negotiate. This is what we hoped to achieve right away in November, and I think it would have made a basis for us to withdraw troops even last year because they had taken troops north. This is after all, one of the ways to come to an understanding. One way is by specific agreement, the other by mutual example. And both are effective.

Now a cease-fire should be our objective, but how we can reach it is a matter that has never been fully worked out. The military have never liked it, you know, because to some extent, what President Nixon said the other day is their view: "We cease and the other side fires." That's a little bit too facetious on a serious subject. And there is a feeling that the conventional armies are at a disadvantage with the guerrillas because you can see an army move, whereas the guerrillas can move around in the jungle without much difficulty.

On the other hand, there are certain things we can tell, such as whether there are terrorist acts in the villages. If they did that sort of thing, we'd know about it.

Did you object last fall to our maintaining unceasing pressure on the enemy—building up the pressure in III Corps, for instance, when the action fell off in I Corps?

HARRIMAN. No. Well, we in Paris were for a change in the orders for all-out pressure, but we were not pressing it because we always thought that the Saigon representatives would appear in Paris and then we would negotiate.

Were there actual proposals being discussed within our Government at that time for a mutual reduction of violence?

HARRIMAN. No—I came back at the end of November, you know, and made our views known here in Washington. But by that time the Saigon Government had agreed to come to Paris. We thought any moment we would start the discussions, so we were going to try to come forward with specific proposals on the mutual reduction of violence. But that never came about because we had this ridiculous performance of Saigon objecting to the shape of the table. I kept telling these Saigon representatives it didn't make the slightest difference what the shape of the table was. We had suggested a round table in October, and the other side had accepted it. The fact the other side accepted it made the Saigon people opposed to it. The round table historically has been a method of ending all dispute as to who has seniority; no one knows where the head of a round table is.

I remember your suggesting—and Secretary of Defense Clifford's suggesting—during this period that if Saigon dragged its feet we'd just go right ahead and talk with the North Vietnamese about this question of military disengagement, de-escalation. Why wasn't that tried?

HARRIMAN. Well, that was not accepted by the President. I was entirely willing to go ahead. I think if we had the Saigon Government would have come along pretty rapidly. But I think that probably our officials in Saigon felt that it would be too much of a blow to the prestige and position of the Saigon Government and would tend to undermine it too much.

On this summer now: Do you think the other side has been trying to signal us with the latest lull that they're willing once again to go into military disengagement?

HARRIMAN. I'm not sufficiently *au courant* with the details. They reduced the fighting, undoubtedly because they ran out of steam. They have these offensives and they carry them on as long as they can. Then they run out of steam and they wait and re-equip and replace their losses and start again. The military are quite right in saying that.

But in almost all the cases in the last year, I think, there was a political intent in connection with it. In fact, they stated it to me once in private talks. They said: "Whenever we attack, you say that this attack is not conducive to an atmosphere which furthers the peace negotiations. But when we stop, Saigon announces we are defeated and forced to end the attack."

They never said—they never will say—"We have stopped for a political purpose." They think that it would be considered by many people in the United States, both the military and other hawks, that they'd been beaten if they were to say, "We've stopped because we wanted to negotiate."

The way to freeze this is to take parallel action, announce that you're taking parallel action; we can afford to announce it. That's one trouble with the present situation. Nobody knows whether we really have stopped offensive action.

Do you take Secretary of Defense Laird's announcement that we're now following a strategy of "protective reaction" as a step in the right direction?

HARRIMAN. I would say it's a step in the right direction, but I don't think it's enough so far because I still see the B–52 raids. Maybe there are discussions going on in Paris that I don't know about. But we have to be very precise about what we're going to do and demand what we expect them to do in return.

I was very much disturbed by these recent terrorist attacks, one at Camranh and one in Saigon. They undoubtedly did this to show that they were not completely impotent, not defeated. They attacked the two supposedly most well-protected areas. Now, this is unfortunate, and one of the things that I certainly would have recommended is that we would make a deal with them that we stop our B–52 raids in return for their agreeing not to take this kind of terrorist action. Unfortunately, fighting has recently increased.

Then you are advocating that we move toward a kind of a territorial accommodation, where they have areas that we really don't go into much, and we have large sanctuaries that they don't hit so forcefully?

HARRIMAN. Well, all I can say is that our program in January was to do what Secretary of Defense Clark Clifford said publicly: "Our first objective should be the reduction of the level of combat," were the words he used. We can't have it both ways—expect the enemy to end their attacks while we keep up a "little" offensive action, "some" B–52 raids and "somewhat fewer" offensive sweeps. There was a plan to avoid contact. In other words, have our probes to avoid contact rather than to get contact. Now Cy Vance, my partner in Paris, has joined the group calling for a cease-fire in place. If the Administration undertook to go that route, I'd support it.

The position I've been taking is for a step-by-step reduction in violence. There may be a more practical way to get at it, but I do feel that one thing is absolutely vital: that the President of the United States take the lead in ending the fighting, ending the killing.

So you take issue with the idea that, in offering a mixed election commission and an election open to all, we have gone as far as we can go, to use Nixon's words.

HARRIMAN. I don't understand what's been offered. I don't know why they take this position. It never occurred to me that the Communists would enter an election on the basis of the winner taking all. There has to be some prior understanding on other issues. You've got to go through the N.L.F.'s points.[2] You can't pick just one aspect of settlement. You've got to go through each one of those 10 points and see how much of it you can give in to and how much you won't. The Saigon Government has its objectives, its eight points; these have to be molded.

I don't think it's a reasonable proposition to just pick one thing in the election, particularly as the Government continues to put people in jail. They give no indication so far that anybody's going to have any freedom in South Vietnam to have a free discussion or free campaigning.

So you have to have some understandings. For instance, you would want to be sure that

---

[2] The National Liberation Front put forward in Paris last May a 10-point proposal that is still the basis of its negotiating position. The plan called for the establishment of a provisional coalition government to hold national elections, the implementation of agreements on the withdrawal of U.S. and allied forces, the achievement of "national concord" as the basis for a post-war coalition government, the "step-by-step" reunification of North and South and the payment of war reparations to both North and South Vietnam by the United States. The 10 points are considered to be more up to date than a more detailed though generally similar political program published on Sept. 1, 1967.

there would be no reprisals against anyone for their past political actions. If there is to be a political settlement, it must provide for the personal safety of people on both sides. In addition, there might be an understanding about postponing reunification. My own feeling has been that the N.L.F. has been rather keen to see South Vietnam independent of the North for some years. They may want to delay reunification until the South is as strong as the North. I would have thought they'd agree to postponing any merger for a period of five to ten years.

Another point that could be discussed is the character of the postwar society. The N.L.F.'s 1967 program included a provision that the social-economic structure would seem to be a mixed socialist and capitalist society. Peasants would own their own farms. Private capital, both domestic and foreign, would be encouraged in many activities. These are things which might be talked out, and if you could get an arrangement which had some lasting qualities about it, then there'd be a chance for it to succeed.

Doesn't the mixed election commission that Nixon and Thieu have talked about open the way to this sort of thing?

HARRIMAN. It's an important step from Thieu's standpoint, but it isn't enough. What's going to come out of that election? A new constitution isn't provided for—the character of the regime, the manner in which it's to operate.

And, of course, I have the very strong feeling that we have to come to an agreement with Hanoi ourselves—the United States. It's very vivid in my mind that Hanoi didn't abide by the 1962 Laos agreement for a single day. So, no matter what is agreed to in the South, it isn't going to be of any value unless we come to an understanding with Hanoi which makes it in their interest to keep the agreement.

North Vietnam is fiercely nationalistic. It doesn't want to be dominated by China. It doesn't want to be beholden to Moscow. Now, we have every reason to believe that Moscow wants to see Southeast Asia independent, so we have some basis to start to work out some kind of an agreement. This would be of the most vital importance.

The North Vietnamese are very anxious, you know, to get economic and technical assistance. Miracle rice is one of the most important things to them. They've had a 300,000-ton food deficit which they're getting from China. The don't like that. If they could get miracle rice and the techniques of growing it from us, I think they would hope to be independent of China.

Do you think that this kind of economic enticement is going to be a sufficient safeguard?

HARRIMAN. Well, there's something to their desire to be independent of China and to have normal relations with us, the desire to have technical assistance, to have loans to buy equipment from us and other ways to rebuild and develop their country. These are all things that are a basis for coming to an agreement.

What other kinds of safeguards ought to be put into an agreement?

HARRIMAN. Of course, we should consider international guarantees and an international police force. They're all very difficult. The International Control Commission set up in '54 has worked badly. The old procedures would not be acceptable; they would have to be improved. But there'd have to be real guarantees that would have a reasonable chance of being effective.

Isn't there going to be inevitable tension after any agreement between the desire of the North Vietnamese—and many other Vietnamese, for that matter—to have the country reunified and our desire that it not be immediately reunified?

HARRIMAN. Actually there's a good deal of evidence to indicate that the N.L.F. wants to have independence for South Vietnam for a period of years. That is hinted at in the 10 points and in their program published Sept. 1, 1967. And a number of your reporter friends have reported that they spoke about reunification being a long-delayed matter—10 to 15 years.

These men are Southerners. They don't want to be taken over by the North. My guess is that it would not be too hard to come to an agreement that a merger with the North would be done only after a popular vote in the South, but it would be postponed for several years.

Some people maintain that the other side has sensed the tremendous urge in this country to wind up the war, and that they're content to sit tight and just let American impatience finally drive us and Saigon to accept their terms.

HARRIMAN. It's very hard to tell. They had a very good young reseacher. They got the Congressional Record. They could quote speeches of some of our distinguished members of the Senate in detail and sometimes rather embarrassingly to me, but how far they believe that represented the main body of American opinion I don't know.

My own feeling about this is that they want to come to a settlement rather than have a military takeover; there's an advantage to them in having the stability that comes from some sort of a settlement. They had a lot of difficulties from the political opposition when they took over the North. It wasn't an easy thing, and it would be much more difficult to take over the South. I think they'd much rather move into a situation where there's a political agreement.

What has bothered me very much is that very little progress seems to have been made since January. And I'm more concerned about the United States, really, than I am about North Vietnam. The demand for a settlement, the demand for the end of the fighting, may become very real in this country. One hears and talks about student movements next October if there's no settlement by then or if the fighting goes on as it is now.

I'm very much opposed to a cut-and-run strategy, and I'm afraid that if this Administration doesn't make more progress, there will be more and more pressure on the Government.

That can expand, and I would hate to see that. I think it's very important to have an orderly settlement of this, and I believe it can be done if we stick to our limited objectives.

I think we could rally public opinion, world opinion, to us if the President would announce that he was for an end to the fighting, for taking steps for a cease-fire, and that should be the first order of business. I think you'd get a good reaction everywhere. The North Vietnamese pay a lot of attention to world opinion.

What about the Soviet Union, how much can it help achieve a settlement?

HARRIMAN. I want to first say what they won't do. I saw Premier Kosygin just about four years ago and had two long talks with him. He made it very plain that they were going to support Hanoi militarily, both with equipment and with volunteers—any number of volunteers they wished. The great Soviet Union, as leader of the Communist movement, had an obligation to support a "sister Socialist state." I assume the North Vietnamese have some kind of an understanding with China because China has been helping them, too.

But the Russians are not going to come to Washington and say, "What kind of a settlement do you want?" and then try to impose it on Hanoi. They're going to take Hanoi's side in these negotiations. If we can come to some basic agreement with Hanoi, I think they'll be very helpful in smoothing out some of the rough parts of the road. That happened in October and also in January.

They will, I think, add some confidence to Hanoi in its negotiations. Hanoi felt it had an agreement with the French in '46, you remember, and that petered out, and they don't think the '54 agreement worked out as it was intended to. And I think the Soviet Union can be of a good deal of help to them in giving them a sense of confidence and in urging them to give in on some of the less-important details. But they won't take our side in supporting the Thieu Government, for instance.

You mentioned that they had helped before. How did this actually work out before the bombing halt and when you were trying to get four-sided talks started?

HARRIMAN. Well, we made certain progress and then we came to some roadblocks. I kept in touch with the Soviet Embassy in Paris and the State Department kept in touch with the Embassy here. They wouldn't tell us just what they did or how they did it, but in any event, the roadblocks were removed.

Now, in January, the procedures were settled in Paris. A member of the Soviet Embassy talked it over with Hanoi's representatives and persuaded them, I think, that they had more to gain by starting negotiations than they had to lose by this argument over the shape of the table—they were being as stubborn as Saigon, you know.

It's very hard to say just where they would be helpful. We found ourselves in a parallel position with the Soviet Union in India and Pakistan. We supported Mr. Kosygin's initiative in bringing the leaders of the two countries together in Tashkent to arrange for a cease-fire. We are both helping India and Pakistan economically. They are helping them both militarily, and it's quite clear that they want to see a subcontinent strong enough, independent enough, to check China's advance.

You think they have the same common interest with us in Southeast Asia as there?

HARRIMAN. They have parallel interests, not the same, because eventually I think they'd like to see the whole world communized. But in the meantime an immediate objective is to see these countries strong enough to check Chinese expansion. We're not going to come to an agreement, but we will find ourselves in a parallel position. There's no reason to believe they won't act in Southeast Asia as they acted in India.

What sort of things do you think they'll nudge Hanoi on? Are they really going to push Hanoi to do something it wouldn't do anyway?

HARRIMAN. I think they will encourage them to abandon positions which are very difficult for us to accept, and they'll give them a sense of confidence. If they saw us withdrawing and reducing the fighting, I think they'd encourage the other side to agree to stop the fighting and the violence. If we were doing something and expecting Hanoi to take parallel action, I think they'd encourage it.

Some of President Nixon's advisers have spoken rather loosely of the idea that you might be able to link such issues as Vietnam, the Middle East, Berlin, arms talks—this sort of thing—with the Soviet Union. You've been negotiating off and on with the Russians for 40 years. Do you think that this is the way they operate?

HARRIMAN: I would say that this a most unwise notion. Each situation stands on its own feet. The idea that we could ask the Soviet Union to abandon some of their political positions in one part of the world in order to bribe us to come to an agreement with them about nuclear restraint is just

unreal, it isn't so. They have exactly the same interests in nuclear restraint as we have. They want a secure situation; they want to reduce the danger of nuclear war, and we cannot combine these negotiations. This is an absolutely erroneous conception.

Any thought that they will pay us something to come into negotiations for nuclear restraint, I just don't understand. We wouldn't do it. They wouldn't sacrifice their personal security any more than we would, and it only complicates a situation.

Now, the Russians are very much affected by what we do, and I would assume that we are affected by what they do. President Kennedy was successful in the nuclear test ban, which, as you remember, he appointed me to go to Moscow and negotiate, because of his American University speech. It was a conciliatory speech. He didn't give anything away, but it indicated a real desire on his part to come to an understanding. Also, he announced that we would stop testing as long as the other side stopped testing. This persuaded Premier Krushchev that he was serious and jarred those prolonged negotiations off dead center. When we went to Moscow, we settled it within two weeks.

If today the President would announce that we would not go on testing multiple warheads (we'd of course go ahead with research and development but not test) provided the Soviet Union would abandon any further tests in this field, I think it would expedite the negotiations and carry them forward.

One can say that this can't be all one-sided. I'm very much influenced by a conciliatory speech Foreign Minister Gromyko made. I'm affected by the manner in which Mr. Kosygin called in the senior American who happened to be in Moscow at that time, Hubert Humphrey, and spoke very glowingly in congratulating the United States on the moon achievement. That was an unusual thing to do. This must have been particularly difficult because of the failure of their moonshot, whatever it was supposed to do.

These are gestures on their part, in spite of the lack of progress in both the Middle East and Vietnam. Now we want to watch what they do with the greatest of care and see whether the atmosphere is right. But this idea of saying, "Well now, you force Hanoi to do thus and so and we'll come to Moscow and trade you," just doesn't work.

In the first place, they can't dominate Hanoi. Number two, they're competing with Peking for the goodwill of Hanoi. They can only go so far.

I gather that Gromyko went to see President Nasser the other day and came back empty-handed. Now, how much pressure the Soviet Union's ready to put on Egypt to get a Middle East settlement I don't know, but it was unsuccessful. I'm still hopeful that something can be done. Events in the Middle East are heading on a collision course, and the only way we can hope to come to a settlement before that happens again is through the influence of the Soviet Union and ourselves.

They are publicly demanding that Israel accept the Nasser terms, which, of course, Israel isn't going to do and we're not going to ask Israel to do. But it's unrealistic to think that you can link a settlement in Vietnam with a settlement in the Middle East. They are not within the Soviet Union's ability to deliver.

You said they would be impressed by what we do. Do you think Moscow and Hanoi were impressed by the theme of President Nixon's trip to Asia, "Asia for the Asians; we're not going to get involved in internal wars in the future"?

HARRIMAN. Well, I would think that they were probably just about as much puzzled as to what President Nixon has in mind as we are puzzled by what Moscow has in mind when they speak about collective security for Asia. If you understand what collective security on the part of Moscow means, why then I think you can explain to me what President Nixon means.

Wasn't that Soviet idea directed primarily against Communist China? What's the possibility of war between the Soviet Union and China in the next few years?

HARRIMAN. I wouldn't want to predict it. We have to remember that the Soviets are used to having minor border conflicts. They had them with Japan before World War II along the Amur River. We may see some minor conflicts.

Something like the Chinese border war against India in 1962?

HARRIMAN. Well, that's a little bit more vigorous than I would think. The Chinese tried to show up the weakness of India. I'm not sure that the Russians will want to go that far; they might. There may be border skirmishes. There may be an attempt by the Soviet Union to teach China a lesson. But I don't think it will develop into a major conflict.

What impact do you think President Nixon's visit to Rumania had on Soviet-American relations?

HARRIMAN. Frankly, I was very glad to see President Nixon go to Rumania. Obviously, the Russians object to it a bit. They don't want to see Rumania become too independent. But it's a move in a healthy direction for the President of the United States to try to develop better relations with the Eastern European countries. And I hope that this Administration explained to the Soviets that this was his objective and in a sense that it will help further some things which the Soviets would like to see accomplished—better trade relations, which they're very much interested in.

And I would hope the talks in Bucharest would lead to President Nixon's recommending legislation to permit us to engage in more trade with Eastern Europe and the Soviet Union. We are denying ourselves of very profitable trade. Western Europe and Japan do about $8-billion in trade with them each year, whereas we have only a few hundred million dollars.

Are you optimistic about the over-all prospects for detente between the United States and the Soviet Union?

HARRIMAN. Not over-all detente. There are still too many subjects on which agreements cannot be reached. They still want to promote Communism to a point where it will dominate the world. We want to see nations of the world free, people free.

There are certain areas, however, in which I think we can come to an agreement. Nuclear restraint is the one which I think is the most important. Despite the discouragement so far, I hope we can work together in finding a solution to the Middle East, and I do expect the Soviets to help us in Vietnam if we can make more progress with Hanoi than we have so far.

You give more over-all importance to the arms talks than the Vietnam negotiations?

HARRIMAN. Yes. Vietnam is the most immediate problem, but—looking at the long term—ending the nuclear arms race is of vital importance. It's important not only to save reckless additional expenditures on both sides but also, as Mr. Kosygin said to me, while the Soviet Union and the United States have the preponderant control of nuclear weapons, it is our obligation to attempt to come to an understanding, which will reduce the risk of nuclear war. I'm satisfied that the Soviets are sincere in that and if we meet them halfway, I think we can come to an understanding.

AMERICAN LEGION CONFIRMS ABSENCE OF CREDIBLE EVIDENCE OF MILITARY-INDUSTRIAL CONSPIRACY

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. FISHER. Mr. Speaker, many Americans have become concerned by unfounded claims that some sort of a "conspiracy" exists between our great scientific-industrial community and the Defense Establishment, and that this is not in the public interest.

While it is true that there have been instances of unjustified waste and extravagance in the Department of Defense, it is equally true that there has been waste and extravagance in other branches of the Government.

These problems must be dealt with as they arise, but in striving to cope with them let us not lose our perspective and downgrade the important role that a powerful Military Establishment plays in terms of our national security and survival. If the critics have their way, in this highly competitive world, our great potential may be weakened to the point that we will become a second-rate power. Who wants that to happen?

Now let us examine for a moment what this military-industrial complex has done by way of positive accomplishment. Not only have we become preeminent as a military power, but other evidences of results that flow from this combination become apparent.

Let me cite an example. A few weeks ago all Americans were thrilled by the performance of the astronauts on their trip to the moon. We marveled at the discipline displayed by these heroic Americans. This magnificent achievement was by no means an accidental thing. What about the machine which took the astronauts to the moon and brought them back?

The discipline displayed by these three Americans, who will take their place among the heroes of all times, left nothing to be desired. Although the trip to the moon was under civilian control, the disciplines displayed had their roots in the development of the air arm of the Navy and the Air Force. The machine was itself incomparable in its perfection.

The building of this machine utilized all of the best in the industry of our great country. It involved private capital, efficient management, loyalty of workers, the latest in technical science, all blended together in building the perfect product which we have come to expect as routine from our superior free enterprise industry. In plain terms, let us not lose sight of the fact that this team of superbly disciplined men and a machine perfect beyond human understanding was the product of our military-industrial complex.

Yet, today, there are those who malign and question the fact that we do have a great military tradition. The presence of this concept has indeed been the bul-

wark of our defense throughout this century.

Let us listen to those who know whereof they speak, those who can speak with authority on this subject of how industry and the military have worked together. One of the most knowledgeable and respected authorities on this subject has been Lt. Gen. Ira C. Eaker, retired, who, incidentally, hails from my district. As a part of my remarks I will include a letter written by him to the Washington Post, and also a column which he writes regularly for a number of daily newspapers.

Scores of others have shown their concern and have spoken out. Their warning should be heeded. Only recently an editorial which appeared in the Wall Street Journal contained this:

For the foreseeable future an effective military force will remain absolutely essential to national survival. An effective force depends on generals who think and act like generals. If they worry about funds for defense and Communist advances in Asia, it is because that is what we pay them to worry about.

It is my belief that the voices of these patriotic citizens are beginning to be heard. The American Legion, which speaks authoritatively for millions of war veterans, has sounded a timely warning. The voice of the Legion is in fact the composite voice of all Americans who understand the rewards of peace, the meaning of war and the need for an adequate national defense.

Mr. Speaker, under leave to extend my remarks I include a copy of a resolution recently adopted by the American Legion. I will also include a copy of a letter written to the Washington Post by General Eaker, and a column written by him which appeared in the San Angelo, Tex., Standard-Times. In addition, I include an editorial which appeared in the Wall Street Journal. I urge careful reading of each of these.

These items follow:

RESOLUTION 527—COMMITTEE MILITARY-INDUSTRIAL COMPLEX

Whereas, the strength of the nation depends not only on the number and quality of the men available to fight for it but also upon the scientific, technological and productive capacity of the nation's industries; and

Whereas, a harmonious relationship must exist between the military and industrial organizations to design, develop and deploy necessary weapons systems in support of our national security; and

Whereas, in two world wars the United States helped bring victory to the free nations by serving as the "arsenal of democracy" because management and labor united in a vital contribution to the effectiveness of our gallant comrades in arms; and

Whereas, many statements regarding the "military-industrial complex" have been made to the citizens of our country in biased or undocumented form in the attempt to downgrade our national military posture; and

Whereas, no modern military power can be created or maintained without sophisticated and vast industrial productive capabilities; and

Whereas, through the investment of private capital, efficient management and loyal workers, the great industrial corporations of America doing research, development and production for our aerospace, naval and ground forces as well as for our space program, are an indispensable national resource which would have to be created if it did not already exist; and

Whereas, the maligned military-industrial complex is composed of workers, technicians, scientists and managers, united in support of their brothers and sons serving our country in all our military forces; now, therefore, be it

Resolved, by The American Legion in National Convention assembled in Atlanta, Georgia, August 26, 27, 28, 1969, that we cannot accept any philosophy that would downgrade or destroy the private enterprise relationship between the military and industry that has made this nation great and has kept it free; and we express our unending gratitude to all who have contributed to the industrial efforts which have supported our armed forces in war and at times of international tension; and, be it

Further resolved, that we urge the press, radio and television media as well as others who attract public attention and help mould public opinion to make every reasonable effort to present to the American people a fair and undistorted picture of the essentiality of cooperative efforts between our military forces and private enterprise so necessary to the survival of the nation and the protection of freedom throughout the world.

[From the Washington Post, June 9, 1969]

ANTI-MILITARY EMPHASIS

The Outlook Section of the Washington Post of Sunday, May 25, contained four anti-military articles under the headings:

1. Leashing Military Complex.
2. Defense Budget and the Nation's Future.
3. Formula for Harnessing the High Riding Military.
4. Toward a Society Dominated by the Military.

There were also four large defamatory cartoons highlighting the same theme, "Get rid of the military."

Your extraordinary emphasis upon destruction of the confidence of our citizens in their defense establishment, leadership and forces perplexes me. I can think of only two reasons why a rational U.S. citizen would want to destroy the military. One, the belief that we now live in a peaceful world and no longer need defense forces. The other, of course, is the knowledge that if U.S. military power is destroyed there will be no further bar to a world dominated by the USSR. Anyone sympathetic with or hopeful for a Red-dominated world could be most effective toward that end by enlisting in the campaign to destroy U.S. military forces.

I have always thought that a great newspaper should give its readers both sides of the principal issues affecting the security and welfare of our people. Is there any hope that the Washington Post will return to such a policy?

IRA C. EAKER,
Lieutenant General, U.S. Air Force, retired.

WASHINGTON.

[From the San Angelo (Tex.) Standard-Times, Apr. 26, 1969]

NO CREDIBLE EVIDENCE SUPPORTS CLAIM OF MILITARY-INDUSTRIAL CONSPIRACY

President Eisenhower in January 1961, warned against "the acquisition of unwarranted influence whether sought or unsought, by the military-industrial complex."

Recently, this admonition has been quoted a thousand times by far left columnists and commentators and by the pacifist press to support their contention that all generals are bomb-happy maniacs who love war and that all defense contractors are greedy robbers who build weapons at unconscionable profits.

One of the strangest anomalies of our times is the fact that a statement of the late Gen. Eisenhower, who proudly devoted a major part of his life to a military career, should be used to support the charge that military men are warmongers and defense arsenals are unnecessary burdens.

In the last years of his life Gen. Eisenhower expressed regret at the reaction to his military-industrial complex warning, when temporarily exasperated by the false charge of a missile gap. He was disturbed that this statement had been taken out of context and made the rallying cry of the disarmament crowd. He wondered why no one seemed to remember another warning in his farewell address: "We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose and insidious in methods. Unhappily, the danger it poses promises to be of indefinite duration. . . . A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no fanatical aggressor may be tempted to risk his own destruction."

In an address in Washington on March 17, Sen. Henry M. Jackson labeled the military-industrial complex charge as a myth. He put it in proper perspective in these terms: "Patently, this view (the industry-military complex theory) ignores the three great factors which have compelled the United States, for the first time in its history, to create and maintain a large permanent military establishment—the expansionist drive of Soviet and Red Chinese communism, the historic shift of world power westward to the United States and eastward to the Soviet Union, and the continuing scientific revolution."

The charge that weapons makers reap fantastic profits is clearly a myth. These corporations now making the principal weapons systems average 6 per cent profit on their government business while making more than 10 per cent on their non-government sales. For this reason all present weapons makers are now struggling to increase the percentage of their commercial sales over government business.

If the generals have striven to seize the power of decision over armaments, they have been singularly unsuccessful. At no time in our history has civilian control over the military been more positive than during the past eight years, as a few typical examples will indicate.

The $8 billion TFX and the $1 billion McNamara Line were approved by the secretary of defense against all military advice.

Civilian political leaders decided to engage in a massive land war in Asia against the counsel of military advisers. They also decided to create sanctuaries for the enemy and refrain from the normal use of sea and air power, contrary to military counsel.

Military leaders, disturbed by the rapid growth of Russian strategic power and our own unilateral disarmament, frequently have urged the replacement of aging ships and bombers. These requests have been repeatedly denied or deferred by the civilian leadership.

The 1970 budget initially submitted by the Johnson administration called for $79 billion for defense although the Joint Chiefs of Staff had proposed an expenditure of $93 billion. As proof that the Nixon administration has not surrendered to the military, it reduced the Johnson budget nearly $2 billion.

Any concerned citizen who assembles and assesses all the facts will be reassured that there is no credible evidence to support the charges of a sinister military-industrial conspiracy.

[From the Wall Street Journal, Apr. 24, 1969]

REVIEW AND OUTLOOK—FOUR-STAR SCAPEGOATS

The "military-industrial complex" has become an increasingly fashionable bogeyman, and indeed the notion is spreading that the generals have created nearly all our national ills by running up defense spending and in-

volving us in Vietnam. These problems are certainly serious, but making the generals scapegoats for them obscures the actual lessons to be learned.

The international climate being what it is, the garrison state remains a real enough long-term danger, though it ought to be plain that at the moment military influence is not burgeoning but plummeting. This long-run danger surely will not be solved by turning military officers into a pariah class, as much as that would please those intolerants whose personality clashes with the military one. The danger requires a far more sober diagnosis, and this would find that many of the present complaints should be directed not at the generals but at their civilian superiors.

We tend to agree, for example, with the complaints that the Pentagon budget is swollen. But it tells us nothing to observe that the officers press for more funds for their department; in this they are no different from any bureaucrat anywhere. Indeed, the same people who think the generals malicious for requesting large funds would find it quite remiss if, say, the Secretary of Health, Education and Welfare failed to make similar demands for his concerns.

Choosing among competing budget demands is the responsibility of civilians, in the Pentagon, at the White House and in Congress. Part of the current problem seems to be that in the ballyhoo about "scientific" management of the Pentagon, the old-fashioned unscientific Budget Bureau review was relaxed. More generally, it needs to be recognized that the problem of fat in the budget is due less to the generals' greed than to a want of competence or will in civilian review.

Much the same thing is true in Vietnam. There is plenty of room to criticize the generals' incoherent answer to the problems of limited war, but many of the most decisive mistakes were made by civilians.

Take the failure to understand the escalation of our commitment implicit in supporting the coup against Ngo Dinh Diem. After we had implicated ourselves in overthrowing the established anti-Communist government, we could not with any grace walk away without a real effort to salvage the resulting chaos. Reasons of both honor and international credibility left us vastly more committed than before, and it was almost solely the work of civilians.

Or take the fateful decision to have both guns and butter, made in 1965 when the U.S. part of the ground fighting started in earnest. It was a civilian—and in no small part political—decision to avoid mobilization, to build the armed forces gradually, to expand the bombing of North Vietnam at a measured rate, to commit the ground units piecemeal. All of this is in direct contradiction to the thrust of military wisdom. And if the generals did favor defeating the Communists, the little public record available also suggests they favored means more commensurate with that goal.

The point is not that the generals necessarily should have been given everything they wanted. The point is that the civilians decided to do the job on the cheap. They would have been wiser to listen when the generals told them what means their goal required, then to face the choice between allocating the necessary means or cutting the goal to fit more modest means. This discord between means and goals is in a phrase the source of our misery in Vietnam, and primary responsibility for it rests not on military shoulders but civilian ones.

Blaming the generals for these problems maligns a dedicated and upstanding group of public servants. More than that, it obscures the actual problem with the military-industrial complex itself. For the real long-term danger is that the garrison state will evolve through precisely the type of failing that led to fat in the budget and trouble in Vietnam.

For the foreseeable future an effective military force will remain absolutely essential to national survival. An effective force depends on generals who think and act like generals. If they worry about funds for defense and Communist advances in Asia, it is because that is what we pay them to worry about.

That the nation needs people to worry about such things certainly does release potentially dangerous forces that need to be controlled. The military's responsibility for controlling them is passive, to avoid political involvement, and our officer corps has a splendid tradition in that regard. The more difficult task of active control is essentially a civilian responsibility and the modern world makes it a terrible responsibility. But make no mistake, civilian control depends squarely on the will and wisdom of civilian leaders.

This simple but crucial understanding gets lost in the emotional anti-militarism growing increasingly prevalent. What gets lost, that is, is the first truth about the actual menace of a military-industrial complex—the danger is not that the generals will grab but that the civilians will default.

AMBASSADOR FAY OF IRELAND PASSES

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. FLOOD. Mr. Speaker, during this last week, which was marked by the death of several great Americans, the Diplomatic Corps of our Nation's Capital suffered a tragic loss of a great diplomat and gracious gentleman, Ambassador William P. Fay of Ireland.

His sudden death while visiting his home capital of Dublin ended an illustrious career in the diplomatic service of the Emerald Isle. His assignment to head the Irish Embassy in 1964 complemented a distinguished tenure of service that included assignments in Canada and France and other European nations.

Wherever he served, Bill Fay represented all that was the finest in a gentleman and diplomat—the scholarly human approach with a classic finesse for making friends for Ireland and winning the hearts of his legion of friends throughout the world.

Both he, and his likewise charming wife, Lilian, brought to the Washington diplomatic community a breath of fresh air and warmth that is so characteristic of the Irish people—something new and pleasant which made them among the most gracious and likable hosts this city has known.

It was my pleasure to know him, and call him my friend, and we in the United States shall miss him deeply.

William P. Fay was a great man, and was known as a great lover of Shakespeare, and I know he would love me to bring down his curtain with these lines from Hamlet:

Now cracks a noble heart.
Good night, sweet prince, and flights of angels sing thee to thy rest!

UNITED STATES MUST DIVORCE ISRAEL AGGRESSION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. RARICK. Mr. Speaker, as men of good will the world over talk of achieving peace, the world community opinion is shocked by today's news that Israel troops, tanks, and aircraft had executed an aggressive attack against Egyptian forces in the troubled northeast Africa region. In the days and weeks ahead there will be charges and countercharges offered by both sides, and the watching world can expect a counter-retaliation by the Egyptian forces to avenge their people.

The American people, weary of fighting communism—in Vietnam in a war their leaders have not permitted them to win—have been told repeatedly that world opinion would react against attacks across sovereign borders or bombing a hostile force supplying guerrilla infiltrators. To the American people there can be only one major concern with this new international crisis. Why did the United States supply the Israel forces with jet fighter planes and train their pilots just days before this Israel attack? How can our Government say that our position is neutral when we supplied the implements of aggression? How can our Government hope to escape censure from the world community for our involvement? Under such circumstances, we fall victim to damaging propaganda that we are supporting the Israelis in a religious war.

Someone must tell the world that the American people will not send their sons into another war created by diplomatic blundering, treaty, or by executive order. If our foreign policy is one of neutrality in the Middle East, then it is time our President announce it to the world and prove our credibility by forbidding any more armaments to be supplied in areas of world tension. Of what value are nuclear test ban agreements or nonproliferation treaties, when we allow ourselves to become drawn into a potential holocaust.

The American people want no U.S. role in bringing about Armageddon.

Mr. Speaker, I include several news clippings:

[From the Washington Star, Sept. 9, 1969]

ISRAELIS STRIKE EGYPT BELOW SUEZ; 30-MILE SWATH CUT IN 10-HOUR TANK ASSAULT

TEL AVIV.—Israeli planes, tanks and ships struck Egypt today in the heaviest raid since the 1967 six-day war. Tanks were landed in Egypt by assault craft and cut a 30-mile swath through military installations, radar and rocket sites.

An Israeli military spokesman said the 10-hour punitive raid cost the Egyptians "dozens" of killed and wounded and that the only Israeli casualty was a slightly wounded soldier who was withdrawn safely with the entire attacking force.

An Israeli plane, reported to be an American-built Skyhawk, was shot down by antiaircraft fire and the pilot parachuted into the Gulf of Suez. He was officially listed as missing.

Intense naval activity preceded the landing which a spokesman said began last night,

when Israel reported its motor torpedo boats destroyed two Egyptian PT boats in the Gulf of Suez. Cairo reported sinking an Israeli patrol boat today with the loss of its crew. These were the first naval engagements since 1967.

CALLED RESPONSE TO "AGGRESSION"

An Israeli communique said the raid was in response to Egyptian "aggression."

(This was believed to include not only heavy Egyptian artillery attacks along the Suez Canal but Arab terrorists attacks on Israeli installations in Europe and various attacks against Israeli airlines, spokesmen said in Washington.

(Despite the obvious warning, the leftwing extremist Arab guerrilla group known as the Popular Front for the Liberation of Palestine warned today in Amman, Jordan, it would escalate its terrors campaign against Israeli organizations abroad with "more dangerous, possibly fatal" attacks.

(Cairo Radio had no immediate reaction to the Israeli raid, but it broadcast communiques reporting heavy Israeli shelling of Egyptian installations in the Suez area at the southern end of the Suez Canal and reported dogfights over the canal between Egyptian and Israeli planes today.)

24 MILES BELOW SUEZ

The Israeli forces hit the Egyptian coast from El Hafayer, 24 miles below Suez City, south to Ras Zafrana, 54 miles below Suez. The Gulf of Suez ranges from 30 to 50 miles wide at this area across the Israeli-occupied Sinai desert.

Israelis in Tel Aviv said they struck to punish the Egyptians for what they called increasing fire at Israel's troops posted on the east bank of the canal. Nine Israelis have been killed and 11 wounded there in the past week. Observers said Egyptian artillery may have been the prime target.

There was no official word on oil installations being hit. The biggest producer of Egypt's offshore oil works lies about 100 miles south of the Suez and in the general area of today's raid.

The center of that oil works is the offshore Morgan oilfield where about 100 Americans are employed. The field is exploited by GUPCO, owned half by Egypt and half by the Pan American Oil Co.

There was no sign of general war preparations, and no sign of any callup of reserves.

The Israeli spokesmen, when they finally gave details, stressed that the raid was punitive.

It apparently was aimed at drawing Egyptian troops and artillery away from the Suez Canal zone to ease up on the constant Egyptian bombardment.

Israeli sources in Washington said it was unlikely that the first of the U.S. F4 Phantoms delivered to Israel took part in today's raids but that they were thought to be in combat readiness. For the purpose of air support slower planes would be more useful.

The raid followed a series of Israeli warnings to Egypt and the other Arab nations. Israeli Transport Minister Moshe Carmel said in Tel Aviv yesterday Israel was considering new retaliation against Arab guerrilla attacks.

The Israeli army spokesman said Egyptian jets and troops made no effort to interfere with the armored raid's progress although the operation was reported to have lasted 10 hours.

Israeli officials did not announce the action until it was over in midafternoon.

Ras Zafrana, southern limit of today's raiding, lies 50 miles across the gulf from Abu Zemina in the Sinai which Israel occupied in 1967. It is the center of American-owned oil installations in the gulf.

Unofficial reports said tanks went ashore from landing craft and that Israeli troops plunged ashore from craft protected by the tanks that went ahead of them. Jets swooped overhead to give fire cover and to attack targets ahead of the advancing Israelis.

"Warnings are not enough," said one Israeli source. "More drastic action is needed to put an end to these attacks."

Strict control was maintained on all information of military activities.

(Israeli sources in Washington confirmed that the area chosen for the raid is where the Egyptian armed forces are thinnest.

(The aim, according to these sources, was to show the Egyptians, who are said to have concentrated as high as 100,000 men along the northern reaches of the canal, that their southern flank is vulnerable to Israeli attack.)

PHANTOM'S FLYOVER DELIGHTS TEL AVIV

TEL AVIV, September 7.—A U.S.-supplied Phantom fighter-bomber streaked over this Israeli metropolis today, watched by thousands of delighted Israelis.

The warplane was one of a long-awaited batch of Phantoms which the army said yesterday had arrived from the United States. The flight was obviously demonstrative, observers said. Israeli military aircraft are very rarely seen over Tel Aviv.

"Even now we will not ignore our security worries, but we can anticipate the future with a more relaxed feeling," said the influential newspaper Haaretz.

[From the Christian Science Monitor, Aug. 11, 1969]

UNITED STATES TO DELIVER ISRAELI JETS

WASHINGTON.—The United States plans to deliver four supersonic F–4 Phantom jets to Israel next month and will complete delivery of a shipment of 50 of the high-performance fighter-bombers within a year, according to authoritative sources here.

At the same time, it was reported, Israel has lodged a tentative request for about 100 additional aircraft—including another 25 F–4's—to meet its defense needs.

The State Department declined comment on the report, but reliable sources said the request had come through the Israeli Embassy.

It appeared that disclosure of the Israeli bid for extra aircraft was deliberately leaked here well in advance of Israeli Prime Minister Golda Meir's planned visit Sept. 25 for talks with President Nixon.

Israel first turned to the United States Government for new fighter planes after the June, 1967, Arab-Israeli war when France clamped an embargo on an order for 50 Mirage jets for the Jewish state.

In December, long after Israel sought Phantoms from the United States, the outgoing Johnson administration announced approval of the sale of 50 of the sophisticated jets, capable of twice the speed of sound.

Authoritative sources said it was the delivery of that order that would begin next month. About 12 Israeli pilots have completed training in the United States to fly the Phantoms.

[From the New York Times, Aug. 6, 1969]

ISRAELIS REPORTED SEEKING TO BUY MORE U.S. PLANES

(By Hedrick Smith)

WASHINGTON, August 6.—Israel is reported to have approached the Nixon Administration with a request for nearly $150-million worth of aircraft, including F–4 Phantom jets, to maintain long-term air superiority over her Arab neighbors.

Reliable informants said today that the Israeli Ambassador, Itzhak Rabin, had asked the United States to agree to sell about 80 more Skyhawk A–4 fighter-bombers and about 25 more supersonic Phantoms.

Under previous deals the United States is already selling both types of aircraft to Israel. The Phantoms are estimated to cost $3-million to $4-million each and the Skyhawks about $1-million with the exact cost depending on the equipment included.

The informants said the request was made last month, shortly before the flare-up in the air war between the United Arab Republic and Israel in the Suez Canal area. This was also about the time that President Pompidou indicated publicly that France would maintain her 1967 embargo on the delivery of the supersonic Mirage jets previously bought by Israel.

NO U.S. RESPONSE REPORTED

The Nixon Administration was reported to have given no response to the Israeli request, but to have taken it under consideration. If past patterns are followed, the request marks the first step in a lengthy process of negotiations in which the Israeli figures may be revised before the United States considers that it has a final and formal request. Detailed talks are expected to begin this fall, the informants said.

Israeli officials are reported to have renewed their earlier expressions of interest in having the Phantoms equipped for carrying atomic weapons. The United States has rejected such pleas and has insisted that Israel agree not to use American-supplied jets to carry such weapons.

The United States became the principal supplier of the Israeli Air Force after the Arab-Israeli war of June, 1967.

Under an agreement signed in 1966 and expanded in January, 1968, during the Johnson Administration the United States has delivered more than half of 80 promised Skyhawks. Israeli officials acknowledge that some of the planes have been used in the recent fighting.

In a more publicized deal, announced last Dec. 27, the United States agreed to sell Israel 50 Phantoms. The 1,200-mile-an-hour aircraft was then the most advanced American fighter-bomber in operation. About a dozen Israeli pilots have completed training in this country, and Israel is scheduled to begin receiving a squadron of 16 Phantoms next month, at the rate of four planes a month.

WILL PUBLIC WORKS CUTBACKS CURE INFLATION?

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. MINISH. Mr. Speaker, with regard to recent statements by President Richard M. Nixon to halt construction on 75 percent of public works projects, I should just like to add my voice to the increasing chorus of critics on this issue.

Although the President has stated that his curb on Federal construction projects will also serve to curb inflation, I must wholeheartedly disagree. Although economists have various and sundry ideas on what will serve to halt the present inflationary spiral, it is generally agreed that the main cause of the present problem is defense spending.

I cannot see where it would serve the public interest to halt projects already in various stages of completion. It would seem to me that such methods would only cost the public more in the long run. These projects will be taken up at some future time for completion, when

construction costs may be much increased. Additionally, unemployment would certainly ensue were projects under construction to be halted midway. To increase the number of unemployed workers is certainly not an efficient solution to the problem of rising prices.

I urge the administration to more thoroughly investigate the matter of inflation, so as to arrive at an answer that will not throw the baby out with the bath water.

NEW U.S. AMBASSADOR TO PANAMA MUST BE OBJECTIVE

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. FLOOD. Mr. Speaker, there has been widespread discussion in the press of the Nation during recent weeks quoting from a letter by me to the President of the United States in opposition to the appointment of Robert M. Sayre, now U.S. Ambassador to Uruguay, as our Ambassador to Panama.

My information is to the effect that Mr. Sayre was an active participant with Walt W. Rostow in the formulation of the three proposed new Panama Canal treaties, which were never signed after completion of negotiations in 1967, because of strong opposition in both Panama and the United States.

What is needed as our Ambassador in Panama is someone who will defend the indispensable sovereign rights, power, and authority of the United States over the U.S.-owned Canal Zone territory and Panama Canal and not one who has been active toward subverting them, and who cannot be objective because of his previous commitments.

Mr. Speaker, it is, indeed, unfortunate that the President has surrounded himself with advisers whose records have, in effect, been unsound as regards the best interests of our country. It is fortunate that we do have able and well-informed men in the United States, with the proper qualifications for appointment as our Ambassador to Panama, and they should be appointed.

In order that the Congress and the Nation at large may know precisely what I have stated regarding the proposed appointment, I include the entire correspondence with the White House; also, an article in a recent issue of Human Events that quotes me correctly:

JULY 28, 1969.

The PRESIDENT,
White House,
Washington, D.C.

DEAR MR. PRESIDENT: Recent Spanish language press news from Panama is to the effect that the Panamanian Government hopes to reopen the negotiations for new Panama Canal Treaties. This news, coupled with current reports that Foreign Service Officer Robert M. Sayre is being seriously considered for appointment as U.S. Ambassador to Panama, is ominous.

According to my information, Mr. Sayre was an active participant with Walt W. Rostow in the formulation of the discredited 1967 proposed new Panama Canal treaties, which proposed treaties aroused strenuous public opposition in both Panama and the United States. In the latter, some 150 members of the Congress introduced resolutions opposing ratification. Many speeches in opposition were made in both the House and Senate.

As those proposed treaties were not only weak and unrealistic, but also perilous to the security of both the United States and the Western Hemisphere, including Panama, I trust that you will not appoint anyone associated with the preparation or negotiation of the proposed 1967 treaties as Ambassador to that country, but someone who can be depended upon to protect the indispensable sovereign rights, power and authority of the United States over the Canal Zone territory and canal. Except for our presence in Panama today, Soviet power would be dominant there, and would absolutely control the Panama Canal in which project the United States has made a net investment, including defense, from 1904 to June 30, 1968, of more than $5,000,000,000, all supplied by the American taxpayer.

The situation affecting the Panama Canal is of such grave character that it should not be dictated by shabby sentimentalities. We have enough trouble on our hands with Cuba which was permitted to pass into the Soviet orbit; we do not wish to have another like, and even more grave, situation at Panama.

Sincerely,

DANIEL J. FLOOD,
Member of Congress.

THE WHITE HOUSE,
Washington, D.C., July 30, 1969.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: This will acknowledge your letter of July 28 to the President regarding Mr. Robert M. Sayre, a Foreign Service Officer, and the proposed Panama Canal treaties which were submitted to the 90th Congress.

I know the President will appreciate having this frank expression of your views which will be called to his attention upon his return. At that time we will be in further touch with you.

With cordial regard,

Sincerely,

WILLIAM E. TIMMONS,
Deputy Assistant to the President.

THE WHITE HOUSE,
Washington, D.C., August 14, 1969.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: With further reference to your letter of July 28 regarding Panama, you will have noted that on August 9 the President announced his decision to nominate Mr. Robert M. Sayre, present Ambassador to Uruguay, as Ambassador to Panama. The President wants to assure you that this decision was taken only after the most careful consideration, and that Mr. Sayre is a very able career officer who can be depended upon to protect the interests of the United States and to implement faithfully the policy of this Administration.

With respect to reports that Panama hopes to re-open negotiations for a new canal treaty, such a suggestion has not formally been made by the Panamanian Government. We do not know if it will be, but again the President wishes to assure you that our policy toward this question will be carefully reviewed within the National Security Council mechanism.

With cordial regard,

Sincerely,

WILLIAM E. TIMMONS,
Deputy Assistant to the President.

"GIVEAWAY" AMBASSADOR FOR PANAMA ATTACKED

(From the Allen-Goldsmith Report)

President Nixon faces a bruising fight if he appoints Robert M. Sayre as ambassador to Panama.

Rep. Daniel Flood (D.-Pa.), a House Appropriations subcommittee chairman, has served blunt notice of this in a letter to the President. A 25-year congressional veteran, Flood has long been closely interested in Panamanian affairs.

Basis of his emphatic opposition to Sayre is that he was an active participant in the drafting of the 1967 proposed Panama Canal treaties.

These treaties evoked such a storm of disapproval in Congress that they were never signed. Some 150 House members sponsored denunciatory resolutions. They made three charges: That the agreements ceded sovereignty over the canal to Panama; made that country a "partner" in canal management, and would share its defense with Panama; authorized the U.S. to construct a new canal in Panama.

The uproar over these treaties were so massive and vehement that the Johnson Administration shelved them. No effort has ever been made to revive them. The House Foreign Affairs Committee did hold hearings, but for some unexplained reason they were not published.

Sayre, 45, a career foreign service officer, is now ambassador to Uruguay. Authoritative reports have been current for some time that he was to be shifted to the U.S. Embassy in Panama.

One of the State Department's leading experts on Latin America, Sayre has served in a number of countries there—including Mexico, Peru and Cuba. For several years he was deputy assistant secretary of state with the Bureau of Inter-American Affairs. In formulating the discarded Panamanian treaties, he worked with Walt W. Rostow, controversial special assistant on foreign affairs to Presidents Kennedy and Johnson.

In assailing Sayre's reported contemplated appointment as ambassador to Panama, Rep. Flood sharply challenged his fitness and qualifications.

"I emphatically trust," the influential legislator wrote the President, "that you will not appoint anyone as ambassador to Panama who was associated with the preparation of the abortive 1967 giveaway treaties, but someone who can be depended upon to protect the indispensable sovereign rights, power and authority of the United States over Canal Zone territory and the canal. Those treaties not only were weak and unrealistic, but also perilous to the security of both the United States and the Western Hemisphere, including Panama.

"Except for our presence in Panama today, Soviet power would be dominant there, and would absolutely control the Panama Canal in which the United States had made net investment, including defense, from 1904 to June 30, 1968, of more than $5 billion, all supplied by the American taxpayer."

Citing the recent visit to Havana of a powerful Russian fleet and authoritative reports of the establishment of a Soviet naval base there, Flood stressed the crucial necessity of preserving the security of the Panama Canal.

"The situation affecting the canal is of such grave character," Flood declared in his unpublished letter, "that it should not be dictated by shabby sentimentalities. We have enough trouble on our hands with Cuba, which was permitted to pass into the Communist orbit, without having another similar, and even more grave, situation at Panama."

Flood has long strongly advocated removal of State Department control of Panama Canal policy. He wants that placed in the Defense Department.

"Panama is still a land of endemic revolution and political turmoil," Flood maintains. "For the U.S. to surrender its full sovereign powers over the Panama Canal is not only unrealistic, but fraught with the greatest peril for the security of all the Americas. That's why it is of such urgent importance for us to have an ambassador there who understands that fully and clearly, and not one who would acquiesce in the surrender and subversion of such powers."

BILL WESCOAT OF THE REYNOLDSVILLE, PA., STAR COMMENTS ON GUN CONTROL

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. DINGELL. Mr. Speaker, in a recent speech on the subject of gun control legislation, my friend and colleague, one of the outstanding Members of this body, JOHN P. SAYLOR, who represents the 22d District of Pennsylvania with great credit and distinction, made a number of particularly hard-hitting comments on the real intent of the report of the President's Violence Commission. In brief, Congressman SAYLOR, like myself, opposes the gun confiscation proposals of the Commission. Further, we believe that the concern of Congress should be on controlling the criminal rather than the law-abiding citizen. One response to that speech has come to my attention which I want to share with you and our colleagues. An article by Bill Wescoat in the Reynoldsville, Pa., Star, succinctly captures the concern I share along with Congressman SAYLOR about attempts to confiscate the guns owned by law-abiding citizens and sportsmen in the United States. The article follows:

[From the Reynoldsville (Pa.) Star, Sept. 4, 1969]

GUN CONTROL

(By Bill Wescoat)

In the long and continuing fight about gun control in the United States, this district's representative, Congressman John P. Saylor, has been an outspoken opponent of any attempt on the part of the government to deprive citizens of the right to own firearms. In his opposition he has performed admirably as a watchdog guarding the rights of all citizens, not just those of his own district, and doing what he can to prevent further intrusion into our private lives by the Federal Government.

Now he has quite correctly recognized the ultimate goal of the National Commission on the Causes and Prevention of Violience for what it is—complete gun confiscation by the U.S. Government. He brought this forcibly to the attention of his colleagues in a speech in the House of Representatives the other day. The Commission, with many fancy phrases and statistics, has tried to convince any who would listen that the way to control crime in the United States is by making it against the law to own or possess a gun, and that the Government should, by law, call upon all citizens to surrender their arms.

This is gun confiscation pure and simple, of course, and Mr. Saylor delights in the fact that the real issue is now out in the open, and expresses confidence that the American people will now begin to "fight these unnecessary, unwarranted, and unworkable recommendations that would destroy their right to self-protection." He said, "I believe . . . the turning point has been reached. The direction now is toward realism. The sob sisters and do-gooders have had their day, now the voice of reason—the voice of the American people, the voice of the American sportsman—will prevail."

There are many of us who couldn't agree more about the sob sisters and do-gooders, not only in regard to gun control, but many other things as well. If the bleeding hearts in this country continue to have their way much longer, our society is most certainly doomed. We must begin to face realism about many things, and take the hard, tough stands where it is necessary to take them. The Treasury Department and the Justice Department have already discovered that the Gun Control Act of 1968 is basically an unworkable law. Spokesmen from those two departments have recognized a couple of important facts. First, Federal control of sporting firearms constitutes an unwarranted invasion into the province of State and local governments. Second, each state and each section of the United States faces different problems in regard to gun control. Problems peculiar to the populous urban areas are certainly not the same as those of the sparsely populated plains and mountain areas.

It is indeed encouraging to learn that there are those in high places who realize that it is impossible, in many, many instances, for ivory Tower thinkers to prescribe one remedy for all ills everywhere—whether they be at a local, state or Federal level. The Washington Post recently ran an editorial entitled "More Gun Control Nonsense," in which it pointed out the obvious—that the Violence Commission's proposal that all Americans surrender their hand guns (there are an estimated 24 million in the country) is rather ridiculous for the criminals most certainly are not going to surrender theirs, and this would leave the law-abiding citizens more than ever at a disadvantage.

Congressman Saylor has long advocated attacking the problem of guns and crime the way it should be attacked—on the criminal, not a broadside against the law-abiding citizen who owns a gun. He recommends that anyone committing a crime while armed be mandatorily sentenced to prison, and that there be no authority for any judge to suspend this sentence, or to have it run concurrently with any other sentence. The purpose of this bill is to attempt to convince the person who sets forth on a criminal venture to think twice about being armed.

There are many arguments for and against gun control, and to the average citizen any control that would hamper the criminal element in the country, or any law that would bring swift punishment for the illegal use of a firearm, would be a good one. What we must watch, and what Mr. Saylor is watching, is that under the guise of protecting us, the do-gooders would actually strip us of a cherished right and place us even more at the mercy of any criminals who would threaten our homes or our families.

PEACE CORPS AUTHORIZATION

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. GILBERT. Mr. Speaker, I was unavoidably absent from the House on yesterday, but had I been present I would have voted for H.R. 11039, the authorization bill for the operation of the Peace Corps for fiscal 1970. As the RECORD indicates, I had requested that I be paired for passage and against recommittal of the bill.

The bill authorizes $101.1 million for fiscal 1970. This is $900,000 less than for fiscal 1969, and I believe it reflects the desire and effort of the Peace Corps to conform to budgetary restraints, as well as to place more emphasis on quality, rather than quantity of Peace Corps volunteers. The Peace Corps is a large and important operation, and I believe all of us agree that since its beginning in 1961 the Corps has made a major contribution, not only in the foreign countries where we have volunteers serving, but also in the United States. Under the authorization which the House passed yesterday, the Peace Corps intends to recruit 7,500 new volunteers for 1970 and these people will come from communities throughout the country. The Peace Corps is not increasing in size and cost, but its work and stature have grown in scope and importance. It is anticipated that as of June 30, 1970, the number of volunteers overseas will be 2,525 in Africa; 1,800 in North Africa-Near East-South Asia; 2,100 in East Asia-Pacific; and 2,825 in Latin America. Mr. Speaker, I wish the Peace Corps continued success.

AN OPEN ELECTION IN NORTH VIETNAM

HON. BURT L. TALCOTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. TALCOTT. Mr. Speaker, Ho Chi Minh is dead. Imminent political events in North Vietnam may give us some perspective about some facets of the settlement of the war in South Vietnam.

I am suggesting that our Government urge the North Vietnamese to select a successor to Ho Chi Minh in the same manner in which they would propose that the South Vietnamese select their political leaders. I would also urge that the election be open to uninhibited international observation.

The Communists demand free, open elections in the south. So they can show the way in the north, now that they have this made-to-order chance.

The manner of selecting a successor to Ho Chi Minh may just separate the true nationalists from the Communist demagogs there and their sympathizers here.

I predict that the successor to Ho Chi Minh will be selected in the conventional Communist manner—the sham election will be rigged and closed—and there will be little public outcry there, or here, by those who crassly demeaned the 1967 elections of Thieu and Ky.

Think about this—Communist power and authority is force and treachery—not the open ballot box, no matter what they proclaim at the negotiating table.

"CHUCK" JOELSON

HON. LIONEL VAN DEERLIN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. VAN DEERLIN. Mr. Speaker, among all the Members of this body, it is probably true that a relative handful can feel certain of commanding full attention of the House when they rise to speak.

"CHUCK" JOELSON has been one of these—a man of incisive wit, always superbly prepared to make his point with a minimum of words—words which colleagues knew would be worth hearing.

He is, moreover, a kind and gentle man whose gay spirit will be sorely missed in this Chamber. When he takes the judicial bench, surely, justice in New Jersey will be tempered with wit, as well as with mercy.

RETIREMENT OF CONGRESSMAN CHARLES S. JOELSON

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. EDWARDS of California. Mr. Speaker it is with a very real pleasure that I join in the host of tributes to our colleague, the Honorable CHARLES S. "CHUCK" JOELSON, on his retirement from this House to take his seat on the bench in New Jersey.

Mr. JOELSON's 9 years in the House have been distinguished ones and he has served well on the House Committee on Appropriations. His legal training and distinguished legal career before his election to the House suited him well for his calm and judicial work here.

I think, perhaps, the finest tribute to Mr. JOELSON will be the record he leaves behind, a record marked by his brilliant efforts in behalf of education. Young people throughout the Nation have much to thank him for and their future achievements will reflect his achievements.

For us in the House, our memories of Mr. JOELSON will be of his humor, his wit, his calm and his wisdom. He has been a most valuable Member of this House and a good friend to all of us.

HOUSE OF REPRESENTATIVES—*Wednesday, September 10, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Unto Thee, O Lord, do I lift up my soul.—Psalm 25: 1.

O God, our Father, who art the truth that keeps men free and the love that makes them good, give to us the faith to see life as it is, the strength to change for good what we can change for good, and the serenity to accept calmly and courageously what we cannot change at this time.

We pass through this world but once. Any good we can do, any kindness we can show, any help we can give do Thou help us to do it now, for we shall not pass this way nor live through this day again.

May we the representatives of our people in loyalty to Thee and our country keep our lives committed to goals great enough for free men.

In the spirit of Christ, we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

RECESS

The SPEAKER. In accordance with the unanimous consent agreement entered into yesterday, the Chair declares the House in recess subject to the call of the Chair, and the bells will be rung 15 minutes before the House meets.

Accordingly (at 12 o'clock and 3 minutes p.m.) the House stood in recess subject to the call of the Chair.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker at 2 o'clock and 50 minutes p.m.

COMMUNICATION FROM THE ASSISTANT ATTORNEY GENERAL

The SPEAKER laid before the House the following communication from the Assistant Attorney General, which was read and referred to the Committee on the Judiciary;

DEPARTMENT OF JUSTICE,
Washington, D.C., September 5, 1969.

Hon. JOHN MCCORMACK,
Speaker of the House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: As you know, pursuant to House Resolutions 673, 674 and 675, dated June 27, 1967, and subsequent resolutions, certain documents and records of the House of Representatives were made available to a District of Columbia grand jury in connection with an investigation involving Congressman Adam Clayton Powell.

The Department of Justice has received a request from the Internal Revenue Service to review evidence developed before the grand jury relevant to an official investigation of Congressman Powell by the Internal Revenue Service. In order to comply with this request, it will be necessary to obtain a court order authorizing access to grand jury records.

Since the information of interest to the Internal Revenue Service involves records furnished to the grand jury by the House of Representatives, it is requested that the House of Representatives authorize the Department of Justice to include relevant House records and materials in our application for a court order granting the Internal Revenue Service access to grand jury information.

Sincerely,

WILL WILSON,
Assistant Attorney General.

PERMISSION FOR COMMITTEE ON APPROPRIATIONS TO FILE PRIVILEDGED REPORT ON LEGISLATIVE APPROPRIATIONS, 1970 UNTIL MIDNIGHT THURSDAY

Mr. ANDREWS of Alabama. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight Thursday, September 11, to file a privileged report on the legislative branch appropriation bill for the fiscal year 1970.

Mr. ANDREWS of North Dakota reserved all points of order on the bill.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

DIRECT POPULAR ELECTION OF THE PRESIDENT AND VICE PRESIDENT

Mr. CELLER. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 681) proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President.

The SPEAKER. The question is on the motion offered by the gentleman from New York.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the joint resolution (H.J. Res. 681), with Mr. MILLS in the chair.

The Clerk read the title of the joint resolution.

By unanimous consent, the first reading of the joint resolution was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from New York (Mr. CELLER) will be recognized for 3 hours, and the gentleman from Ohio (Mr. MCCULLOCH) will be recognized for 3 hours.

The Chair recognizes the gentleman from New York.

Mr. CELLER. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, House Joint Resolution 681 contains the provisions for a proposed new article to the Constitution which shall be valid only if ratified by the legislatures of three-fourths of the States within 7 years after it has been submitted to them by the Congress.

The purpose of the article of amendment is to abolish primarily the electoral college and to substitute the direct popular election of President and Vice President. It provides for a runoff election between two pairs of candidates who receive the highest number of votes if none of the candidates receives at least 40 percent of the popular vote.

Second, the proposed amendment provides that the President and Vice President shall be voted for jointly only as

candidates who have consented to the joining of their names. That is in section 1.

Third, under the new articles of amendment, the voters for President and Vice President in each State shall have the same qualifications as are required for persons voting therein for the most numerous branch of the State legislature, except that each State may adopt less restrictive residence requirements and the Congress may establish uniform residency requirements for voting in presidential elections. That is in section 2.

Fourth, the times, places, and manner of holding the presidential election and any runoff election and entitlement to inclusion on the ballot shall be prescribed in each State by the legislature thereof except that Congress is empowered to make or alter such regulations. The Congress is specifically empowered to determine the days on which the original election or any runoff election is to be held.

Moreover, the Congress is authorized to prescribe the time, place, and manner in which the results of such presidential election shall be ascertained and declared—section 4.

Fifth, the Congress is specifically empowered to provide for the case of the death or withdrawal of any candidate before the election and for the case of the death of both the President-elect and Vice President-elect—section 5.

Finally, the amendment provides that the direct popular election system will take effect 1 year after the 21st day of January following ratification—section 7.

That generally is the purport of the amendment now before you.

I plea for the indulgence of the members of the committee that I may be permitted to finish my general statement before being interrogated and asked questions.

Gentlemen of the committee, Jefferson said way back in 1823 that our system of election of President and Vice President was the most dangerous blot on our Constitution and one which some unlucky chance will soon hit. The dangers that Jefferson pointed out are even more grave today. The uncertainty, the doubts, the fears, the imponderabilities of even the last presidential election emphasize the need for some change. We of the Committee on the Judiciary, as Benjamin Franklin stated many years ago at the close of the Constitutional Convention on September 17, 1787, cannot help expressing the wish that every Member will learn a little of his own fallability. Thus we of the Committee on the Judiciary are not infallible and are not so infallible as to state that House Joint Resolution 681 is perfect. It is indeed not prefect. Nothing is perfect. But we do believe that it contains the least number of inequities, the least number of objections of all plans considered, and we did consider a plethora of plans. Among these plans was the district plan, the proportional plan, the automatic electoral vote plan, the direct vote, and combinations of all four. We rejected decisively all except the direct election plan. The final vote in the Committee on the Judiciary was decisive. Twenty-nine members voted for the joint resolution now before you, and only six voted against. Thus, as I said, a very strong sentiment existed in the Committee on the Judiciary and still exists for the plan now before you.

The reform we seek is timely and wise. It is anomalous to preserve the electoral college system. It is outmoded. It is ill suited to our times.

Edmund Burke in a classic speech for reform said:

> A wise Government well knows the best time and manner of yielding that impossible to keep.

Every well-intentioned statesman, every worthy institution, be it civic, religious, or educational, knows that the present system is not in the best interest of the Nation and should not be further maintained. Thus, Congress must start to weed out the distressing system that can be a catchall of much evil.

Mr. EVANS of Colorado. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 165]

Abbitt	Eckhardt	McCloskey
Anderson, Tenn.	Edwards, Ala.	Martin
Ashley	Esch	Michel
Ayres	Fallon	Morton
Baring	Ford, William D.	Nix
Barrett	Gallagher	Obey
Blanton	Giaimo	Powell
Bolling	Gubser	Railsback
Bush	Hansen, Idaho	Rooney, N.Y.
Cabell	Hansen, Wash.	Rosenthal
Cahill	Harsha	Rostenkowski
Carey	Hathaway	Saylor
Chisholm	Hawkins	Scheuer
Clark	Holifield	Sisk
Clay	Howard	Smith, Iowa
Collier	Hungate	Stuckey
Cunningham	Karth	Teague, Tex.
Daddario	Kirwan	Tiernan
Davis, Ga.	Kleppe	Tunney
Dawson	Kuykendall	Watkins
Dent	Landrum	Wilson, Charles H.
Diggs	Lipscomb	Wydler

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. MILLS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the joint resolution (H.J. Res. 681) and finding itself without a quorum, he had directed the roll to be called, when 364 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The gentleman from New York (Mr. CELLER) had been recognized and had not completed his remarks. The Chair now again recognizes the gentleman from New York.

Mr. CELLER. Mr. Chairman, I was about to say when I was interrupted by the quorum call that even the President of the United States deprecated the present system of electing the President and Vice President.

I would like at this juncture, however, to express my gratitude and appreciation to the members of the Committee on the Judiciary who in the most painstaking and dedicated manner helped to prepare and shape this resolution. They all worked most diligently and in a most careful fashion, rounding out each sentence. They did all and sundry to see that the words in this resolution are properly set and each phrase was diligently rounded out, polished, and refurbished. This is not an easy task, especially when it involves a constitutional amendment. I want to pay a special tribute to my colleagues, all of them, on the Judiciary Committee for the work that they accomplished and in particular pay tribute to the ranking Republican member, the gentleman from Ohio (Mr. MCCULLOCH), who, in tandem with myself, made possible—let me put it that way—the real and final shape of this legislation. It is a very important piece of legislation because as I said in speaking on the rule yesterday, there has been no full-scale debate on this momentous subject of the electoral system since 1826. So, we are engaged in a rather historical debate and everyone who participates in this debate, participates in a momentous event.

Ladies and gentlemen of the Committee, I must say that those who forget the mistakes of history must live them all over again. The electoral college system turned out, contrary to the spirit and words of the Founding Fathers to be a historical blunder, a real genuine blunder. Twice the election of the President and the Vice President was thrown in the House, with most aggravating and evil consequences; namely, in 1800 and in 1824. There were additional narrow escapes. In 1968, in the election between Humphrey and Nixon; in 1960, in the election between Nixon and Kennedy; in 1948, the election between Truman and Dewey, in those contests a mere shift of 1 percent—of 1 percent—of the popular vote in a number of the key States would have thrown the election, shall I say, into the "cockpit"—would have thrown the election in the House of Representatives with the probability of political wheeling and dealing that always accompanies such election in the House for President.

The Nation must shudder at the prospect of a repetition of such a situation. We must prohibit it and we must pass, therefore, the instant resolution.

Thrice in our history, because of the electoral system, the winner of the presidential popular vote became the loser and the loser became the winner. Such a result is horrible; it is unsporting, it is dangerous; it is downright uncivilized to have the winner become the loser and the loser become the winner.

In 1824, in 1876 and in 1888 such flukes happened. As I said during the discussion of the rule yesterday it is very much like Sancho Panza in "Don Quixote" who sits down to a very sumptuous meal and is about to partake thereof and the meal is taken away from him. That is what happens to the winner in a popular election and the loser in the electoral college. It is all filched from him and all he can do is bite his nails in anger. We should not permit such a situation. By a popular vote the loser in those elections in 1824, 1876 and 1888, the popular vote

loser was elected President by the electoral college in those years; namely, John Quincy Adams, Rutherford B. Hayes, and Benjamin Harrison. The political convolutions and skullduggery that turned the Presidency, for example, over to Rutherford B. Hayes in 1870 might have well caused another Civil War. Read the history of those times and you will find that the country seethed with excitement as a result.

And the winner there, who was branded the loser—Samuel J. Tilden, was the winner of the popular vote. Samuel J. Tilden had been former Governor of the State of New York. He was a man of character and strength, he calmed, however, the seething political waters of that year, 1870. He said:

I am returning to private life with a consciousness that I shall receive from posterity the credit of having been elected to the highest position within the gift of the people without any of the cares or responsibilities of the office.

In 15 elections, as I indicated before, a shift of less than 1 percent of the electoral vote would have made a popular loser the President. Now, that kind of a situation we must circumvent in the future. We will be like spineless—and I put it that way—jellyfish to continue an elective method that entails such tragic and idiotic factors. Nor can we, like troglodytes, keep our heads in the sand and keep away the evils, they will not go away.

These evils attendant upon this elective system struck hard in the past, and we cannot foretell what can happen in the future if there is repetition. Some man who might be the winner in the popular election and declared the loser in the electoral vote might be some demagog who could proceed on a white charger and arouse the Nation, arouse the Nation to the tragic error that had been committed as a result of this constitutional mistake. He might arouse the Nation to such a furor as to cause great havoc. Great danger therefore, I say, lurks in this electoral system. The evil has struck several times in the past, and it will strike again unless we now use the remedy that is at hand, and do away with this elective system.

There are many, many evils attendant upon this electoral system. I am going to point out to you several of them—and there are many others.

First, you have the so-called bonus electoral votes. Each State gets three electoral votes, regardless of population. I will explain that more in detail momentarily.

Second, you have the unit rule, the winner takes all in each State.

Third, you have the machinations that are resident in the contingent procedure if the election is thrown into the House of Representatives.

Fourth, there is the situation wherein the loser becomes the winner.

Fifth, you have the so-called faithless elector. An elector may not vote for the candidate of the party that nominates him, and causes his election. He has a free choice. He can be a turncoat—and there is nothing more abominable than a turncoat. We do not want any turncoats in our electoral system.

Now, what about this bonus vote? Let me tell you something about that. Take Alaska, with a population of 226,000 people—it has three electoral votes, one for every 75,000 people, but New York, with a population of 16,782,000 people, has 43 electoral votes, only one for every 390,000 people.

On a population basis then, Alaskans received electoral votes at better than five times the rate that New Yorkers did.

The ratio is low for all other small States as well: Nevada, one electoral vote for every 95,000 people; Wyoming, one electoral vote for every 110,000 people; and Vermont, one electoral vote for every 130,000 people.

And the rate is high for the other large States: California, one electoral vote for every 393,000 people; Pennsylvania, one electoral vote for every 390,000 people; and Illinois, one electoral vote for every 388,000 people.

Now what is the cumulative effect of all this?

For example, the cumulative effect of this small State advantage may be gaged by the fact that New York with a population of 16,782,000 has 43 electoral votes. Whereas, Alaska, Nevada, Wyoming, Vermont, Delaware, New Hampshire, North Dakota, Hawaii, Idaho, Montana, South Dakota, and Rhode Island with a combined population of only 6,364,000 people also have a total of 43 electoral votes—the same number as the State of New York has.

That is unfair. That violates the principle enunciated by the Supreme Court, which has been wholly acceptable in the United States; namely, "one person, one vote."

Inherent in this system is the so-called unit rule where the winner takes all of the electoral votes in a State. This suppresses a State's minority vote. The winner of the popular vote in a State regardless of the percentage of votes cast receives all of the State's electoral votes. The votes of the losing candidate are discarded in that State.

Way back in 1824 a very distinguished Senator had this to say about this situation.

Senator Thomas Hart Benton said:

To lose their votes is the fate of all minorities and it is their duty to submit. But this is not the case of votes lost, but of votes taken away, added to those of the majority and given to a person to whom the minority is opposed.

Now the system we propose—namely, the direct popular election of the President and Vice President—does away with "winner take all" and does away with this lopsidedness as to the value of the electoral vote. It also does away with the possibility that the election may be thrown into the House.

Election of the Chief Executive is a very serious situation. As I have said, it has happened twice in our history. It happened in 1800, when we had the election of Jefferson versus Burr. The election was thrown into the House. There were 36 ballots taken. The country was excited, and there were grave doubts as to where the majority of the votes in the House would go.

Under the Constitution, each State has but one vote, regardless of the number of Congressman to which that State is entitled; regardless of the State's population. The election lasted for several weeks. It was necessary to get eight votes to obtain a majority.

The result was seven for Jefferson and four for Burr and the rest undecided. Alexander Hamilton, however, threw his great weight and influence to Jefferson, thereby incurring the ill will and the enmity of Aaron Burr, the other candidate.

The result was that tremendous venom of Burr against Hamilton, resulting in the duel, which occurred 1 year after, in which, unfortunately, Alexander Hamilton was shot. Jefferson triumphed, but he triumphed under rather unusual circumstances. Bayard of Delaware was the one who cast the final vote, making it eight, instead of seven, for Jefferson. Charges were made of deals between Jefferson and Bayard; however, it was never proven. In my opinion, it could never be proven against Jefferson because Jefferson was not the type of man to make any such deal, even if the price was to be the Presidency. But it is strange that after Jefferson became President, Bayard of Delaware received all manner and kinds of political preferment, all manner and kinds of so-called political plums, as a result of which charges were made but never proven, and I am quite convinced that Jefferson was blameless. But there was always that suspicion.

What happened in 1824, when the contest was between Andrew Jackson, Crawford, Henry Clay, and John Quincy Adams? The four of them were in a contest. John Quincy Adams had not won the popular vote. Crawford had a stroke and was eliminated. All that was left was Clay, Jackson, and John Quincy Adams. Clay and Adams hated Andrew Jackson, the radical out of the West. They made a deal with this great Henry Clay, with this great John Quincy Adams, a scurvy deal. Henry Clay agreed to throw his influence in support of John Quincy Adams in this House. The result was that John Quincy Adams became President of the United States. A minority candidate became President of the United States, and it was said then that it was done as a result of the machinations of Clay. He was made, as a result of the deal, Secretary of State. That has all been proven by historians. And John Quincy Adams was said to have become a "Clay" President. He suffered for the rest of his life because of that scurvy deal. And the Congress that followed was of a different party. Adams was not reelected.

Then, as you know, he came back to public life as a Member of Congress.

We do not want these kinds of deals or the possibility of these deals, but there are great possibilities of such situations happening if an election is thrown into the House. Very serious consequences can result. I caution you gentlemen that such a contigent election can be eliminated if we pass this resolution.

As I said before, we do not want a winner to become the loser and the loser to become a winner. That is not cricket.

That can happen under the present system. It cannot happen if you pass this resolution.

So, my dear friends, I do hope that you will see fit to embrace this resolution. It has many advantages, and I would like to point them out to you. Only the direct popular election plan, of all the alternative proposals, can eliminate all the basic deficiencies in our present electoral system. It will remove electors as nameless intermediaries who are not needed to express the people's choice of national leader. It will eliminate existing disparities in the weight given to certain votes because of the geographic location of the voters. It will guarantee that the presidential electoral system is in harmony with the principle of "one man, one vote." It will conform presidential elections to the system of plurality voting used throughout the Nation in congressional elections and in elections for statewide and local offices.

It will assure that the people who elect the Chief Executive in all cases—and that the candidate receiving the most popular votes will be elected.

Mr. Chairman, I shall be very glad to answer any questions from my colleagues.

Mr. GILBERT. Mr. Chairman, if the gentleman will yield, I understand under the joint resolution we have on the floor, the joint resolution provides that the candidate shall be elected by 40 percent of the vote, which will be a minimum.

Mr. CELLER. Mr. Chairman, the resolution provides the candidates who receives a plurality of the votes, on condition he receives at least 40 percent, shall be elected President.

Mr. GILBERT. That is correct. And that would not be a majority, as I understand it. It would be a plurality, but not a majority.

As I listened to the chairman a moment ago, the chairman made reference to John Quincy Adams, and he seemed to belabor the point that Mr. Adams was elected by a minority of the vote. In testimony before the gentleman's committee, I offered to amend the joint resolution to the effect that whoever be elected President be elected by at least 50 percent of the vote, which I think would reflect the majority will of the country, as opposed to the 40 percent that would be still a minority. I wonder if the distinguished chairman could make some comment on that point.

Mr. CELLER. The Committee on the Judiciary weighed very carefully the question whether the vote should be a plurality or a majority vote, and it discarded the latter. It is interesting to note that 15 of our Presidents have been elected President by less than 50 percent of the vote cast. One-third, in other words, of our Presidents never received a majority. I will list them for the Members: Adams; Polk; Taylor; Buchanan; Lincoln—who received only 39 percent in the first election; Hayes; Garfield; Cleveland, twice; Harrison; Wilson, twice; Truman; Kennedy; and Nixon.

We discarded the idea of 50 percent, because it would give rise to the proliferation of other parties. It would be to the advantage of other parties to endeavor to gather unto themselves as many votes as they could and then to try to make deals and try to cast their strength with one or the other of the candidates.

The gentleman's memory is fresh, I am sure, with the plans that occurred in only the last election, when a certain gentleman sought to get votes and tried to make a deal with either of the two major candidates. Fortunately those two candidates—namely Mr. Nixon and Mr. Humphrey—refused to make a deal.

In order to forfend against that type of practice in the future the committee concluded that 40 percent would be proper, especially since one-third of our Presidents were elected with less than a majority of the popular vote.

Also, it was felt that if we increase the amount from 40 percent to 50 percent, we would increase the possibility of runoff elections. It would be difficult for a candidate to get 50 percent, and therefore there would be an inducement for a runoff or second election.

For all those reasons, the Judiciary Committee, very carefully sifting all the pros and cons of 40 percent, 43 percent, and 45 percent, thought that the 40-percent would be proper, and that is what we brought in, and it is now before the Members.

Mr. GILBERT. Will the distinguished chairman yield further?

Mr. CELLER. I yield to the gentleman from New York, (Mr. GILBERT).

Mr. GILBERT. Mr. Chairman, as I understand the thrust of the gentleman's argument, he says that 40 percent would lessen the likelihood or the probability of a runoff, but the reasons are the same if we had 50 percent or 60 percent.

In other words, the reasoning is it is less likely we might have a runoff if there were required 40 percent of the vote. I submit, Mr. Chairman, why not reduce that to 35 or 30 percent, if that is the fear of the members of the distinguished Judiciary Committee.

Mr. CELLER. That would be what we call reductio ad absurdum. We cannot make it as large as that. We have to draw the line somewhere. I believe 40 percent is the appropriate line. This was the consensus of the opinion of the members of the committee.

Mr. GILBERT. If we are in the process of changing the Constitution and we want to get the fairest denomination for the election of a President I would submit, Mr. Chairman, that a majority of 50 percent would be the proper denomination to determine who should be the President of the United States, and not 40 percent, because then we are still dealing with a minority candidate or a minority President.

Mr. CELLER. I must respectfully be in disaccord with the gentleman from New York. I believe this adequately covers the situation. The grave danger would be the proliferation of splinter parties, if we raised the amount to as high as 50 percent.

Mr. GILBERT. May I say, it is only a question of degree, whether it is 40 or 50, because we would still have the same splinter parties whether it was 40 or 50. My personal opinion is with 50 percent the likelihood of splinter parties would be lessened.

I thank the gentleman.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Mr. Chairman, I direct the attention of the committee to my additional views set forth on page 15 of the committee report, wherein I advocated that there be a plurality requirement of at least 45 percent rather than 40. That was submitted to the committee, and unfortunately the committee did not go along.

What I am trying to bring out is the same thing the gentleman from New York did; that is to say, if we elect a man President let us elect him with a mandate at least from 45 percent of the people.

I suggest to the Members that they read the additional views I filed, because I anticipate offering an amendment, wherein I will try to increase this figure from 40 percent to 45 percent. Then if any individual fails to get 45 percent there would be a runoff election.

Mr. CELLER. I want to say to the gentleman from Colorado and to the gentleman from New York that the provision is not just 40 percent. That is only half the story. The provision is a plurality of the vote on condition that that plurality is at least 40 percent.

In most States the Governors, Senators, Members of Congress, all high officials and low officials, are elected by simple plurality. It is the plurality that counts. That is the measure in the election; not 40 percent or 60 percent, but simple plurality.

We add another condition, that the plurality must be at least 40 percent of the votes cast. We have a double safeguard; plurality and 40 percent.

The gentleman wants to increase the 40 percent figure to 45 percent, and the gentleman from New York wants to increase it to 50 percent. Somebody else will come along and want to make it 52 percent. Where do we draw the line?

The gentleman will remember that in the Judiciary Committee we labored long on this subject and we argued for hours on it.

Finally a consensus of the members of the committee was that it would be reasonable to require a plurality on the condition that plurality would reach at least 40 percent of the popular vote cast.

Mr. MIKVA. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Illinois.

Mr. MIKVA. Mr. Chairman, I wish to commend the chairman of the committee on his most recent remarks that 40 percent is the secondary protection. The first protection is that the person must be a winner and receive a plurality.

As the distinguished chairman pointed out, almost every Governor in the country is elected in that way and every Member of Congress is elected in that way, by a plurality. So that the insistence on it being 50 percent or a percentage of 45 merely seeks to impose a restriction which would cause the very fragmentation of the parties that the gentlemen are seeking to avoid. Any splinter party obtaining 1 or 2 percent could in effect cause a run-off if a 50-percent

plurality were required. The higher the percentage, the larger the number of run-offs there would be. None of us look forward with relish to that prospect. The reason for the 40 percent minimum is that we want to make sure the President has a mandate under which he could govern. We felt that 40 percent was that reasonable minimum that would give him that mandate.

Mr. Chairman, I commend the distinguished gentleman from New York for his able answer.

Mr. MACGREGOR. Mr. Chairman, will the gentleman yield to me for one moment?

Mr. CELLER. I yield to the gentleman from Minnesota.

Mr. MACGREGOR. The chairman has very properly emphasized the two requirements of first a plurality and then a minimum of 40 percent of the vote. The gentleman from Illinois (Mr. MIKVA) reinforced the significance of the chairman's remarks.

In order to set the RECORD straight in the light of the reference to John Quincy Adams by the distinguished gentleman from New York (Mr. GILBERT), the evil in the case of John Quincy Adams was not because he failed to obtain an absolute majority or failed to obtain 45 percent but the fact that he was the loser and not the winner in the election. He was the loser and ran a weak second in the popular vote. Also, he was the loser and ran a weak second in the electoral vote. The evil in the case of John Quincy Adams is that he became President notwithstanding the fact that he was a loser. The evil there lies in the fact that he was a weak second and not that he failed to obtain a majority or a plurality of the vote.

Mr. HECHLER of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I am glad to yield to the gentleman from West Virginia.

Mr. HECHLER of West Virginia. The distinguished chairman of the Judiciary Committee has outlined eloquently, powerfully, and succinctly the reasons why we should support this historic constitutional amendment. One of the inequities pointed out by the chairman in the current system was the apparent bonus to smaller States under the electoral vote system. I would like to suggest, as a Representative of a State which is somewhat smaller than the State represented by the distinguished chairman in the well the reason why Representatives of small States should rally to support this constitutional amendment. Under our political system smaller States are ignored in the presidential campaigns. Smaller States would be given their just due and all presidential candidates would feel the obligation to seek every vote possible in every State, small or large, under the system proposed by the amendment which is being considered here.

I recall that the present occupant of the White House indicated in 1960 that the only reason why he went to Alaska was that it was because he made a promise to visit all 50 States. I doubt that he would have done so otherwise.

Therefore, I feel that all Representatives of small as well as large States, despite the apparent bonus under the current electoral system, will stand to gain much more and the American political system will be healthier if this amendment is passed.

Mr. CELLER. Let me make a brief statement with reference to advantages and disadvantages first with reference to small States and large States which might quiet and still some of the fears that might reside in the mind of some of the Members.

Small State interests cite statistics to establish that the smaller States today enjoy advantages under our present electoral college system which would be relinquished if meaningful electoral reform is accomplished. This supposed advantage grows out of the distortion in voting strength resulting from the allocation of so-called bonus electoral votes to the small States. This deceptively simple mathematical analysis views voter strength as follows.

Alaska, 1 electoral vote for each 75,389 persons.

California—1 electoral vote for each 392,930 persons.

According to this analysis an Alaskan voter has 5 times the weight of a California voter.

Other observers cite statistics to establish that electoral reform would require citizens in the large States to relinquish important political leverage which they now enjoy. This disproportionate strength of the larger States grows out of the winner-take-all, or unit count, system. Respected mathematical analyses of voter strength indicate that voters in States like New York and California have more than 2½ times as much chance to affect the ultimate result in a Presidential election than voters in smaller States. This results from the fact that the larger State voter influences a much large bloc of electoral votes.

Whatever the advantages—to large States or to small States—neither can be justified because it rests on the notion of voter inequality.

Under the doctrine of one man, one vote, no citizen's influence upon the choice of President should depend on the accident of his geography.

To my mind that is a most logical statement. We have to wipe out this advantage or disadvantage, whatever it may be. And, we can only do it by a direct popular election of the President and Vice President.

Mr. HECHLER of West Virginia. I concur with the gentleman and I enthusiastically support the joint resolution. I urge Representatives of the smaller States, for the reasons given by the chairman of the Judiciary Committee, to rally to the support of this proposed amendment to the Constitution.

Mr. CELLER. There is no question that the large States are going to vote for the direct election plan and I think the small States likewise.

It is interesting to note that certain polls have been taken. The Gallup poll shows that 81 percent of the Nation favors a direct vote for President. The Harris poll shows throughout the Nation that approximately 80 percent of the Nation favors the direct vote which is embodied in the joint resolution now pending before us. Polls were taken by Senator GRIFFIN, of Michigan, which indicate that there is a preponderance of sentiment even in the legislatures of the smaller States for the direct election plan. Other surveys have been taken by Members of the House which clearly indicate that fact. Also, many Senators from the smaller States are in favor of this joint resolution that is now pending before you.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Illinois.

Mr. McCLORY. I thank the gentleman for yielding. I do not want to disagree with the gentleman's general statement. I support House Joint Resolution 681.

Mr. CELLER. I just want to make one more statement. Forgive me for interrupting you. However, the American Federation of Labor and the CIO is on record as being in favor of this bill. The U.S. Chamber of Commerce favors this bill. Never before have such disparate organizations like the AFL–CIO and the U.S. Chamber of Commerce agreed on anything. However, they have agreed on this resolution. It is favored by the American Federation of Labor, by the American Bar Association, the Federal Bar Association and a host of other organizations.

Now, I yield to the gentleman from Illinois, and again ask the gentleman to pardon me for my interruption.

Mr. McCLORY. Mr. Chairman, I thank the gentleman for yielding.

I do recall, Mr. Chairman, that the labor organizations and the U.S. Chamber of Commerce agreed on the uniform Monday holiday bill which was passed at the last session, but I did not rise to make that comment. I rise to indicate that at a later time, after the general debate and during the amending stage, I will offer an amendment that the minimum plurality required to elect the President and Vice President be reduced from 40 percent to 35 percent.

I take that position because of the cost and inconvenience of a popular runoff election. The chances of such a runoff are at least 10 times greater at the 40-percent level than at the 35-percent level.

And at the same time I feel that a popular-vote winner with 35 percent of the vote has a mandate, and that he has the necessary support in the country which would enable him to lead us.

The Members of the House and Senate are elected by a mere plurality. I feel that on this resolution we should support what is practical, reasonable, and workable, and avoid the problems which are inherent in the runoff with the probabilities of such in the resolution in this form. But I do not want to discuss this in detail at this time.

Mr. CELLER. Now we have 35 percent suggested, and we had 45 percent suggested, and the committee has come in with 40 percent. All civilization is based on compromise. Now we have a good compromise at 40 percent.

Mr. McCLORY. If the gentleman will yield further, Mr. Chairman, I might say that I do not believe I am disclosing any-

thing inappropriate in saying that the vote in the committee was evenly divided on my 35-percent amendment and lost because of the tie vote.

Mr. HUTCHINSON. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Michigan (Mr. HUTCHINSON), a member of the committee.

Mr. HUTCHINSON. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would like to point out that under our present system the requirements are that the candidates for the Presidency and the Vice Presidency in each political party must come from different States. This comes about because of the provision in the Constitution that says that the electors of one State have to vote for at least one of the candidates that must be a noninhabitant of their State. That is the present system.

Under the present system, then, we are virtually assured that on every political ticket the candidates for the Presidency and the Vice Presidency will come from different States.

Under the committee bill as it stands, that provision is not carried forward. I do not recall that we ever discussed it in the committee. I simply want to bring the subject up at this time so that the distinguished chairman in the well will be aware of the fact that at the proper time I would like to offer an amendment to the committee resolution in the spirit of perfecting it, and not to obstruct it at all, in order that we, under the direct election system, could be assured that on each presidential ticket the candidates for President and Vice President would come from different States.

Mr. CELLER. Mr. Chairman, if my memory serves me correctly, I believe we did have a discussion on that in the committee. We felt that traditionally we never had a situation like that, and probably would not have in the future. But of course the gentleman is welcome to offer such an amendment.

Mr. THOMPSON of Georgia. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Georgia.

Mr. THOMPSON of Georgia. Mr. Chairman, I thank the gentleman for yielding.

I recognize the work the committee did in arriving at the 40-percent figure. However, I feel there is considerable merit to the 50-percent figure, notwithstanding the fact that a number of Presidents in the past may have been elected with as low as 39 and a fraction percent, and in the forties, I believe that President Nixon had around 43 percent.

But we are attempting to correct the Constitution of the United States with respect to elections.

We are attempting to correct what we view to be an inherent fault in the Constitution—a fault which we all recognize as a possibility of some very disastrous situations developing.

I certainly support the direct election of the President. However, I feel a majority requirement is not unreasonable. I am not too concerned about runoffs. We have runoffs in our State and we never have had any particular problem with runoffs. It is an additional election, but this body is elected every 2 years and we could take the position that an election every 2 years is too much trouble. Yet, it serves a useful purpose and the 50-percent requirement would serve a useful purpose in making absolutely certain that the President does have the majority support of the people behind him when he takes office.

Mr. MIKVA. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman.

Mr. MIKVA. Mr. Chairman, for the purpose of clearing up what I think might be some confusion about the present article of the Constitution so far as the President and Vice President are concerned, the present Constitution does not say that the President and Vice President cannot come from the same State. The present Constitution only says that the electors in any State must not vote for both a President and Vice President, from their own State. As President Nixon pointed out during the recent campaign, the vice-presidential candidate might have come from New York. It would merely have meant that the New York electors would not have been able to vote for both President Nixon and the Vice President from the State of New York. So that the present article does not say that the President and Vice President must be from two separate States and the proposal here does not say that they must be from two separate States. I would hope that we would not write into the Constitution an absolute prohibition that would say that even though the two most qualified men for President and Vice President happen to come from the same State that we would, by the Constitution, be precluded from electing them.

The CHAIRMAN. The gentleman from New York (Mr. CELLER) has consumed 55 minutes.

Mr. McCULLOCH. Mr. Chairman, I yield myself such time as I may desire.

Mr. Chairman, I am pleased to join with the chairman of the Committee on the Judiciary, the gentleman from New York (Mr. CELLER) in the appraisal of the diligent, dedicated, long and careful work of the members of the Committee on the Judiciary on this most important joint resolution that has been before either branch of the Congress for almost 20 years.

Mr. Chairman, many speeches will be given, many amendments will be offered, many points will be made as we start down the long road that leads to the 26th amendment to the Constitution of the United States. I hope that in the heat of debate we never lose sight of the fundamental issues.

Should the people of the United States elect their President?

Should every vote be counted in ultimately determining who is President?

Should each voter be given an equal voice in determining who is President?

Should the candidate with the most votes be declared the winner?

I answer those questions in the affirmative. So do the American people—as the Gallup and Harris polls both very clearly indicate.

Anyone who subscribes to the neutral principles that Government should be representative, that every vote should count, that individual voting power should be equal, that winners should be declared winners and losers should be declared losers must also subscribe to the direct election proposal. No other proposal—and this is critically important—no other proposal contains those neutral principles. The district plan, the proportional plan and the automatic plan—one and all—desregard such principles.

Each of those plans holds that geographical territories—not people—elect the President.

Each of those plans, except the proportional plan, holds that the votes of the minority in such a geographical area should be counted against the minority voters.

Each of those plans holds that a vote should count more or less depending on where it was cast.

Each of those plans holds that in at least some elections the winner should be the loser and the loser should be the winner.

I urge the Members of this body to reflect upon the gravity and solemnity of our meeting today. We must never for one moment forget that it is a constitution that we are writing.

Then how could we—how dare we—enshrine in the Constitution any of the troublesome propositions that inhere in the district plan, the proportional plan and the automatic plan? How can we ask the other body and the States to expend time and energy in considering some proposal whereby, for example, winners lose and losers win? Should we undertake the difficult time-consuming task of amending the Constitution to make that the fundamental law of the land?

We have confronted that question in this body before. We voted on the district plan in 1826—and rejected it. We voted on the proportional plan in 1950—and rejected it. Yes, when those plans were at the pinnacle of their popularity, this body saw their imperfections.

The time for the district plan and the time for the proportional plan have come and gone. Today, if you want to reform the electoral college, there is only one choice: House Joint Resolution 681.

I support House Joint Resolution 681 because it is the only plan that cures all the defects in our present system, because it is the only plan that is supported—overwhelmingly supported—by our constituents, and because it is the only plan that has a chance at ratification.

Let us examine some of the basic defects of the present system.

First, winners may be declared losers and losers may be declared winners. This happened three times in our history. We have been very fortunate that the system has failed only three times because in 15 other elections a shift of less than 1 percent of the vote would have made the popular-vote loser the electoral-vote winner and the President of the United States. Beyond that, in three other elections, a shift of less than 1 percent of the vote would have thrown the election into the House where, of course, it is possible for the popular-vote winner to lose.

That is what happened in 1825, the last time the House chose a President.

Official popular-vote tabulations are available for all elections as far back as 1824. Thus in the 37 elections that have occurred since 1824, there have been 21 occasions where the electoral system failed or nearly failed. This will not do any longer.

Second, the present system is defective in resolving the question of who becomes President when the electoral college fails to accord any candidate a majority. In such a case, the House of Representatives—each State having one vote—selects the President from the top three candidates in the electoral college voting. That is certainly anachronistic, undemocratic, and mischievous. The Nixon administration, although it did not wed itself to any particular plan for the general election, has unequivocally called for a popular runoff election in lieu of the present House selection. I agree.

The basic flaw in the present provision in the eyes of the American people is not that each State has one vote in the selection process but that the process itself is removed from the people. A "corrupt bargain," such as the one allegedly made by John Quincy Adams and Henry Clay, whereby the popular-vote loser became President of the United States and the Speaker of the House became Secretary of State, can be made whether the formula be "one State—one vote" or "one member—one vote." It is wheeling and dealing in smoke-filled rooms that the people dislike and not the way the votes are counted in the House.

Third, the present system is defective because the States employ a unit rule in casting their electoral votes. The unit rule has the following adverse effects.

It promotes voting fraud because the entire election can hinge on a few popular votes in heavily populated States. For example, the theft of 10,000 votes in a key State under the present system is the equivalent of the theft of 10 million votes under the system outlined in House Joint Resolution 681.

Likewise, an honest mistake in counting votes in a State may have the same disproportionate result.

The heavily populated States have disproportionate voting power because of the unit rule.

The incentive to participate in the representative process is blunted in States where the result is fairly certain. This would also be true—in fact, more true—under the district plan—such as House Joint Resolution 791—when the outcome of an election in a district is certain. Conversely, since there would be no such enclaves under the direct plan, political participation would be encouraged.

Those who vote for the loser in a particular State under the unit rule do not have their votes discarded but worse than that have their votes counted against them. However, the district plan may function even less democratically. For under the district plan, the majority of voters in a given State may find themselves substantially disenfranchised since the popular-vote loser may receive a majority of the State's electoral votes.

Since a candidate needs only a plurality of votes in the 12 largest States under the unit rule to be elected President, winners may lose and losers may win.

Fourth, the present system is defective because every State is given two bonus votes. This produces a disparity between people power and electoral power in every State. We boast that as a Nation we grant our citizens equal rights. Yet the election for our highest office, we fail to fulfill that promise. For some are given more equality than others.

These four major defects can be remedied completely only by the direct plan. The proportional plan and the district plan do attack some of the evils of the unit rule. But those plans ask the large States to surrender the advantage they have in the unit rule but do not ask the small States to surrender their advantage in their bonus votes. How could such a ruse ever succeed? This body has been asked the question three times. And we have answered "no" three times—in 1820, 1826, and in 1950.

The proportional and district plans are old failures. And I suggest to the Members of this body that every plan that does not eliminate both of the competing inequities of the present system—the unit rule and the bonus votes—is doomed to defeat. House Joint Resolution 681 is the only realistic chance—the only chance—at reform that we have.

When these competing inequities are both eliminated, then automatically another major defect is remedied. For no longer is it possible for winners to lose and losers to win, as it is when one or both inequities are retained.

Thus only the direct plan—House Joint Resolution 681—cures all the defects in the present system.

The people want this plan. The Harris poll shows that 78 percent of the people want direct election. The Gallup poll shows that 81 percent want direct election. People in every State want this plan. All parts of the country want this plan. The people in small States and large States alike want this plan.

House Joint Resolution 681 is right in principal. It is overwhelmingly favored by the people. So what is the problem?

It is claimed "the States would not ratify the plan." However, in 1966, a poll was taken by a Member of the other body which revealed that the direct plan was the first choice of every State legislature, large State, and small State, North, South, East, and West. But the claim persisted. Early this year the President stated that, although he personally favored the direct plan and would vigorously support it if adopted by the Congress, he doubted that such a plan would be well received in small States.

Early in this session, the House Judiciary Committee held 10 days of hearings. Attendance was excellent. Our study was thorough. Although a good majority of the Republican members of the committee favored some reform other than the direct plan at the start of those hearings, 12 of the 15 Republican members were persuaded by the merits of the direct plan by the time the hearings had concluded. I believe that the same thorough study would produce similar results in the Congress and in the State legislatures.

During those hearings we learned that the direct plan was supported by the American Bar Association, the U.S. Chamber of Commerce, the National Federal of Independent Business, and the AFL–CIO.

In spite of that powerful coalition of support, the Attorney General testified on the final day of the hearings that although direct election was the best concept it would not be ratified by the small States. That claim was not substantiated.

Last month that claim was again refuted. The junior Senator from Michigan, an advocate of the proportional plan, polled legislators in 27 States considered most likely to reject ratification of the direct plan. The results of the poll indicated that all but two of the States would ratify the direct plan and that the direct plan actually had the best chance of being ratified. Needless to say, the poll made at least one convert to the direct plan in the other body.

In summary, the direct plan is the only plan that cures all the defects of the present system. The direct plan is the only plan that is favored by the people. The direct plan is the plan that has the best chance at ratification.

Therefore, for those who want reform there is only one choice—House Joint Resolution 681.

Mr. CELLER. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio, Mr. FEIGHAN.

Mr. FEIGHAN. Mr. Chairman, I wish to commend the able chairman and members of the committee for their untiring efforts and careful deliberations which brought forth the joint resolution.

Mr. Chairman, I rise in support of House Joint Resolution 681 which I have cosponsored with the distinguished chairman, the gentleman from New York (Mr. CELLER), and many of my colleagues of the Judiciary Committee.

This resolution has seven major provisions which together would make vast revisions in the present electoral college system of electing our Chief Executive and Vice President.

Section 1 would abolish the electoral college system of electing the President and Vice President and provide for direct, nationwide popular vote by the citizens of each State and the District of Columbia. The presidential and vice-presidential candidates must run jointly as a team and must have consented to the joining of their names.

Section 2 provides that voters for President and Vice President must meet the qualifications for voting for the most numerous branch of the State legislature. However, the States are permitted to establish lesser qualifications with respect to residence requirements for presidential elections than are utilized in State elections. Thus, in most instances, the requirements for voting in State and national elections would be identical unless the States determined otherwise. Finally, Congress is empowered to establish uniform residence requirements throughout the Nation.

Section 3 requires that the candidates must obtain 40 percent of the popular

vote and a plurality of votes to be elected. If no pair of persons has a plurality and 40 percent of the popular vote, a runoff election shall be held between the two presidential and vice-presidential pairs having the greatest number of votes.

Section 4 gives Congress the authority to set the days of presidential elections which would have to be uniform throughout the country. Congress would also be required to establish by law the time, place, and manner in which election results would be ascertained and declared. The States would prescribe the time, place, and manner of the elections by legislation, but Congress would have the power to make or alter the regulations. State legislatures would also determine entitlement to inclusion on the ballot subject to a reserve power in Congress to make or alter such legislation. Thus, if a State sought to exclude a major party candidate from appearing on the ballot, Congress would be empowered to deal with such a situation.

Section 5 authorizes Congress to provide for the case of death or withdrawal of any candidate for President or Vice President before a President or Vice President has been elected. Once the President or Vice President has been elected, existing constitutional provisions would apply.

Section 6 confers on Congress the power to enforce the new article by appropriate legislation and section 7 provides that the new article shall take effect 1 year after the 21st day of January following ratification.

I firmly believe that the closeness of the recent presidential election has again conclusively demonstrated the dire necessity for electoral reform. Three times in our history, a President has been elected who had fewer popular votes than the defeated candidate—1824, Jackson-Adams; 1876, Hayes-Tilden; and 1888, Harrison-Cleveland. Eleven other victorious candidates were elected without having a majority of the popular vote.

Moreover, under the present system, there are several other significant inadequacies, which follow:

First. It is possible for a candidate to win a majority of the electoral votes with approximately one-fourth of the total popular votes. If he won New York, 43; California, 40; Pennsylvania, 29; Illinois, 26; Ohio, 26; Texas, 25; Michigan, 21; New Jersey, 17; Florida, 14; Massachusetts, 14; Indiana, 13; and two more votes, he would have a majority of the electoral votes. These States have 50 percent of the total population. However, if he won each of these States by a small margin, he would only have 26 percent of the popular vote.

Second. The electoral college does not reflect whether one person or several million voted within a State. For example, in 1964 Delaware and Alaska had the same number of electoral votes and yet three times as many people voted in Delaware as Alaska. In the 1968 election, 590,000 more people voted in Connecticut than South Carolina, yet both have the same number of electoral votes.

Third. If no candidate wins a majority of the electoral vote for President, the election process would devolve upon the House of Representatives. There each State would have one vote regardless of its size. Thus, the five smallest States with one Representative each, and a combined population of less than 2 million, would have the same voting power as the five largest States with a total of 154 Representatives and a combined population of 64 million. Moreover, since the House elects the President and the Senate the Vice President, it could easily happen that each party would choose a candidate from the opposing party.

Fourth. Third-party candidates have power far surpassing the number of popular votes they receive. In a closely contested race, a third-party candidate could easily capture enough electoral votes to deny either of the major party candidates the majority necessary to win. Moreover, once the election was thrown into the House of Representatives, this third party candidate, by controlling a handful of States, might be able to determine the outcome. George Wallace may have been an excellent example of this principle.

Fifth. Under the Constitution, there is no provision binding electors to vote for the candidate of their parties. In fact, in the last election, an elector from North Carolina voted for George Wallace even though a plurality of the voters of North Carolina indicated a preference for Richard Nixon. If electors chose to vote as they saw fit in a close election, one or several individuals could determine the outcome by thwarting the will of the people.

Sixth. If both the presidential and vice-presidential candidates are residents of the same State, that State could not cast its electoral votes for both candidates. Thus, if Hubert Humphrey had chosen EUGENE MCCARTHY as a running mate, since both are residents of Minnesota, the electors of that State could not vote for both of them.

Seventh. The present system gives too much discretion to the States to determine which candidate may be on the ballot and who may vote. Thus, some States have been able to keep a major party candidate off the ballot. For example, in 1948, Truman did not appear on the ballot in Alabama.

Eighth. The electoral system encourages the selection of the vice-presidential candidate with primary attention to regional and other considerations rather than his ability to govern.

Ninth. The Constitution does not provide for selecting the President if the President-elect should die between election day and the day in December when electors cast their votes.

Various other electoral reform plans were considered by the Judiciary Committee. Extensive testimony was heard—in fact, the committee transcript is 1,009 pages. The overwhelming majority of the witnesses and members of the committee clearly favored the direct election plan. This is the only electoral reform proposal which would eliminate all of the principal defects in the present system and guarantee that the popular winner is elected President. It will assure that each vote cast is given equal weight; it will eliminate the possibility of electors repudiating the will of the people; it will assure that the electoral decision is truly democratic and consonant with the principle of one man, one vote; it will eliminate the possibility of the election devolving upon the House of Representatives; and it will conform the process of electing the President to the method proven by experience throughout the country in elections of Senators, Representatives in Congress, as well as State and local officials.

I firmly believe that the right to vote also includes the right to have that vote accorded equal weight with a vote cast by any other citizen of the United States. Only the direct election can guarantee the realization of this principle. Therefore, I urge each of you to join in support of House Joint Resolution 681.

I include a particularly enlightening editorial pertinent to this legislation which appeared in the Cleveland Plain Dealer yesterday.

ELECTORAL REFORM'S TIME IS NOW

Nineteen sixty-nine could be the year Congress recognizes that American citizens are worthy of voting directly for their president and vice president.

A proposed constitutional amendment abolishing the archaic Electoral College and establishing direct election of the president and vice president, running as a pair, comes before the U.S. House this week.

It is only just that American voters should select their president as they select every other public office holder—by direct vote. It is only fair that every vote should have equal weight in determining who will be president. It is only right that an election system should assure that the man with the most votes is the man who becomes president.

Direct election is the only system that answers all counts. It should be approved by the House. We hope it is approved overwhelmingly to reflect the overwhelming desire of American people to vote directly for their president.

The proposed amendment needs a two-thirds majority in the House, and two-thirds again in the Senate. If approved by Congress, it will require ratification by three-fourths of the 50 states.

Only then will American citizens for the first time be permitted to take a direct and personal part in selecting their president. Only then will a vote in California have the same weight as a vote in Maine and a vote in Ohio. Only then will the electorate be assured that the candidate with the most votes becomes president. (Three times in American history, a candidate receiving a minority of popular votes became president.)

Many attempts have been made through the years to change the unfair, undemocratic and dangerous double-election system in which voters choose electors who select the president. All have failed for one reason or another.

The reform effort gained new urgency in the 1968 election. The third-party candidacy of George Wallace and closeness of the race between Richard M. Nixon and Hubert H. Humphrey threatened to deny any candidate a majority of electoral votes. Had that happened Wallace could have bargained to throw his votes to one or the other, or the election could have been thrown into the House of Representatives, where each state would have one vote for president, if the state delegations could agree on a candidate. The results could have been chaotic.

Direct election would solve the problem for good.

Mr. McCULLOCH. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois (Mr. McCLORY).

Mr. McCLORY. Mr. Chairman, first of all, I want to commend the chairman, the ranking member, and all the members of the committee for the very deliberative, the very patient, and the very thorough job which I feel was done in connection with the consideration of electoral college reform by the full Judiciary Committee. I think that it is entirely consistent with the work of the committee that this measure comes before the Chamber with overwhelming bipartisan support. I am proud that my party has expressed itself decisively in behalf of the direct popular election amendment which is before the Committee for consideration today, and that we have joined in presenting this resolution to the House, as the chairman has indicated, for the first full scale debate in almost 150 years.

I am convinced that this single measure will be the most important legislative measure considered at this session of the Congress. Certainly, the people of the Nation have expressed themselves vocally, articulately, and overwhelmingly in favor of a change from the existing system, and indicating a strong preference for the direct popular election of the President.

I am glad, too, that there has been provided adequate time for debate on the resolution and for debate on any amendments that will be offered, before we come to a final vote.

The dangers inherent in the present system are those factors that impel us to take action on electoral college reform at this session. I know that at the time the original Constitution was completed, in September of 1787, the delegates to the Convention had agreed upon a compromise insofar as the establishment of the electoral college is concerned.

We can recall that there was strong debate at that time as to whether or not the President should be elected by the House of Representatives, with each Member having one vote, or whether each State should have one vote. The great compromise was not between a direct popular election plan and some other system, but was between election by the States, each having one vote, and by the Members of the House. The compromise resulted in the establishment of the electoral college, which reflected both of those views—in other words, giving representation to each congressional district in the person of an elector, and giving two bonus votes to each State for the two Members of the Senate. This gave an advantage to the smaller States in that they got the two bonus votes, and reflected also the larger populations of the big States which are represented by larger delegations in the House of Representatives.

The system was intended to elect electors who would be popularly known, who would be leading citizens, and who would have the intelligence and the wisdom to select well-qualified men to be the candidates for President and Vice President.

The system never worked. The system never worked from the outset.

We know that this electoral college system results in the selection of electors, most of whom are unknown to the voters. When the voters go to the polling places on election day, they think they are voting for a President and a Vice President, but, in fact, they vote for nameless electors, who may or may not respond to their wishes in the election of the President.

Under the present system the result in the entire State determines the manner in which the electoral votes of that State goes. The winner takes all. This can, and has resulted in the winner of the most popular votes being defeated by a less popular candidate in the electoral college.

As a result of these obvious inequities, most members of the Judiciary Committee and, I am certain, the Members of this House, are determined to eliminate the existing system and give expression to what is the popular will of the people. It seems to me there is no way we can give expression to this popular will except to count each individual citizen's vote equally with that of every other citizen of the Nation.

With regard to the determination of popular will, earlier this year I took a poll of my constituents in the 12th district of Illinois on various subjects and found that of the 25,000 plus who responded, more than 75 percent favored the direct popular election of the President and Vice President. Only 14 percent favored the proportional system and a mere 5 percent favored the district plan. Further, in response to a questionnaire sent out by 40 other Republican Members representing some 16 million Americans, 80 percent of those answering favored election of the President by popular vote.

It has been argued, and it may be argued further in the course of these debates, that the small States were given some advantage by the original system, that this was the intention of the framers, and that they should retain this advantage. It will be argued also that the present system gives great leverage to bloc voters in the large cities and that those who hope to continue to enjoy this leverage will vote to retain the existing system.

There was testimony before the committee in behalf of both these ideas. But I say we are not charged here with favoring or giving special advantages to citizens living in the small States or in the large cities or in any States, but rather to give expression to the votes of every citizen in every State throughout the Nation.

As the Members know, in the course of the amending stage I intend to offer two amendments. One will be to reduce the minimum required plurality for election from 40 to 35 percent of the total popular vote cast. One reason for offering that amendment is to overcome the danger inherent in the proposed runoff elections. I have some studies on this subject made by an expert in the field of systems analyses, in the business of making projections through the use of computers. This expert has taken the existing historical facts with respect to third parties and third-party votes, and has attempted to project the likelihood of runoff elections based on various fact situations.

We know as an historical fact that Abraham Lincoln would not have been elected President of the United States by the popular vote system if we required the 40 percent minimum set out in the committee proposal, because he received only 39.8 percent of the popular vote.

Mr. MIKVA. Mr. Chairman, will the gentleman yield at this point for a question?

Mr. McCLORY. I yield to the gentleman from Illinois.

Mr. MIKVA. Mr. Chairman, I recognize that Mr. Lincoln did not receive 40 percent of the vote, but does the gentleman in the well know that the name of Mr. Lincoln did not appear on the ballots in some 10 States? Had his name appeared on those State ballots, it is quite probable that he would have picked up enough votes to go over 40 percent of the popular vote.

Mr. McCLORY. I am aware of that, but the votes cast for him were less than 40 percent of the total votes cast, and if we are going to consider the percentage of popular votes cast for President, then Mr. Lincoln received less than 40 percent. We know a number of other candidates have received just a shade above 40 percent.

At any rate, based on the history of our national elections, there is more than a remote chance that we will have a runoff if we retain the 40-percent figure proposed by the resolution before us.

Also it has been reported, and I think justifiably, that the direct popular vote system is going to increase the number of third-party candidates, and this could adversely affect the two-party system. It may well be that third parties will become more prevalent in the years ahead. My study has projected what would result if we doubled the frequency of substantial votes for third party candidates.

In that case, we find that, retaining the requirement for a 40-percent plurality, the chances for a runoff increase to 1 in every 18 elections. If, however, we are to reduce the required plurality to 35 percent, the chances for a runoff drop dramatically to 1 in every 167 elections.

The CHAIRMAN pro tempore (Mr. MONTGOMERY). The time of the gentleman from Illinois has expired.

Mr. McCULLOCH. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. McCLORY. Mr. Chairman, if we would take the same facts, except to say that the strength of third-party candidates will be great in five times as many elections, we find that at the 35-percent minimum plurality I propose, a runoff will occur only once in 100 elections. However, if we retain the 40-percent minimum, the chance of a runoff soars to 1 in every 11.9 elections. The likelihood of a runoff, and all the dangers inherent therein, are reduced immeasurably if we reduce the 40-percent requirement to 35 percent.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Did the gentleman run it through the computer to see how the runoff election would come out using 45 percent rather than 40 percent?

Mr. McCLORY. I may have that result later. Obviously the chances of a runoff would be greatly increased if we went to 45 percent. At 50 percent we would have it every time if there were any kind of third-party candidate at all.

As I stated in my additional views to the Judiciary Committee Report (H. Rept. No. 91–253): I believe that a 35-percent requirement would accomplish the twin task of preventing runoff elections and preserving the two-party system while at the same time providing a guarantee against the remote possibility of the election of a President who has only very minor national support. It would allow a third party to cause a runoff election only when it had itself risen to the stature of a major party—the only situation that appears to me to justify the cost and inconvenience of a runoff election.

The other amendment which I will propose would require that the constitutional plan for a direct popular election be submitted to State conventions for ratification rather than to the State legislatures. It has been argued here that the chances of ratification of this amendment are difficult inasmuch as approval by the State legislatures is doubtful. Some are not yet committed to the direct election system for this very reason.

While the distinguished chairman of the committee has pointed to the very convincing poll conducted by Senator GRIFFIN, of Michigan, I wish to point out that in May of this year the UPI released a survey which indicated that only 12 State legislatures would support the direct plan while 10 were going to oppose it, with 28 undecided. I believe we have to recognize that there is some validity in that poll, too.

We must further recognize the practicalities. We know the people are now overwhelmingly in favor of the direct election plan. We know also that members of State legislatures, due to their abilities and their distinction in their communities, often are elected term after term and that many are committed to a position in opposition to the direct election principle. It is clear to me that we would get a better expression of opinion with regard to the public thought from conventions than from the State legislatures.

I spoke earlier of the excellent poll taken by Senator GRIFFIN and I commend it to the Members. It was sent to legislators in the 27 States where difficulty in ratification was regarded most likely. While the results from those answering indicate approval of the direct election plan, a majority of those responding in eight States—with three others extremely close—predicted failure in their State legislatures. Only 13 rejections are required to defeat the amendment and we therefore must think long and hard with regard to our choice of method of ratification.

The CHAIRMAN pro tempore. The time of the gentleman from Illinois has again expired.

Mr. McCULLOCH. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. McCLORY. Mr. Chairman, I thank the gentleman for yielding further.

Congress was faced with a similar dilemma in 1932 when it approached the subject of the repeal of prohibition.

It was represented then that Congress could propose repeal but the State legislatures would not ratify the constitutional amendment. As a matter of fact, both political parties stated that they would not take that chance. They declared in their party platforms that they would vote a constitutional amendment for repeal of prohibition and provide that it be submitted to State conventions for ratification. There were extensive debates on the floor of the Senate with regard to the alternative modes of submitting a constitutional amendment and finally, the amendment was sent to State conventions. Within 10 months the people had spoken and prohibition was repealed. This was the second fastest ratification to date.

Let me point out that an amendment cannot be submitted in the alternative. We cannot say that it may be ratified by State conventions or by State legislatures. Article V requires that we submit it in one mode or the other.

It seems to me that this is another case where we should submit it to State conventions. Why do I say that? It is because I have grave doubts myself that three-fourths of the State legislatures would ratify the amendment.

There are 99 State legislative bodies involved. Just a negative vote in 13 could veto, and destroy all that we do here in behalf of the direct popular election principle. The people want the direct popular election. If we submit it to the States for State conventions the people electing delegates to the State conventions will insist that the delegates elected commit themselves and that they vote to ratify the direct popular election amendment.

One further point must be made in this connection. It has been argued that the convention method is time consuming and will delay ratification. The contrary is much more accurate. As noted above, the one time this method was used, it took only 10 months to ratify the 21st amendment. Indeed, those who propose the legislative method should be aware that at least 26 States are not scheduled to have legislative sessions during 1970. This delay would make it impossible to complete work on whatever proposal we pass in time for the 1972 presidential election.

It is my hope that we can adopt the two amendments I will propose, not for the purpose of interfering with the direct popular election, but in order to strengthen the chance of it being ratified and it being workable after its ratification by the people.

Mr. DENNIS. Mr. Chairman, will the gentleman yield to me?

Mr. McCLORY. I yield to the gentleman from Indiana.

Mr. DENNIS. It occurs to me, as I understand the position of those who are advocating the direct popular vote method that the thrust of their argument is that this is a popular measure. Yet under the district plan there always has to be a majority, either an electoral majority in the point session. Under the gentleman's proposal you can elect the President, as I understand it, with 65 percent of the people opposed. Even under the committee bill you can do it with 60 percent of the people opposed. Is that not correct?

Mr. McCLORY. May I say this in answer: We elected John Quincy Adams with 30 percent of the vote and we elected Lincoln with less than 40 percent and Nixon with 42 percent.

The CHAIRMAN. The time of the gentleman has expired.

(Mr. McCLORY asked and was given permission to proceed for 1 additional minute.)

Mr. McCLORY. What I am trying to emphasize here is that each individual should have one vote and that vote should be equal to that of every other individual in the Nation. I know that it has been difficult in years past when the popular vote loser has been the electoral vote winner. But I shudder to think of what would occur in our Nation today, if a popular vote loser, by 1 million or 2 or 3 million votes, would be declared the winner under the electoral college system. This same result could occur even with the district plan. I do not think we should take that chance in the consideration of this subject. I cannot support any other proposal than the direct popular vote plan.

Mr. DENNIS. Will the gentleman yield further for one moment?

Mr. McCLORY. If I have any further time.

Mr. DENNIS. I just want to suggest that when the gentleman says that in order to adopt his direct plan he needs to bypass the legislatures of the several States in order to go to this system, he is reinforcing the argument of those of us who feel that one of the defects of the direct plan is that it does bypass and ignore the several States. The gentleman underlines that argument.

Mr. McCLORY. I cannot agree. The State conventions made up of delegates selected by the people, will be making the final decisions. If the State convention method is authorized for ratifying the direct popular vote plan, then we will have the people themselves deciding that the people—and not presidential electors—shall elect the President and Vice President of the United States.

Mr. CELLER. Mr. Chairman, I yield such time as he may consume to the gentleman from Florida (Mr. BENNETT).

Mr. BENNETT. Mr. Chairman, I wish to congratulate Chairman CELLER and the other members of the Judiciary Committee for acting promptly in recommending to the House legislation calling for the direct election of the President and the Vice President. I have actively supported this concept since I first came to the Congress—over 20 years ago—and have introduced legislation continuously since that time to bring this

about. The qualified American voter needs no middleman in his selection for President. He needs no agent to cast his vote.

The direct election plan certainly is the best method of achieving one-man, one-vote citizen participation in government, and since each vote would count equally, it would encourage more people to vote. This is the cornerstone of our representative democracy.

Very little time needs to be spent establishing the fact that reform in this area is long past due. The events of the 1968 presidential election brought home clearly the unworkability of our present system. The two most widely referred to opinion polls—the Gallup poll and the Harris poll—show that 81 percent and 79 percent respectively of the American people want direct popular election of the President and the Vice President. The section of the country and the size of the community in which one lives does not seem to affect the positive support for this measure in these polls. And I see that the November 1968 Gallup poll shows that on a regional basis, no less than 78 percent of those in communities under 2,500 and over 1 million in population want this reform measure.

I have reviewed the bill's proposals, which were rejected by the Judiciary Committee in favor of direct election, and feel that none of them resolves all the problems inherent in our present system of electing the President and the Vice President. All three alternate plans—district, proportional and automatic—risk electing the candidate who did not receive the greatest popular vote and under each, the States would continue to cast the same electoral votes regardless of population changes occurring between decennial censuses, and regardless of how many people voted in each State. Also under each, the small States receive additional power because of the bonus two electoral votes. The widely discussed district plan—this plan preserves the electoral college and selects college electors on a congressional district basis—would encourage gerrymandering to achieve at least one vote for the minority candidate. The proportional plan—this plan would in each State allocate the electoral vote in accordance with the proportion of votes cast—although taking away from the large States their advantage under the "winner-take-all" system, which allows their majority vote in each State to eliminate large minority voting, would encourage splinter parties in each State, thus requiring many second elections. The automatic plan—this plan would abolish the electors, but retain the electoral vote and cast it for the winner in each State—would compel the "winner-take-all" system writing it into the Constitution.

I am confident that on this matter the American people will rise above provincialism in order to have the opportunity, for the first time, to vote directly for the President and the Vice President. Passage of this legislation will bring about a new era in our electoral system, and we will show our faith in the ultimate judgment of the American people.

Mr. CELLER. Mr. Chairman, I yield to the gentleman from New Jersey (Mr. RODINO) 5 minutes.

Mr. RODINO. Mr. Chairman, first of all, may I also join with my colleagues on the Committee on the Judiciary in extending my congratulations for the commendable efforts of the chairman of this committee, together with the ranking minority member (Mr. MCCULLOCH), who worked laboriously and diligently over the 10 days during which these hearings were conducted and during the time during which the article was considered in executive session, which also took 6 days. I know the chairman and the ranking minority member were eminently fair in giving of the time needed and afforded to each member in order adequately to address themselves to this very important amendment. Many people appeared before the committee expressing their pros and cons.

Mr. Chairman, may I say after all this deliberation I was very happy to join as a cosponsor of House Joint Resolution 778 out of a deep conviction that the enactment of a system of direct election of the President and Vice President is urgently essential now.

There are many compelling reasons favoring the enactment of this legislation. The American Bar Association report of 1969 for instance characterizes the present system as "archaic, undemocratic, complex, ambiguous, indirect, and dangerous." This of course was not a conclusion reached without very, very much deliberation, studies, and research of this very vexing and perlexing problem. However, two principal reasons stand out and while either is sufficient unto itself—when combined they make passage of this resolution imperative.

The first reason why a system of direct elections should be instituted is because such a system is based on the soundest and most equitable principle that we can possibly apply in our democracy—the principle that each man's vote shall be equal. There is not the slightest doubt that the implementation of this principle in presidential elections is necessary to perfect our democracy by removing the glaring defects of the present system. The defects under which we now labor cannot be disputed. The present sytem contains the insidious possibility of deadlocks and vacancies in the Presidency of uncertain duration. It also allows for a gross departure from democratic principles in that it permits electors to cast votes in disregard of the wishes of their constituents, making therefore the vote of an individual a useless and futile action.

At the same time, the most gaping inequity of all lies in the possibility that the people of the United States will have a President who has been elected on the basis of votes which are not proportionate to the population and do not reflect the wishes of the majority or possibly even a plurality of the American people.

Given these archaic and inequitable features of the present system, our obligation as Members of Congress is clear. We owe it to our people and to our democracy to remedy the defects by substituting the fairest possible system—one that makes each man's vote count as much as another's. Only the direct election plan embodied in this resolution does that.

Mr. Chairman, for considerations of fairness and equity alone, we have an obligation to pass this resolution. This obligation would exist even if our present society was functioning in great harmony and under ideal conditions—even if our country and its democratic institutions were not being threatened from divisive forces within and enemy forces abroad. However, a second, perhaps more urgent reason for adopting this resolution. The harsh reality of our times is such that we simply cannot afford to have our Nation torn asunder by constitutional crises which can arise under the present system.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

Mr. CELLER. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. RODINO. Mr. Chairman, that system is no longer simply archaic, it is now clearly dangerous. Once was a time when we could leisurely read histories of past presidential races and note with intellectual disfavor the three instances when popular vote losers were electoral college winners; or when a congressional-appointed commission decided the 1876 winner; or when this body on two occasions "elected" Presidents.

If such an aberration were to occur now, and we all know in our bones that we courted one only last year, the question would be more than academic—more than a principle of democracy. In fact, under present conditions I fear that the question would be in the streets, and the House would have an impossible job of imposing a President upon the Nation—even if the House could finally come to an agreement upon who that President was to be.

Mr. Chairman, if we grant the two major reasons that I have spelled out—that this resolution embodies the fairest presidential election plan and that the present system is dangerous—then I think we can readily answer the small but vocal opposition. Those who rely solely on tradition for their opposition need only be reminded that we now number as a nation over 200 million people, and their wishes in a national election cannot be left in the capricious hands of unknow electors. Those who claim that direct election will destroy federalism need to be reminded that only when voting for President are voters in America denied a democratically direct vote.

All local, State, and congressional contests are decided by direct elections, and often by subsequent runoff elections. Such practices at every level of government have certainly not destroyed federalism and neither will election of our national leader. In fact, the protection of intrastate interests and State interests at the national level lies with the House and Senate respectively—two bodies whose Members are directly voted into office.

And finally, there are those who say that the small State advantage would be wiped out and therefore all the smaller States will fail to ratify this constitution-

al amendment. Recognizing that this question can only be firmly settled by the ratifying action of State legislatures, there appear on the horizon no indications of small State hostility. Two pieces of evidence, in fact, point toward small State favorable receptivity toward direct election of the President. The State of Delaware along with 12 other States brought court action against the present electoral system, and congressional polls specifically aimed at small State legislators have uncovered no greater minority opposition than in the larger States. The opposite conclusion, that now is precisely the time to submit a direct election plan to the States, seems to me better indicated.

Mr. Chairman, with the present system outmoded and dangerous, with the fairest and most logical system embodied in the resolution before us, and with a social climate that precludes further delay, I urge this House to overwhelmingly pass this historic constitutional amendment.

Mr. Chairman, I yield back the balance of my time.

(Mr. BROOMFIELD (at the request of Mr. McCULLOCH) was granted permission to extend his remarks at this point in the RECORD.)

Mr. BROOMFIELD. Mr. Chairman, I rise in support of House Joint Resolution 681 as reported by the Committee on the Judiciary to abolish the electoral college and provide for direct popular election of the President and Vice President.

We have an opportunity this week to continue the process toward a necessary and historic change in our national election system and at the same time take a step that will reinforce the confidence of the American people in the responsiveness of their Federal Government.

As the sponsor of House Joint Resolution 128 which is very similar to House Joint Resolution 681 and as the author of identical proposals in each of the last several sessions of Congress, I have been impressed and encouraged by the great number of electoral reform measures introduced in the 91st Congress.

They reflect the intense and overwhelming interest of the American people in affecting a meaningful change in the electoral system, hopefully by 1972.

The Judiciary Committee merits the highest commendation for its recognition of this concern and for its thorough, yet expeditious consideration of the broad range of reform proposals with which it was confronted.

The committee's approval of House Joint Resolution 681 by a conclusive vote of 29 to 6 is testimony to the tireless efforts of Chairman CELLER, Representative McCULLOCH and all of its other distinguished members.

There is no question in my mind about the need for fundamental reform of the electoral college system.

Realization that the American concept of popular presidential elections rests more on myth than constitutional guarantees has distressed many of us for a long time.

The 1968 election campaign crystallized that concern in the minds of a great many more.

For years voters have marked their ballots for a presidential candidate in the belief that they were, in fact, casting a vote for that candidate.

In reality, of course, they were voting for a slate of electors pledged to vote for that candidate in the electoral college. But there was and still is no enforceable constitutional requirement that electors actually vote for the candidate to whom they are pledged.

That point was underscored last December by a North Carolina elector, pledged to President Nixon, who chose to cast his ballot instead for third-party candidate George C. Wallace.

Many specific remedies have been proposed for this specific problem, chief among them the so-called automatic electoral vote plan which would abolish the office of elector but retain the electoral votes of each State.

While this solution would deal with the problem of the "faithless elector," it would not treat the other fundamental deficiencies in the electoral college system.

Another equally distressing misconception is that the candidate who receives the most popular votes will always be President. That, of course, is equally dependent on circumstance and chance.

There is the perpetual possibility that a candidate may be elected President even though he does not get as many popular votes as his nearest rival. In fact, this circumstance benefited John Quincy Adams in 1824, Rutherford B. Hayes in 1876, and Benjamin Harrison in 1888.

The 1968 election marked the fourth time in this century alone that the anachronistic workings of our electoral college system threatened a clear-cut choice in a presidential election.

George Wallace's assertion that he might bargain his electoral votes if neither of the major party candidates obtained the necessary majority demonstrated again how susceptible the electoral college is to abuse.

In multicandidate elections in 1912 and 1948, as in 1968, shifts of only a few votes per precinct in key States would have deprived the eventual winner of victory and thrown the election into this body.

In 1960, similar shifts could have reversed the electoral college results and elected Richard M. Nixon even though he received fewer popular votes than John F. Kennedy.

This winner-take-all procedure has the effect of canceling all of the popular votes received by any other candidate no matter how close the popular election may be.

A number of proposals have been advanced which would abolish the electoral college, but retain the electoral vote, allocating it either proportionately by popular vote, or by voting districts.

But with each of these proposals, as with the automatic plan, the possibility remains—although diminished somewhat—that a candidate who failed to win a majority of the popular vote could be elected President.

House Joint Resolution 681 eliminates that possibility by providing for the direct popular election of the President and Vice President.

In addition, it removes this body once and for all from the responsibility of electing a President in the case of an impasse in the electoral college with the further potential for deadlock here.

It accomplishes this by providing for a runoff election between the top two vote-getters if neither receives at least 40 percent of the vote.

Possibilities for abuse of the electoral system are reduced but not eliminated by proposals for proportional electoral voting or electoral voting by district.

Under most proportional distribution systems electoral votes would be awarded according to the popular vote received by each candidate in each State.

But unless the electoral votes are fractionalized—which poses further complications—the system lacks precision, especially in the smaller States. For example, in a two-candidate contest in a State with four electoral votes, a candidate would need nearly 63 percent of the popular vote for the electoral votes to do anything but split evenly.

Most district electoral voting plans would award one electoral vote to the popular vote winner in each district with a bonus of two votes to the statewide winner. But the bonus votes would preserve the same degree of overweighted representation for the small States that is contained in the present system.

In view of all of these considerations, the direct popular election plan is the most desirable in the minds of most Americans. President Nixon has said he favors it as have a great many Members of this and the other distinguished body.

It has the endorsement of a long list of private organizations including a commission of the American Bar Association and nearly 80 percent of the voters, according to public opinion polls.

Questions remain, however, about which plan is most likely to be accepted and ratified by three-fourths of the States as required by the Constitution.

In my view, the direct election plan stands a better chance than any of the other three basic choices.

The overwhelming public support for the plan as revealed in virtually every opinion survey cannot be dismissed.

Moreover, a survey conducted recently by our distinguished colleague in the other body, the Honorable ROBERT P. GRIFFIN, revealed surprisingly strong support for the direct election plan among the State legislatures of the 27 States thought most likely to oppose it.

Sixty-four percent of the nearly 4,000 State legislators who responded to the poll said they favor the direct election proposal. Only two of the 27 States indicated they would oppose it.

The surveys were conducted in States with the smallest populations and in those thought most likely to object to the direct election plan.

The electoral college served in its time. It was designed as an elite body which would rationally debate the merits of presidential candidates and pick the best man. Making that choice was not a task trusted to the ordinary voter in the early days of our country.

Great changes have taken place in the last two centuries and there is broad agreement that the need to protect the system from the voters has long since past.

Our challenge today is to find ways of making the system more responsive to the wishes and needs of the ordinary voter. I believe House Joint Resolution 681 best meets that challenge.

In this day of monumental national problems, instant communications and a need for the widest possible national consensus, our goal must be the election of a President and Vice President by the most direct method possible.

Mr. McCULLOCH. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio (Mr. WYLIE).

Mr. WYLIE. Mr. Chairman, I had not intended to present my statement today. I thought I might wait until after other Members, favoring a district plan, or a proportional plan, present their arguments. I know the gentleman from Indiana (Mr. DENNIS) will argue for a district plan. The gentleman from Virginia (Mr. POFF) has a plan. The gentleman from Louisiana (Mr. BOGGS) favors a plan which would eliminate the faithless elector and retain the present winner-take-all system, I believe.

However, I have been offered some time now to present my plan, and I am glad for the opportunity. I appreciate the gentleman from Ohio (Mr. McCULLOCH) yielding me this time.

Mr. Chairman, following the last election almost everyone agreed that the time for reform in the method of electing the President and Vice President had come. We were all wrung dry from anxiety on election evening when it seemed that we were on the brink of a constitutional crisis.

We came dangerously close to having the election of the President and Vice President thrown into the House, where a decision might not have been made. Then, the selection of the Vice President would have been made by the Senate, and he would have acted as President for a time.

Yes, we are all agreed, I think—every Member of the House is agreed, perhaps every Member of the Senate is agreed—that the time has come for some change and we, as representatives of the people of this great country should be innovative in proposing change. We should present ideas for the change which will have a chance for approval by the people of the United States.

We do not want to perpetuate the electoral college, the faithless elector, or the system of electing by the House—and maybe even electing by the Senate. Most people seem to prefer the direct election plan. But most is not enough. In a UPI survey reported on February 6, 1969, 46 Senators were willing to vote for a direct popular election plan, and indeed committed themselves to do just that.

Eighteen Senators supported a proportional plan. Twenty-six said that they would vote for a district plan. That adds up to 90.

Even if the other 10 who did not indicate a preference voted for a direct election plan that would only be 56—and that is not two-thirds of the Senate, and we must have at least a two-thirds vote in the House and Senate before a plan can be submitted to the States.

Now I doubt, therefore, any plan including the direct election plan has two-thirds of the Senate. I say that additionally because only recently the Senate Subcommittee on Elections adopted a resolution which would provide for a district plan. Back on February 24, President Nixon in his message to the Congress indicated that he preferred a direct election plan, but felt it could not win the approval of at least three-fourths of the States. We may find ourselves in a situation where it matters not what we do in the House, for no method will pass by the required two-thirds vote in the other body.

So the argument goes. I have tried to think of a procedure or method by which we could get two-thirds of the Members of Congress to adopt something which could be submitted to the States to determine how the States feel. I do not want to get into the position of not adopting anything in this Congress and saying to the people of the United States we have reached an impasse. We could not get two-thirds of the Senate or two-thirds of the House and that no plan is being submitted to the States.

So I conceived a method which would in effect be a two-step constitutional amendment procedure. The first step would amend article V of the Constitution to accommodate the submission of four plans to the States and the States could then select from any one of those four plans their plan for election of the President and Vice President.

The four plans would be a direct popular vote plan which is proposed in the resolution now before us; the electoral vote by congressional district, which will be offered I understand by the gentleman from Indiana (Mr. DENNIS); the proportional vote plan, which I understand will also be submitted; and a continuation of the present plan which has been offered by the gentleman from Louisiana (Mr. BOGGS) eliminating the office of elector.

Now my bill would suggest that each of these four plans be submitted to the States for consideration and the first one to receive the approval of three-fourths of the States would be adopted as a constitutional amendment for the election of President and Vice President.

By this two-step procedure, the States can say, "Yes, we want an amendment in the first instance, we think there should be a change," adopt that portion of the resolution and hammer out the kind of election plan they want later on.

To me this plan is completely fair. It gives the States a choice. We are not saying to them, you either vote yes or no on the plan which we, the Members of Congress, submit to you. We are urging that this is the time for a change. Yet, at the same time we are not saying that it must be our way or nothing at all. We are accepting our responsibility and providing a vehicle for necessary change. I have given the idea a great deal of thought—and it is the idea that I am offering. I am not wedded to any plan. I trust the idea has sufficient merit that it will meet with the approval of the Members of the House.

Mr. WIGGINS. Mr. Chairman, will the gentleman yield?

Mr. WYLIE. I yield to the gentleman from California.

Mr. WIGGINS. I would like the gentleman to comment on the argument that has been made that your proposal would require an amendment to article V of the Constitution, in that it proposes a new way for amending our Constitution. It has been said that the gentleman's amendment, in effect, delegates the power which is reserved to the Congress and gives to the States the power to propose amendments as distinguished from reserving that power.

Mr. WYLIE. I thank the gentleman for propounding that question, because I evidently did not make it clear. My amendment proposes a two-step procedure.

Under present article V of the Constitution, submitting four plans to the States might not be possible. Therefore, this two-step procedure is offered, article V of the Constitution would be amended to accommodate the submission of four plans, and that would come as a first step. In other words, if my amendment were adopted, article V would say precisely that any one of the four plans could be adopted by the States. It would be a special type of amendment to allow for this special type of situation.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. WYLIE. I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Do I correctly understand the gentleman to say that we would have to amend the Constitution first before the States could consider the four plans which the gentleman has proposed?

Mr. WYLIE. Under the resolution which I submitted, and under the substitute bill which I will offer to the House, both steps are in the same resolution, so that we would vote on them simultaneously and, indeed, the States could do the same thing.

Mr. ROGERS of Colorado. Once they are submitted to the respective State legislatures, would the State legislatures be permitted to adopt one, two, three, four—all the plans—or must they adopt only one?

Mr. WYLIE. A State would be permitted to adopt only one plan or none at all. It could say, "We think the Constitution ought to be amended, and we will go along with amending the Constitution, but we are not ready yet to say which plan we prefer." On the other hand they could say, "We are not for changing the Constitution on presidential elections, but, we will select a plan, and protect ourselves on the outside chance the Constitution will be amended."

Mr. ROGERS of Colorado. In other words, if the State of Ohio should adopt one plan and my State should adopt another, and by the time all the States got through the process of acting on the question of adoption no plan had received anything close to three-fourths of

the vote, would you permit my State to change its position and follow what the State of Ohio did, under your proposal?

Mr. WYLIE. Yes, I have made provision in my amendment so that any State can change at any time until one plan receives approval of three-fourths of the States.

Mr. ROGERS of Colorado. That is, my State might adopt one, two, three, or four of the plans, changing it around, with the hope that you can get a three-quarters vote of all the States?

Mr. WYLIE. That is correct. A State could adopt a plan. For instance, it could adopt the proportional plan, and later determine that the district plan is getting more votes and the direct plan is getting still more votes than that, and it might want to decide between those two. Until such time as three-fourths of the States adopt a plan, a State could adopt an alternate plan.

Mr. ROGERS of Colorado. In other words, a State legislature would be free to choose and dispose at its pleasure until three-fourths of the States got together on a plan.

Mr. WYLIE. That is correct.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. WYLIE. I am glad to yield to the distinguished chairman of the Judiciary Committee.

Mr. CELLER. In contemplating your plan, I am free to confess that we Members of Congress would abdicate our authority, would we not? We would sort of dump it into the laps of the States. Is it not our duty to present a plan to the States rather than plans? Your theory envisages four plans, as I understand it. Would we not sort of abdicate our responsibility through such action?

Mr. WYLIE. Mr. Chairman, I think that is a very excellent question, but I feel the opposite. I think our primary responsibility is to offer a plan to the States. I think we are demonstrating to all the States that we do not want to take the chance that one plan which might receive a two-thirds vote in the Senate after a two-thirds vote in the House, if that be the direct election plan, that three-fourths of the States are sure to adopt it. Especially, when there is doubt that the direct election could receive approval by three-fourths of the States.

What I am saying is, with this evidence before us, we want to be certain to meet our responsibility and provide a vehicle so that the States will have an opportunity for amendment, if they want it. I think the argument goes the other way. Rather than abdicating our responsibility, I think we are saying we, as Members of Congress, do have strong preferences but we are more desirous of effecting the necessary change.

Mr. CELLER. Has there been any precedent for something akin to the idea offered by the gentleman; namely, those three or four prongs in the proposal? Has that ever been done before?

Mr. WYLIE. Not that I am aware of, sir. When I testified before the Committee on the Judiciary a similar question was asked, and I am not prepared for it at the time. It concerned a so-called Daniel amendment which was offered in 1956. But that plan provided that one State could adopt a proportional plan and another State could adopt a district plan. That would only serve to confuse the whole issue.

Under my proposal all the States would be governed by the same plan. It is not the same, and I do not think any similar proposal has ever before been offered.

Mr. CELLER. Mr. Chairman, I yield to the gentleman from Colorado (Mr. ROGERS) such time as he may consume.

(Mr. ROGERS of Colorado asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. ROGERS of Colorado. Mr. Chairman, although I join in the committee report and support the proposed new article of amendment providing for the direct, nationwide popular election of the President and Vice President, I do have a serious reservation concerning the wisdom of requiring only a 40-percent plurality of the national popular vote to elect the Chief Executive of the United States.

No convincing demonstration has been offered in either the course of the committee hearings or in the majority report to rationalize a 40-percent plurality requirement. If 40 percent, why not 30 percent; or 20 percent?

Only a majority requirement would furnish unequivocal evidence of a national mandate and would completely dispel the possibility that the candidate elected was a minority choice. By meeting the requirement of a majority of the popular vote, the successful candidate would not only overcome the vote of his nearest competitor, but also would have the support of more voters than all other candidates combined. We are told, however, that under a direct election system a majority requirement will precipitate runoffs, that the first or general election will come to resemble only a primary, and that runoff elections will be commonplace. It is prophesied that this, in turn, will encourage and strengthen splinter parties, who will be able to postpone making accommodations with major party candidates until after the first election. It is difficult to disprove such speculations—or prove them, for that matter. However, I am mindful of the practical problems that two elections for President every 4 years would entail. I also share the desire expressed in the majority report to make resort to contingent election machinery the exception rather than the rule. I am further persuaded that a majority requirement under a direct popular election system might unduly increase the likelihood of runoff elections.

Although I am willing to dispense with the majority requirement, I find no justification for the 40-percent plurality requirement of the proposed new article. Proponents say that 40 percent is a figure low enough to preclude runoffs, yet high enough to furnish a national mandate. Of course, the lower the required plurality, the less likelihood a runoff—but it does not follow that a President can successfully govern this Nation when almost 60 percent of the national electorate has refused to support him. I am of the opinion that the 40-percent figure fails to insure a broad enough mandate for a President to govern. Traditionally, we have required that a President be elected by a majority, albeit a majority of electoral votes. The fact of the matter is that in the overwhelming number of the 46 presidential elections held to date, the successful candidate polled more than 45 percent of the national popular vote. Indeed, in 26 of the last 29 presidential elections—1856–1968—the winning candidate received a plurality in excess of 45 percent of the popular vote.[1] Thus, the 45-percent plurality requirement which I recommend incorporates our most recent historical experience as a future norm. In the 1968 presidential election, for example, a requirement of a 45-percent plurality would have resulted in a runoff election. This result, I believe, would have afforded the people an opportunity to register a clearer choice between the two leading candidates.

The committee resolution embodying the direct nationwide popular election system is a long overdue reform of our antiquated and potentially dangerous system of choosing our Chief Executive. I would prefer, however, that the proposed new article of amendment require a 45-percent plurality, as being more directly reflective of the people's will and more consistent with this Nation's actual past experience in presidential elections.

Mr. CELLER. Mr. Chairman, I yield to the gentleman from Massachusetts (Mr. BOLAND) such time as he may consume.

Mr. BOLAND. Mr. Chairman, I rise in support of this proposed constitutional amendment calling for the abolition of the electoral college—a dangerous and antiquated institution that was of questionable value even when it was created nearly 200 years ago.

This legislation, substantively identical to a bill I introduced the first day of this Congress—proposes direct popular elections among presidential and vice-presidential candidates linked together on national tickets.

The need for abolition of the electoral college is clear and pressing: every 4 years the American people run the risk of being thrown into a constitutional crisis that could threaten public confidence in the basic processes of government. For almost 200 years the election of the President has been carried out through the use of the electoral college system. The harrowingly close elections of 1960 and 1968 have again raised a number of longstanding questions about the value of a system that is so capable of distorting or betraying the very will of the majority. The present electoral college system is open to valid criticism, but the problem is far from simple.

The actual working of the Constitution appears to have departed far from the intentions of its framers as to the provisions for electing the Chief Executive. The Constitution's draftsmen displayed great foresight but they could not know that the development of organized political parties and the development of a

[1] The three exceptions were: Abraham Lincoln, 1860 (39.78); Woodrow Wilson, 1912 41.85); Richard M. Nixon, 1968 (43.40).

literate and informed electorate would so change their conception of the role of elections.

In essence, as Prof. James E. Kirby has stated, we have subjected ourselves to an "ox-cart method of selecting space-age Presidents." The prospect of an indecisive election, serious enough in the 19th century, has become wholly unacceptable in the 20th when a nation of great power and worldwide responsibility demands continuity in the Executive leadership.

A product of compromise, the electoral college was settled upon at the Constitutional Convention only after much discussion. Although more than 15 proposals for electing the President were presented to the Convention, one of the most frequently suggested was a plan entailing election by Congress. Fear of an Executive dominated by the legislative body as well as fear of cabal and intrigue brought rejection of this method. Deadlocked on this and other proposals—among them a direct election plan advocated by James Madison—the Convention devised the electoral college as a method most acceptable to the people. The plan was devised by men who envisioned a system under which persons of the highest caliber would be chosen as electors. The founders contended that it was impossible for the people to know the candidates, reinforcing the hesitancy expressed by Elbridge Gerry to subject the election of the President to the "ignorance of the people."

Yet the men designated as electors today function for the most part under a cloak of anonymity. In fact, in 35 States no attempt is made to inform the voters just who is representing them. Instead, these States use what is referred to as "the short ballot" listing only the names of the party candidates. Only 14 States place on the ballot with the candidates the names of all the electors pledged to each. Alabama prints only the names of the electors.

Stemming from compromise between large and small State factions, the electoral college gave something to both. All States, regardless of size, received a minimum of three electoral votes, corresponding to the two Senators and one Representative to which they were entitled. The large States won the right to have the element of population recognized, since the assignment of electoral votes depended on the size of the State's representation in the House. Small States were given assurance that, providing no candidate received a majority of the electoral votes, the House would select the President with all States having equal voting power; that is, one vote each.

While small States today may express fear at relative loss of power without the electoral college, we need only mention the 1968 election, as in other recent elections, where even with the electoral college system, most of the emphasis of campaigning focused on the larger States that have the power to throw large blocs of electoral votes to one candidate or the other.

Throughout previous elections numerous instances have occurred in which all electoral votes of large States were cast for a candidate who won only by a small majority or plurality. For example, elections in which the national outcome depended on a single large State are legion: a shift of 2,555 votes in New York could have reversed the electoral college outcome to make Henry Clay President instead of James K. Polk in 1844. In 1880 Winfield S. Hancock would have been made President instead of James A. Garfield if there had been a vote shift in New York of 10,517 votes. A shift of 575 votes in New York during the election of 1884 would have made James G. Blain President instead of Grover Cleveland. In 1888 a shift of 7,189 votes in New York could have changed the electoral vote to favor Grover Cleveland instead of Benjamin Harrison—Cleveland actually won a popular vote plurality but lost in the electoral college vote. A California shift in the election of 1916 of 1,983 votes would have made Charles Evans Hughes President instead of Woodrow Wilson, although President Wilson still would have had a half million more popular votes.

Under the present system a candidate can win the Presidency by concentrating on and winning the electoral votes of 11 large States plus one small State. The electoral votes of New York, California, Pennsylvania, Illinois, Ohio, Texas, Michigan, New Jersey, Florida, Massachusetts, and Indiana total 268. Only one more State with 12 electoral votes would be necessary to win with the required 270.

On the other hand it is of interest to note that the five smallest States, with one Representative each and a combined population of about 1,700,000, would have the same voting power as the five largest States, with a total of 154 Representatives and a combined population of 64 million, if an election were thrown into the House. The 26 smallest States, with 76 Representatives and a total population of about 31 million, would thus be able to elect the President.

The means whereby all of a State's electoral votes go to the candidate polling the largest vote, even when that vote is only a plurality, exaggerates concentration on the large-population States with their large blocs of electoral votes. This winner-take-all approach is responsible for the discouragement of political activity in States considered safely in the pocket of either major party and leaves the door open for a President to be elected who has received fewer popular votes than his leading opponent. The winner-take-all procedure, in effect, disenfranchises voters on the losing side by giving their votes to the candidate they opposed.

In the "winner-take-all" approach a candidate's popular vote is isolated in one State from those cast for him in another State. For example, in 1960 John F. Kennedy received 2,377,846 popular votes in the State of Illinois while Richard M. Nixon received 2,368,988 votes. The late President received all the electoral votes in Illinois. Nixon received the 13 electoral votes in Indiana where he obtained 1,175,120 popular votes and Kennedy, 952,358 votes. Although Mr. Kennedy received more than two-thirds of the combined electoral votes of the two States, Mr. Nixon actually received a substantial majority of the popular votes cast.

This disproportion between the popular vote and the electoral vote is to be found in every presidential election. For example, in the 1964 election, President Johnson received 61.1 percent of the popular vote, or 43,128,958 votes, yet Mr. Johnson received 486 electoral votes to Mr. Goldwater's 52. In 1944 Franklin D. Roosevelt received 53.4 percent of the popular vote and 81 percent of the electoral vote. In 1936 Alfred M. Landon received 36.5 percent of the popular vote and only 2 percent of the electoral vote. In 1912 Woodrow Wilson received 41.9 percent of the popular vote and 82 percent of the electoral vote.

The fact that a State's electoral votes remain the same regardless of voter turnout is highly significant. Thus, in the 1964 election with the total popular vote cast in New Jersey substantially more in number than that cast in Texas, the winning candidate in Texas received 25 electoral votes while the winning candidate in New Jersey was awarded only 17 electoral votes. In that same election, the three electoral votes in Alaska were decided by 67,259 votes at a ratio of one electoral vote for every 22,419 voters. In the same election, New York citizens voted at a ratio of one electoral vote for every 166,657 voters with 7,166,275 people casting ballots.

These are the sorts of problems with which the American people are confronted every time they vote for the President. If the people fail to cast a decisive presidential vote on election day, a constitutional crisis could very well follow the balloting in the electoral college. With no candidate receiving the majority of the electoral votes, selection of the President would be forced upon the House of Representatives. The possibility of such a crisis is increased by the strength of a third party candidate, whose momentum is capable of upsetting the machinery of the college. This submits the electoral college to the level of bargaining—giving a third party the balance of power.

These inequities in the present system have underscored the necessity of fundamental changes in the election process. If we are to have fair presidential elections we must focus on the elimination of the undemocratic and complex system that exists. This need for reform is magnified by the perpetual risk of deadlock—a risk heightened by the emergence of third party movements and the use of uncommitted electors in recent years.

This danger has become a reality twice in American history in 1800 and 1824 when electoral deadlocks have placed the election of the President in the House.

While in 1800 it was generally assumed that the Democratic-Republican electors were voting for Thomas Jefferson for President and Aaron Burr for Vice President, this was in no way specified on their ballots. The Constitution prior to this time provided that each elector should vote for two candidates, the one receiving the highest number of votes to be declared the elected President, the next highest, Vice President. With a tie of 73 votes for Jefferson and 73 for Burr, the House took 36 ballots to choose be-

tween them. Jefferson was elected President only after arduous and vociferous debate. By the time of the next election the 12th amendment had been ratified, providing that electors cast separate votes for President and Vice President.

The electoral college again deadlocked in the election of 1824 when John Quincy Adams, Andrew Jackson, Henry Clay, and William Crawford vied for the presidency. When thrown into the House the election went to Adams; in this instance he was the candidate receiving the second highest number of popular and electoral votes.

In the recent presidential elections of 1948, 1960, and 1968, the college was again threatened with deadlock. In 1948, the Dixiecrat Party and the Progressive Party siphoned off enough normally Democratic votes to cost President Truman the States of New York, Michigan, and Maryland. The switch of only a few popular votes in California and Ohio would have put those States' electoral votes in another column and deadlocked the college.

Dissident Democrats in 1960 ran slates of uncommitted electors in the Deep South, and these slates were successful in Alabama and Mississippi. With the popular vote split more closely than ever before in history, the switch of fewer than 5,000 votes in Illinois and Missouri would have required the House to pick among John F. Kennedy, Richard Nixon, and Virginia's Senator HARRY BYRD, who received the votes of the uncommitted electors.

Just how close the Nation came to an electoral deadlock in 1968 is evident from an examination of the returns. With 270 electoral votes needed for victory, Richard Nixon received merely 302. The shift of a relative handful of popular votes in Illinois, which gave him 26 electoral votes, and Missouri, which gave him 12, would have produced the deadlock. Only through Mr. Nixon's capture of a clear-cut majority of electoral votes was a major political crisis averted.

Although electors normally cast their ballots for their State's winner, most are not required to do so. In only 17 States and the District of Columbia are electors bound to vote for the winner. Only in three of these States, Florida, New Mexico, and Oklahoma, are penalties provided for electors who choose not to do as instructed. However, the Constitution appears to leave the electors as free agents, and it is highly questionable whether these instructions and laws have any real meaning or could be enforced. The issue has never been adjudicated.

As long as the elector retains the constitutional power to exercise his own judgment, the voter reckons with the eventuality of disfranchisement. Voters who cast a ballot for candidates who do not carry the State are disfranchised at the State level in the sense that their ballots do not figure in the national tabulations. Under the winner-take-all rule, the candidate who carries a State, no matter how small his popular vote margin, receives that State's total electoral vote. The relatively high voter turnout in pivotal States may flow in part from the mathematics of this disfranchisement. When the voter believes he has the chance to influence the selection process, then he will go to poll.

For most citizens the electoral college is a meaningless institution which only confuses the presidential election process. Often the voter is unaware that his vote is one cast for electors and that he is not voting directly for President.

What alternatives are there to the present electoral system? Three basically different proposals have been developed and examined in great detail as possible replacements. They are: the district plan under which presidential electors would be chosen by congressional districts with two statewide at-large electoral votes going to the candidate who wins the popular vote in the State; the proportional distribution plan under which a State's electoral vote would be divided among the candidates in proportion to each candidate's share of the popular vote; and the direct election plan—the plan now before us—under which the winner of a majority or a substantial plurality of the popular vote would be elected President.

Under either the district or the proportional plan it would still be possible, as it is now, for a candidate to win the popular vote and still lose the electoral vote and therefore the Presidency. This is the fundamental weakness of both of these plans, although they have other serious shortcomings which make me wonder if either of them would represent very much of an improvement over the system now in use.

This is not true of the direct election plan. This resolution does away with the electoral college, electoral votes, and, of course, the electors themselves and provides quite simply and straightforwardly that the people of the States and the District of Columbia shall vote directly for the President and the Vice President. The people would cast one ballot for the candidates of their choice, who would be required to join their names and run as a team so that there could be no confusion about who was running for President and who for Vice President. The State legislatures would keep the powers they now have to prescribe the places and manner of holding the election, and all persons qualified to vote for Members of Congress would be entitled to vote for the President and his running mate. A State could, if it wished, relax its residence requirements for voting for President, and Congress could, if the necessity arose, approve legislation requiring uniform residence and age requirements for the presidential vote.

The pair of candidates with the greatest number of votes shall be declared, respectively, President-elect and Vice President-elect if they have received at least 40 percent of the total number of votes cast. In case no team of candidates wins a majority or the 40-percent plurality, Congress must provide by law for a runoff election between the two pairs of candidates who received the greatest number of votes.

The unanswerable and overwhelming argument in favor of direct election is that it is the only plan that would always guarantee that the choice of the people, as expressed in their votes, would be elected President. Every vote throughout the entire United States would carry exactly the same weight and have exactly the same value as every other vote. This, to me, is democracy in action.

There are other very practical and compelling reasons which make the direct vote alternative so attractive. Words and phrases like the big States, small States, and key States that are now so important at election time would no longer have any special significance. Carrying the States as such would have no particular value because it would be the separate vote of every individual that would count. For this same reason the parties would no longer feel required to rely so heavily on the big States for their candidates.

Opponents of direct election have argued that it would damage the two party system at the grassroots level. In my opinion it would have exactly the opposite effect, especially in those areas where the reinvigoration of a party is most needed—areas which have long been dominated by one party. Under the present unit electoral vote plan there is certainly little incentive for a weak party in a State to bestir itself. It cannot carry the State anyway, so why do any work. But under direct election this would not be relevant. The strength of a party would be precisely recorded everywhere in the Nation, and votes within a State for a losing candidate would not be thrown away, as they now are.

Another argument we sometimes hear is that direct election would lead to a proliferation of political parties. As a strong believer in the two-party system I would be very much concerned about this possibility if I thought this argument to be valid. Frankly, I do not think it is. Members of the House and the Senate, Governors, and other statewide officials have long been elected by direct vote without causing a multiplication of parties. The people are not particularly anxious to waste their votes on parties and candidates that have no chance of winning, and the 40-percent plurality requirement for election in House Joint Resolution 681 makes it certain that the victor would have to be the representative of a major party. Of course, the strength of minor parties would be accurately reflected at the polls, but I think it should be and I do not see why anyone should object to this. Incidentally, along these lines, and for the same reasons, there would be less need than at present for the major parties to make excessive concessions to minority groups who may hold a balance of power in certain States.

One of the strongest features of direct election as proposed in my amendment is that it would do away with the need for the House of Representatives to choose the President as is now the case under the contingent election procedures. The choice of President would always be where it should be—with the people in the general election and with the people in the unlikely event that a runoff election is needed.

Direct election is simple, uncomplicated, and easy to understand. The voters would know exactly for whom they are voting. The temptation toward fraud

would be greatly reduced, perhaps completely eliminated, in the large States where tampering with a few votes can, under the present system, mean the delivery of a large bloc of electoral votes.

Adoption of direct election would in one clean sweep wipe out a system that is undemocratic, complicated, and potentially dangerous and replace it with a plan that would in every election give to every voter an equal voice in the selection of the person to fill the most important office in the Nation.

Mr. MOLLOHAN. Mr. Chairman, I support the electoral reform resolution reported to the floor by the Judiciary Committee.

The need for this reform is evident. Under our preesnt system, there is no guarantee that a majority of the people will elect a President and this transgresses the fundamental concepts of democracy we hold. Twice in this decade, we have come perilously close to electing a minority President and last year, the specter of the election being thrown into the House hovered unpleasantly over the entire process of our elections.

It is this latter possibility, the possibility of an election being decided by the Congress, that gives the most cause for concern to the country. For, the process of congressional decision in a situation of a deadlocked election is not clear. The Constitution does not establish guidelines which cover all the problems arising and, indeed, it gives a poor guide to some of the problems with which it deals.

The provision under which each State shall cast one vote is implicitly undemocratic. The requirement for an absolute majority has a democratic facade, but inasmuch as the House would be called upon to choose a President only when there are more than two presidential candidates, this provision leads in fact to deadlock.

Traditionally, we have had only two candidates and consequently, the Congress has not been called upon to decide an election. Only with minor exceptions in times of stress or crisis has the Nation had more than two serious candidates to choose from for President. But, it is in times of stress or crisis, that we can least afford the kind of constitutional and political crisis within the Congress that deciding a Presidency would make almost inevitable under our present constitutional provisions.

We should take a lesson from history here. The makers of the Constitution did not have a party system firmly fixed in their minds when they drafted the constitutional provision concerning the election of a President and Vice President.

They did not, for instance, make reference to a two-party system or a convention system, for they could not have envisoned the precise direction our political evolution would take. They did make mistakes.

The largest mistake, of course, was the failure to provide for a presidential-vice-presidential team. As a consequence, it was possible to have a Vice President from the minority party. The election of 1800 again found our presidential election process wanting because Jefferson's running mate, Aaron Burr withheld electoral votes in his control from Jefferson and forced the decision to the House of Representatives, where a massive deadlock developed. It was only after the considerable statesmanship of Alexander Hamilton that Jefferson became President on the 36th ballot.

The Tilden-Hayes incident proved another embarrassing episode for the electoral system as electoral votes were callously bargained for in Louisiana. The result of that bargaining constitutes one of the darker chapters in American history.

Mr. Chairman, the people should elect a President and they should do so directly; a vote cast anywhere in the Nation should have no more weight than any other vote because of circumstances of place of residence. Both the electoral college and the congressional selection procedure when the electoral college fails are detrimental to an effective and efficient election process.

Alternatively, the proposal to allow direct elections and provide for a runoff in the event that no candidate secures 40 percent of the vote insures that the people, and only the people, shall choose their President.

Mr. PODELL. Mr. Chairman, any society which does not maintain the relevancy of its basic institutions is doomed to collapse the moment those outdated institutions are subjected to meaningful challenge and test. Today, the manner in which this Nation elects its Presidents demands updating, particularly in light of events which characterized and highlighted our last national election. Such a solution has been long sought, and at long last is being offered to this House.

A proposed constitutional amendment that would elect the candidate with the largest number of popular votes has been reported out of the Judiciary Committee. This would insure a candidate's orderly election, no matter where he comes from. Much credit is due the most distinguished chairman of that committee (Mr. CELLER) for the measure which now awaits scheduling on the calendar of this body.

Alternative plans are due to be offered for consideration and approval of this body, and it is my fervent hope that they will be presented to no avail. There must be direct popular election of national leaders of the United States by all the people themselves. For many years Members of the other body were elected by their respective State legislatures. At last America opted for direct popular election of Members of that body. Shall we deny our people the same right as far as their national executives are concerned?

As the influence of the executive branch of government has grown, so has power of our Chief Executive. His accumulated prerogatives are awesome in their extent and ability to affect lives of all people on earth, much less the Nation. It is imperative that direct popular election be instituted in order to make our Chief Executive, no matter what party, more closely responsive and responsible to people he has the privilege of leading. No meaningful argument may be made against such arguments.

As our system is constructed today, a candidate may command the votes of a majority of our people, and fail of election. This has occurred several times in our history. The possibility of throwing an election into the House holds open the possibility of uncertainty, deadlock and political bargaining for the Presidency. Such a specter presented itself in the last campaign, revealing the inherent weakness of our present system. Shall we allow the future of all Americans to be potentially at the mercy of the ideologies and whims of itinerant demagogs? Shall we not pay a full bitter penalty in the future if we delay or cast aside the opportunity we now possess to permanently prevent such occurrences? Shall we allow our system to continue on a winner-take-all basis, which disenfranchises all those who vote for a man who finishes second?

The possibility of total deadlock in the House is a distinct possibility, as the last election showed. What would we have done then, when all avenues of decision had been explored and been found blocked? What would we have done then except resort to the worst political chicanery in order to gain advantage? Or perhaps it could even have degenerated into violence, and those familiar with the American scene then and now certainly cannot discount that possibility.

We can guarantee one-man, one-vote, combined with direct popular election of the Chief Executive. It eliminates possibilities of deadlock, insuring that every vote cast contributes to the result. Further, such a reform would open up the presidential nomination to men from smaller States, while preserving our two-party system by discouraging regional candidates.

If a nation remains blind to existing inadequacies in its institutions which endanger the very underpinnings of its society, it courts national disaster. Political maturity requires admission of such shortcomings and taking of appropriate legislative action to correct them. Such a situation now exists here. Such an opportunity is offered us. Let us by all means put aside partisan bickering and regional prejudice in order to retain viability and flexibility in this, the most basic of our elective institutions.

Mr. EILBERG. Mr. Chairman, we know from Madison's notes on the Constitutional Convention that the Founding Fathers were deeply troubled by the problem of how the President should be elected. The Gallup and Harris public opinion polls in November 1968 indicated that 81 and 78 percent, respectively, of the adults surveyed believed that the system of the electoral college should be changed so that the President and Vice President are elected directly by the voters. A poll which I conducted myself several months ago indicates that the people of northeast Philadelphia, in my Fourth Congressional District, overwhelmingly agree that the electoral college must be eliminated and that direct election of the President should be substituted in its place.

The present system we use to elect the President and Vice President of this great Nation is archaic, undemocratic, complex, indirect, ambiguous and dangerous. This system has made it possible for the greatest of all nations in the free world to have a leader supposedly elected by the people but who, in fact, did not receive a majority of the votes cast. John Quincy Adams in 1824, Rutherford B. Hayes in 1876, and Benjamin Harrison in 1888, all received fewer votes than their opponents. Yet history records each of these men as a President of the United States.

The fact that the system must be changed has been evident since John Kennedy and Richard Nixon were involved in their close contest of 1960. Yet, while there has been agreement that some changes must be made, there has been no semblance of agreement about what course we should take prior to this year when the Judiciary Committee, on which I am proud to serve, set out to clear away the myths and half-truths about the various proposals which had been advanced and get down to the difficult task of drafting the resolution we now have before us.

The 1,000 pages of testimony which was heard on the subject of electoral reform and the countless executive sessions which the committee held to assure that all points of view were fully and carefully aired commend the resolution now before the House to the affirmative consideration of all the Members.

House Joint Resolution 681 recognizes that the election of the President and Vice President of the United States is the most important act of government performed by the people of this Nation. It is an act which demands that each vote be counted equally with another. It demands that my vote and that of the gentleman in California or Alabama be counted equally. In short, the election of our President and Vice President demands full implementation of the one-man, one-vote dictum. No longer can we be content to subjugate this feast of democracy through the use of provisions and procedures that constantly threaten the very principles and practices of that democracy.

Adoption of House Joint Resolution 681 and ratification by the States will take the electoral college—this mockery of everything that this Nation has espoused and symbolized for almost 2 centuries—and abolish it. We will at long last be assured that the man or woman who wins the confidence of the majority of the electorate will lead the Nation.

The fact that direct election of the President and Vice President is the only truly democratic way to elect our national leaders that assures victory to the popular vote winner is reason enough for adoption of House Joint Resolution 681. There are many other reasons also which I am sure are well known to the Members of the House. As a result of our constitutional provision for the electoral college, millions of Americans have known that their votes do not count as much as those of their fellow Americans. I believe that the safety of the Nation and the dignity of the elective franchise dictate that we act favorably and start the machinery in motion to achieve the direct election of the President.

Mr. CELLER. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. ALBERT), having assumed the chair, Mr. MILLS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the joint resolution (H.J. Res. 681) proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President, had come to no resolution thereon.

GENERAL LEAVE

Mr. CELLER. Mr. Speaker, I ask unanimous consent that all Members may revise and extend the remarks they made on House Joint Resolution 681 and include therewith pertinent extraneous matter.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

FREE ELECTIONS IN NORTH VIETNAM

(Mr. MARSH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MARSH. Mr. Speaker, I rise to urge free elections in North Vietnam whereby the people of that country might select their chief of state.

The recent death of Ho Chi Minh has caused wide-ranging speculation as to his likely successor. There has been little speculation as to the method of selection.

Granted, it has been suggested that he probably will be one of four lesser-known powers in this tightly held police state. Some observers have advised us to expect a form of collective leadership by two or more figures prominent in the Communist hierarchy of North Vietnam.

All predictions, however, are couched in the language of possibility, contingency and speculation. The term "interim leadership" is mentioned to put us on notice that the succession might not be settled without a protracted power struggle within the collective group, while factions seek to consolidate the people by political finesse and the use of raw power. "Consolidate," in this connotation, is an euphemism for "liquidate." From experience in the observation of other agonies of power transition in Communist states, we might expect the techniques of the purge, even to the possibility of the firing squad.

Implicit in this situation is a travesty of the governmental process and a double standard of political morality.

The holding of free elections long has been a cause celebre in South Vietnam, a country ripped by the agonies of a savage war. In these unstable circumstances, we have pressed, nevertheless, for representative government and free elections. Let us now press for free elections in North Vietnam. Through world opinion and diplomatic channels, let us demand and insist that those who seek to succeed the deceased dictator resort to election by the people at the ballot box rather than selection by liquidation.

Will bullets or ballots choose those who will speak for the people of North Vietnam? Will the people of that oppressed land be heard to say who shall lead them toward peace, or rather, will they be driven farther along the cruel path of conflict with their brothers of the South?

I believe it appropriate, Mr. Speaker, that the Congress, representative of a people which has made a heavy investment in blood and treasure in defense of the freedom of South Vietnam, now make expression of its hope that the interim leaders of North Vietnam will back up a professed interest in peace with a significant gesture of trust in their own people. Accordingly, I have offered today in association with my distinguished colleague (Mr. TALCOTT) a concurrent resolution expressing the sense of the Congress that free elections be held to select the new leader of North Vietnam.

TV DISCOUNTS BILL

(Mr. MACDONALD of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MACDONALD of Massachusetts. Mr. Speaker, every Member of this body should take particular interest in a bill that I am introducing today. Indeed, more than 32 Members of this body are demonstrating specific interest by joining with me in bipartisan cosponsorship of the measure representing a broad geographical distribution across the continental United States and extending as far west as Hawaii. They, along with myself and the rest of the membership, can testify as experts on a growing crisis that threatens the American political process.

This Nation's basic mechanism for political democracy, the campaign for election, has been subject in recent years to an accelerated inflation of costs that is increasingly rendering all those who seek to hold or gain office hostage to their own fortunes or to the wealth of others. In large part, these costs have been increasing faster than the general price level, and this, in turn, is because of increasing use of the electronic media of communication.

Television in particular has proven to be indespensible in many election campaigns and television is the most expensive single item in most campaign budgets. Those who cannot afford to use this uniquely efficient tool, with its unparalleled capacity for inspiration and motivation, dream that they could. Those who can afford some television exposure, wish for more. Those who are able to make use of the medium to the full extent of its potential escalate the costs of campaigning for others who cannot match the financial stakes. The pressures of financing campaigns have long had unwholesome influences on the political processes; those pressures now show signs of getting wholly out of hand.

The time has surely come when we in the Congress must come to grips with the

hard realities of the situation, and face the incontestable fact that the costs of campaigning—the keystone political activity of our representative democracy—are fast outrunning our traditional means of campaign financing. In no areas of campaign spending are decreasing costs being predicted by any serious student of the matter. On the contrary, all indications are that future campaign spending totals will eclipse even the projections being made today.

The problem of broadcasting costs has been subject to intensive study by a number of groups both in and out of Congress. The bill I am introducing today is a result of many years of concerned thought and months of detailed research on specific legislative language. The bill, as finally drafted, would not end with one stroke the myriad problems of campaign-financing reform. But it is a start—a careful start, perhaps a modest start, but a workable start.

No area of campaign-financing reform is without controversy. The legislation I am submitting today will no doubt be seen by some as going too far. Others may say it does not go far enough. Many, upon studying the bill and the problems with which it deals, as I have, will conclude that the approach is fair, reasonable, and that it offers a meaningful improvement to the present situation. It is a realistic and practical measure that can command consideration this year, and could—with concerted effort—be put in place to begin yielding benefits to all America by election time next year.

Some progressive broadcasters have already taken meaningful steps in the direction of reduced rates for paid political messages. Among them during the last campaign was a network, NBC, and a major group broadcaster, Storer Broadcasting Co., whose WSBK–TV is located in Boston, which experimented in offering reduced rates to candidates as a public service.

In essence, the bill would provide limited amounts of television time at substantial discounts during the 5 weeks preceding the general elections for U.S. Senators and Representatives. Candidates for those offices would continue, as they do now, to decide how much use of television was in their interest, and on what stations, with complete control of format as is customary with paid time.

The bill makes no change in the workings of section 315 of the Communications Act—the equal-time provisions. A feature of the proposal is that candidates must be serious enough contenders to be willing to pay for their television time. The discounts that are proposed—70 percent off a station's top rates for spot announcements—and 80 percent off for program-lengh time—amount to considerable reductions in cost of television, but under the discounts the time would still not be free. This represents a basic policy decision to avoid equal-time complications and the associated problems with publicity-seeking nonserious candidates.

The time to be made available is limited in the total amount available to any one candidate, and even more limited from the standpoint of the broadcasting stations covering districts where there are multiple television signals available. Candidates for the House seats could claim the discounts on 60 1-minute spot announcements or the equivalent in spots of varying lengths. Candidates for the Senate would have an opportunity to buy 120 1-minute spots or the equivalent. I would stress that no limit is to be placed on the amount of time a candidate may choose to purchase at any station's going rates, and, likewise, there is no obligation for a candidate to buy all the time offered at the discounts proposed under the legislation.

Where, as in many cases, there are two or more television stations covering a given district, the stations would equally share the time to be made available for spot announcements at a discount.

Candidates for the House would be entitled to buy one-half hour of program-length time at substantial discount from each station covering the district. Candidates for the Senate could purchase 1 hour of discounted program-length time from television stations in the State.

Stations located out-of-State or beyond the confines of a given district would share in the provision of time to candidates if a specified percentage of the audience—one-third for House races, one-fifth for Senate races—was within the State or district in question.

Mr. Speaker, it is my hope that the introduction of this measure today will mark the start of a concerted effort to keep this Nation's political processes abreast of the rapid changes in communications technology, so that optimum use is made of the great potential of television—which has been correctly called "a miracle of our age"—to enlighten and stir interest and commitment in our representative system of government. The public interest demands no less.

Likewise, as our Nation progresses, the financial facts of political life demand new attention to the problem of containing runaway costs. This bill is seen first and foremost as a practical measure, that is in accord with the political and economic realities with which every Member of this body has to deal. It deserves to be supported and enacted, so that its benefits can be promptly brought to bear on the growing crisis of campaign financing.

INFORMATION FOR VETERANS ON SCHOOL, TRAINING, AND AVAILABLE BENEFITS

(Mr. MADDEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MADDEN. Mr. Speaker, when I was home during the recess, many veterans or their wives made inquiry as to what opportunities veterans had to take advantage of education and training benefits. For their information I have summarized the legislative enactments which will be of great help to all veterans and dependents.

The Government will give you money for study or training that will help qualify you for a well-paying job. This money is not a loan. You will not have to pay it back. This is because the Government would like to help you help yourself in return for the service you gave it. The people at the Veterans' Administration can tell you how to get the money available to you.

You can use Government money to get a high school diploma or a college degree. You can use it for apprenticeship or on-the-job training, vocational or technical school, flight training, farm training as part of a farm-cooperative program, and correspondence courses.

The payments for full-time study toward a college degree can amount to $130 a month. Extra money is given to you for your dependents. Provision is also made for part-time study. You must check with the Veterans' Administration for exact details.

The money given to you while you earn our high school diploma also can amount to as much at $130 a month. If you use Government money to study for your diploma now, you will not lose your eligibility for money for college or training later.

Apprenticeship or on-the-job training benefits amount to $80 a month for the first 6 months. This is in addition to pay from the job. As your training goes on, the Government payments go down every 6 months because you will be earning more on your own.

If you study full time at a vocational or technical school, the payments are the same as for college—$130 a month plus extra money for your dependents.

If you enter a farm-cooperative training program, you will combine work—for which you will be paid—with study. The additional Government payments to you will be $105 a month with extra money for dependents.

Flight training benefits amount to 90 percent of what it would cost a nonveteran for the same training. But before you can receive money for this training, you must have a private pilot's license or have taken training equal to the 40 hours needed for this license.

Government payments will take care of the full cost for correspondence courses. However, your eligibility for other study and training benefits goes down by 1 month for each $130 paid to the correspondence school for your courses.

To find out exactly what Government money is available to you for study and training, and how to get it, visit the regional office of the Veterans' Administration, 2030 West Taylor Street, Chicago Ill. Veterans residing in congressional districts other than the First District of Indiana should visit the nearest regional office or write directly to the Veterans' Administration Headquarters, 2033 M Street NW., Washington, D.C. 20421.

A booklet that also will help you is Federal Benefits for Veterans and Dependents, VA Fact Sheet IS–1. Veterans residing in my congressional district may secure this booklet by visiting my district offices located in the New Post Office Building, Hammond, Ind., and the New Federal Building, Gary, Ind., or writing to me at my Washington office. Other veterans should contact their respective Members of Congress or order this in-

formation for 30 cents from the Superintendent of Documents, Washington, D.C. 20402.

Any correspondence pertaining to a veteran should give his full name, address, C-number or serial number.

PROPOSED AMENDMENT TO TARIFF ACT OF 1930 TO ENLARGE THE CONCEPT OF DRAWBACK

(Mr. MILLS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. MILLS. Mr. Speaker, today I am introducing an amendment to the Tariff Act of 1930, H.R. 13713, that could give our exports a badly needed boost, and without the risk of provoking nullifying actions on the part of the other countries with which we trade.

As is well known, our surplus trade balance has declined alarmingly, to the point where it is playing almost no role at all in helping to rectify our deficit balance of payments. Although exports have grown steadily and substantially, they have not kept pace with the increase in imports.

One positive way of improving this situation would be to give our exports the same kind of tax benefit that is allowed under international agreement and that is granted by most of the countries of Western Europe. This is the remission of indirect taxes, such as sales or excise taxes, that are imposed upon exports or goods used to make exports.

The bill I am introducing would seek to encourage exports in this manner by enlarging the concept of drawback. Ever since the first Congress, our tariff laws have provided for the return—or drawback—of duties paid on imported goods upon the exportation of products made with such goods. This concept of drawback of duties has been liberalized so as to permit drawback when domestic goods like the imported goods are used in making the export product.

But the drawback of taxes—as opposed to duties—for the benefit of exports is now permitted by law in only a few cases. The bill I am introducing would provide for the drawback of local, State, and Federal indirect taxes to the extent consistent with our international obligations. It would also simplify the existing provisions concerning the drawback of duties.

I am introducing this bill primarily to focus attention on the serious need to improve our export performance. I am aware that the present administration is studying this problem, but I would frankly like to see that study expedited. I understand that the Tariff Commission has been conducting a basic investigation of provisions in our trade laws relating to temporary duty-free imports which include the drawback provision. I am also aware that discussions have been going on in Geneva concerning the remission of indirect taxes and related problems, but I have been disappointed to see how little progress these discussions have made.

The need to do something in this area is too great to go on studying and discussing. I would therefore invite views on this bill not only from the agencies of the executive branch but also from all interested persons outside the Government.

DESCRIPTION OF BILL

The bill reenacts in simplified form the drawback provisions contained in sections 313 (a) and (b) of the Tariff Act of 1930. In addition, the bill provides for the refund of such local, State, and Federal taxes as the Secretary of the Treasury determines are directly or indirectly borne by exported articles.

New subsection (a)(1) is in substance the same as the basic drawback provision in section 313(a). But new subsection (a)(2) modifies the so-called substitution provision in section 313(b) by providing that the domestic merchandise be similar to—and not the same as—the imported merchandise with respect to kind and quality. This change is designed to make it easier for exporters to qualify for substitution. Present drawback recipients would continue without interruption to receive drawback under existing drawback rates.

New subsection (a)(3) adds a new general provision concerning the refund of indirect taxes, using the precedent now in section 313(d) with respect to the refund of Federal excise taxes on certain alcoholic products. This new provision provides for the refund of all local, State, and Federal taxes that the Secretary of the Treasury determines are borne directly or indirectly by the exported article and merchandise used in the manufacture of such article. In administering this new provision, it is anticipated that the Secretary of the Treasury would, under his broad regulatory authority contained in section 313(i), compile average rates of taxation with respect to categories of products.

It should be noted that the amount of drawback provided for in new subsection (a) is fixed at 98 percent—instead of the present 99 percent—because the cost of administering the drawback program has been somewhat over 1 percent in recent years.

New subsection (b) provides that the Secretary of the Treasury shall allow the three kinds of drawback only insofar as he determines it to be consistent with the international obligations of the United States. This is designed, in particular, to assure that the United States engages in no practice that could be deemed a subsidy and thereby provoke retaliatory action against our exports. At the present time, it is believed that all three forms of drawback are consistent with the obligations of the United States under the General Agreement on Tariffs and Trade.

A CRISIS FACING THE PUBLIC SCHOOLS OF ALABAMA

(Mr. NICHOLS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. NICHOLS. Mr. Speaker, the schools in my State opened recently for the new school year as they did throughout other parts of the country. But the public schools of Alabama find themselves facing a crisis which is not likely to be resolved in the immediate future.

Last year, every school system in Alabama operated under the so-called freedom of choice plans ordered by the Federal courts. These plans gave any student, regardless of his race, the right to attend any other school in the system. It allowed those Negro students who wished to do so to attend previously all-white schools. It also allowed white students to continue to attend the school they traditionally and customarily had attended in the past.

But the bureaucrats here in Washington and the Federal judges decided that not enough Negro students had chosen to attend the previously white schools, so this year, they ruled that freedom of choice plans, which were constitutional last year, were not constitutional this year. In other words, parents of the Negro students did not choose the way the bureaucrats and judges felt they should, so this year they are doing the choosing rather than the parents.

They have accomplished this by closing many of the Negro schools, and requiring all students to attend the previously all-white schools. In many instances, the Negro school is practically a new school with better facilities than the white school. Since most of our schools were already crowded, you can imagine what they are like with the enrollment suddenly doubled as it has been in many cases.

I have received numerous phone calls and letters during the past few days from parents in my district. These parents are not particularly concerned about the integration of these schools. Granted most of them would prefer to have their children go to school with members of their own race. But they are more concerned about the overcrowding of schools and the lack of facilities and the general lowering of the educational standards than anything else. They are concerned, too, about the long bus trips many of the students, colored and white, are required to make to school.

Mr. Speaker, this concern is not limited to white parents. Negro parents are also opposed to the closing of their schools just to accomplish integration. I have many letters from Negro students, parents, and teachers who want to remain in their own schools. In most cases they are proud of their own school, their own glee clubs and bands, their own football teams.

Because of the seriousness of the conditions in the public schools in Alabama, I have asked Attorney General John Mitchell to personally come to my State and see firsthand the problems we are facing. I sincerely hope that he will have enough compassion for the young people of my State to spend a day or two viewing the deplorable conditions that exist. If he does, I believe he will make every effort to help grant us some relief so that our educational system will not be completely destroyed.

NEED FOR PASSAGE OF PROGRAM INFORMATION ACT

(Mr. ROTH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROTH. Mr. Speaker, over the past 3 legislative days, I have spoken briefly of the need for passage of the Program Information Act, H.R. 338, which would require the President to publish an annual catalog of all Federal aid programs and to update the catalog monthly. As I have in my earlier statements, I would like again today to use the comments of some of our constituents across the Nation, who responded to a questionnaire I sent out dealing with the accessibility of meaningful program information.

I would like to make one point today; however, we vitally need adequate information because potential beneficiaries now are uncertain where to turn for help. In addition, inadequate, meaningless information often misleads applicants and results in the waste of precious manhours.

For example, this comment comes from a county official in California:

It would be very helpful to know that all available aid programs were outlined in one catalog . . . if we could be satisfied after a brief check of such a catalog that we had an outline of all available funding sources for a particular project or program we were contemplating, we could eliminate a significant amount of time formerly needed for "shopping around."

From colleges in New York, Michigan, and New Hampshire:

We currently spend a great deal of time tracking down from a variety of sources the kind of information you would include in a catalog. Not infrequently it is not possible to assemble a complete and current program profile.

In general, the more information you can give us in a consolidated and integrated fashion, the more intelligent will be our response to federal programs.

What we need is a better indexed, single, central catalog.

From a trade group in New England:

Many communities have the feeling they are not taking advantage of available programs because of lack of awareness.

From a city official in the East:

(a) A Comprehensive catalog would provide a guideline for government reorganization of agencies that would more efficiently combine efforts that are otherwise overlapping. This would save money for the government. (b) It would show those in need of help where to go for programs that would give such help, thereby making each program more effective. (c) Program administrators should have copies of the catalog so that families of programs can be coordinated and to guide people in the right direction if the latter apply to the wrong agency.

Mr. Speaker, I ask my colleagues this question: What is the sense of evolving a creative, innovative program to meet the needs of the people if the Government does not simultaneously provide information about the program in a central repository? Many of our efforts will be for nothing if the people back home cannot take advantage of what we do. For this reason, I urge action and adoption of H.R. 338, the Program Information Act.

I will speak on this subject again tomorrow.

ACROSS-THE-BOARD CUT BY ADMINISTRATION ON FEDERALLY FINANCED DOMESTIC CONSTRUCTION

(Mr. ALEXANDER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ALEXANDER. Mr. Speaker, I rise today to add my voice to those of my colleagues who have expressed their dismay and amazement at the administration's meat ax approach to the problem of inflation. To say the least, I was shocked that the new administration would just start cutting across the board without giving any apparent consideration to priorities.

I am in agreement that the problem of inflation has become a major threat to the orderly growth and development of our country. I agree that inflation has been even more cruel in its effect on our people that has the tax system which we are trying to reform. I agree that the finding of a solution to this growing problem is one of the most urgent challenges facing the administration and the Congress.

But the problem is not such that we must take actions, the results of which have apparently been given little or no consideration. The magnitude of the problem is not such that we do not have time to give thoughtful consideration to priorities for our Federal tax dollars.

In essence, how can we justify slashing haphazardly across the whole spectrum of domestic construction programs while continuing high funding for programs which, even if good and worthwhile, could be cut back or delayed with little or no effect on our domestic economy. How can we justify a 75-percent cut in federally financed domestic construction, which could lead to financial hardships for many construction companies and a possible increase in the unemployment rate?

I agree that Federal expenditures must be held in check. I agree that a Federal surplus is needed and necessary as a check on the inflationary spiral. I agree that the Federal Government must exert strong, positive leadership in the fight against the shrinking dollar.

But I do not think we would classify an across-the-board cut on all federally financed domestic construction as "strong positive leadership." I urge the administration in the strongest of terms to take a new look at this problem, to reconsider the effects of this decision on our domestic economy and on the construction industry, and to take a new look at what the priorities of this great Nation should be in this time of economic trial.

NARCOTIC DRUGS

(Mr. GALLAGHER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. GALLAGHER. Mr. Speaker, it is my pleasure to announce that 35 distinguished Members of this House have joined me in introducing legislation (H.R. 13686 and H.R. 13687) designed to strike hard at the trafficking in lethal narcotic drugs.

Our legislation imposes a maximum sentence of life imprisonment on the nonaddicted person who transports narcotic drugs across State lines.

Further, our bill makes it a Federal offense, punishable by life imprisonment, for any adult person to solicit the assistance of, or to actually use a juvenile in an unlawful drug transaction.

Mr. Speaker, as I have previously reported to this body, the two areas covered by our legislation represent huge gaps in our criminal law structure; we seek to fill these gaps today.

The need for stringent Federal laws against the interstate transportation of narcotic drugs is easily seen. Although local law enforcement agencies have performed with superior skill in the drug war, both their numbers and their jurisdiction are limited.

For example, in my own State of New Jersey, the municipal and State police authorities have vigorously, and diligently pursued the battle against narcotics. But they still require, as do police authorities throughout the Nation, strong Federal legislation supported by strong Federal manpower to supplement and strengthen their own notable efforts.

We cannot deny this need. Our city and suburban sidewalks literally bulge with dope peddlers who deal in death and destruction. But, due to the gaps I have indicated, our Federal criminal machinery cannot be applied with full force against these merchants of menace.

The drug addicts themselves are really not the root of the problem. When we consider the tremendous rise in drug abuse throughout the United States, we must carefully keep in mind that the dope peddlers are the true villains of the peace. They are the malicious individuals who rape our neighborhoods and defile our society. The addict is, more often than not, merely the helpless victim of the pusher; both psychological and environmental factors have combined to put him at the mercy of the narcotics junkie.

The addicted pusher is, in a sense, caught up in the same vicious cycle as the ordinary addict; he is under some compulsion to pursue his wayward course, and is desperately in need of compassion and therapy. Accordingly, under the transportation offense section of our bill, we aim the heaviest artillery at the nonaddicted junkies, and prescribe a minimum of 10 years—hard labor—and a maximum of life imprisonment in a Federal penitentiary, for their transportation of hard narcotic drugs across State lines.

Our bill provides that the addicted narcotics transporter be committed to a Federal hospital for therapy and cure. Such commitment would be a mandatory sentence for the addict who is convicted under this section of the bill.

Mr. Speaker, we feel it is essential that the law distinguish between the ad-

dicted and nonaddicted pusher when applying sanctions to transporters. In order to knock out the trade in narcotics, we must knock out the responsible suppliers; this means the cold, calculating dope peddlers who, while not hooked themselves, willfully initiate and continue the addiction of others.

The nonaddicted junkie is the twisted animal that rests at the root of our crime problem. Indeed, most of our crime in the streets can be traced directly back to the trafficking in illegal drugs, prostitution, muggings, larcenies—these are all ultimately linkable to the drug trade. The proximate cause is evident: An addict in need of a fix is an addict who will do almost anything to get that fix. And to whom does this addict owe his misfortune and his monetary tribute? To the dope peddler, who dines at a table spread full with the products of human misery.

The perversity of dope peddling requires no sermon. But, it nevertheless boggles the mind to realize the extent to which youths have been coerced and used in the drug traffic. Schoolyards, no less than streetwalks or campus grounds, have become centers for the distribution of narcotics. It is no source of comfort to consider that our children may be walking to the welcome arms of a waiting pusher when they walk to school.

And usually, the demon who they encounter at school is not some leering adult villain; rather, narcotics are distributed in the schools through the hands of youngsters themselves who have been abused, corrupted, and exploited by the adult pusher. If and when these unfortunate youngsters are apprehended, literally nothing can be done to get at the real criminal, for it is the young person who is found with the illegal product and caught in the illegal act.

And, how much worse even than the man who just sells dope, is the man who involves a young person with narcotics? It is this man who reproduces and regenerates his own terror and perversity and who guarantees that the drug traffic will continue its flow.

It is precisely for this reason that we need legislation which would enable law enforcement officials to remove the adult who uses or who attempts to use juveniles in the narcotics trade.

The States, too, have a responsibility in this area; yet, at the present time, only six States—Colorado, Illinois, Massachusetts, New York, Pennsylvania, and Texas—have laws specifically forbidding the use of juveniles in an unlawful drug transaction.

Through our legislation, we post notice to all those who would involve young people in their vicious, venemous activities.

Let them stand warned that this Congress, this Government will not tolerate a further disintegration of our society through the slow undoing of our young.

Let the dope pusher beware that while it may be too late to save him from the perversity of narcotics trafficking, it will never be too late for this Government to stop him from destroying a child.

Mr. Speaker, the current administration has stated that it is up to this Congress to seize the initiative in the war on narcotics. We dare not shrink from the challenge or the responsibility.

The proof that this Congress has decided to raise the standard against dope peddlers is found in the wide, bipartisan cosponsorship of my bill. For there is no Republican or Democrat position on this issue, no division in sentiment between a political left and a political right. When a dope peddler poisons a young American, he does not first inquire as to his party affiliation or ethnic background.

What we need, then, is not more jails for young persons, or more cells for helpless addicts. Rather, what we require is a concerted effort to attack those who are truly at fault, those who provide the drugs and who establish the outlets for their sale.

Let us today decide to junk the junkies for once and for all.

The distinguished Members who have joined with me in this legislation, have committed their energies to the task fighting drug abuse in our society. I know that the entire House recognizes the urgency of this fight and will support it in full measure.

Mr. Speaker, in the hopes that our legislation will receive quick and favorable consideration, I am placing a copy of the bill, with a list of its cosponsors, in the RECORD at this point:

H.R. 13686 AND H.R. 13687

A bill to amend the Internal Revenue Code of 1954 to increase the penalties for the unlawful transportation of narcotic drugs and to make it unlawful to solicit the assistance of or use a person under the age of 18 in the unlawful trafficking of any such drug

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 7237 of the Internal Revenue Code of 1954 is amended by adding at the end thereof the following new subsections:

"(f) Unlawful Transportation of Narcotic Drugs.—Any person who commits the offense described in section 4724(b) shall—

"(1) if such person—

"(A) is determined in accordance with section 4252 of title 18 of the United States Code not to be an addict, or

"(B) committed such offense after a prior conviction for committing such offense,

be imprisoned for not less than 10 years and may be imprisoned for any additional term of years or for life; or

"(2) if such person is determined in accordance with such section to be an addict and has no prior conviction for such offense, be committed, in accordance with chapter 314 of such title 18, to the custody of the Attorney General for treatment.

For purposes of this subsection, the term 'addict' shall have the meaning prescribed for that term by section 4251 of such title 18.

"(g) Soliciting or Using a Minor in Unlawful Trafficking of Narcotic Drugs.—Any person who solicits the assistance of another person under the age of 18 to commit, or uses such person in the commission of, the offense described in section 4724(a) shall be imprisoned for not less than 10 years (with hard labor) and may be imprisoned for any additional term of years or for life."

(b) Section 7273(d)(1) of the Internal Revenue Code of 1954 is amended by inserting ", (f), or (g)" after "subsection (b)".

CROPLAND AND WATER RESTORATION BILL

The SPEAKER pro tempore (Mr. ALBERT). Under a previous order of the House, the gentleman from Missouri (Mr. HALL) is recognized for 1 hour.

(Mr. HALL asked and was given permission to revise and extend his remarks and include extraneous matter.)

Mr. HALL. Mr. Speaker, on the second weekend of August of this year Dr. Don Paarlberg, special assistant to the Secretary of Agriculture; Congressman ODEN LANGEN, chairman of the House Republican agriculture task force, and other officials of the Department of Agriculture gave very generously of their time in order to accompany me in a visit to the Gene Poirot farm near Golden City, Mo. This is the same farm that the House Committee on Agriculture took time to visit 2 years ago and this is the same Gene Poirot that testified before the committee both in the 89th and 90th Congresses. The purpose of the visit was to view personally the soil restoration and water retention program in use on this 1,900-acre Missouri farm. The Poirot family magnificently demonstrated how it has applied the basic laws of nature to farm and land management. This distinguished group saw low cost irrigation methods which have enabled the Poirots to weather successive periods of extensive drought which brought severe economic loss and tragedy to other farm operations. Then they saw, spoke with, and listened to a "man of the soil" who has had the ability to incorporate his observations and experiences in a most readable book, "Our Margin of Life," which I sincerely believe should be must reading in every school of agriculture in the United States.

Dr. Paarlberg lavishly praised this book and indicated that the Nixon administration would borrow features from the book whose concepts I have incorporated

into my farm legislation. An article in the August 10, 1969, edition of the Springfield, Mo., Sunday News & Leader, written by Frank Farmer, spells out in greater detail this successful visit. The article follows:

HALL-POIROT IDEAS TO BE PART OF NEW FEDERAL FARM PROGRAM?

(By Frank Farmer)

"When Secretary Hardin makes his recommendations to Congress, don't be surprised if you see some of the features of Doc. Hall's Cropland and Water Restoration Bill in it."

That was the comment late Saturday by Dr. Don Paarlberg, special assistant to Secretary of Agriculture Clifford Hardin.

The place was the sprawling prairie farm of E. M. (Gene) Poirot, south of Golden City. The occasion was a field demonstration on the Poirot farm to Dr. Paarlberg, Rep. Durward G. Hall, Rep. Odin Langen, Minnesota, and to conservationists and agriculturists, of row crop hydrology, water conservation and soil restoration, wildlife habitat and enhancement of natural resources.

Dr. Paarlberg's comment possibly was the most concrete hint yet of what the Nixon administration intends to do in the field of agriculture. He spoke swiftly, articulately, with poise and confidence, that appeared to make a favorable impression on the 100-plus visitors at the demonstration.

He did not staunchly confirm Congressman Hall's Cropland and Water Restoration Bill, but he praised features of it highly, and complimented Poirot on his labors and his book, "Margin of Life," which partially inspired the bill.

"I have read his book," Paarlberg said. "He has an appropriate insight into humanity, a philosophy, a sensitivity. He is also somewhat of a poet."

Paarlberg noted that his job is to help make studies that will finally lead to the recommendations Hardin will make to Congress, probably in the fall. "He has not said if it is to be general or in the form of alternatives," Paarlberg said, "if it will point in a specific direction or be left open."

"We have received various proposals, including Dr. Hall's. I have read the bill and it has features of great merit. There is a full range of farm proposals, many of them with the resource adjustment akin to those presented this afternoon.

"The idea to limit crop production is appropriate. The idea to restore resources is good. The idea to change resources as determined by market conditions is appropriate. The idea of product income is good, and the idea that the public has a great enough stake in the food resources is a good idea which the secretary and Congress will like.

"When the secretary makes his recommendations, don't be surprised if you see some of these features, but there are indications there will be other than those. The recommendations may be a synthesis of what we are able to borrow from the work of Poirot and Dr. Hall, from the experience of the Department of Agriculture, other people who have resource adjustment ideas, people on our own staff, Congressman Langen's task force and other congressmen.

"Secretary Hardin has not promised a sure-shot single solution of all of the problems in agriculture. That has been promised in the past and most have fallen far short of those promises.

"The secretary is heartened that all over the country there are programs like this. He has chosen to listen, rather than preach, study, rather than talk, to analyze before acting. The purpose of the extension of the 1965 farm program for one year was to give us time to make this study.

"When he has his studies made, he will make his recommendations. That may not be the dramatic way, but it is the sound way."

Hall, in explaining his farm bill, said, "Cropland soil, its plant food, and the water necessary to make crops grow are not expendable. If these die or disappear, the rest of the population cannot be sustained, and some will also die until these basic elements are brought back into the balance with human need.

"The basic premise of our bill is that the cost of doing soil and water restoration IS a cost of producing food. It must be paid by the consumer either directly at the store, or indirectly through the government which is ALL the people. It must result in voluntary and honorable profit to the farmer. He must be considered and respond with expertise.

"The basic approach is to offer farmers a 'second market' by the opportunity to shift a percentage of cropland to the production of a suitable cover crop for his particular region, such as sweet clover, plowed under, with the government paying a fair price per dry-weight ton, and with the farmer free to choose between this market, or the consumer market for food and fiber he would otherwise grow."

Hall noted that under the "second market" plan three important objectives would be met:

1, Each farmer would be given a chance to earn a minimum fair net income for values accomplished, without a chance to produce a surplus of questionable quality, or later, the need of producing it to pay costs.

2, Each farmer would be given the opportunity to adjust his participation to the size of his own problem. He could use all, or none, of his land, one year at a time.

3, Each farmer would be given not only a chance, but the incentive to use the science of agriculture to solve his own individual problems relating to his land, without creating a problem of over production for others.

Dr. Hall was asked four questions by a reporter:

Q: "Where will the money come from?"

A: "From the taxpayers' pocket. It is of direct benefit to them."

Q: "How much will it cost?"

A: "We estimate $2.6 billion, a reduction of $6 billion from the cost of the current program."

Q: "Who would administer the program?"

A: "The Department of Agriculture through the ASCS offices, with a man on the spot at time to plow or cut."

Q: "Would it supplant the current programs entirely?"

A: "Yes."

Now, Mr. Speaker, I am introducing today an updated farm bill which is largely based on Gene Poirot's observations and recommendations, and which offers to this body, to the Nixon administration, to the farmers and consumers of this Nation: a new concept, a new and fresh approach to the farm dilemma, which has plagued without exception every administration in office for the past four decades. This bill is entitled the "Cropland and Water Restoration Bill."

Effective agricultural production depends upon a suitable supply of air, sunshine, soil plant food minerals, and water. Any one or all of these can limit agricultural production. In general, soil plant food minerals and water are the limiting factors. These four are nature's requirements and will continue to produce food and fiber without man. When man enters agricultural production as a farmer, and as a consumer paying the farmer for producing his needs, science becomes necessary for the farmer and economics becomes necessary to provide an orderly means of exchanging products between them.

During our past agricultural history, farmers have produced more in food and fiber—under an unorganized business—than nonfarmers would buy; so, many farmers went to town. The result is our industrial prosperity built upon a great agriculture now nearing its top in capacity to produce for an ever increasing demand.

So as to raise our agricultural soils and water resources to a higher level of production in a scientific manner, and so as to prevent unfair low prices to the farmer and unfair high prices to the consumer, and so as to continue to have an efficient national agriculture capable of growing abundance for the consumer at a reasonable cost to him and without producing an unwanted surplus yet flexible enough to readily meet the new demands, a new type of farm program has been suggested, called "A Second or Escape Market for the Farmer."

In operation the second market would—

Buy tons of a suitable crop which by its growth and yield would—

Prove the degree of soil restoration and water conservation accomplished and paid for by the farmer—

In any amount of tons the farmer wants to sell—

At a fair price announced each year but above an approved standard such as a minimum wage, parity or share of national income—

Grown on any part or on all of his cropland—

Leaving the farmer the choice of selling to the Government or of otherwise disposing of the crop without Government payment.

In actual practice in Missouri, for example, the second or escape market would offer to buy sweet clover or its equivalent growing alone for 1 year at $25 per dry weight ton to be plowed under. If the farm had a pond approved by the SCS for irrigation and flood control or other practices of special value the suitable crop would be worth say $30 or more per ton. The weight and rent per acre would be figured on the spot for the farmer to accept or reject the offer.

In the past, the surplus seemed the only problem, so economists and politicians—few of them farmers—were given the job of reducing it. Various farm programs, at a great cost, have worked at doing so for more than 30 years. They have been successful but they have also disregarded the following important items:

First, soil and its plant food minerals: 37 percent of the topsoil is gone beyond repair. As late as 1963 we were still using and wasting three times as much plant food as we returned in all fertilizers. There is no program to change that course.

Second, water: It falls on the land in abundance. Agriculture needs it in great amounts for efficient production. Farm programs have, perhaps by necessity, ignored it as a vital part of agricultural production and have seldom made any effort to conserve it.

Third, farmers: 70 percent of them are in the poverty group, family net income of $1,851 in 1965. The average income of all of them about 64 percent of

that of the nonfarm population. In previous years, it was 50 percent or less. Farmers cannot control the price of what they buy or sell. They have no control over the research done for them. They have no control over the farm programs. They are penalized if they do not participate. They do not agree on a policy of their own or on Government programs. There is no leadership.

Fourth, consumers: Programs were to increase the prices to the consumer by reducing the surplus. When the program was getting it done in 1966 the consumer objected and prices started down for the farmer but up for the consumer with the farmer taking the blame. No one told the true story. Farm programs should give first consideration to the consumer who is the only reason for farming. The program should open the door to science to provide the best food of the highest nutritional value in an efficient way at reasonable cost and it should protect the potential—soil, water, research, and farmers—for producing such food in the next generations.

The Poirot suggestion, called a second market for farmers, differs in that it is based upon further developing soil and water resources—not limiting them—according to the teachings of scientific agriculture—not politics and economics alone—as we know it now and as more facts become available through research. By all college of agriculture's standards, this is called "good farming."

The program differs by offering a fair money reward for good farming—not a stingy amount of relief money for idling land as in the soil bank. Not large sums of money for surplus control to those on rich land where there is no problem, and only one-third as much per acre to those on poor land, needing fertility, water, and the money to buy them. The second market buys only proven results, regardless of the political power a group may have, or the richness of the soil. It does not pay for storing large amounts of surplus products, or large sums for giving them away later.

The program pays at a minimum wage or parity level for the services it buys from the farmer. Any product he grows which yields less net income per acre is at once a surplus so he shifts farming efforts and the troublesome land to the second market provided by the Government for developing its soil and water resources to a higher level of more economic production.

Since yield per acre, market price, and local costs are all factors in net profit a change in any one of them can cause acres to be shifted into or out of production under the second market program. This is far more flexible than any directive delivered from Washington, D.C., could ever be because the individual farmer makes the deicsion on his farm.

The evident results are "good farming" at a high level of efficiency. Run by farmers, producing above the poverty level at a reasonable price for the consumer without danger of accumulating a surplus and without the sting of "farm relief" and "subsidy" attached.

Another result will be a permanent system for agricultural production with little or no competition from the off-the-farm people who either own already rich land or can restore soil and water resources to make it so and thereby gain income tax relief. If the land should become rich, beyond our food and fiber needs, industry can find use for the products it will grow at low cost to make them into products people will need. Many such products are already known. Research will find others. Other uses for any extra land could well be environment controls to hold insects and diseases in check; restoration of wildlife habitat; ponds for farm and community water supplies where nitrate poisoning in wells becomes a health hazard; the preservation of virgin stands of grasses and timber, and beautification in general are a few. The extra good land we had when Columbus discovered America was never a liability.

Unlike past and present programs, the "second market" program offers the dairy and livestock farmers a defense against low market prices and high costs by giving them a chance to make money by selling their low producers while building up more productive land, and growing more efficient animals. Because of the mild climate, south Missouri dairymen can compete with any farmer if they enrich their soils and provide cheap water to irrigate the crops growing on them.

The "second market" program gives the small farmer, raising a large family but lacking credit and information, a chance to compete with the large farmer who has credit and information but who must hire help. The Government second market gives both the same chance for soil restoration and water conservation with the help of already available county agents and SCS engineers. Small productive Ozark bottom fields, cheap hillside pastures and a large family can produce a lot of wealth with a little help in the selection of more valuable crops and soil restoration and water conservation.

The soil bank bought land abandonment at a per acre figure already distressing to the farmer living on it. The community lost the farmer as a customer and the chance to haul and process the products of his abandoned land. The "second market" program retains the farmer as a customer, restores the capacity to produce to the land so it can meet the competition of better lands and farmers elsewhere and serve in the economic development of the community.

The amount of money appropriated for present programs is not determined by any specific guides. The amount of money to be appropriated for the "second market" program is to be an amount large enough so that the farmers of the Nation will return to the Nation's soils in total as much plantfood each year as that used, wasted, and lost in agricultural production. The figure will probably not be too high because as consumer market prices go near to where they should be, farmers will use more fertilizer to supply that market.

Let us remember: Human bodies and minds are the final product of agriculture.

To protect those bodies and minds from disease we support the best scientific laboratories in the world. We require doctors to be trained for years in using the best science has to offer, before they get a license to touch human bodies.

Our Armed Forces are geared to protect them from an enemy attack with the best in science, skills, and machines money can buy.

Is there any sensible reason for denying agriculture the money to encourage farmers by this "second market," or by any other means to use science in restoring and preserving our food producing soil and water resources so vital in guarding the health and growth of human bodies from the moment of conception to death?

Administrative costs should be less. There would only be one crop to measure; participation would be checked only on those farms selling to the second market. There would be no surplus to measure and give away. There would be no "cost sharing" for fertilizer, lime, terraces and many other activities now requiring many more people than were needed a few years ago.

In return for the administrative costs there would be something bought of great value to all people, soil restoration and water conservation.

To summarize then Mr. Speaker, there is no doubt that the farm policies of the past are reaping a bitter harvest today.

The American farmer, uneasy and restless, because of the unstable trend of agriculture, needs a new seeding of ideas. Ideas that will necessitate the plowing of new ground, to revive and bring forth new fruit in the orchards of the economy of the Nation's largest business.

To that end, Gene Poirot, a man of the soil, a master farmer, author of the book, "Our Margin of Life," who has applied the fruits of science and technology to his farm operation on wornout acres, members of the Missouri Seventh Congressional District farm advisory council, and myself, have put together some ideas for legislation that we call the cropland and water restoration bill. I think, that contained in this measure, is a better way to meet the farm challenge, based on concepts that any farmer can understand, and on concepts which if properly explained to the public, will erase the popular conception that farmers are being paid not to grow food and fiber.

The backbone of this legislation is for soil and water restoration, the incentive to accomplish both, with a realistic profit margin for the farmer.

It is important to remember, that it is not the big farmer—that is, the one with top-quality land, adequate water, and sufficient capital—who needs the help. It is the farmer on marginal land, with the ever-present threat of inadequate rainfall, with little capital and no margin for error, and no control of the market forces, who is in real trouble. Yet it is this same man who under the farm policy of the past two decades or more, receives the least Federal assistance, while the man who already has everything going for him—including rich soil—benefits the most from present

farm program outlays, even to the point of not properly using the resources.

The Hall farm bill—the cropland and water restoration bill—makes clear that cropland soil, its plant food, and the water necessary to make crops grow, are not expendable. If these die or disappear, the rest of the population cannot be sustained, and some will also die until these basic elements are brought back into balance with human need.

The basic premise of our bill is that the cost of doing soil and water restoration is a cost of producing food. It must be paid by the consumer either directly at the store, or indirectly through the Government which is all the people. It must result in voluntary and honorable profit to the farmer. He must be consulted and respond with his expertise.

The basic approach is to offer farmers a "second market" by the opportunity to shift a percentage of cropland to the production of a suitable cover crop for his particular region, such as sweet clover, plowed under, with the Government paying a fair price per dry weight ton, and with the farmer free to choose between this market, or the consumer market for food and fiber he would otherwise grow.

Under the "second market" plan three important objectives would be met:

First. Each farmer would be given a chance to earn a minimum, fair net income for values accomplished, without a chance to produce a surplus or questionable quality; or later, the need of producing it to pay costs.

Second. Each farmer would be given the opportunity to adjust his participation to the size of his own problem. He could use all, or none of his land, one year at a time.

Third. Each farmer would be given not only a chance, but the incentive to use the science of agriculture to solve his own individual problems relating to his land, without creating a problem of overproduction for others.

The results that would occur would be—

First. Surplus control would be done by farmers, voluntarily.

Second. Abundance would be assured in a steady, nutritious supply, at a reasonable price for the consumer.

Third. Net profit to the farmer would be assured at or above the parity of top income level.

Fourth. Above that level, the consumer would regulate the price by his demands. At that level, the farmer would regulate the price of what he buys by his demand and/or options.

Fifth. The Nation would be assured of a permanent potential in case of emergencies for the production of food and fiber by a constant program of soil and water restoration.

It is my feeling that this cropland and water restoration bill, with the built-in feature of a "second market" could become the answer to what has been termed our national disgrace, the seemingly insoluble farm problem. It is truly based on the balance of nature, "our margin of life."

LEGISLATION TO CONTROL AND SUPERVISE PRIVATELY CONTROLLED TAX-EXEMPT FOUNDATIONS AND CHARITABLE TRUSTS

The SPEAKER pro tempore (Mr. ALBERT). Under a previous order of the House, the gentleman from Texas (Mr. PATMAN) is recognized for 15 minutes.

Mr. PATMAN. Mr. Speaker, I would like to unfold another chapter in the continuing story of privately controlled tax-exempt foundations.

The bill introduced today by me with Congressmen EVINS, ADDABBO, and BUTTON coauthors, has been needed over a long period of time. It is referred to the Committee on Ways and Means for consideration.

As we look upon our great country today, we see the big corporations, the big banks and the privately controlled tax-exempt foundations closing their hold on the economic windpipe of America.

The average American citizen is overburdened with taxes and unable to obtain mortgage money, even at the present high interest rates, to buy a home. The small businessman is hamstrung by his inability to obtain a loan despite high interest rates, and is competing against tax-exempt business.

We have the highest interest rates in our history; the greatest concentration in our history of financial, economic and business power in the hands of the big banks, big corporations, and the conglomerates. Privately controlled tax-exempt foundations and charitable trusts add a further dimension to the problem. Tax exemption places an additional burden on the average taxpayer who must pay from his pocket what the tax-exempts do not pay, or what is lost through tax deductible contributions to such organizations.

In 1962, in the original report of the Subcommittee on Foundations, which I as chairman issued, I pointed out that for the 10-year period from 1951 to 1960, almost $7 billion in receipts of 534 foundations was not subject to taxation. In the one year, 1951, these receipts had amounted to $554 million, but by 1967, $1¼ billion in receipts of 647 foundations were being siphoned off, in that one year alone, from the taxable income of this Nation. From 1961 to 1967—a 7-year period—receipts of the foundations studied—575 to 647—totaled $8.7 billion or 25 percent more than for the preceding 10 years from 1951 to 1960 for the 534 foundations studied.

On an accumulated basis from 1951 to 1967, almost $15.7 billion had been received by such organizations. Of this $15.7 billion, a little less than half, or $7.3 billion, came from such sources as business income, interest, dividends, rents and royalties. Over half of the balance, or $4.1 billion, came from capital gains on the sale of assets and the remainder, $4.3 billion from contributions, gifts, and grants.

It is clear that foundation-controlled businesses are competing with tax-free dollars against the average businessman who is at a disadvantage because of his taxpaying requirements. Further, it is obvious that there is a great deal of speculative activity in the securities field—note the capital gains. Our latest report shows that 154 of 647 foundations, or almost 25 percent held sizable amounts of stock, from 5 to 100 percent, in 313 corporations. At the close of 1967, the carrying value of these shares was $2.7 billion with an estimated market value of $6.2 billion. These holdings have a powerful influence on control situations, in the marketplace and in proxy solicitations.

When we take a look at the market value of total corporate stockholdings by these foundations, we find that their holdings amount to the staggering sum of $13.1 billion, or almost 80 percent higher than the holdings at the end of 1960. In a similar vein, these foundations had total assets at market value at the end of 1967 of $17.8 billion as compared to some $10.2 billion at the end of 1960, an increase of almost 75 percent. To place this in perspective, the $17.8 billion valuation is half as much again as the $11.8 billion of the capital stock, surplus, undivided profits and contingency reserves of the 50 largest banks in the United States.

What have these foundations done with these tax-free dollars? In the years 1951 through 1967, these foundations disbursed, out of $15.7 billion in receipts, $9.9 billion of which $1.9 billion, or almost 20 percent was paid out for expenses, and $8 billion was distributed for contributions, gifts, and grants. In other words, it cost the foundation $25 in expenses for every $100 of contributions, gifts, and grants made. However, this is an average figure. For 1967, it cost the foundations $33 in expenses—$253 million—for every hundred dollars in contributions, gifts, and grants made—$754 million. Further, the $8 billion in contributions, gifts, and grants represents only about one-half of the receipts for this period.

Privately controlled tax-exempt foundations and charitable trusts are established to distribute their tax-free dollars for the worthy purposes for which tax-exemption status was granted. Has this been done? No indeed. As of the close of 1967, the accumulated unspent income exceeded $2 billion as compared to $367 million at the end of 1951, or an increase of almost 500 percent with no signs that such accumulations are at an end. In addition, their capital structure is constantly increasing.

When we consider that this incredible tale covers only 647 of some 30,000 foundations, even though these include most of the larger ones, the tremendous impact can only begin to be realized. Further, such organizations are proliferating at the rate of some 2,000 each year.

The Internal Revenue Service and the Treasury Department has admittedly been extremely lax in their surveillance of these organizations. It took them years to supply the Subcommittee on Foundations with a listing of these organizations. Shortly, thereafter, a large number of corrections to this list were made. They have proven themselves unable to exercise the close supervision and control

over these organizations for which the average taxpayer and the small businessman of this country are crying aloud. While the tax problem is an important one, there are many other aspects of foundation operations which require the closest scrutiny.

We have built a Frankenstein monster, which together with high-interest rates, the big greedy banks and big corporations will continue to choke economically our average taxpayer and small businessman. We cannot let this happen. We must take action now.

In 1962, I made a number of specific recommendations on this subject, based on the abuses which were uncovered. They are as applicable today as they were then and at this point I would like to insert them in the RECORD:

1. In my view, consideration should be given to a limitation of 25 years on the life of foundations instead of permitting them to exist in perpetuity.

2. Tax-exempt foundations should be prohibited from engaging in business directly or indirectly.

Foundations controlling corporations engaged in business, through the extent of stockownership in those corporations, should themselves be deemed to be engaged in that business.

3. Commercial money lending and borrowing by foundations should be banned.

4. Arms-length relationships should be enforced. A foundation should not be permitted to use its funds to grant benefits to a controlled company's employees. This is quite a competitive advantage.

5. Foundation or donor solicitation or acceptance of contributions from suppliers or users of goods or services should be prohibited.

6. A foundation should not be in the position of exercising control over any corporation, directly or indirectly. In my view, all foundations should be limited to ownership of no more than 3 percent of the stock of a corporation and should not be allowed to vote stock.

7. Standards should be established with respect to foundation behavior in a proxy fight.

8. Another area that needs consideration is that of investments. There is a sharp difference between investing in securities and speculating or trading in securities. In other words, there is a difference between being a passive investor and an active securities merchant or gambler.

9. Is the tax law sound in permitting a deduction for charity to a person who merely transfers funds to a foundation that he himself controls, where the money has not as yet reached actual operating charities?

In my view, a contributor should not be allowed a deduction for payments to a foundation that he controls until the foundation actually uses the money for charity. The foundation should be recognized as being the alter ego of the controlling contributor. Income earned by the foundation should be taxable to the controlling contributor until put to charitable use.

10. Exemption should be denied if a foundation has been formed or availed of for tax avoidance purposes or to get financial benefits for the contributor. Conversely, a controlled corporation should not be allowed a contribution to a foundation, but instead the payment should be considered as a dividend to the controlling stockholder where the amount is significant and the foundation is unrelated to the business purpose of the corporation.

The tax law says that a foundation's earnings may not inure to the benefit of any private individual. It should be made clear that "individual" includes corporations and trusts.

11. Isn't there something out of gear with the tax law that, under the guise of charity, permits a taxpayer to actually enrich himself at the cost of all other taxpayers? One answer may be to treat gifts to foundations in the same way as private gifts, and figure them at the cost of the property given or their value, whichever is lower.

12. In the case of corporations that are treated like partnerships (Subchapter S, Chapter 1, Internal Revenue Code), contributions to foundations should "pass through" to the stockholders and be included pro rata as contributions by the stockholders personally. In that way, the 20 percent and 30 percent limitations on contributions will be maintained. At present, through the mechanics of Subchapter S (Chapter 1, Internal Revenue Code), an extra 5 percent of the corporation's income becomes deductible by the stockholders.

13. For the purpose of figuring the accumulation of income, contributions to a foundation and all capital gains of the foundation should be considered as income, and not capital. Both the original contribution and the income from it are ordinarily available to the foundation without distinction.

This would eliminate a device for avoiding unreasonable accumulation of income: contributions from one donor-controlled foundation to other foundations controlled by the same donor.

14. For the purpose of computing the accumulation of income, amounts unreasonably accumulated in corporations controlled by a foundation should be added to the foundation's direct accumulation as if the two were one.

15. Corporations controlled by foundations should be subject to the unreasonable accumulation earnings tax in section 531 of the Code. At present, that tax is imposed where dividends are held back to save tax for stockholders. It should also apply where dividends are held back to save the existence of unreasonable accumulations for foundations otherwise exempt from tax.

16. Re gift and estate taxes:

(a) Exclude from the base for the marital deduction amounts left to foundations that are hence untaxed.

(b) While amounts given to foundations are not subject to gift and estate taxes, the rate brackets to be applied to amounts that are taxable should be the same as if the foundation amounts were part of the taxable gifts or estate.

17. Consideration should be given to a regulatory agency for the supervision of tax-exempt foundations.

18. A penetrating review of every application for tax exemption is needed.

19. All matters relating to the granting or denial of tax exemption, as well as revocations and penalties, should be made public.

20. The full content of foundation tax returns should be open to public inspection.

21. A national registry of all foundations should be published annually.

22. The tax returns of foundations should require disclosure of amounts spent for instigating or promoting legislation, or political activities, or amounts paid to other organizations for the purpose.

23. The returns should likewise require disclosure of amounts spent for TV, radio, and newspaper advertising.

24. The returns should call for a description of all activities, directly or indirectly engaged in by the foundation, in which commercial organizations are also engaged.

25. The program of field auditing returns of foundations should be greatly expanded.

26. Stiff penalties and revocation of tax exemption for improper or insufficient reporting would help curb abuses.

Mr. Speaker, these and other reforms are vitally necessary.

H.R. 13270 which was recently passed by the House contains provisions dealing with some of these abuses; others still remain.

I am, therefore, introducing legislation to establish an independent Federal agency to control and supervise these organizations. The agency, the Private Foundation Control Commission, would be headed by three Commissioners appointed by and reporting to the President. It would—

First, provide general leadership in the identification and solution of problems relating to private foundations;

Second, facilitate the enforcement of internal revenue laws and regulations relating to private foundations and aid in the development of a more equitable tax structure with respect to such foundations;

Third, develop and recommend to the President and the Congress policies and programs designed to ameliorate the problems relating to Federal taxation and regulation of private foundations; and

Fourth, establish and administer a comprehensive registration and reporting system for private foundations and to determine and centrally record the financial and other operations of such foundations in order to assist in the accomplishment of the foregoing objectives.

The agency would be self-sustaining by assessing against the foundations a registration and an annual maintenance fee to cover the agency's administrative costs. This fee would not be a substitute for the 7½-percent tax on net investment income contained in H.R. 13270 recently passed by the House.

Your support is solicited for consideration and speedy action on this legislation to cure this ever-growing problem.

THE ARMS TRADE—PART IV

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. COUGHLIN) is recognized for 15 minutes.

Mr. COUGHLIN. Mr. Speaker, last week week King Idris of Libya was overthrown by a small group of radical military officers. Whether or not this coup will ultimately prove to be beneficial to Libya's, America's, or the West's best interests remains to be seen. But what is certain at this time is that a regime friendly to the West has been overthrown by an unknown quantity armed with Western weapons. It is also certain that the unrestrained trade in conventional arms by the great Western industrial powers helped provoke this latest incident.

According to the Institute for Strategic Studies in London, Libya's military posture in the spring of 1966 was as follows:

LIBYA

GENERAL

Population: 1,610,000.

Voluntary military service; a conscription bill is to be introduced during 1966.

Total armed forces: 7,000.

Defence estimates 1965: £L5,000,000. ($14,000,000).
Total expenditure 1965: £L85,801,430.

ARMY

Total strength: 6,000.
1 armoured and 5 infantry battalions equipped mainly by Britain.
2 artillery battalions equipped by the USA.

NAVY

Total strength: 200.
1 corvette.
2 inshore minesweepers.

AIR FORCE

Total strength: 800.
6 light aircraft and a C–47 transport.
2 T–33 jet trainers.
Some more T–33s, about 6 C–47s, and 2 helicopters may be supplied by the USA.

POLICE

Total strength: 12,000.
In Cyrenaica the Police (CYDEF) is a stronger military force than the regular army. It has recently been given the responsibility of guarding oil installations against the threat of sabotage.

AID

Army personnel have had training from the British and US military missions in Libya, some Naval cadets have been training in the UK, and about 50 pilots in Germany and the USA. A few military personnel are also being trained in the Italian, Greek, and Turkish forces.

From all other indications, the Libyan defense posture changed little in the next 2 years.

But in 1968, Great Britain concluded a $280 million sales agreement with the Libyans which included supplying sophisticated Thunderbird and Rapier antiaircraft missiles, elaborate radar equipment, and various other air defense gear.

At the same time, the United States agreed to sell Libya 10 F–5 Freedom Fighter jets, despite the fact that Libya had—and apparently still has—no personnel capable of flying or servicing them.

In early 1969, Libya agreed to purchase a large supply of British Chieftain tanks and self-propelled cannon. All of this equipment, including the air defense missiles and jets, is estimated to cost the Libyans approximately $500 million.

What becomes obvious is that Great Britain, and to a lesser extent the United States, in their eagerness to sell weapons, have convinced Libya to spend nearly 36 times its entire annual defense budget—$14 million versus $500 million—on arms it cannot operate and certainly does not need.

As the New York Times of September 2, 1969, pointed out:

Many of the members of the revolutionary council (who overthrew King Idris) are believed to be air force officers who acquired stature recently with the conclusion of a large air defense agreement with Britain.

Stripped of all gloss about how such a sale adds to "the defensive strength of the West," the case of Libya's recent military buildup amounts to a clear attempt by Britain and the United States, both of which have crushing balance-of-payments deficits, to ameliorate their international monetary problems by selling arms to a nation with some ready gold. Ten years ago, when Libya was poor, no one wanted to sell or loan the country anything. Now that Libya is rich, suddenly it needs the most sophisticated military equipment in the world. The expansion of its oil industry requires a natural expansion of its border police, but certainly not to the tune of 36 times its entire defense budget.

Yet no one asks: Where is the war? Who is Libya's enemy? Where is the threat? Just sell them all the arms you can, take the money, and then show surprise when a group of military officers, puffed up by the inordinate infusion of arms you just sold them, makes a grab for power.

If the situation were not so serious, it would be ludicrous.

I believe it imperative that the great arms suppliers of the world—the United States, the Soviet Union, Great Britain, France, West Germany, Italy, Sweden, Canada, and the rest—must stop this kind of thing. That is why I have repeatedly called for the question of conventional arms control to be added to the agenda of the forthcoming strategic arms limitation talks in Geneva, and why I once again ask that our Government take the initiative and seek to have it included.

How many military coups must there be before the great arms suppliers learn that there exists a deadly relationship between both the quantity and the quality of arms in a country and the behavior of the military using those arms? And how long will it take before the great arms suppliers realize that the trade in conventional arms which they so assiduously promote is ultimately detrimental to their own interests?

FTC ORDERS FULL-SCALE INVESTIGATION, PROSECUTION IN MAGAZINE SUBSCRIPTION SALES FRAUDS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. ROONEY) is recognized for 20 minutes.

Mr. ROONEY of Pennsylvania. Mr. Speaker, several months have passed since I last addressed my colleagues on the despicable methods by which magazine subscription sales frequently are conducted.

My silence has not been the result of any shortage of new evidence of deception, fraud, or intimidation in the sale of magazine subscriptions. To the contrary, this time has been utilized to explore various unscrupulous practices in depth and to press for effective corrective action by several means.

I am pleased to announce today that the Federal Trade Commission has now launched a full-scale nationwide investigation to gather evidence for legal action against magazine subscription sales companies which are continuing to use deceptive sales practices.

This investigation is the direct result of two inquiries by the FTC into evidence I was able to uncover to establish that an FTC-endorsed "code of fair practices" which supposedly controls sales activity in the subscription industry is not being observed by many magazine sales organizations.

The initial FTC inquiry was a limited field survey conducted primarily in Pennsylvania and New Jersey. It established that there are numerous abuses occurring in the two-State area, despite implementation of the fair practices code in January of 1968.

The second inquiry, conducted through the FTC's 12 regional offices around the Nation, was intended to determine what impact the fair practices code has had upon the deceptive and fraudulent sales tactics which have marked the magazine selling industry for decades.

FTC Chairman Paul Rand Dixon has advised me:

Our investigation of the impact of the PDS Code indicates that the Code does some good and that it probably has sufficient potential to justify continued Commission approval. I hasten to add, however, that the question of continued approval has not been decided by the Commission.

Although the PDS Code appears to be serving a useful purpose in assisting some consumers, it has not effectively stopped the flow of complaints regarding magazine subscription solicitors.

Accordingly, the Commission has now directed its staff to review the files and to promptly investigate all indications of law violation with a view to recommending issuance of formal complaints where justified. The staff has advised me that a further field investigation involving several of our field offices will be initiated in the near future.

This investigation will be given the highest priority.

Mr. Speaker, since February I have been identifying specific bad practices, naming names, and identifying companies. Although some steps have been taken by some companies to stop abuses, I find that in too many instances the company effort has been too little and too late.

Unless far more decisive steps are taken promptly, this industry risks its own destruction. It is still my contention, however, that more than self-regulation will be required to keep deceptive practices from gaining a new foothold, if in fact they can be rooted out. For that reason I will continue to submit evidence to the FTC to establish that the code of fair practices, now being administered by the magazine industry through its Central Registry of Magazine Subscription Solicitors, can never hope to provide the degree of protection against deception and fraud to which the American consumer is entitled.

In pursuing the new investigation to gather evidence for legal action against offending magazine sales companies, the FTC investigators have met with officials of some of the Nation's leading publishing houses which operate magazine sales subsidiaries—Hearst Corp., Cowles Communications, Inc., and Time, Inc. A similar meeting with the former Curtis organization is planned.

These meetings are not intended to imply that subsidiary sales companies of any or all of these publishing companies will be the subject of FTC action. However, they are being advised that past and present sales activities and practices are being examined closely.

I previously identified a subsidiary of the Hearst Corp., International Magazine Service of the Mid-Atlantic, and five

subsidiaries of Cowles Communications, Inc.—Home Reader Service, Home Reference Library, Civic Reading Club, Mutual Readers League, and Educational Book Club—as the sources of most of the complaints of sales abuses I have received from all parts of the country.

Abuses by Cowles subsidiaries have been the subject of so many complaints, I recently outlined some of these abuses in two letters to Gardner Cowles, chairman of the board, with an appeal that he intervene personally to correct them. Mr. Cowles has assured me of his concern and has outlined a series of specific steps he is taking to combat abuses within his own subsidiaries.

I include this exchange of correspondence, as well as a recent letter from Chairman Dixon relative to the FTC investigation, in the RECORD. I should also like to include a letter from Richard Maxwell, president of the National Better Business Bureau, Inc., as well as an article by Arthur F. Rowse, special writer for the Washington Star, which provides further proof that the deception and fraud continues.

In addition, I would like to insert in the RECORD a column I have prepared for the "Action! Express" public service feature of the Easton, Pa., Express newspaper in which I trace my investigation of magazine subscription sales abuses to the present time.

The above-mentioned material follows:

FEDERAL TRADE COMMISSION,
Washington, D.C., August 12, 1969.

Re PDS Magazine Subscription Code, File No. 673 7038.

Hon. FRED B. ROONEY,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ROONEY: This is in response to your letter of July 16, 1969, regarding the current status of the Commission's inquiry into the effectiveness of the PDS Code in stopping illegal practices of door-to-door magazine subscription solicitors. Your continued cooperation in this matter is greatly appreciated.

Our investigation of the impact of the PDS Code indicates that the Code does some good and that it probably has sufficient potential to justify continued Commission approval. I hasten to add, however, that the question of continued approval has not been decided by the Commission.

Although the PDS Code appears to be serving a useful purpose in assisting some consumers, it has not effectively stopped the flow of complaints regarding magazine subscription solicitors. Accordingly, the Commission has now directed its staff to review the files and to promptly investigate all indications of law violation with a view to recommending issuance of formal complaints where justified. The staff has advised me that a further field investigation involving several of our field offices will be initiated in the near future. This investigation will be given the highest priority.

I am sure that the information you refer to in your letter will be very useful in our continuing investigation and I have instructed the staff to take full advantage of your offer of assistance and cooperation. Thank you again for your helpfulness.

With best wishes, I am,

Sincerely yours,

PAUL RAND DIXON,
Chairman.

COWLES COMMUNICATIONS, INC.,
New York, N.Y. June 2, 1969.

Hon. FRED B. ROONEY,
U.S. Congress, House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ROONEY: Thank you for your letter of May 22nd.

I want to assure you that I am just as concerned as you are by the evidence of some deceptive practices in the sale of magazine subscriptions.

I am initiating a thorough investigation so far as our own subscription subsidiaries are concerned, and I want to assure you that all of the executives here are determined to find a way to stamp out any improper sales tactics.

We take pride in the good reputation of this company and we do not propose to allow that reputation to be tarnished.

Sincerely,

GARDNER COWLES.

MAY 22, 1969.

Mr. GARDNER COWLES,
Chairman of the Board,
Cowles Communications, Inc.,
Des Moines, Iowa.

DEAR MR. COWLES: You are aware, I am certain, of my deep concern regarding the manner in which certain magazine subscription sales organizations are conducting their sales.

Enclosed is a statement from the Congressional Record in which I discuss practices which are being utilized by various Cowles subsidiaries. The statement is self-explanatory.

I know that the practices described are not limited to a few individuals or a few franchises in isolated parts of the country. I have polled the Attorneys General of every state and a number of them have singled out various Cowles subsidiaries for special comment regarding deceptive practices.

It appears to me that some basic policies of Cowles Communications are in need of revision and that effective action can best begin at the very top. I urge that you consider this matter seriously and that effective action be taken.

I am certain you share my view that the publications which are offered for sale by your subsidiaries can be sold in reasonable quantities on their own merits, without gimmicks designed to confuse or mislead the purchaser.

With kind personal regards, I am,

Sincerely yours,

FRED B. ROONEY,
Member of Congress.

JULY 15, 1969.

Mr. GARDNER COWLES,
Chairman of the Board,
Cowles Communications, Inc.,
New York, N.Y.

DEAR MR. COWLES: I thank you for your letter of June 2nd evidencing your personal concern regarding sales practices being used by Cowles' subsidiaries which are engaged in magazine subscription sales.

Naturally, I have no way of knowing what method of investigation you are employing. However, if you merely question top echelon personnel, you will receive the "propaganda" which has been supplied freely to me and which is readily offered for public examination. This material reflects great concern that fair sales practices be adhered to, etc.

There is no offer to disclose the sales practices which are recommended by word of mouth and through personal contacts by officials of the Cowles subsidiaries to franchised dealers. Nevertheless, my own investigation is producing these in quantity, along with testimony of personnel who have been instructed by directors to use a variety of deceptive and fraudulent practices, "because they are boosting production for this dealer or that dealer."

I have received reports from dealers that they were relieved of their franchises because they refused to follow the "suggestions" of directors (who earn their keep by commissions, incidentally) to employ sales pitches which were untrue. Further, despite denials by some of the corporate officers of Cowles' subsidiaries that dunning tactics are being used in collection, I continue to collect dunning letters under recent dates from a large array of your franchises around the country.

So-called "unauthorized" but identical 48-hour "Notices of Court Action" continue to flow from various franchise offices of Home Reader Service, Civic Reading Club and other subsidiaries to collect sums often amounting to less than $10. These are in direct violation of the code and are not to be found in the "collection letter series" supplied to me as evidence of fair practices employed by Civic, for example.

Recently, a quantity of Civic Reading Club contracts containing hidden gift subscriptions—outright fraud—came into my possession. I have contacted these subscribers in writing and have determined from a number of them they have no knowledge of persons identified on their contracts as having received free subscriptions to Look at their expense. This material is being turned over to U.S. Postal inspectors.

There are still other aspects of the operations of various Cowles subsidiaries I am investigating now which may prove even more serious.

What steps you personally take to stamp out these practices are, of course, your concern. I merely want to point out that Look magazine utilizes top flight investigative reporters to develop some of its enterprising exposes. If you were to turn some of these reporters loose on a confidential investigation of the manner in which your subscription sales subsidiaries are being run, and have been run over a period of years, I venture that your eyes will be opened.

Again, I do appreciate your concern and I sincerely hope you will be successful in identifying the upper echelon personnel who are responsible for the unsavory manner in which business is being conducted.

Incidentally, I have touched upon only a few of the abuses my own investigation is revealing. For example, even reports that unscrupulous sales personnel are dismissed prove to be shams—the personnel are simply transferred to other communities to carry on their productive but despicable practices.

I am enclosing several letters which will help to demonstrate that I'm not talking off the top of my head.

Further, it has come to my attention that some rather extensive personnel changes are occurring at upper echelons within the sales subsidiaries. This may be the result of reports circulating within the industry that two of the Cowles subsidiaries are being discontinued. Perhaps, however, this is evidence of steps already begun to correct abusive practices.

Certainly, I would be most interested to learn of any specific steps taken to insure that deceptive and misleading practices are being abolished.

Again, I am pleased to note your concern and wish you success in your efforts.

With kind personal regards I am,

Sincerely yours,

FRED B. ROONEY,
Member of Congress.

COWLES COMMUNICATIONS, INC.,
New York, N.Y., July 28, 1969.

Hon. FRED B. ROONEY,
U.S. Congress,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ROONEY: Upon receipt of your letter dated July 15th, I immediate-

ly called a meeting of the Executive Committee of Cowles Communications, Inc.'s Board of Directors to consider the serious charges made in such letter with respect to our subscription-selling subsidiaries. Due to vacations and other absences from the city, it was not possible to hold a meeting with all members present until July 22, 1969. I might explain that this five-man Committee includes the Chairman of the Board, the President, both Executive Vice Presidents and the Vice President and Controller of Cowles Communications, Inc. Immediately following this meeting here in New York at which your letter was fully discussed, all members of the Committee—other than myself—flew to Des Moines, Iowa, where our subscription subsidiaries are headquartered and met with top management of the subsidiaries and of the Look subscription department. This Committee has now reported back to me that improper sales practices, though greatly reduced in recent months, have not been entirely eliminated. It has also made specific recommendations on how to correct the situation and these recommendations are already being implemented.

Basically, our Executive Committee agrees with your conclusion that policing of the field operation by regional directors who report directly to the agency heads and whose emphasis is primarily on production has not proved as effective as we had anticipated. We believe that most of our agency officials have made a genuine effort to clean up both sales talks and collection efforts. Parent company representatives have also made continuing effor's—especially during the last few months—to tighten controls over franchise dealer practices. As you note in your letter, we have consolidated the management of Educational Book Club and Home Reference Library; also the management of Home Reader Service and Mutual Readers League. We have also earlier this month changed some of the agency top management to strengthen the operations.

Our Executive Committee now proposes to establish a task force, members of which will contact franchise dealers regularly to check the dealer's operation, his sales talks, his collection procedures and generally how he is carrying on his business. This task force will be a *Cowles Communications, Inc.* auditing group operating completely independently of the agency heads and the regional directors. Its responsibility will be to Cowles Communications, Inc. and its members will report to a Cowles Communications, Inc. official in New York City to be designated by the Executive Committee. Members of this task force will *not* be assigned to specific dealers or specific subscription-selling subsidiaries. They will not only be shifted as among dealers and agencies, but they will also from time to time verify subscription orders in the field and monitor telephone verifications made either by the dealer or by the agency. We would expect under this program to have our Executive Committee informed at all times as to sales talks and collection procedures being used in the field by dealers and their representatives and would be in a position to shut off the authorization of any dealer whose practices were not proper.

Although you can well appreciate that it will take some time to implement this program, I am sure you will agree that prompt and constructive action is being taken by Cowles Communications, Inc. to correct the situation described in your letter to me. We shall keep you advised as to our progress and would in turn greatly appreciate your permitting our representatives to meet with you or your assistants on a regular basis to ascertain what complaints may be continuing and the extent to which the same are justified. It certainly is not in our interest to permit improper sales practices. Business obtained that way obviously does not profit the subsidiary involved because it cancels out and does not renew. But even more important, we at Cowles Communications, Inc. have too much pride in our publications—principally LOOK—to permit what we believe is a very highly regarded image to be tarnished by the unauthorized practices of field-selling personnel.

Thank you for your most constructive and helpful letter. I assure you that we intend to cooperate most fully with your efforts to eliminate improper practices in the magazine subscription-selling field.

Sincerely yours,

GARDNER COWLES.

DECEPTION UNLIMITED IN MAGAZINE SALES

(By FRED B. ROONEY, Member of Congress)

Nearly seven months have passed since "ACTION! Express" turned over to me a two-inch-high stack of complaints about magazine sales practices and asked, "What can the federal government do about this?" Although I didn't realize it then, that was a loaded question.

It marked the beginning of an investigation, undertaken by my own office staff, which has grown to proportions I wouldn't have believed possible when it began last February. While "ACTION! Express" pursued means to correct deceptive and fraudulent practices in magazine sales in the Pennsylvania and New Jersey area, I began pressing for effective action in Washington. Today, after months of cooperation with "ACTION! Express," it is possible to report that magazine sales companies are faced with the alternatives of cleaning up their sales practices swiftly or of wrecking their own industry.

Since February, that two-inch-high stack of magazine complaints supplied by "ACTION! Express" has grown into an eight-foot-high record of deception and fraud, consisting of documented complaints, of signed testimony by magazine sales personnel, of actual magazine sales company records which contain hundreds upon hundreds of examples of deception, and copies of hundreds of documents which provide clear evidence of violations of a "code of fair practices" under which magazine subscriptions supposedly are sold.

Evidence of possible abuses of federal laws has been turned over to investigators of the Federal Trade Commission, the United States Post Office Department and the Internal Revenue Service. News wire services have dispatched a number of stories nationwide regarding the magazine sales investigations and hundreds of letters from victims of deceptive sales practices have poured into my office from every part of the country. Hundreds of daily and weekly newspapers in virtually every state have carried articles describing the deceptive and fraudulent tactics used to sell magazine subscriptions to the unwary.

I have surveyed the Attorneys General of all 50 of the United States and received detailed reports of magazine sales abuses within their own jurisdictions from virtually every one. Within the past few weeks, magazine sales practices have been the subject of columns by Senator Warren Magnuson, Chairman of the Senate Commerce Committee, and by nationally-known columnist Jack Anderson. World Wide Features Syndicate is preparing an article at the present time.

Several major business and industry newsletters have been carrying regular reports on progress of the investigation and some have even forecast that the very survival of the magazine sales industry may be at stake. I doubt that anything so extreme as the demise of magazine sales companies will result, although I am determined that if they are to survive it will be because they have learned to sell subscriptions honestly. There is no reason why the American consumer should tolerate the sales abuses which still are rampant in door-to-door sales of magazines, as well as various books and encyclopedias.

Throughout the nearly seven months that I and my staff have been working to uncover magazine sales abuses, one of my primary objectives has been to expose the abuses to public scrutiny. Through publicity, it is possible to alert the consumer to the pitfalls which may await him when he answers the telephone solicitor's call or responds to the salesman's knock at his door. This is not to suggest that all telephone solicitors nor all door-to-door salesmen are dishonest. It is intended to suggest that too few consumers take the time to make the distinction, or are able to do so. But by publicizing various sales abuses, consumers will learn to be wary and an educated consumer is this nation's strongest weapon against deception and fraud.

In the investigation of magazine sales practices, consumer education has been but one of the results of the excellent news coverage this effort has received. The publicity has prompted many consumers to write and describe their own experiences. A California housewife, for example, wrote to explain that she had had an unpleasant experience with one company which sells magazine subscriptions nationwide and that she had retained a complete file of all documents, letters and receipts. She sent along the complete file for use in the investigation. Scores of others sent their contracts—many of which clearly showed violations of the industry's code of fair practice—while others sent copies of high-pressure collection letters, including threats of lawsuits, bad credit reports and other forms of persuasion used to prod deceived consumers to complete payments on long-term subscription contracts.

The third and most important result of the publicity about the investigation of magazine sales practices was the first-hand descriptions of magazine subscription sales practices by people actually engaged in sales. Dozens of individuals, including franchised dealers, salesmen, solicitors, and contract renewal writers called my office or sent letters offering to help the investigation. Each of them agreed that the magazine subscription sales industry is thriving today on misrepresentation and fraud. They offered testimony and produced documented evidence of their own experiences. Some came to Washington from as far away as the New England states to discuss their experiences. Not a week goes by that I do not hear from others who have worked in the magazine subscription sales industry and who want to offer their help to clean it up.

Through the help of these sales personnel, many of whom have worked in magazine sales for 10 or 15 years or longer, it was possible to learn many of the intimate details about the internal operations of subscription sales companies. Their personal knowledge has helped bring into focus the degree of effectiveness of Central Registry of Magazine Subscription Solicitors—the magazine financed agency which is responsible for policing sales practices. I have described Central Registry as a "smokescreen behind which the fraud and deceptive practices flourish." Personnel in the industry regard Central Registry as a "joke" and are quick to cite its loose control of salesman registration and ineffective supervision of fair selling codes which are its prime functions.

Basically, three types of magazine subscription sales are conducted on a door-to-door basis. Two of these are the "cash" or "two-payment" types, the latter merely a variation of the former involving an initial cash payment at the door and a subsequent * * *. Generally, cash sales of magazine subscriptions are conducted by traveling crews of high school and college age boys

and/or girls, under the direction of a crew manager. They canvas neighborhoods door-to-door claiming to be students earning points toward college scholarships or to win trips to Europe, or purporting to be conducting research or surveys, or representing themselves as working for some charity, foundation or civil rights effort, to mention but a few of the standard sales pitches. A deputy attorney general for the state of Delaware told me he checked out magazine salesmen claiming to be college students and found that "none of them were in college, had been in college or really intended to go to college."

Cash crews transact their sales "on the spot," collecting payment-in-full immediately for the magazine subscriptions sold. Cash salesmen generally are recruited through classified ads which offer "travel to resort areas or major cities," hired on the spot with little or no regard to character, and sent out of town within hours (before they change their minds) as members of a traveling sales crew. Classified pages of large urban newspapers frequently contain such ads recruiting Negroes for crews to be sent into white suburban neighborhoods and instructed to use a civil rights sales pitch which often involves intimidation. Recently, an elderly woman in a Northeastern State collapsed and died after two members of a magazine sales crew threatened to "burn your house down" for refusing to buy magazines.

A fourteen-year-old New York State boy, describing his experiences during two weeks' work as a member of a traveling magazine crew, said youthful members of his crew often were mistaken for the "paper boy" and gladly accepted payment for newspapers at one door, then sold magazines at the next. A check of police records of 500 traveling salesmen who registered in Fairfax County, Va., during a 12-month period showed that more than 200 of them had committed crimes ranging from forgery to armed robbery and assault with deadly weapons. And a veteran magazine dealer who visited my office explained how cash crew leaders often carry guns to persuade disillusioned or disgruntled sales personnel to stay on the job.

Central Registry of Magazine Subscription Solicitors supposedly maintains a register of all cash and two-payment sales personnel and administers a code of ethics for these methods of selling magazines. Yet many of the complaints involving cash sales which I sent to Central Registry for action revealed that sales personnel involved were not registered. Nearly four months have passed since I sent a list of about 200 magazine salesmen to Central Registry with a request that I be advised how many of them were actually registered as salesmen. To this day I have not received a report, despite the fact I was told by Central Registry's administrator more than two months ago that the information would be supplied promptly.

Approximately 50 magazine sales companies are members of Central Registry. Of that number, about a dozen companies engage in "paid during service (PDS)" sales—that is, long term financing of multiple magazine subscriptions for four-year or five-year periods. Although Central Registry is the self-designated administrator of the code of fair practices for cash sales of magazines, it has a more official responsibility in administering a separate code of fair practices governing PDS subscription sales. The PDS code of fair practices has the distinction of having been formally endorsed by the Federal Trade Commission in May of 1967 by a 4 to 1 vote of the five-member FTC. Thus, since January of 1968 when that new Code took effect, Central Registry has had a quasi-official role as a "law enforcement agency" for the federal government.

Basically, I believe the FTC was wrong in delegating responsibility for enforcement of fair sales practices to a private agency which is financed by the very same industry it is expected to regulate. My own experience during the months of investigating magazine sales practices convinces me that the FTC is wrong to continue this relationship with Central Registry. I have urged in the past—and will continue to do so—that the FTC should dissolve its relationship with Central Registry and take over enforcement of fair practices for the benefit of the American consumer. It was my criticism of this relationship, coupled with my contention that Central Registry was not enforcing the PDS Code effectively, which convinced the FTC to reopen its investigation of magazine sales practices five months ago.

Beginning with a limited field investigation in the Pennsylvania-New Jersey area, the FTC found sufficient evidence of continued sales abuses to order a broader nationwide investigation through all 12 of its field offices in major population centers around the country. FTC Chairman Paul Rand Dixon has just advised me that this nationwide field investigation "indicates that the Code does some good and that it probably has sufficient potential to justify continued Commission approval." But Chairman Dixon further explained, "I hasten to add, however, that the question of continued approval has not been decided by the Commission. Although the PDS Code appears to be serving a useful purpose in assisting some consumers, it has not effectively stopped the flow of complaints regarding magazine subscription solicitors."

Thus, the FTC now recognizes that the Code has not lived up to expectations. "Accordingly," Chairman Dixon advised, "the Commission has now directed its staff to review the files and to promptly investigate all indications of law violations with a view to recommending issuance of formal complaints where justified. The staff has advised me that a further field investigation involving several of our field offices will be initiated in the near future. This investigation will be given the highest priority. In short, the FTC now is gathering evidence to begin prosecuting misrepresentation and fraud in the sale of magazines. Of course, all of the material in my files has been offered to the FTC and the Chairman has acknowledged he instructed the FTC staff "to take full advantage of your offer of assistance and cooperation."

Throughout my investigation, my files on magazine sales abuses have been open to any and all official investigations. Information as well as photostatic copies of complaints and documents have been supplied regularly to investigators for the FTC and the Post Office Department. Some material has been supplied to individual members of the FTC. Investigators also have spent many hours with myself and members of my staff in discussing magazine sales practices and abuses with the various sales personnel who have come to Washington to assist the investigation.

I have exchanged correspondence with the United States Chamber of Commerce and have met several times with representatives of the Mazagine Publishers Association. I discussed various abuses with the President of the National Better Business Bureau, Richard Maxwell, and just recently received a report from him that 13 crew managers and 113 magazine salesmen have been dismissed as the result of complaints of bad business practices. Dozens of individual complaints of misrepresentation have been sacrificed by the sales companies involved, but of all the complaints I submitted to Central Registry, I have yet to receive any report of a single punitive action taken against the offending companies, despite repeated requests for such information and repeated assurances from CR that I would be kept informed.

I have discussed directly with top management of the nation's leading magazine sales companies the specific abuses attributed to their organizations. In almost every instance, I was assured the particular company in question was doing its utmost to root out misrepresentation but that its competitors are the offenders who need to be dealt with. A high corporate official of one leading publishing company insisted his company is "the church" among magazine sales organizations. Yet, weeks ago, a New Jersey judge issued a temporary injunction against the use of certain deceptive sales practices by a sales subsidiary of that same "church." Another cited the "integrity" of his nationally prominent publication and insisted his organization has too much at stake to tolerate sales abuses. Yet, company documents from some of his subsidiaries show that his publication's high circulation figures have been maintained in part by overcharging unsuspecting subscribers to pay for magazines sent to individuals unknown to the subscribers.

Invariably, these corporate officials insist their policies do not permit deceptive practices and they place full blame on individual sales personnel for any misrepresentation or fraud. With few exceptions, they insist that parent sales organizations cannot be held accountable for abusive actions by what they describe as "a few overly-aggressive salesmen." They are quick to point out that unscrupulous salesmen, when identified, are promptly terminated. When a salesman offered a member of my staff "free magazines—you pay only the wrapping charges" several months ago, I promptly filed a complaint. The company proudly announced a short time later that the offending salesman had been discharged. But my sources within the industry reported that the same salesman was back working for the same company in another city the following week and a short time later turned up in a third city, still selling magazines for the same company.

In dismissing any burden of responsibility for the sales tactics utilized by their sales personnel in the field, these corporate officials disregard the fact that the parent corporation sets production quotas, sends regional directors into the field to pressure its dealers to maintain the production quotas, and seizes entire dealerships when production falls off, plunging longtime, dedicated personnel into virtual bankruptcy. My investigation indicates the degree of pressure applied by the parent organization to maintain high subscription sales quotas is largely responsible for deceptive practices in the industry. The production quotas often are unattainable, unless consumers can be tricked into becoming subscribers.

The tricks, of course, usually involve offers of xx magazines "free of charge" but "of course, you'll have to pay a small sum for postage (or handling, or wrapping, or editing, as the case may be)." One woman reported she was asked to "sign a receipt for 200 free green stamps" and after signing discovered that she had signed a contract to buy magazines.

Obviously, we have just begun to penetrate the surface of shoddy business practices in the magazine subscription sales industry. The complaints continue to pour in. The investigation goes on.

NATIONAL BETTER BUSINESS BUREAU, INC.,
New York, N.Y., August 22, 1969.

Congressman FRED B. ROONEY,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN ROONEY: Further following your letter of August 11th, I wanted to tell you of our continuing action program.

1. Since my visit with you in May, I have held a series of meetings with individual publishers to acquaint them with our activities and furthermore, to enlist their efforts with respect to their own organizations.

2. When I was in your office, I indicated that some nine crew managers and sixty-eight solicitors had been terminated by their individual employers after the records of bad business practice collected through the auspices of Better Business Bureaus and local Chambers of Commerce had been pointed out. Since then, four more managers and forty-five solicitors have been terminated.

3. Some of those terminated for cause, namely, bad practices, have gone to other agencies who are not a part of the self-regulatory programs. As this has occurred, some publishers have withdrawn their authorizations for agencies who would employ this type of people to sell their magazines.

4. We are having another review meeting in mid-September with local Bureau managers and the industry to discuss first of all, the progress since our last meeting in cleaning up these problems and secondly, to turn our attention to the matter of sales talks and advertising for prospective employees.

While not directly bearing on the magazine selling industry, I thought you should know about our efforts in promoting higher ethical standards for direct selling in general. One of our landmarks has been the adoption by the Direct Selling Association of a code of ethics entitled appropriately "The Right Thing To Do". I am attaching a copy of this brochure. This was released to the press and to the companies in June. Since then, we have distributed over 40,000 copies to people engaged in direct selling.

I really feel, Congressman Rooney, that this is a tangible expression of the concern of business, as well as its willingness to maintain and improve high ethical standards in the public interest.

Kindest regards,

RICHARD MAXWELL,
President.

[From the Washington (D.C.) Evening Star, Sept. 7, 1969]

HOW MAGAZINE SOLICITORS CAN HOOK YOU

(By Arthur E. Rowse)

The charming female voice on the other end of the telephone said she was making a survey (where did I hear that one before?) and wondered if I would answer a few questions about TV advertising.

What a beautiful hooker. Who wouldn't like to give a polling firm some choice comments on the quality and taste of TV commercials? So I lost no time responding to such questions as "What do you think of TV commercials?"

While I was trying to find appropriate words to answer the last question, the voice thanked me very graciously and then got down to the real business behind her call.

NUMEROUS FEATURES

"In appreciation for answering these questions," she said, "we are going to send you a brand new Webster's Encyclopedia Dictionary without charge." She said it had 1,500 pages and beautiful color pictures, plus many other wonderful features too numerous to mention here.

My, how generous she was, I thought, just for a few minutes of my time. Before I could even catch my breath to reply she added:

"In addition, with our compliments, we will send you 60 issues of Holiday, Sport, True, Look and Venture."

I knew, of course, that such unbounded generosity was too good to be true, so I asked who she was representing and what the gimmick was.

"The only favor we ask," she explained, "is that you send us 57 cents a week to pay the cost of mailing the magazines to you. You will get a written guarantee verifying what I have said to you. Just give me your complete name and address and I'll have our field representative deliver it to you."

NICE NAME

Pressed further for the company involved, she said it was the Educational Book Club—isn't that a nice name?—and that it was a subsidiary of the Cowles Publishing Co., publishers of Look and Venture magazines.

She said I would be billed $2.45 a month (57 cents a week times an average of 4⅓ weeks per month). A little hasty figuring showed that $2.45 a month times 60 months comes to $147.

When I complained that such an amount was quite a lot for postage for magazines that pay the low-lov· second-class rate, she said that was not her "department" but the representative would explain it.

Sure enough, a nice man visited my office the next day with the dictionary and the "guarantee." He said he would have a dictionary sent, then explained that it would be better for both of us to pay the whole thing in 2½ years instead of five, only $4.90 monthly.

The "guarantee" turned out to be an order form. But when I asked if I could check with my wife and mail it with my signature to him, he suddenly turned curt, crossed off my name and walked away.

His reason of course, was to avoid getting anything into the mail and thus make him liable under the laws on postal fraud. By avoiding the mails, this scheme has flourished for years, hooking countless thousands of people on a deal many may regret later.

WORLD PEACE DEMANDS POSITIVE U.S. NONALINEMENT ANNOUNCEMENT ON MIDDLE EAST

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 15 minutes.

Mr. RARICK. Mr. Speaker, attempting to take sides in the Middle East is impossible to an impartial American because the events of the case have been too confused by the usual sources of information which have, seemingly, in the past several days turned handsprings as if to explain away the essential facts by calling aggression a "deterrent" and military escalation "defensive" in the long boiling tension areas of northeast Africa.

Yet the provocative utterances of the U.S.-born Prime Minister of Israel, Golda Meir, that Arab leaders "should not be surprised if they are hit sevenfold in response" must be considered in any evaluation of the latest series of events.

Can any thinking American conceive of the wrath of world opinion should the President of the United States threaten sevenfold reprisals against the Communists of North Vietnam for the terrorist acts of the Vietcong? Or the frantic world censureship should Prime Minister Ian Smith announce similar policy measures against African states from whose territory guerrilla terrorists stream into Rhodesia. What about South Africa or the Portuguese?

The recent events in the Middle East must be considered the most serious threat to peace in the world which, if major powers participate or allow themselves to be drawn in, could evolve into a nuclear showdown.

The abbreviated policy statement by the U.S. Department of State is that our Government "deplores and regrets cease-fire violations by either side by regular or irregular forces." This weak official announcement by our diplomatic spokesmen will not even convince the American people of a nonpartisan position by our Government. How can it be expected to vindicate our image of suspect involvement in the eyes of the world community?

Under unanimous consent I submit a newspaper clipping for inclusion in the CONGRESSIONAL RECORD, as follows:

[From the Washington (D.C.) Post, July 1, 1969]

GOLDA MEIR WARNS ARABS OF "SEVENFOLD" RETALIATION

JERUSALEM, June 30—Israeli Prime Minister Golda Meir warned the Arabs today that if they continued attacking Israel they "should not be surprised if they are hit sevenfold in response."

"Anybody who fails to honor the cease-fire agreement and shoots at us cannot claim immunity from the results of his aggression," she told the Israeli parliament, the Knesset.

"Arab leaders should make a correct appraisal," she said, "of what their aggression achieves and our inevitable reply. They should realize the suffering they are inflicting on their own people."

Mrs. Meir's stiff warning in Jerusalem followed the explosion of a parked, stolen jeep loaded with more than 100 pounds of explosives in the heart of Tel Aviv early this morning.

The Israelis said 10 persons were wounded in the first significant terrorist attack in Tel Aviv this year. Police set up roadblocks all over the country and picked up 20 to 30 Arab suspects, mostly from Jaffa, the city south of Tel Aviv.

[The Al Fatah Arab guerrilla organization issued a statement in Amman, capital of Jordan, claiming credit for the bombing.]

Israeli jets strafed and bombed Arab guerrilla positions in Jordan south of the Sea of Galilee early this morning, a military spokesman announced in Tel Aviv. The Jordanians mentioned no casualties.

Mrs. Meir referred to an Israeli commando raid last night in the Upper Nile Valley in which the Israelis claimed to have destroyed a 500-kilowatt high-tension power line linking Cairo to the Aswan High Dam.

She said the raid deep inside Egypt proved Israel's potential to strike back.

"Although the acts of aggression along the Suez Canal have multiplied," she said, "we once again appeal to the rulers of Egypt to change their minds and their policy." Unless they do so, she said, they may create a situation "more unbearable for them than it would be for us."

The Egyptians denied that any such raid took place.

Mrs. Meir complained of hundreds of violations of the cease-fire. She said there had been 111 cases this month of firing into Israel from Jordan, 16 of them involving regular Jordanian forces. She said there had been dozens of cases of attempted infiltration from Jordan by would-be saboteurs.

She accused Egypt of having used artillery 333 times and light arms 121 times across the Suez Canal in the last month.

Mrs. Meir's words were the latest in a series of warnings to the Arabs apparently designed to convince them that Israel means business.

Deputy Prime Minister Yigal Allon warned in mid-June that "Israel will stop drawing the distinction between the terrorists and the Arab regular armies" if Arab guerrilla attacks did not cease.

In mid-May, Defense Minister Moshe Dayan warned that Israel would not restrict itself to purely defensive action if the Egyptians kept up their military activities along the Suez Canal.

CURING A VIRUS BY KILLING THE PATIENT

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, the administration has slashed new Federal construction contracts in order to curb inflation. Cutbacks could total anywhere from $2 to $4.5 billion during the remainder of this current fiscal year. All Federal agencies have been ordered to immediately put into effect a 75-percent reduction in dollar value of new contracts for Government construction financed entirely by Federal funds. Some States already are freezing awarding of new highway contracts and advertising for bids. Such an action is like amputating a leg to cure a barked shin.

Our national leaders have put on a great show of sorrow and indignation in recent months over inflation. They beat their breasts and rend their political garments, claiming labor is the villain because it requires wages to match rising prices. This latest catastrophic decision is supposed to save us from the brink of economic catastrophe. Humbug, nonsense, and flapdoodle. Our patient has measles, and the doctor is about to attempt brain surgery.

Usurious interest rates charged by banks cause inflation. Our leaders pretend not to notice. Price hikes by steel, aluminum, copper, and auto industries cause inflation. No Republican voice is raised against this herd of sacred cows.

Instead, Government construction is halted, and all States are encouraged and almost commanded to halt projects partially covered by Federal financing. And what is their excuse? Out of the economic dark ages comes their reply. This cutback is supposed to take public housing and homebuilding out of its present depression, mainly caused by the 19th century economic policies of this administration. We are informed by our reigning economic oracles that contractors who build flood control projects, dams, small watersheds, bridges, roads, post offices, and other Federal works, will because of the cutback, turn with eager cries to building of private homes and apartment buildings. Blinding logic. Let us examine it a little more closely.

Almost all contractors engaged in such major Federal projects are specialists in several ways. Their massive capital investment is sunk into earthmovers, road graders, steam shovels, cranes, and similar units. They are as different from most housing contractors as cucumbers are from hoot owls. It would be fascinating indeed to see them immediately switch to construction of homes suited to an average American family. Unless subdivisions are shortly to consist of multistory buildings poured out of concrete and supported by bridge beams, it is not likely to occur in this century.

Perhaps houses should have foundations 100 or more feet deep. Maybe our apartment houses should have corridors more suited to four-lane truck traffic. Carpets might make a difference, though. Instead of back yard wading pools, an average home would be sold complete with a small watershed project or a diversion dam. Wonderful when it rains. Is this what the Government meant when it solemnly assured us that the cutback would divert construction efforts into housing? Soon an average workingman would not have capital at going mortgage and interest rates to afford a well-furnished and laid-out chicken coop.

This disastrous decision will complete the devastation of our entire construction industry. Already its unemployment figures are at recession levels. Minorities in our midst who hold so many positions in this sector will be economically devastated, pouring more oil on already smouldering social situations throughout the Nation. Essential projects will slide down the drain for years. But we should be consoled by knowing that our housing industry will revive. I imagine that tomorrow Mao Tse Tung will announce his candidacy for the office of mayor of Moscow.

We must halt inflation at its source. Bank interest rates; steel industry price hikes; price rises by aluminum, copper, and auto firms; these are basic building blocks of our economy. When they raise interest rates or prices, it heaves a huge boulder of inflation into our national economic pond. As long as this administration stands paralyzed on dead economic center, not daring to protest such greedy actions, we shall have disastrous inflation in tandem with other signs of impending economic collapse. And the average worker with a few hard-earned dollars will not be to blame. The tail does not wag this dog. Certainly not in this case.

Is our patient curable? Definitely. But cancer does not yield to poultices. Warts are not banished by stump water and dead cats in a cemetery at night. Correct diagnosis and skillful action will do the job. Right now a first-year medical student is at work rather than an experienced physician. The patient may expire while the student learns basic anatomy. They are sowing the wind. We shall all reap the whirlwind.

ERRONEOUS INTERPRETATION OF A COLLEAGUE'S REMARKS

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, a few days ago, when Ho Chi Minh's death was announced, our distinguished colleague, Mr. KOCH of New York, had the occasion to make a series of comments bearing on the war in Vietnam. He spoke of the possibility of utilizing the occurrence of his death to seek yet another peace initiative. Simultaneously, he described in general terms the overall role this man had played in the affairs of his own country. I was present on the floor of this House when Mr. KOCH made these statements, and can attest to their content.

Several other Members of this body, who were not present when Mr. KOCH took to the floor, heard of his comments second or third hand. Most regrettably, they misinterpreted what he said, thinking that his description of Ho Chi Minh's activities was meant as praise. Mr. KOCH described Ho Chi Minh as a "patriot" in the eyes of the people of North Vietnam. In no way did he give the impression that he himself shared that opinion. I hold no brief for Ho Chi Minh, a man who murdered so many of his own people so brutally and callously. Nor did Mr. KOCH's comments in any way imply praise of him or his works.

We all know our distinguished colleague from New York is an avid, utterly sincere, and dedicated seeker for a solution to the Vietnam conflict. He was merely exploring the possibility of another initiative which conceivably could have been opened or precipitated by an event which no one could have accurately predicted or anticipated. It is ungracious and unfair to place an interpretation upon his remarks which not only does him an injustice, but impugns his motives and casts a cloud over the very floor of this House.

It is to be fervently hoped that Members will ascertain the exact content of remarks made before mounting attacks upon those who utter them.

SECRETARY FINCH ASKED TO REOPEN SCHOOL

(Mr. THOMPSON of Georgia asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. THOMPSON of Georgia. Mr. Speaker, it will come as no surprise to the Members of this body that I am greatly concerned over the unreasonable activities of the Department of Health, Education, and Welfare regarding the requiring of racial balance in our school system. Mr. Speaker, let me make one point clear, and that is, discrimination in our schools because of race, creed, or color should not and cannot be allowed, and it will be my purpose to attempt to assure all persons regardless of race, creed, or color their basic right to achieve a quality education. However, Mr. Speaker, I cannot accept the absurd actions in requiring racial balance through school closings, pairings of schools, and busing of students.

An American child has a basic right to attend the school closest to his home. To deny him this right and force him through either pairing, closing, or busing to attend a school more distant is nothing short of Hitleristic or Stalinistic tactics.

In College Park, Ga., there is a 6-year-old school of which the students are very proud. Without a single exception every child attending this school lives closer to it than any other school. No discrimination whatsoever was present in student assignment. There were more library books and textbooks per pupil at this school than any other. The salaries of the teachers were higher on the average than at other schools. Yet, the Department of Health, Education, and Welfare has insisted on destroying the school as an entity through trying to force its pairing with another school or through

the gerrymandering of student districts or the closing of the school. After confrontation with HEW, wherein I advised the local school board not to accede to threats or intimidations of HEW and to assign students to the school they live closest to, court action was initiated. The court has ordered the 6-year-old high school closed and the students bused and distributed to four other schools. The students who last year won the State basketball championship do not want to give up their school. They have been picketing, staging sit-ins and refusing to attend the new schools to which they have been assigned. Mr. Speaker, my sympathy lies with these black students who want to attend the school closest to their home but are being denied this right because of the absurd racial balance requirements.

Mr. Speaker, in Vietnam, President Johnson stated over and over that our only purpose in being in Vietnam was to assure the South Vietnamese of the right of free choice as to the type of government they would have. Forty thousand Americans have died in trying to assure the South Vietnamese this right of free choice. Yet, we are denying to our own students the basic American right to attend the school closest to their home and are forcing them against their will to attend schools more distant simply in order to achieve what some people deem desirable, a racial balance. Mr. Speaker, I repeat that these are Hitleristic and Stalinistic tactics and must cease.

I have today written the Secretary of Health, Education, and Welfare, Robert Finch, and have urged him to petition the Federal court, asking that the Eva Thomas High School be reopened on the basis of allowing the students who live closest to it to attend their beloved school and to forget about the absurd remarks of racial balance. I hope there will be some humanitarian and Americanistic spirit evidenced by the Secretary of Health, Education, and Welfare, and he will allow these students to go back to the school closest to their home.

PERSONAL ANNOUNCEMENT

(Mr. ROGERS of Florida asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. ROGERS of Florida. Mr. Speaker, because of a most important meeting with Secretary of the Army Resor, concerning the welfare of a soldier in Vietnam who is a constituent, I was not present on Monday when the vote was taken to recommit the bill, H.R. 11039, to amend the Peace Corps Act.

If I had been present, I would have voted "yea" for the motion to cut $11.1 million from the bill. I favor the program, but object to the recommended funding level.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. CHAPPELL), to revise and extend their remarks and include extraneous matter:)

Mr. ROONEY of Pennsylvania, for 20 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. RARICK, for 15 minutes, today.

Mr. PATMAN, for 15 minutes, today, to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. DENNIS), to revise and extend their remarks and include extraneous matter:)

Mr. SNYDER, for 5 minutes, today.

Mr. COUGHLIN, for 15 minutes, today.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. DENNIS) and to include extraneous matter:)

Mr. HARVEY in two instances.
Mr. ASHBROOK.
Mr. FINDLEY.
Mr. CLANCY.
Mr. STEIGER of Wisconsin.
Mr. BLACKBURN in five instances.
Mr. SANDMAN.
Mr. SHRIVER.
Mr. MCEWEN.
Mr. PELLY.
Mr. WEICKER.
Mr. HASTINGS.
Mr. GROVER.

(The following Members (at the request of Mr. CHAPPELL) and to include extraneous matter:)

Mr. POWELL in two instances.
Mr. OTTINGER.
Mr. ROONEY of Pennsylvania.
Mr. HAYS in two instances.
Mr. JONES of Tennessee.
Mr. OBEY in four instances.
Mr. DENT in four instances.
Mr. EDWARDS of California in two instances.
Mr. HAWKINS in two instances.
Mr. JACOBS.
Mr. TEAGUE of Texas in eight instances.
Mr. RARICK in two instances.
Mr. ANNUNZIO in five instances.
Mr. SYMINGTON.
Mr. CELLER.
Mr. STEPHENS.
Mr. GALLAGHER.
Mr. VANIK in four instances.
Mr. MOLLOHAN in three instances.
Mr. REUSS in 10 instances.
Mr. HECHLER of West Virginia in two instances.
Mr. BINGHAM in two instances.
Mr. COLMER.
Mr. OLSEN in two instances.
Mr. HAGAN in two instances.
Mr. GONZALEZ in two instances.
Mr. EDMONDSON.

ADJOURNMENT

Mr. CHAPPELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 14 minutes p.m.), the House adjourned until tomorrow, Thursday, September 11, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1129. A letter from the Deputy Secretary of Defense, transmitting a report of support furnished from military functions appropriations in Southeast Asia for the fourth quarter of 1969, and cumulative fiscal year amounts through June 30, 1969, pursuant to the provisions of section 537 of the Defense Appropriation Act, 1969 (Public Law 90–580); to the Committee on Appropriations.

1130. A communication from the President of the United States, transmitting an amendment to the 1970 budget for the Legislative Branch, Architect of the Capitol (H. Doc. No. 91–154); to the Committee on Appropriations and ordered to be printed.

1131. A communication from the President of the United States, transmitting an amendment to the requests for appropriations transmitted in the budget for fiscal year 1970 for the Department of Defense-Civil, Corps of Engineers (H. Doc. No. 91–155); to the Committee on Appropriations and ordered to be printed.

1132. A letter from the Comptroller General of the United States, transmitting a report of the examination of the financial statements of the Federal Housing Administration, fiscal year 1968, Department of Housing and Urban Development (H. Doc. No. 91–156); to the Committee on Government Operations and ordered to be printed.

1133. A letter from the Assistant Secretary of Defense (Comptroller), transmitting a report on the value of property, supplies, and commodities provided by the Berlin Magistrate for the quarter April 1 to June 30, 1969, pursuant to the provisions of section 519 of Public Law 90–580; to the Committee on Appropriations.

1134. A letter from the Comptroller General of the United States, transmitting a report on U.S. assistance programs in Tunisia, Department of State, Agency for International Development; to the Committee on Government Operations.

1135. A letter from the Comptroller General of the United States, transmitting a report on enforcement of sanitary, facility, and moisture requirements at federally inspected poultry plants, Consumer and Marketing Service, Department of Agriculture; to the Committee on Government Operations.

1136. A letter from the Chairman, Interstate Commerce Commission, transmitting a draft of proposed legislation to amend section 13a of the Interstate Commerce Act, to authorize a study of essential railroad passenger service by the Secretary of Transportation, and for other purposes; to the Committee on Interstate and Foreign Commerce.

1137. A letter from the Assistant Attorney General, transmitting a request that the Department of Justice be authorized to include certain documents of the House of Representatives in its application for a court order; to the Committee on the Judiciary.

1138. A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to improve and clarify certain laws affecting the Coast Guard; to the Committee on Merchant Marine and Fisheries.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk

for printing and reference to the proper calendar, as follows:

Mr. TEAGUE of Texas: Committee on Veterans' Affairs. H.R. 13369. A bill to extend for 2 additional years the authority to set interest rates necessary to meet the mortgage market for guaranteed and insured home loans to veterans under title 38 of the United States Code and for other loans; with an amendment (Rept. No. 91–484). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. MILLS:

H.R. 13713. A bill to provide for the refund of certain duties and taxes with respect to exported articles, and for other purposes; to the Committee on Ways and Means.

By Mr. CAHILL:

H.R. 13714. A bill to require the Secretary of the Army to make a feasibility study of providing a dredge exclusively for use in the North Atlantic region; to the Committee on Public Works.

By Mr. DULSKI:

H.R. 13715. A bill to provide for the orderly expansion of trade in manufactured products; to the Committee on Ways and Means.

By Mr. GARMATZ (for himself and Mr. CLARK):

H.R. 13716. A bill to improve and clarify certain laws affecting the Coast Guard Reserve; to the Committee on Merchant Marine and Fisheries.

By Mr. HALL:

H.R. 13717. A bill to establish a cropland and water restoration program, and for other purposes; to the Committee on Agriculture.

By Mr. JOHNSON of Pennsylvania:

H.R. 13718. A bill to provide for a preliminary examination and survey of the Allegheny River and French Creek and their tributaries; to the Committee on Public Works.

By Mr. KOCH (for himself, Mr. BLATNIK, Mr. CAHILL, Mr. ESHLEMAN, Mr. FULTON of Pennsylvania, Mr. MCCLOSKEY, Mr. MCDADE, and Mr. WHALEN):

H.R. 13719. A bill to establish an urban mass transportation trust fund, and for other purposes; to the Committee on Banking and Currency.

By Mr. MCKNEALLY:

H.R. 13720. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted each year without any deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. MACDONALD of Massachusetts (for himself, Mr. TIERNAN, Mr. PODELL, Mr. HARVEY, Mr. ST. ONGE, Mr. ROSENTHAL, Mr. LEGGETT, Mr. BURLISON of Missouri, Mr. ECKHARDT, Mr. OTTINGER, Mr. BURTON of Utah, Mr. BOLLING, Mr. MURPHY of New York, Mr. DANIELS of New Jersey, Mr. ESCH, Mr. HATHAWAY, Mr. GONZALEZ, Mr. REID of New York, Mr. SISK, Mr. BUTTON, Mr. MOSS, Mr. ADAMS, Mr. BINGHAM, Mr. DENT, and Mr. HOWARD):

H.R. 13721. A bill to amend the Communications Act of 1934 to provide candidates for congressional offices with certain opportunities to purchase broadcast time from television broadcasting stations; to the Committee on Interstate and Foreign Commerce.

By Mr. MACDONALD of Massachusetts (for himself, Mr. THOMPSON of New Jersey, Mr. MEEDS, Mr. KARTH, Mr. SANDMAN, Mrs. MINK, Mr. RIEGLE, Mr. MCCARTHY, Mr. MOORHEAD, and Mr. MIKVA):

H.R. 13722. A bill to amend the Communications Act of 1934 to provide candidates for congressional offices with certain opportunities to purchase broadcast time from television broadcasting stations; to the Committee on Interstate and Foreign Commerce.

By Mr. MESKILL:

H.R. 13723. A bill to provide compensation for firemen not employed by the United States killed or injured in the performance of duty during a civil disorder, and for other purposes; to the Committee on the Judiciary.

By Mr. OLSEN:

H.R. 13724. A bill relating to mortgaged Indian land redeemed by a tribal member or tribal organization; to the Committee on Interior and Insular Affairs.

By Mr. PATMAN (for himself, Mr. EVINS of Tennessee, Mr. ADDABBO, and Mr. BUTTON):

H.R. 13725. A bill to provide for the study and investigation of private foundations, to establish a Private Foundation Control Commission, and for other purposes; to the Committee on Ways and Means.

By Mr. ROONEY of Pennsylvania:

H.R. 13726. A bill to provide for special programs for children with specific learning disabilities; to the Committee on Education and Labor.

By Mr. ST. ONGE:

H.R. 13727. A bill to establish an Intergovernmental Commission on Long Island Sound; to the Committee on Interior and Insular Affairs.

By Mr. SISK:

H.R. 13728. A bill to provide additional benefits for optometry officers of the uniformed services; to the Committee on Armed Services.

By Mr. SLACK:

H.R. 13729. A bill to amend the Randolph-Sheppard Act for the blind so as to make certain improvements therein, and for other purposes; to the Committee on Education and Labor.

By Mr. TEAGUE of Texas:

H.R. 13730. A bill to direct the Administrator of the National Aeronautics and Space Administration to erect a monument commemorating the lunar landing of the Apollo 11 mission, and for other purposes; to the Committee on House Administration.

By Mr. CAHILL:

H.R. 13731. A bill to require an investigation and study of improved and additional means of protecting the coastal waters of the United States from further pollution; to the Committee on Public Works.

By Mr. OLSEN:

H.R. 13732. A bill to provide for loans to Indian tribes and tribal corporations, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. ROSENTHAL:

H.R. 13733. A bill to amend the Immigration and Nationality Act to make additional immigrant visas available for immigrants from certain foreign countries, and for other purposes; to the Committee on the Judiciary.

By Mr. RYAN:

H.R. 13734. A bill to amend section 3 of the Housing and Urban Development Act of 1968; to the Committee on Banking and Currency.

H.R. 13735. A bill to increase the participation of small business concerns in the construction industry by providing for a Federal guarantee of certain construction bonds and authorizing the acceptance of certifications of competency in lieu of bonding in connection with certain Federal projects, and for other purposes; to the Committee on Banking and Currency.

H.R. 13736. A bill to amend the act of August 24, 1935 (commonly referred to as the "Miller Act"), to exempt construction contracts not exceeding $20,000 in amount from the bonding requirements of such act, and for other purposes; to the Committee on the Judiciary.

By Mr. SIKES (for himself, Mr. DINGELL, Mr. FOUNTAIN, Mr. FASCELL, Mr. REUSS, Mr. MOORHEAD, Mr. WRIGHT, Mr. ST GERMAIN, and Mr. HORTON):

H.R. 13737. A bill to amend the Federal Property and Administrative Services Act of 1949 to permit donations of surplus personal property to State fish and wildlife agencies; to the Committee on Government Operations.

By Mr. ESHLEMAN:

H.J. Res. 892. Joint resolution proclaiming week of September 21 to 27, 1969, as "National Y-Indian Guide Week"; to the Committee on the Judiciary.

By Mr. ROGERS of Florida:

H.J. Res. 893. Joint resolution to provide for the issuance of a commemorative postage stamp in honor of the 25th anniversary of the Battle of Bastogne; to the Committee on Post Office and Civil Service.

By Mr. HECHLER of West Virginia:

H. Con. Res. 329. Concurrent resolution declaring the sense of Congress on the depressed domestic mining and mineral industries affecting public and other lands; to the Committee on Interior and Insular Affairs.

By Mr. JOHNSON of Pennsylvania:

H. Con. Res. 330. Concurrent resolution to provide for a permanent United Nations peacekeeping force; to the Committee on Foreign Affairs.

By Mr. MARSH (for himself, and Mr. TALCOTT):

H. Con. Res. 331. Concurrent resolution calling on the interim leaders of the government established at Hanoi, North Vietnam, to provide for free and open elections to choose a successor to the late chief of state of such government; to the Committee on Foreign Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 13738. A bill for the relief of Carl Gilles; to the Committee on the Judiciary.

By Mr. BRASCO:

H.R. 13739. A bill for the relief of Radha Majumdar; to the Committee on the Judiciary.

By Mr. DELLENBACK:

H.R. 13740. A bill for the relief of Kimball Brothers Lumber Co.; to the Committee on the Judiciary.

By Mr. PEPPER:

H.R. 13741. A bill for the relief of Dr. Clara Satanowsky Becker; to the Committee on the Judiciary.

MEMORIALS

Under clause 4 of rule XXII,

263. By the SPEAKER: A memorial of the Legislature of the State of California, relative to cooperative federalism; to the Committee on Ways and Means.

PETITIONS, ETC.

Under clause 1 of rule XXII,

234. By the SPEAKER: Petition of Kathryn E. Worden, et al., Granger, Wash., relative to appointments to the U.S. Supreme Court; to the Committee on the Judiciary.

SENATE—*Wednesday, September 10, 1969*

The Senate met at 10 o'clock a.m. and was called to order by Hon. JAMES B. PEARSON, a Senator from the State of Kansas.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, whose mercies are new every morning, open our eyes to Thy beauty, open our minds to Thy truth, open our hearts to Thy spirit, and use us this day to advance the Nation's welfare and extend Thy kingdom among men.

Draw together the world of the visible and the invisible, the temporal and the eternal, and unite us in our labors with that unseen Host, whom we have loved long since and lost awhile. Grant that being compassed about with so great a cloud of witnesses we may run with patience the race that is set before us looking unto the author and finisher of our faith for guidance and strength.

In His holy name, we pray. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will read a communication to the Senate.

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., September 10, 1969.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. PEARSON, a Senator from the State of Kansas, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. PEARSON thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Tuesday, September 9, 1969, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations on the Executive Calendar, beginning with Department of Justice.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated, as requested by the Senator from Montana.

DEPARTMENT OF JUSTICE

The bill clerk proceeded to read sundry nominations in the Department of Justice.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Nos. 388 and 389.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

NATIONAL ADULT-YOUTH COMMUNICATIONS WEEK

The joint resolution (H.J. Res. 614) authorizing the President to proclaim the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week," was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-394), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the joint resolution is to authorize and request the President of the United States to issue a proclamation designating the week of September 28, 1969, through October 4, 1969, as "National Adult-Youth Communications Week."

STATEMENT

This legislation will demonstrate to young people in all parts of the United States that meaningful change can be brought about through the democratic legislative process rather than through violence or by taking over administration buildings. It is hoped that this resolution would encourage the communication of ideas and cooperation between persons of different generations.

The committee is of the opinion that this resolution has a meritorious purpose and accordingly recommends favorable consideration thereof without amendment.

RESTORATION OF THE GOLDEN EAGLE PROGRAM TO THE LAND AND WATER CONSERVATION FUND ACT

The Senate proceeded to consider the bill (S. 2315) to restore the golden eagle program to the Land and Water Conservation Fund Act, which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 2, after line 2, insert:

(c) The first sentence of section 8 of the Land and Water Conservation Fund Act, as amended, is further amended to read as follows:

"Not to exceed $30,000,000 of the money authorized to be appropriated from the fund by section 3 of this Act may be obligated by contract during each fiscal year for the acquisition of lands, waters, or interest therein within areas specified in section 6(a)(1) of this Act."

After line 10, insert a new section, as follows:

SEC. 2. (a) Section 2(a)(1) of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), is amended by deleting "$7" and inserting in lieu thereof "$10".

(b) Section 7 of such Act (78 Stat. 903), is amended by inserting immediately before the period at the end thereof a comma and the following: "except to the extent that the Secretary of the Interior determines necessary in order to advertise and promote any entrance or user fee program established pursuant to section 2(a) of this Act."

After line 19, insert a new section, as follows:

SEC. 3. Section 210 of the Flood Control Act of 1968 (82 Stat. 746) is repealed.

So as to make the bill read:

S. 2315

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the first section of the Act entitled "An Act to amend title I of the Land and Water Conservation Fund Act of 1965, and for other purposes", approved July 15, 1968 (82 Stat. 354; Public Law 90-401), is hereby repealed.

(b) Subsection (c) of section 2 of the Land and Water Conservation Fund Act of 1965 (16 U.S.C. 4601-5), as added by section 2 of the Act of July 15, 1968 (82 Stat. 354; Public Law 90-401), is redesignated as subsection (d).

(c) The first sentence of section 8 of the Land and Water Conservation Fund Act, as amended, is further amended to read as follows:

"Not to exceed $30,000,000 of the money authorized to be appropriated from the fund by section 3 of this Act may be obligated by contract during each fiscal year for the

acquisition of lands, waters, or interest therein within areas specified in section 6(a)(1) of this Act."

SEC. 2. (a) Section 2(a)(1) of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), is amended by deleting "$7" and inserting in lieu thereof "$10".

(b) Section 7 of such Act (78 Stat. 903), is amended by inserting immediately before the period at the end thereof a comma and the following: "except to the extent that the Secretary of the Interior determines necessary in order to advertise and promote any entrance or user fee program established pursuant to section 2(a) of this Act."

SEC. 3. Section 210 of the Flood Control Act of 1968 (82 Stat. 746) is repealed.

Mr. HATFIELD. Mr. President, we on the Interior Committee reported out a bill S. 2315, which would extend the golden eagle passport. To many Oregonians, the golden eagle is the best investment they can make in their vacation enjoyment. Each time they visit an area, the cost drops.

I wish to highlight two groups of people who profit greatly from the golden eagle program. They are senior citizens and large families. Many older Oregonians have written me to tell of their great pleasure in using our parks. The golden eagle offers them an opportunity to visit our parks as often as they can with no increase in cost. Because so many elderly people have fixed incomes, the golden eagle helps hold down the cost of vacation plans.

Large families are not penalized by a per-person charge, and, therefore, are encouraged to take family vacations. I think the Senate shares my belief that we should encourage such endeavors, and the golden eagle is a step in that direction.

I support the golden eagle and am pleased to be a cosponsor of the bill.

The reason I speak today is to point out the support in my State for the program. I wish to call attention to a fine article from the East Oregonian of Friday, August 29, 1969, written by Mrs. Bernice Riley. I think that it represents the views not only of Oregonians, but of many Americans.

Mr. President, Mrs. Riley captures the feelings of many of us who support the bill. Because of the interest in this bill, I ask unanimous consent to have the article by Mrs. Riley printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOLDEN EAGLE PERMITS TO BE TERMINATED

(By Mrs. Bernice Riley)

The first of September marks the end of summer to many families in this area. There will still be several weeks of bright, sunny days. But the nights will turn crisp and there will be the feeling of autumn in the air.

Camping equipment will soon be stored to await the return of the long vacation period, when we head for the mountains almost every weekend.

This part of Oregon is blessed with vast forests unmarked by the inroads of commercial exploitation. Outdoor lovers can find camp spots at a hundred places, tree-shaded, with creeks winding through meadows or rippling over rocks in the gorges.

The Umatilla National Forest maintains camp facilities in many scenic locations. Eight of these, with tables, water and sanitary facilities, are "charge camps."

This means there is a box at the entry to the camp, where you leave a dollar for each night you'll be staying there.

(If you go to Union Creek Camp, at Mason Dam in the Wallowa-Whitman Forest, you'll pay $2 a night. But you can connect your trailer to water, sewer and electricity. This is the only forest camp in the west with such plush facilities.)

For the past several years the Forest Service has offered vacationers a bargain fee for use of camps, and for entry into national parks. You've been able to buy a "Golden Eagle" card for $7, good anywhere in the United States for a year.

"The law was passed by Congress," said Jay Hughes, recreation director on the Umatilla Forest, "as part of the land and water conservation fund act of 1965. This act provided $150 million yearly to expand the recreation program in the nation."

Hughes said many people have believed the $7 fee for the Golden Eagle goes directly back into the Forest Service for development of more recreation areas.

"This isn't true," he said. "Actually, 60 per cent of all land and water conservation funds goes to the states, and only 16 per cent of the remainder is allocated to federal agencies west of the Mississippi River."

Hughes said the states pass along their share of the fund to counties for development of local facilities, after a community plan has been made and approved, and matching funds have been assured.

"For example, the tennis courts at Athena were built partly with these funds. And Pendleton has bought some property adjacent to McKay Creek School under this program." The remainder of county funds will go into development of the camp ground at the Port of Umatilla.

The Forest Service use of the fund can be only for land acquisition, said Hughes. He said the only project currently underway in the Umatilla Forest is Kelly Prairie, where a lake will be built. Land is being purchased for this new recreation site.

So, if you have felt that you are contributing to the maintenance of your national forest when you pay $7 for a Golden Eagle, you'll have to adjust your feeling of ownership a bit.

You are buying land for new camp sites. You are paying for recreational facilities in your home town as well.

Apparently you aren't paying enough.

For this is the last year the Golden Eagle will be available, said Hughes. "The program will be discontinued at the end of this year. Congress has decided to return to the policy of an individual fee for use of each facility."

He said there has been complaint because some of the big national parks, such as Yellowstone, Yosemite and Grand Canyon have suffered a big decline in receipts since the Golden Eagle went into effect.

"Some of those parks charge as much as $2.50 admission. Golden Eagle owners have been gaining entry by showing their cards."

The director observed that termination of the Golden Eagle will work a hardship on persons on fixed incomes who may spend seven or eight months a year traveling with trailers or campers. These people use the federal campgrounds with no other charge than their yearly $7 fee.

Low-income families may spend almost every weekend during the summer in a forest campground, said Hughes. These people too will be hurt by termination of the Golden Eagle.

There has been some discontent voiced by the public over termination of this bargain fee. Letters are being sent to members of the Congress and U.S. Senate, asking that the policy be continued. If there are enough letters, the solons may reconsider.

Hughes said the Umatilla Forest collected $1,206 in dollar fees from the charge camps in 1968. That same year 507 Golden Eagle cards were purchased for $3,549.

It may be that few people will object to paying the dollar a night to use a forest camp ground.

On the other hand, when the camper displays his Golden Eagle, he has tangible evidence that he is part owner of the great national forests in our country.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-395), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF S. 2315

The primary objective of this measure, as introduced by Senator Jackson and amended by the committee, is to retain the extremely popular golden eagle program created by the original enactment of the Land and Water Conservation Fund Act of 1965 (78 Stat. 897), as amended. The legislation would restore the golden eagle passport program due to expire next March, while also increasing the annual fee from $7 to $10. The bill also continues the advance contract authority of the Secretary of the Interior to deal with the increasingly serious problem of land-cost escalation. He had this authority for fiscal years 1969 and 1970 for the acquisition of certain land, water, or interests therein.

Other provisions of S. 2315, as amended, include: (1) authorization for the Secretary of the Interior to advertise and promote entrance or user fee programs currently in operation and, (2) repeal of section 210 of the Flood Control Act of 1968, which, as interpreted, precludes the sale of golden eagle passports in recreation areas under the administrative jurisdiction of the Corps of Engineers.

BACKGROUND OF THE GOLDEN EAGLE PROGRAM

The Land and Water Conservation Fund Act of September 3, 1964, Public Law 88-578, established the Land and Water Conservation Fund, as of January 1, 1965, to help expand local, State, and Federal outdoor recreation opportunities.

The act authorized as revenue for the fund: (1) Proceeds from the sale of Federal surplus real property, (2) Federal motorboat fuels tax, and (3) Entrance, admission, and user fees at Federal recreation areas, or the so-called golden eagle program.

Money appropriated by Congress from the fund is used by the National Park Service, Forest Service, and Bureau of Sport Fisheries and Wildlife to acquire authorized national outdoor recreation lands and waters; and as matching grants to the States and their political subdivisions for planning, acquiring, and developing outdoor recreation areas and facilities. During the first 5 fiscal years of the fund, receipts have averaged around $100 million annually.

In 1968, Congress amended the Land and Water Conservation Fund Act to provide that the original sources of revenue to the fund could be augmented to provide a fund of $200 million annually, during fiscal years 1969 and 1973. The additional income to the fund, if not appropriated into the fund by Congress, will be earmarked from Outer Continental Shelf mineral leasing receipts.

By the same 1968 act, Congress repealed authority for the annual Federal recreation area permit, known as the golden eagle passport, and for other recreation entrance and used fees collected under the golden eagle program. Under the 1968 act, the Federal

agencies are not precluded from collecting recreation fees at their areas, but after March 31, 1970, no such collections may be made under the auspices of the Land and Water Conservation Fund Act.

ADMISSION AND USER FEES

Support for the enactment of S. 2315 and a continuation of the popular golden eagle program came through thousands of letters received from citizens throughout the Nation urging reconsideration of the action terminating the golden eagle and other fee programs next March. Many, if not a majority of these citizens were retired people living on fixed incomes who have found a new way of spending their retirement years in the out of doors at a price they can afford. Others supported user and admission fees because they do not adversely affect large families by extending a "per person" charge. Consequently, family vacations are encouraged, and the costs are reduced.

The golden eagle passport, purchased for $7, provides access to all Federal recreation areas including national parks, seashores, recreation areas, monuments, and historic sites under the jurisdiction of the Department of Interior, and recreational areas operated by both the Department of Defense and the Department of Agriculture.

During the hearing on S. 2315, it was reported by a witness representing the U.S. Forest Service that the fee system—

* * * has led to significant improvement in administration of use of National Forest recreation developments, facilities and services provided at public expense.

Particularly, we believe recreation users have had greater interest in and respect for the areas they visit. In turn, the emphasis of the program has encouraged us to continue to provide high quality recreation opportunities.[1]

A Department of the Interior witness, also testifying in favor of S. 2315, confirmed a statement that the National Park Service encountered reduced vandalism and destruction to areas under its administration where an entrance charge is collected. The Interior Department witness states "* * * I think it is not an uncommon phenomenon that when you have to pay for something you are a little more careful of that something than if you get it for nothing."[2]

Continuation of the golden eagle program is completely consistent with the national policy of requesting users of special public facilities to be responsible for paying their fair share of the costs. For many years, the Federal Government has had a policy that where the use of Federal resources convey special benefits to identifiable recipients above and beyond those which accrue to the general public, such recipients should pay a reasonable charge for the service or product received or for the resource used. The Department of the Interior reports, for example, that specific charges are made for other similar recreational services such as bathhouses, boat launching ramps, cabins, overnight shelters, electricity, fuel and winter sports facilities.

A similar policy of collecting fees for special benefits also exists at the State level of government. Forty-seven of the 50 States make charges for the use of tent and trailer campsites or for picnicking, swimming, water access, shelter rentals, boat rides, et cetera. The charges for the use of overnight camping facilities range from 50 cents per night for tent campsites to $3.50 per night for trailer campsites.

LAND ACQUISITION CONTRACTS

In the act of July 15, 1968, language was added which authorized the Secretary of the Interior to enter into advance contracts prior to actual appropriation for the acquisition of certain lands and waters within authorized Federal recreational areas for fiscal years 1969 and 1970. The advance contract limitation was $30 million annually. If enacted, S. 2315 would continue this advance contract authority.

In reviewing the operation and conduct of the program by the responsible agencies, the committee found that advance contract authorization served as an important anti-inflationary measure and useful land management and acquisition tool. With recreational land price increases averaging 5 to 10 percent per year for land not in close proximity to water, and significantly higher for water-oriented areas, the advance contract authority has the potential of enabling the Departments of the Interior and Agriculture to purchase lands and waters at substantial savings.

Although this provision does not alleviate the frustrating, and as yet unresolved problem of rapid land price escalation of new parks and recreation areas between the time a bill is introduced to create such an area, and the time it finally becomes law, it does at least shorten the time between enactment and the availability of appropriations. In extending the advance contract authorization provision, the committee expressed its belief that this authority should be utilized in recently authorized areas, areas where the best opportunities and greatest need occur, and sites where prices are rising or are likely to rise rapidly enough to jeopardize eventual Federal purchase.

INCREASING GOLDEN EAGLE PASSPORT COST TO $10

Section 2(a) of the amended bill, S. 2315, amends the Land and Water Conservation Fund Act of 1965, by increasing the golden eagle passport cost from $7 to $10. The committee members, in agreeing to this provision, stated that many of those who favor extension of the golden eagle program actually expressed a willingness to have a fee increase. Some users of the passport spend weeks, and even months in Federal outdoor recreational areas, and consequently do not contribute a reasonable share of the costs associated with maintaining those areas.

EXPENDITURE OF FUNDS FOR ADVERTISING ADMISSION AND USER FEE PROGRAMS

The committee, in reporting this measure, expressed the belief that the revenues collected under the golden eagle and other recreational fee programs during the last 4 calendar years are not a true reflection of the future funds which can be generated under this program. The passport's apparent lack of acceptance until recently by recreationists was felt to be caused by incomplete knowledge of the program stemming from restrictions imposed on the advertising of the golden eagle passport. The committee feels that as the benefits to be derived from these fee programs are better understood, brought about through the expenditure of funds for advertising, that participation will expand, thus substantially adding to the revenue source of the Land and Water Conservation Fund.

A study conducted by the Arthur D. Little, Inc., for the Bureau of Outdoor Recreation provided recommendations on both the collection and advertising systems of the entire Federal recreation area permit and fee system. The report, entitled "Marketing Study and Recommendations Concerning Federal Recreation Area Permit and Fee System," recommended that a major, adequately funded, program be implemented for the educational task of attaining greater public acceptance and conformity of Land and Water Conservation fee programs. For the 1969 recreation season, the study recommended the expenditure of $1 million be made available for a mass-media advertising approach to the permit and fee program. Approximately one-half to one-third of this amount was recommended for each succeeding fiscal year.

In referring to the potential revenues capable of being generated from increased public information on fee programs, the report stated:

In the absence of adequate indication of congressional intent as to the amount of revenue to be raised from a recreation area user fee program, except indications that the present level of revenues is considered to be inadequate and disappointing, we recommend a permit system which for 1969 as a first calendar year of operation, would be designed to raise approximately $33 million of gross revenue of which $29 to $30 million would be carried into the land and water conservation fund net of the cost of sales commissions. It is also designed to have increasing revenues in each succeeding year so that 1979 net revenues into the fund would be $58 million, and total revenues for the years 1969–89 would be about $1,250 million.

USER FEE COLLECTIONS BY THE CORPS OF ENGINEERS

The Land and Water Conservation Fund Act listed the Corps of Engineers as one of several agencies deemed appropriate to collect user and admission fees for support of the fund on recreational lands under its jurisdiction. In practice, however, the corps which has over 4,000 recreation areas and has in excess of one-quarter billion visitations each year, has made only minimal contributions to the fund through the collection of admission and user fees. Nearly 75 percent of the total collection of admission and user fees come from the Department of the Interior, while another 20 percent is collected by the Department of Agriculture. The remaining 5 percent are received by all other agencies combined, including the Corps of Engineers.

While the Corps of Engineers maintained at our hearing that it has no objection to an indefinite extension of the admission and user fee programs, it feels that it is prohibited from collecting any such fees as a result of provisions in section 210 of the Flood Control Act of 1968 (Public Law 90–483). Subsequent to passage of this act last year, the Corps of Engineers discontinued, entirely, fee collections of any kind at recreation areas under their administration. Section 210 of the Flood Control Act of 1968 is printed below:

SEC. 210. No entrance or admission fees shall be collected after March 31, 1970, by any officer or employee of the United States at public recreation areas located at lakes and reservoirs under the jurisdiction of the Corps of Engineers, United States Army. User fees at these lakes and reservoirs shall be collected by officers and employees of the United States only from users of highly developed facilities requiring continuing presence of personnel for maintenance and supervision of the facilities, and shall not be collected for access to or use of water areas, undeveloped or lightly developed shoreland, picnic grounds, overlook sites, scenic drives, or boat launching ramps where no mechanical or hydraulic equipment is provided.

Prior to enactment of this act, the corps collected admission and user fees at as many as 189 areas according to the criteria established by the President in Executive Order 11200.

[1] Refer to page 42 of the hearing record on the "golden eagle program", held before the Subcommittee on Parks and Recreation of the Committee on Interior and Insular Affairs, July 17 and 18, 1969.

[2] Refer to page 34 of the hearing of July 17 and 18 cited above.

In a recent letter to Senator Jackson from Major General Clarke, Deputy Chief of Engineers, it was reported that the corps, acting in accordance with the procedures established, issued regulations governing the collection of fees. The criteria, as set forth in the corps letter, states as follows:

The Corps of Engineers, in accordance with the procedures established, issued regulations governing the collection of fees at its projects. Under these regulations no entrance fees were charged at projects, where the total Federal investment in recreational facilities for the entire project was less than $50,000, and the recreation pool was less than 100 acres. Entrance fees were collected at designated public use areas of the project where at least $25,000 had been spent by the Federal Government on recreational facilities at each area, apart from roads; there were at least 25 acres of usable land available in the area above the conservation pool; there was an annual recreational attendance of at least 50,000 per year; and the area had potential for further recreational development. Consideration was also given to such factors as to whether there were other access areas on the same project with minimum recreation facilities where no fee was charged. There was at least one such no-charge area at each project. The developed areas for which entrance fees were charged contained such facilities as campsites, water, toilets, picnic tables, boat launching ramps, and the like.

The committee believes that the Corps of Engineers should not be exempt from charging entrance or user fees at its recreational areas, when other Federal agencies such as the Park Service, the Forest Service, and the Bureau of Land Management presently impose such fees. The corps, which supports more waterborne recreational users than any other Federal agency, could make a significant contribution to the land and water conservation fund if included among the other fee-collecting agencies.

The Corps of Engineers places heavy reliance upon the use of recreational benefits to justify the construction of navigation and multiple-use dams and reservoirs. For example, Public Law 90-483, the River and Harbor and Flood Control Act, approved August 13, 1968, authorized the construction of 19 projects which included multiple-purpose reservoirs in the plan for development. Total benefits accruing to all project purposes would be $71,322,400 annually of which $22,781,090, representing 32 percent, would accrue to recreation or fish and wildlife enhancement.

As the corps becomes more recreationally oriented, their investments will constitute an increasingly larger portion of the Federal Government's investment in public recreation. Therefore, it seems appropriate that revenues should be derived from these investments to help support such activities.

COST

The continuation of the golden eagle will not enlarge the land and water conservation fund program because the ceiling is set at $200 million a year. Rather, if the golden eagle, and other fee collections are continued the income from such sales will go into the fund and the amount of mineral receipts entering the fund will be reduced accordingly. Therefore, the miscellaneous receipts of the Treasury will benefit to the extent of the golden eagle and other related fee income.

At the request of Senator Bible, chairman of the Subcommittee on Parks and Recreation, the committee was provided with data from the Bureau of Outdoor Recreation as to the cost of collecting recreation fees. Subsequent to the hearing on S. 2315, the committee received correspondence from the Bureau of Outdoor Recreation, stating:

We have carefully reviewed all available information relating to the costs of collecting recreation fees. None of the agencies involved has a cost accounting system that would reflect actual costs of collecting such fees. The estimate of 10 percent used by the Bureau of Outdoor Recreation includes the same cost items as the other agencies use. One reason for the difference is that each agency figures its costs in relation to the funds it collects. Many permits are sold by mail orders addressed to the Bureau of Outdoor Recreation. While the cost of checking Passports at areas, answering questions and processing visitors falls on the managing agencies, the revenues from the mail order sales cannot be credited to specific agencies. Thus, their costs may run 15 to 20 percent. Overall, we believe that total costs will not exceed 12 to 15 percent of total collections.

During the executive session on S. 2315, the committee thoroughly discussed the anticipated costs of advertising the annual passport to increase public awareness and acceptance of the program. Rather than establish rigid guidelines on expenditures, the committee felt that the Secretary of the Interior should be given sufficient latitude to expend such sums as he deems necessary in order to advertise and promote any recreational entrance or user fees of the golden eagle passport. The committee anticipates that the Appropriations Committee will review these expenditure requests each year.

COMMITTEE RECOMMENDATIONS

The Interior and Insular Affairs Committee recommends that S. 2315, as amended, be enacted.

The PRESIDING OFFICER. The question is on agreeing to the committee amendments.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. KENNEDY. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Without objection, it is so ordered.

OFFICERS' BONANZA

Mr. YOUNG of Ohio. Mr. President, in 1966 Congress was prevailed on to pass the 10-percent overseas savings plan. Generals galore appeared before the House and Senate Armed Services Committees claiming GI's in Vietnam and other foreign countries—a total 1,422,000 at this time—should be encouraged to save money. I voted against the bill predicting at the time that it would become a bonanza for officers, but mean little to enlisted men and draftees. The fact is that 50 percent of eligible officers have made deposits, but only 15 percent of GI's. Many high-ranking officers are depositing much more than their "unallotted pay and allowances" notwithstanding that monthly deposits were limited to pay and allowances. Instead of the $25 million expected to be deposited, approximately $200 million was deposited in the first 14 months, mostly by officers. Unfortunately, American taxpayers are paying that 10-percent interest compounded quarterly. The money paid in interest to officers greatly exceeds actual deposits made by enlisted men and draftees overseas.

Unfortunately, this program has a rule that GI's cannot withdraw any of their deposits while overseas unless they prove an emergency. GI's in Vietnam, for example, desiring a rest and relaxation trip to Australia or Hong Kong naturally need their money, so very few make deposits. Officers who borrow money in the United States and whose relatives send their own money or borrow money in the United States at from 5 percent to 8 percent and then send bank drafts and checks overseas have no desire to end this bonanza. Obviously, relatives and close friends send bank drafts for deposit at 10-percent interest compounded quarterly by their officer relative, or friend, and join in this profiteering. The Secretary of Defense should end this racket. He should lower the interest rate to 5 or 6 percent without delay. This would not affect GI's adversely. It would end the racketeering and quick profiteering being made by some thousands of officers.

S. 2876—INTRODUCTION OF THE CAMPAIGN BROADCAST REFORM ACT

Mr. PEARSON. Mr. President, today it is my privilege to introduce the Campaign Broadcast Reform Act of 1969, together with the distinguished senior Senator from Michigan (Mr. HART) and Senators ANDERSON, BROOKE, BURDICK, CASE, CRANSTON, DODD, EAGLETON, FULBRIGHT, GOODELL, GRAVEL, HARRIS, HARTKE, HATFIELD, HOLLINGS, HUGHES, INOUYE, KENNEDY, MCGOVERN, MATHIAS, METCALF, MUSKIE, MONTOYA, NELSON, PELL, PERCY, RANDOLPH, SAXBE, SCOTT, SCHWEIKER, SMITH, SPONG, TYDINGS, YARBOROUGH, and YOUNG of Ohio.

Earlier this year I resubmitted the Campaign Finance Act (S. 1692) which was originally introduced several years ago. That bill is designed to broaden the contributions base in public affairs by offering tax incentives to small- and medium-sized donors to political campaigns. The bill would also require much more stringent reporting of all campaign spending. At that time I noted that the rising costs of political campaigns was rapidly pricing many qualified men of modest means out of the public arena. A better system of reporting and a broadened contributions base would help alleviate the problem, of course, but they could not alone halt the costly trend that is rapidly making a mockery of our democratic election philosophy. Thus, something must also be done to directly reduce the major costs of seeking public office. That is the purpose of the legislation we introduce today, for it is obvious that the greatest expense faced by serious candidates for Federal office is incurred in the purchase of television time.

Mr. President, the Campaign Broadcast Reform Act is designed to provide candidates for the House and Senate with the opportunity to purchase, at significantly reduced rates, the minimum amount of time demanded by today's modern campaigns. The bill applies only to nominated candidates for the House and Senate, and is limited to the 5 weeks preceding the November general elections. Recognizing the average candidate's preference for spot announcements, it provides a basic amount of spot time to be used in segments of 1 minute or less. Also offered is a bonus amount of program time at an even greater cost reduction to encourage the use of longer, more educational segments of not less than 5 minutes' duration each. Every affected candidate is free to use some, none, or all of the discount time, in whatever manner he chooses—prime or nonprime time, long or short segments, film or live. Moreover, he is in no way prohibited from purchasing additional television time at regular rates if he so desires.

SPOT TIME PROVISIONS

Mr. President, under this bill each candidate for the U.S. House of Representatives would be entitled to purchase 60 1-minute segments of prime television time, or the equivalent, and each candidate for the U.S. Senate would be allotted 120 1-minute segments of prime television time, or the equivalent, to be used in the 5 weeks prior to the general election. Recognizing the schedule variations in the 50 States, prime time is defined as the continuous 3-hour period of the broadcast day which reflects a station's highest published rates.

On every television station, the cost for 1 minute at 9 p.m. is more than for 1 minute at 9 a.m. Also, the cost of a 20-second spot is more than one-third of the cost for the full 60-second spot.

Spot time equivalencies, when a candidate requests some or all of his spot time allotment in nonprime time and/or in segments of less than 1 minute, would be derived from the station's highest published rate for the 1-minute, prime time spot; for example, the single spot, one-time buyer rate. These rates are available in, or can be derived from the rate schedules published in such accepted buyers' guides as Standard Rate and Data.

For purposes of a simple example, assume a rate schedule such as the following:

$100 per one 60-sec. spot at prime time.
$50 per one 20-sec. spot at prime time.
$50 per one 60-sec. spot at non-prime time.
$25 per one 20-sec. spot at non-prime time.

In this case, the equivalent of a prime time 1-minute spot would be two 20-second prime time spots, two 1-minute nonprime spots, or four 20-second nonprime spots. In this way the candidates in any given race would benefit as equally as possible in terms of the monetary discount they received, while the total air time used by each would vary according to the actual composition of the schedule which each candidate devised.

COST DISCOUNTS

For both House and Senate candidates, the charge by broadcasters for spot time would be 30 percent of the regular commercial rate charged by the licensee for comparable use of the station. Thus, the discount would apply to the general rate schedule, including the discount prices which stations generally afford commercial buyers in the purchase of long-term or multiple-unit packages. In regard to the discount provisions, as well as the equivalency provision mentioned above, the FCC would have the power to review station's current rate schedules. The Commission would be expected to issue such general regulations and instructions as necessary to assure uniform application of these provisions, and in the case of disputes to investigate and rule promptly.

Mr. President, in each constituency, all UHF and VHF licensees would be expected to share equally the responsibility for providing the necessary broadcast time. Thus, while these individual requirements will vary from district to district and State to State, no broadcaster would bear a larger burden than any other licensee in his given area. In no case would any station be expected to assume the responsibility of another; should a candidate not wish to purchase his allotted time on one or more of the stations in his constituency, this portion of time would be sacrificed from his total allotment.

House races: For every House candidate—except those running at large—the sixty 1-minute segments to which he is entitled would be equally divided among the broadcast stations located within the geographical boundaries of the congressional district and such stations outside the district whose broadcast area population—for instance, the population residing within the radius of the station's "A-contour" broadcast area—includes at least one-third of the population of the given district. Example: If there are three stations in the district and one just outside which counts one-third of the district's population in its A-contour market area, the candidate's 60-minute allotment would be equally divided among these four stations: each offering him 15 minutes of discounted time.

Senate races: The 120 1-minute segments to which each Senate candidate is entitled, and the sixty 1-minute segments in the case of House candidates running at large, would be equally divided among those broadcasters located within the State and such broadcasters outside the State, one-fifth of whose broadcast area population—or a contour population—reside within the State.

It should be possible to estimate well in advance the total amount of time required to be provided by any given station in any given election year, thus permitting licensees to set aside adequate time for political candidates. It is also presumed that a licensee would have the right, whether formally or informally established, to preempt commercial advertisers during the 5-week preelection period if necessary to meet the requirements established by this law. Obviously, we hope that any such instances would be the exception and not the rule.

PROGRAM TIME PROVISIONS

Mr. President, in order to encourage broader exposure of candidates and issues, broadcasters would also be required to offer candidates the opportunity to purchase an additional bonus of program time—that is, time to be used in segments of 5 minutes or more. Each candidate for the House and Senate would be entitled to a 30-minute program, or its equivalent, on each of the stations required to provide him time. Station responsibility is defined exactly as it is in the section dealing with spot time allotments.

Program time equivalencies are derived from the highest published rate charged for the basic time unit, as in the spot-time formula, but in this case the base unit is the 30-minute prime-time program, rather than the 60-second prime-time spot announcement.

For both House and Senate candidates, the cost of this program time would be 20 percent of the regular commercial rate charged by the station for comparable use for other purposes. As in the case of spot-time discounts, the FCC would have the power to review a station's rates and to issue such regulations as necessary.

PROCEDURES FOR REQUESTING, ALLOTTING, AND PURCHASING POLITICAL TIME

Candidates and broadcasters, or their representatives, would neogtiate the purchase of spot and program time much as they now do, within the limits of the timetable specified in the bill. This would require submission of applications and schedule requests by candidates at least 60 days before the election and the presentation of a suggested schedule by the broadcaster to each candidate 40 days before the election. A minimum of 5 days would be left for resolving problems or disagreements. Special provision is made to cover late primaries where a candidate is not selected until after the 60-day schedule submission date. Almost all candidates are now required to make payment for time purchased prior to broadcast, and under the Campaign Broadcast Reform Act, candidates would be expected to continue to observe this procedure. In order to assure uniformity and fairness, the FCC would have responsibility for prescribing the form of the applications and schedule presentations and for arbitrating disputes.

ALTERNATIVE APPROACH

Mr. President, other avenues of reform are open and certainly should be explored. In recognition of this fact, the Campaign Broadcast Reform Act of 1969 is not offered as a panacea for the problem of skyrocketing campaign expenditures. Rather, it is submitted simply as a focus for discussion and a stimulus for debate. Thus, the sponsors of this bill are not wedded to every comma and semicolon contained within it. Quite the contrary. We are open to any reasonable approach which addresses the problem. But we do ask that the problem be ad-

dressed and, that after careful deliberation, action be taken.

In considering any alternative approaches, however, let us remember that the use of a small amount of discounted time such as we propose circumvents many of the complications that are raised by legislation which would substantially alter the equal-time provision of section 315 of the Federal Communications Act. Any such alterations always run the grave risk of exposing the broadcast industry to the very abuses that section 315 was designed to prevent when it was originally enacted 35 years ago.

The Campaign Broadcast Reform Act manages to avoid all these pitfalls while still providing a guarantee of access to the television medium for every serious candidate. Yet, because the cost of even discounted broadcast time is relatively high, strong deterrents guard against abuse by frivolous candidates and protect the broadcast industry in high-priced metropolitan areas where television is not now a campaign factor.

THE NEED FOR REFORM

Mr. President, the cost of television campaigning in the United States—the only country in the world that charges its candidates for access to the medium—is making it impossible for a man of moderate means to run for public office unless he successfully curries the support of wealthy men or powerful special-interest groups.

The total cost of all campaigns in the United States last year is estimated at approximately $300 million, an increase of 50 percent since 1964 and 100 percent since 1956. Roughly $58.9 million of this total was expended on political broadcasts, 64.5 percent being spent on television. If we limited our attention solely to the Federal offices that would be affected by the Campaign Broadcast Reform Act, the proportion spent on television would be much, much higher.

Even when production costs are eliminated, the amounts spent on political television time are enormous. In 1952 the declared figure for all candidates was $3 million, excluding primaries. In 1956 the comparable figure was $6.6 million; in 1960, $10 million; in 1964, $17.5 million; and in 1968, $27.4 million. These rising broadcast expenses represent greater use of television as well as higher costs, of course. But we cannot ignore the fact that television rates also climbed by an average of 30 to 40 percent between 1961 and 1967.

Mr. President, from the time Abraham Lincoln spent 75 cents on his 1864 Congressional campaign until the early 1950's, most of the growth in political spending corresponded to the increases in our population and our cost of living. That campaign spending has jumped 114 percent since 1952 can only be directly attributable to the television revolution in American politics. The cost per vote cast for the two major party candidates never exceeded 19 to 20 cents during the years 1912 through 1928. In fact, it even remained at this low level through the elections of 1952 and 1956. But in the past 12 years this cost indicator has soared upward by over 300 percent, reaching 67 cents per vote in 1968 when spending on behalf of third party candidate George Wallace is included.

The full extent of the insatiable demands imposed by this campaign revolution are best revealed when the specific requirements for House and Senate races are considered. For example, many, many House races cost each candidate at least $100,000—of which 40 to 50 percent is often spent on broadcast time. As for the Senate, several candidates last year were told by their advertising agencies that television would cost them 10 cents for every man, woman, and child in their States. This meant that senatorial candidates in six States could expect to pay at least a million dollars for television if they conducted a well run campaign. In California and New York the sum would be nearer $2 million. And these figures do even include the cost of producing the advertisements. These extras are normally equivalent to one-fourth the expense of purchasing the time needed to air them.

Mr. President, the television industry has done a marvelous job in bringing the issues developed in our major campaigns before the public. The nightly newscasts and special documentaries represent worthy efforts to provide the vital information every intelligent voter needs to make a wise choice. But the hard fact remains that these efforts, by necessity, are highly condensed and, as a result, are of limited effectiveness. For example, a half-hour news show, literally covering the entire world's events, is equivalent in content to only three-quarters of a single newspaper page.

Our radio stations, too, must be considered in evaluating the need for reform of our political broadcast practices. For, certainly, they, too, have contributed, however unwittingly, to today's dangerous cost spiral. The problems involved in defining the minimum discount-time obligations of radio broadcasters is much more difficult, however, given the far greater number of stations involved. And, as pointed out earlier, radio advertising costs are a relatively small percentage of television costs at the Federal level where we must operate. No doubt reform is needed here, too, but we cannot delay action on the heart of the problem—television—while waiting for a solution of the minor issues.

With each year that passes, the crisis grows more grave, and if any action is to be taken by 1970 we will have to begin now, where we can, while we can.

Mr. President, the broadcasters have a right to do their best to make a fair profit under our free enterprise system. But they also have an obligation, a higher obligation, as the law states, to operate "in the public interest." After all, they are licensed by the American people to use their airways as a public service. They have not been granted their broadcasting opportunities by divine right. Congress can alter the requirements for use of the airways any time it is in the public interest to do so. And given the vital importance of reopening our political system to maximum competition, now is clearly such a time.

Thus, Mr. President, I am quite hopeful that the Campaign Broadcast Reform Act will achieve the speedy consideration it deserves, for nothing less than the integrity of our historic belief in democracy is at stake. Technology has radically changed the demands of campaigning for public office in just the past decade. We must adapt our laws and practices to deal with these changes if we are to succeed in preserving the open character of our political system. And let us remember that this free competition has produced some of the greatest statesmen the world has ever known—men of unlimited talent, but very limited means—men such as Abraham Lincoln. If he were to enter the public arena today, for example, I doubt if he would be able to survive.

Such a situation is obviously unhealthy. The responsibility to do something about it is ours. We cannot shirk it any longer. If we do not have the wisdom and courage to reform our political system from within there are many who stand ready to overthrow it from without. Public confidence can only be maintained by reforming obvious inequities. The remedy offered by the Campaign Broadcast Reform Act is a mild one, but it is reasonable and should prove effective. Let us take this opportunity for moderate reform before more extreme measures are the only viable alternative.

Mr. President, I ask unanimous consent that the Campaign Broadcast Reform Act be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2876) to amend the Communications Act of 1934 to provide candidates for congressional offices with certain opportunities to purchase broadcast time from television broadcasting stations, introduced by Mr. PEARSON, for himself and other Senators, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 2876

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Part I of title III of the Communications Act of 1934 is amended by adding at the end thereof the following new section:

"Television Broadcast Time for Candidates for Congressional Offices

"SEC. 331. (a) For purpose of this section—

"(1) The term 'broadcast area' means the A contour area of a television broadcasting station, as determined under regulations of the Commission.

"(2) The term 'legally qualified candidate' includes only candidates in general elections.

"(3) The term 'Representative in Congress' includes the Resident Commissioner from the Commonwealth of Puerto Rico.

"(4) The term 'television broadcasting station' means a television broadcasting station operating on a channel regularly assigned by the Commission under this Act to the television broadcasting station's community.

"(b) Each legally qualified candidate for the office of Representative in Congress or United States Senator shall be provided, in accordance with subsection (d), opportunities to purchase broadcast time from the television broadcasting stations required under subsection (c) to provide such opportunities to such candidate.

"(c)(1) Each legally qualified candidate for the office of Representative in Congress elected from a congressional district shall be provided opportunities to purchase broadcast time from each television broadcasting station located in such district and from any other television broadcasting station whose broadcast area population comprises at least one-third of the population of such district.

"(2) Each legally qualified candidate for the office of Representative in Congress elected at large from a State or for the office of United States Senator from a State shall be provided opportunities to purchase broadcast time from each television broadcasting station located in such State and from any other television broadcasting station which has at least one-fifth of its broadcast area population residing in such State.

"(3) The population of each State, congressional district, and broadcast area shall be determined by the Commission on the basis of the latest available census information from the Department of Commerce.

"(d) The opportunities to purchase broadcast time required to be provided by television broadcasting stations under this section shall be provided as follows:

"(1) The broadcast time required to be provided shall be provided during the five-week period ending on the date of each general election held to select Representatives in Congress and United States Senators. Not later than the 60th day preceding the date of such election (or if a primary election to select candidates for such election is to be held after such 60th day, not later than the 42nd day preceding the date of such election), each legally qualified candidate in such election for the office of Representative in Congress or the office of United States Senator may apply (in such manner as the Commission shall by regulation prescribe) to any television broadcasting station, required under subsection (c) to provide opportunities to purchase broadcast time to such candidate, to purchase the broadcast time described in paragraph (2) of this subsection. Not later than the 40th day preceding the date of such election, each television broadcasting station which has received any application under the preceding sentence to purchase broadcast time shall provide each applicant with a schedule of the broadcast time which may be purchased by the applicant. Such schedule shall be made in accordance with the requirements of this section.

"(2)(A) Each legally qualified candidate for the office of Representative in Congress shall, with respect to each general election in which he is running, be entitled to purchase—

"(i) Sixty one-minute announcements or the equivalent (as determined under regulations of the Commission), and

"(ii) A thirty-minute, program-length broadcast or the equivalent not to be used in segments shorter than five minutes in length (as determined under regulations of the Commission) from each television broadcasting station required under subsection (c) to provide opportunities to such candidate to purchase broadcast time.

"(B) Each legally qualified candidate for the office of United State Senator shall, with respect to each general election in which he is running, be entitled to purchase—

"(i) One hundred and twenty one-minute segments of broadcast time (or the equivalent as determined under regulations of the Commission), and

"(ii) A thirty-minute program-length broadcast or the equivalent not to be used in segments shorter than five minutes in length (as determined under regulations of the Commission) from each television broadcasting station required under subsection (c) to provide opportunities to such candidate to purchase broadcast time.

"(C) If more than one television broadcasting station is required under subsection (c) to provide a candidate with opportunities to purchase broadcast time, all the television broadcast stations so required to provide such candidate with such opportunities shall divide equally among themselves (in accordance with regulations of the Commission) the responsibility to provide to the candidate the opportunity to purchase broadcast time described in clause (i) of subparagraph (A) or (B) of this paragraph, as the case may be.

"(3) Each candidate shall be given the opportunity to purchase broadcast time during the continuous three hour period of each broadcast day which reflects the highest published rates of the station, or during such other period as the candidate may request.

"(4) The rates charged a candidate for broadcast time purchased under this section shall not exceed—

(A) Thirty per centum of the charges made for comparable use of such station for other purposes for the announcements described in clause (i) of subparagraph (A) or (B) of paragraph (2), as the case may be.

"(B) 20 per centum of the charges made for comparable use of such station for other purposes for the program time described in clause (ii) of subparagraph (A) or (B) of paragraph (2), as the case may be.

"The Commission shall have the authority to require licensees to keep such records as may be necessary to determine the sale price of broadcast time during the four month period preceding the date of the general election. Upon application of a candidate, the Commission shall promptly review the station's records to determine whether the station is in compliance with this Act and take such steps as may be necessary to bring the station into compliance."

SEC. 2. The amendments made by Sec. 1 of this Act shall be applied in accordance with the provisions of Sec. 315 of the Communications Act of 1934.

SEC. 3. The amendments made by Sec. 1 of this Act shall apply with respect to candidates in general elections held on or after the 180th day following the date of the enactment of this Act.

Mr. HART. Mr. President, will the Senator yield?

Mr. PEARSON. I am glad to yield to the distinguished Senator from Michigan.

Mr. HART. Mr. President, at a time when there is considerable and laudable interest in widening participation in our electoral process, soaring campaign costs work in the opposite direction.

It has been estimated that in 1968 candidates for public office at all levels spent about $300 million campaigning, up $100 million from the previous presidential election year.

Similar expenditures in presidential election years between 1952 and 1964 only rose from $140 million to $200 million.

Inflation accounts for only part of that increase.

One major increase came from greater use of political broadcasts as a campaign tool, in Senate and House races, as well as in presidential elections.

The Federal Communication Commission reported that $34.6 million were spent on all political broadcasting in 1964. In 1968, that figure was $58.9 million.

Almost 65 percent of that total went into television.

Clearly, television campaigning, with its many pluses and minuses, is not only here to stay, but reliance on TV as a major campaign strategy undoubtedly will continue to increase.

As campaign costs soar, the search for wealthy candidates and wealthy contributors intensifies.

Reliance on just one segment of society undermines the basis for representative and responsive government.

Statistics emphasize the narrowness of participation represented by political contributors.

It has been estimated than only 5 percent or less of our population contribute to political campaigns.

It has been estimated that only 1 percent of our people contribute 90 percent of all political funds.

The Nation is faced, then, with a serious problem of maintaining representative and responsive governments, both as to making possible races for public office by candidates of low and moderate incomes and as to supporting political campaigns which reach and inform as many people as possible.

Today, the able Senator from Kansas (Mr. PEARSON) and I introduced a bill designed as a small step toward alleviating one aspect of the problem of increasing campaign costs.

The Campaign Broadcast Reform Act of 1969 seeks to lower the cost of a limited amount of television campaigning.

The rationale for starting with television is:

First. The airways belong to the public.

Second. TV time is a major campaign cost and will continue to be so.

The Campaign Broadcast Reform Act would work this way:

In the 5 weeks prior to a general election only, a candidate for the U.S. House of Representatives could purchase the equivalent of 60 1-minute prime-time spots at 30 percent of the commercial rate, and the equivalent of one 30-minute prime-time program at 20 percent of the regular commercial rate.

Senate candidates could purchase the equivalent of 120 1-minute prime-time spots at 30 percent of the regular commercial rate and the equivalent of a 30-minute program at 20 percent of the prime-time rate.

At the discretion of the candidate, spot time could be divided among 1-minute ads and ads of shorter duration and purchased at various times. The cost of the package would be limited to the cost of 60 1-minute or 120 1-minute prime-time spots.

Similarly, program time would be divided at the discretion of the candidate, though programs would have to be at least 5 minutes long.

Discounted time purchased would have to be divided equally among all stations in a House district or a State. Also, out-of-district or out-of-State stations serving prescribed percentages of an area's population also would have to accept an equal share of the discounted time.

The bill does not limit a candidate from purchasing additional time, nor does it interfere with billing procedures involving political candidates.

The bill also is designed not to raise questions of equal time.

Again, the intent of the Campaign Broadcast Reform Act of 1969 is to help provide all candidates with access to a most important campaign tool.

It is my hope that not only will this bill be considered on its own merits, but that its introduction will generate needed study of ways to open the opportunity to run for public office to all persons, regardless of the degree of affluence of the candidate or of his backers.

Only in that way can we insure that the high cost of campaigning does not thwart efforts to insure that our Government elected by the people represents and is responsive to all people.

Mr. PEARSON. I thank the Senator.

Mr. SPONG. Mr. President, the rapidly growing cost of political campaigns poses a serious threat to our traditional political values and system. In the past few years the impact of technological developments on our campaigning has become obvious to all. The need for a good television image and the use of TV documentaries and television spots similar to those used to sell commercial products have become accepted parts of our system of choosing our leaders and legislators.

Besides becoming a dominant influence in our elections, TV has had a profound effect on the cost of running for political office. For example, in 1952, $3 million was spent for TV time by all candidates; by 1968, this figure reached $27.4 million. These figures do not include the considerable cost of the production of TV materials, which is estimated to run 25 percent or more of the cost for time.

In Virginia, we have just completed a Democratic primary election in which record amounts were spent by the candidates on their campaigns, much of which was for TV time and production. For example, one candidate spent about a quarter of a million dollars on TV time and production, a figure in excess of the total amount spent by any previous Virginia candidate in a primary or a general election.

Recently released figures on campaign costs in 1968 indicate that the percentage spent for TV time was greater than in previous years. Whatever figures are used, one point is clear—campaign costs are increasing rapidly and the cost of TV time is a significant factor in the increase.

As campaign costs increase, it is becoming more and more difficult for candidates without personal wealth or the backing of powerful interest groups to run for high office. Such a situation is totally unacceptable in a system such as ours.

It is clear that the current election laws are ineffective in limiting the cost of campaigning and that Congress must take steps to bring the cost of campaigning within reason. The bill introduced today by Senators HART and PEARSON represents a modest first step in that direction. I join in its sponsorship as an expression of my concern over complaints—heard with increasing frequency—that only the independently wealthy, or those backed by well-to-do special interests, can afford to seek public office. I hope the bill will serve as a vehicle for further refinements leading to limitations on campaign spending and disclosure.

Congress must act to restore the public's faith in our Government. Broader participation in political campaigns, together with a reduction in campaign costs and financial disclosure by public officials, would serve to eliminate doubt and suspicion about the activities of people in government, and those aspiring to public office.

The bill provides for reduced rates for TV time for candidates for the House and Senate, and does so in the simplest manner possible and without imposing an undue burden on any one station. Simply, the bill provides that each candidate for the Senate and House of Representatives, in a general election, would be able to buy a certain amount of time at a reduction from the regular commercial rate.

Candidates for the Senate would be able to buy up to 120 minutes of spot time to be used in segments of 1 minute or less at 30 percent of the regular rate. Candidates for the House would be able to buy up to 60 minutes of this time. The time would be divided among the stations serving a significant portion of the candidate's State or district. In addition, each candidate would be able to buy a 30-minute program or its equivalent on each station servicing his State or district at 20 percent of the regular rate.

Mr. President, I would hope that the simplicity of the bill would be a start toward a more complete limitation and control upon campaign costs, particularly those involved in television. In view of this, the bill is worthy of consideration by the Senate. I hope early hearings will focus the Senate's attention upon this problem.

The PRESIDING OFFICER. Is there further morning business?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HART. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

JOINT COMMISSION BETWEEN THE UNITED STATES OF AMERICA AND THE UNITED MEXICAN STATES

A communication from the President of the United States strongly urging prompt action on S.J. Res. 119 and provision of sufficient funds to cover the modest expenses of the U.S. Section of the United States-Mexico Commission for Border Development and Friendship; to the Committee on Foreign Relations.

REPORT OF TITLE I AGREEMENTS UNDER THE AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT OF 1954

A letter from the Acting Administrator, Foreign Agricultural Service, U.S. Department of Agriculture, transmitting, pursuant to law, a report of agreements signed under Public Law 480 in July and August 1969 for foreign currencies (with an accompanying report); to the Committee on Agriculture and Forestry.

REPORT ON VALUE OF PROPERTY, SUPPLIES, AND COMMODITIES PROVIDED BY THE BERLIN MAGISTRAT

A letter from the Assistant Secretary of Defense, reporting, pursuant to law, on the value of property, supplies, and commodities provided by the Berlin Magistrat for the quarter April 1, to June 30, 1969; to the Committee on Armed Services.

PROPOSED LEGISLATION AUTHORIZING A STUDY OF ESSENTIAL RAILROAD PASSENGER SERVICE

A letter from the Chairman, Interstate Commerce Commission, transmitting a draft of proposed legislation to amend section 13a of the Interstate Commerce Act, to authorize a study of essential railroad passenger service by the Secretary of Transportation, and for other purposes (with an accompanying paper); to the Committee on Commerce.

PROPOSED LEGISLATION IMPROVING AND CLARIFYING CERTAIN LAWS AFFECTING THE COAST GUARD

A letter from the Secretary of Transportation, transmitting a draft of proposed legislation to improve and clarify certain laws affecting the Coast Guard (with accompanying papers); to the Committee on Commerce.

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the examination of financial statements of the Federal Housing Administration for the fiscal year 1968, Department of Housing and Urban Development, dated September 9, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the potential for savings by reduction of aircraft engine procurement, Department of the Navy and Department of the Air Force, dated September 9, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the enforcement of sanitary, facility, and moisture requirements at federally inspected poultry plants, Consumer and Marketing Service, Department of Agriculture, dated September 10, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a secret report on review of U.S. assistance programs in Tunisia (with an accompanying report); to the Committee on Government Operations.

PROPOSED LEGISLATION MODIFYING THE BOUNDARIES OF THE SANTA FE, CIBOLA, AND CARSON NATIONAL FORESTS, N. MEX.

A letter from the Under Secretary of Agriculture, transmitting a draft of proposed legislation to modify the boundaries of the Santa Fe, Cibola, and Carson National Forests in the State of New Mexico, and for other purposes (with an accompanying paper); to the Committee on Interior and Insular Affairs.

REPORT ON COMMISSARY ACTIVITIES OUTSIDE THE CONTINENTAL UNITED STATES

A letter from the Assistant Secretary for Administration, Department of Commerce, transmitting, pursuant to law, a report of the Department on commissary activities outside the continental United States (with an accompanying report); to the Committee on Commerce.

PROPOSED AMENDMENT OF THE ATOMIC ENERGY ACT OF 1954

A letter from the Acting Chairman, Atomic Energy Commission, transmitting a draft of proposed legislation to amend the Atomic

Energy Act of 1954, as amended, and for other purposes (with accompanying papers); to the Joint Committee on Atomic Energy.

REPORT ON FOREIGN AGENTS REGISTRATION ACT

A letter from the Attorney General of the United States, transmitting, pursuant to law, a report of the Attorney General on the Foreign Agents Registration Act, for the calendar year 1968 (with an accompanying report); to the Committee on the Judiciary.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. BIBLE, from the Committee on Interior and Insular Affairs, with amendments:

S. 560. A bill to provide for the establishment of the William Howard Taft National Historic Site (Rept. No. 91-396).

EXTENSION OF AUTHORITY TO LIMIT THE RATES OF INTEREST OR DIVIDENDS PAYABLE ON TIME AND SAVINGS DEPOSITS AND ACCOUNTS—REPORT OF A COMMITTEE (S. REPT. NO. 91-397)

Mr. PROXMIRE. Mr. President, from the Committee on Banking and Currency, I report favorably an original joint resolution (S.J. Res. 149) to extend for 3 months the authority to limit the rates of interest or dividends payable on time and savings deposits and accounts, and I submit a report thereon.

The PRESIDING OFFICER. The report will be received and the joint resolution will be placed on the calendar; and the report will be printed.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session, the following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

Jack W. Lydman, of New York, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to Malaysia;

Charles T. Cross, of California, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to the Republic of Singapore;

Charles W. Adair, Jr., of Florida, a Foreign Service officer of the class of career minister, to be Ambassador Extraordinary and Plenipotentiary to Uruguay;

Robert M. Sayre, of Virginia, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to Panama;

Douglas MacArthur II, of the District of Columbia, a Foreign Service officer of the class of career ambassador, to be Ambassador Extraordinary and Plenipotentiary to Iran;

Robinson McIlvaine, of Pennsylvania, a Foreign Service officer of class 1, to be Ambassador Extraordinary and Plenipotentiary to the Republic of Kenya;

Charles W. Yost, of New York, William B. Buffum, of New York, Dante B. Fascell, U.S. Representative from the State of Florida, J. Irving Whalley, U.S. Representative from the State of Pennsylvania, and Shirley Temple Black, of California, to be representatives of the United States of America to the 24th session of the General Assembly of the United Nations; and

Christopher H. Phillips, of New York, Glenn A. Olds, of New York, Rita E. Hauser, of New York, William T. Coleman, of Pennsylvania, and Joseph E. Johnson, of New Jersey, to be alternate representatives of the United States of America to the 24th session of the General Assembly of the United Nations.

By Mr. EASTLAND, from the Committee on the Judiciary:

Leonard E. Alderson, of Wisconsin, to be U.S. marshal for the western district of Wisconsin.

BILLS AND JOINT RESOLUTIONS INTRODUCED OR REPORTED

Bills and joint resolutions were introduced or reported, read the first time and, by unanimous consent, the second time, and referred or placed on the calendar, as follows:

By Mr. PEARSON (for himself, Mr. HART, Mr. ANDERSON, Mr. BROOKE, Mr. BURDICK, Mr. CASE, Mr. CRANSTON, Mr. DODD, Mr. EAGLETON, Mr. FULBRIGHT, Mr. GOODELL, Mr. GRAVEL, Mr. HARRIS, Mr. HARTKE, Mr. HATFIELD, Mr. HOLLINGS, Mr. HUGHES, Mr. INOUYE, Mr. KENNEDY, Mr. MCGOVERN, Mr. MATHIAS, Mr. METCALF, Mr. MONTOYA, Mr. MUSKIE, Mr. NELSON, Mr. PELL, Mr. PERCY, Mr. RANDOLPH, Mr. SAXBE, Mr. SCHWEIKER, Mr. SCOTT, Mrs. SMITH, Mr. SPONG, Mr. TYDINGS, Mr. YARBOROUGH, and Mr. YOUNG of Ohio):

S. 2876. A bill to amend the Communications Act of 1934 to provide candidates for congressional offices with certain opportunities to purchase broadcast time from television broadcasting stations; to the Committee on Commerce.

(The remarks of Mr. PEARSON when he introduced the bill appear earlier in the RECORD under the appropriate heading.)

By Mr. DODD:

S. 2877. A bill for the relief of Pasquale Sandolo; to the Committee on the Judiciary.

By Mr. MONDALE:

S. 2878. A bill for the relief of Donato Losenno; to the Committee on the Judiciary.

By Mr. STEVENS:

S. 2879. A bill to amend the Internal Revenue Code of 1954 to require the issuance of certificates of release of tax liens and the filing of such certificates in the same offices in which the notices of such liens are filed; to the Committee on Finance.

S. 2880. A bill to provide that time spent by a Federal employee in a travel status shall be considered as hours of employment; to the Committee on Post Office and Civil Service.

S. 2881. A bill to amend the Food Stamp Act of 1964 in order to permit eligible households living in remote areas of Alaska to use food stamp coupons for the purchase of ammunition; to the Committee on Agriculture and Forestry.

(The remarks of Mr. STEVENS when he introduced the bills appear later in the RECORD under the appropriate heading.)

By Mr. FANNIN:

S. 2882. A bill to amend Public Law 394, 84th Congress, to authorize the construction of supplemental irrigation facilities for the Yuma Mesa Irrigation District, Arizona; to the Committee on Interior and Insular Affairs.

By Mr. MONTOYA (for himself, Mr. HOLLINGS, Mr. MOSS, Mrs. SMITH, and Mr. YOUNG of Ohio):

S. 2883. A bill to provide for the imposition of a duty on excessive imports of potassium chloride or muriate of potash; to the Committee on Finance.

(The remarks of Mr. MONTOYA when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MURPHY:

S. 2884. A bill to provide for the duty-free entry under bond of certain plastic bags to be used as containers for exporting organic fertilizer from the United States; to the Committee on Finance.

By Mr. HOLLINGS (for himself and Mr. COTTON):

S. 2885. A bill to establish an orderly trade in textiles and in leather footwear; to the Committee on Finance.

(The remarks of Mr. HOLLINGS when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. FULBRIGHT:

S. 2886. A bill to change the names of certain projects for navigation and other purposes on the Arkansas River; to the Committee on Public Works.

(The remarks of Mr. FULBRIGHT when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. HARTKE (for himself and Mr. MAGNUSON) (by request):

S. 2887. A bill to amend section 13a of the Interstate Commerce Act, to authorize a study of essential railroad passenger service by the Secretary of Transportation, and for other purposes; to the Committee on Commerce.

(The remarks of Mr. HARTKE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MONTOYA (for himself, Mr. ANDERSON, Mr. ALLEN, Mr. BENNETT, Mr. BIBLE, Mr. BURDICK, Mr. CANNON, Mr. CRANSTON, Mr. DODD, Mr. EAGLETON, Mr. FULBRIGHT, Mr. GURNEY, Mr. HARRIS, Mr. HART, Mr. MANSFIELD, Mr. MONDALE, Mr. MOSS, Mr. MURPHY, Mr. MUSKIE, Mr. SPARKMAN, Mr. SPONG, Mr. STEVENS, Mr. THURMOND, Mr. TYDINGS, Mr. WILLIAMS of New Jersey, Mr. YARBOROUGH, and Mr. YOUNG of North Dakota:

S.J. Res. 148. Joint resolution to amend the joint resolution making continuing appropriations for the fiscal year 1970 in order to provide for payment to local educational agencies of full entitlements pursuant to the provisions of title I of Public Law 874, Eighty-first Congress; to the Committee on Appropriations.

(The remarks of Mr. MONTOYA when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. PROXMIRE:

S.J. Res. 149. A joint resolution to extend for 3 months the authority to limit the rates of interest or dividends payable on time and savings deposits and accounts; placed on the calendar.

(The remarks of Mr. PROXMIRE when he reported the joint resolution appear earlier in the RECORD under the appropriate heading.)

S. 2879—INTRODUCTION OF A BILL RELATING TO RELEASE OF TAX LIENS

Mr. STEVENS. Mr. President, I have today introduced a bill as an amendment to the Internal Revenue Code which would require the issuance of certificates of release of tax liens and the filing of such certificates by the Internal Revenue Service.

When the Internal Revenue Service files a lien upon an individual or business, that lien is recorded.

When the lien is satisfied a release of the lien is recorded only if the expense of that release is borne by the taxpayer.

This procedure works a hardship on owners of real property who have had a lien filed against that property. In order

to clear title, the owner of the property must file the release of lien at his own expense.

In many cases the expense is really borne by subsequent owners of real property who have the burden of removing the cloud from the title which was originally created by the Internal Revenue Service lien.

The Federal Government should be in no greater position than anyone else in regard to removing clouds from titles created by liens. The legislation I have introduced today would require the Federal Government to take the necessary simple measures to remove the cloud created by a tax lien by filing a certificate of release of lien in the same office in which the notice of such lien was originally filed.

I ask unanimous consent that the text of this bill be printed in the RECORD in full at the conclusion of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2879) to amend the Internal Revenue Code of 1954 to require the issuance of certificates of release of tax liens and the filing of such certificates in the same offices in which the notices of such liens are filed, introduced by Mr. STEVENS, was received, read twice by its title, referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

S. 2879

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subsections (a), (b), (c), (d), and (e) of section 6325 of the Internal Revenue Code of 1954 (relating to release of lien or discharge of property) are amended by striking out "may issue" wherever appearing therein and inserting in lieu thereof "shall issue".

(b) Subsection (f)(1) of such section is amended by striking out "if a certificate is issued pursuant to this section by the Secretary or his delegate and is filed in the same office as the notice of lien to which it relates (if such notice of lien has been filed) such certificate" and inserting in lieu thereof "a certificate which is issued pursuant to this section and is filed as provided in subsection (g) (if filing is required under such subsection)".

(c) Subsection (g) of such section is amended to read as follows:

"(g) Filing of Certificates and Notices.—If the notice of lien to which a certificate or notice issued pursuant to this section relates has been filed, such certificate or notice shall be filed by the Secretary or his delegate, within ten days from the date of issuance, in the same office in which the notice of lien was filed. If the notice of lien to which such certificate or notice relates was filed in the office designated by State law under section 6323(f) (or in the office of Recorder of Deeds of the District of Columbia) and if such certificate or notice may not be filed in such office, then such certificate or notice shall be effective if filed in the office of the clerk of the United States district court for the judicial district in which such office is situated."

SEC. 2. The amendments made by this Act shall take effect on the first day of the first month which begins more than thirty days after the date of the enactment of this Act.

S. 2880—INTRODUCTION OF A BILL RELATING TO TIME SPENT IN TRAVEL STATUS BY FEDERAL EMPLOYEES

Mr. STEVENS. Mr. President, today I am introducing a bill that will treat that time spent in travel status by a Federal employee as hours of employment.

Too often in the past a Federal employee has been required to travel, while on Government business, on his own time. Many instances are documented in which an employee is required to be in a distant city on a Monday morning, necessitating his traveling on Sunday and many times on Saturdays in order to make his business appointments.

In many areas, such as my home State of Alaska, it is difficult to arrange convenient travel schedules to allow travel during normal working hours. In these cases, in order to carry out his job responsibilities, the employee must travel on a weekend or after regularly designated working hours.

Mr. President, it seems to me to be inconsistent to require an employee to sacrifice his personal time, time that could be spent with his family and friends, in order to meet Federal employment commitments.

My bill will correct this glaring deficiency by counting that time spent in travel status, outside of normal working hours, as hours of employment.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD following these remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2880) to provide that time spent by a Federal employee in a travel status shall be considered as hours of employment, introduced by Mr. STEVENS, was received, read twice by its title, referred to the Committee on Post Office and Civil Service, and ordered to be printed in the RECORD, as follows:

S. 2880

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 5542(b)(2) of title 5, United States Code, is amended to read as follows:

"(2) time spent in a travel status away from the official station of an employee is hours of employment."

(b) The last sentence of section 5544(a) of such title is amended to read as follows: "Time spent in a travel status away from the official duty station of an employee subject to this subsection is hours of work."

SEC. 2. Section 3571(e) of title 39, United States Code, is amended to read as follows:

"(e) Time spent in a travel status away from the official duty station of an employee is hours of employment."

S. 2881—INTRODUCTION OF A BILL TO AMEND THE FOOD STAMP ACT OF 1964

Mr. STEVENS. Mr. President, I introduce for appropriate reference a bill that will amend the Food Stamp Act of 1964 to allow certain eligible households in my home State of Alaska to use food stamp coupons for the purchase of ammunition.

The purpose of the bill is to allow those Alaskans in the remote parts of the State who rely on subsistence hunting for the bulk of their diet to purchase rifle and shotgun ammunition for this purpose. In these areas where the cost of living can be 50 to 100 percent higher than Anchorage—and Anchorage has a cost of living 25 to 50 percent higher than Washington, D.C.—it is imperative that we do everything possible to assist these people to obtain an adequate diet.

Mr. President, when a person pays 30 cents for a small can of milk, 50 cents for a box of salt, or $11 for 50 pounds of flour from a village store and must still pay a high freight rate to have the staples delivered to his homesite, something must be done. My bill will help relieve this tremendous economic burden by allowing the purchase of ammunition with food stamp coupons. It is obvious that by allowing these Alaskans to purchase ammunition to shoot game for subsistence they will be able to supplement their basic diet to assure an adequate food intake.

The IRS in a recent administrative order has recognized the unique Alaskan problem by allowing Alaskans in remote areas to purchase rifle and shotgun ammunition through the mail. It would seem that we should carry this one step further and allow them to purchase the needed ammunition for subsistence hunting with food stamp coupons.

My bill would allow this.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD immediately following my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 2881) to amend the Food Stamp Act of 1964 in order to permit eligible households living in remote areas of Alaska to use food stamp coupons for the purchase of ammunition, introduced by Mr. STEVENS, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

S. 2881

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Food Stamp Act of 1964 is amended by adding at the end thereof a new section as follows:

"AUTHORITY OF CERTAIN ELIGIBLE HOUSEHOLDS IN ALASKA TO USE COUPONS FOR THE PURCHASE OF AMMUNITION

"SEC. 17. Notwithstanding any other provision of this Act, members of eligible households living in the State of Alaska shall be permitted, in accordance with such rules and regulations as the Secretary may prescribe, to purchase ammunition with coupons issued under this Act if the Secretary determines that (1) such households are located in an area of the State which make it extremely difficult for members of such households to reach retail food stores, and (2) such households depend to a substantial extent on the use of firearms to kill game for food. As used in this section, the term 'ammunition' means ammunition for rifles and shotguns."

S. 2883—INTRODUCTION OF A BILL CURBING EXCESSIVE POTASH IMPORTS

Mr. MONTOYA. Mr. President, the agricultural production of the United States is looked to as a model by the entire world. The quality and abundance of our food supply is a credit to the American farmer and a tribute to the modern science and technology which this country has developed in order to feed an ever-growing population in the United States. I think we would all agree that to place this production capability in jeopardy by making it dependent on the will of a foreign nation—no matter how amiable that nation may be or how cordial our mutual relationships—would be utter folly. Yet this is just what is occurring.

We are doing this by allowing our domestic potash production to be jeopardized—by excessive imports—and thus presenting this country with a situation wherein we could become totally dependent on Canada and other countries for our supply of potash.

Potash is one of three primary plant-food elements, the other two being nitrogen and phosphorous. Potash is an element for which there is no substitute, and without which most food crop plants cannot flourish. Since potash is one of the three essential ingredients of fertilizers, it is, therefore, the key to dependable crop production.

My logic then is this: Without potash the farm community cannot maintain or increase the productivity of our land to match the food requirement of our growing population, estimated to be 300 million persons by the year 2000. It is just that simple.

I find it unthinkable that this Nation could knowingly allow an industry so vitally important to our well-being and national security as our domestic potash industry to become economically atrophied. It may behoove us to recall the reasons why our domestic potash industry was founded in the first place.

Prior to World War I, American agriculture was entirely dependent on foreign sources for its potash. When the war cut off these supplies, an intensive search was made to locate sources in this country. As a result, potash began to be produced here in 1916 and production continued on a moderate scale at Trona, Calif., from brines of Searles Lake, even when imports were resumed.

In 1931, shipments were made from the newly discovered potash deposits near Carlsbad, N. Mex. Production increased rapidly until at the outbreak of World War II about half of the potash consumed here was of American origin. Since 1938, brines of the Saldura Marsh in Utah, and subsequently brines in eastern Michigan, also have been used as sources of potash.

Imports were again cut off during World War II, while the demand soared due to the huge war-food program and intensified industrial activity. The American potash industry immediately expanded its mines and refineries to meet these needs and continued to increase production in the postwar period. This production is now in jeopardy, and prompt, aggressive action must be taken if we are to safeguard an industry whose importance to our national interest is all too clear from past history.

As I pointed out to my colleagues in the Senate 2 years ago and again last January, new discoveries of potash in Canada have been flooding the U.S. markets, steadily squeezing out our domestic supplies. Total foreign imports of potash have jumped from 9 percent of domestic consumption in 1960 to 54 percent in 1968. Over the 9 years from 1960 to 1968, total imports of potash into the United States averaged about 30.5 percent of our domestic consumption for those 9 years. It is interesting to note further that potash imports excluding Canadian imports have remained relatively constant, totaling approximately 350,000 tons per year in raw mineral, while Canadian imports have jumped astronomically from 3 tons in 1961 to 3,309,142 tons in 1968 of the mineral known as potassium chloride.

Mr. President, some American potash producers have found it more profitable to operate in Canada. The primary reason is because of an extensive body of high grade, low cost ore, making possible lower production costs. This advantage, plus special inducements given by the Canadian Government to Canadian potash producers, creates a difficult competitive situation for the producers in Carlsbad, where our domestic production is concentrated. Consequently, some of our domestic producers are phasing out their operations in the United States and moving their operations to Canada. To compound the situation, potash imports are duty free.

There is a human side to this story also, my colleagues. Plants in the Carlsbad area are laying off workers by the hundreds due to mine shutdowns and plant closings. In the year between June 1967 and June 1968, alone more than 1,400 workers were put out of work in the Carlsbad area, and all because of potash imports. Many of these workers are over 50 years of age, and their previous education has been in one field—potash mining. It is late in their lives to retrain them for other jobs, and even if they could be retrained, there are no other jobs available to them in the area.

The advent of the Canadian potash industry is, to a degree, a welcome development to our country in that it can supplement our domestic requirements if and when we have a shortage of supply; we are not advocating a total restriction on imports—but what we do say is that no force within our control should be allowed to render us without a domestic industry. The close and friendly relationship that has been maintained by the United States and our good neighbor to the North is indeed a pattern of excellence that could be followed by other contiguous nations. But in spite of our friendship with Canada, it must be realized that it is not in the best interest of any nation to be dependent upon another for the production of its food supply.

Mr. President, 2 years ago I introduced a bill in this body to place a limit on imports of potash into this country. My bill then would have allowed for up to 25 percent of our domestic needs to be imported from foreign sources. I stated in introducing that measure, and again during hearings before the Senate Finance Committee in October of 1967, that if my measure was not enacted promptly that a domestic industry would be destroyed. Regrettably my import quota bill was not enacted and my warnings are becoming prophetic. A domestic industry is being destroyed.

I reintroduced my import quota bill again this session—in January of this year. I intended to push vigorously for its enactment and felt that I had the force of the history of unfortunate mine closings to support my contention. But what has happened? The administration, in a report from the U.S. Tariff Commission on May 6, 1969, to the Senate Finance Committee on my bill, S. 344, while openly acknowledging the plight of our domestic industry, nonetheless has reserved judgment on the measure. Thus, without the open support of the administration, and given the number of import quota bills pending before Congress, being practical, one would have to surmise that my measure stood little chance of passage soon enough to help our domestic industry. Thus, another alternative or alternatives must be sought.

There is one small ray of hope for our domestic industry short of legislative action. The U.S. Treasury Department, at the request of Senator ANDERSON and myself, initiated an investigation 2 years ago into possible violations by potash importers of the Anti-Dumping Act of 1921, as amended. Finally, after constant prodding and urging on our part, the Department has concluded their investigation and has informed me that—

> This merchandise (potash) is being, or is likely to be, sold at less than fair value within the meaning of the Antidumping Act, 1921, as amended (19 U.S.C. 160 *et seq.*). The cases, therefore, have been referred to the United States Tariff Commission for determination as to injury.

The determination was with reference to potash imports from Canada, France, and West Germany.

Mr. President, I think it is interesting to note that in the case of one exporter from Canada, International Minerals and Chemical (Canada) Ltd.—IMC—"less than 25 percent of its merchandise was sold in the home market." Mr. President, how can any industry hope to survive with this type of unfair competition from foreign importers? No industry can. You have an exporter that sets up shop in Canada where it gets special incentives from the Canadian Government, mines potash in Canada, helps the Canadian economy, pays Canadian taxes, then turns around and exports over 75 percent of its product into the United States because we place no restrictions whatsoever, and it does so at less than fair market value. Our domestic potash industry is at the mercy of foreign producers. This is totally incomprehensible. No other sovereign government would stand still for this sort of cutthroat competition from a foreign source.

It is to be hoped that the Tariff Commission within the 90-day period that it has been given to determine the extent

of injury to the domestic potash industry from foreign imports will take appropriate action to curb this situation. I vigorously urge them to do so and serve notice that I will be following their proceedings extremely close. If remedial action cannot be enacted by the Tariff Commission in this situation and under these circumstances, then I feel we need no further proof that the machinery which has been established to deal with these situations is not adequate and cannot meet the purposes for which it was established. Under such circumstances—that is, if the Tariff Commission fails to take remedial action or fails to take adequate action, then I feel that it is then up to the Congress to enact additional legislation.

For this reason, Mr. President, and because the legislation which I had previously introduced, S. 344, is not receiving the active support of the administration at this time, I am today introducing a bill on behalf of myself and Senators HOLLINGS, MOSS, SMITH, and YOUNG of Ohio, which bill would not prohibit nor place a limitation on the volume of potash which can be imported into the United States. Instead, this bill would simply establish a limit on the volume of potash which can be imported duty free. Any amounts over and above that limit would be assessed an ad valorem tax.

Mr. President, this bill would allow up to 30 percent of our domestic needs to be supplied from foreign sources and be imported duty free into the United States. I repeat that up to 30 percent of our domestic needs in any one year could still be imported duty free under my proposal—duty free, just as now is the case. When our domestic demand increases, the amount that can be imported duty free would also increase correspondingly, subject to the 30-percent limitation. As I stated earlier in my statement, during the 9-year period from 1960 to 1968, total imports of potash into the United States averaged approximately 30.5 percent of our domestic needs. Thus, the 30-percent limitation on duty-free imports that I have provided for in my bill seems more than judicious.

In addition, Mr. President, I emphasize that imports into the United States would not be limited to 30 percent of our domestic needs. Foreign sources could still continue importing potash into the United States without limit. They could supply any volume whatsoever they choose to. However, for any amounts imported over 30 percent of our domestic needs for any one year, there would be assessed a 40-percent ad valorem tax on such imports—only on the amount that exceeds 30 percent of our domestic needs.

Mr. President, I cannot see anything unfair about this proposal. At least not as far as foreign potash producers are concerned. Perhaps it is unfair to our domestic potash industry because it is so liberal in its coverage. It is far more liberal than S. 344 which I introduced earlier and which would place a 25 percent ceiling on the amount of our domestic needs that could be imported. However, it is a measure which the domestic industry feels it can live with and which because of its liberal terms, I am hopeful this session of Congress can take action on. However, it can still be hoped that the U.S. Tariff Commission will recommend the necessary action during the proceedings it presently has underway, so that perhaps this legislation may not be required. In the event it fails to do so, however, I shall press vigorously for enactment of this proposal.

Mr. President, I ask unanimous consent that the text of my bill which I have introduced on behalf of myself and Senators HOLLINGS, MOSS, SMITH, and YOUNG of Ohio, be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred and, without objection, the bill will be printed in the RECORD.

The bill (S. 2883) to provide for the imposition of a duty on excessive imports of potassium chloride or muriate of potash, introduced by Mr. MONTOYA, for himself and other Senators, was received, read twice by its title, referred to the Committee on Finance and ordered to be printed in the RECORD, as follows:

S. 2883

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) schedule 4, part 11, of the Tariff Schedules of the United States is amended by striking out item 480.50 and inserting in lieu thereof the following:

"	Potassium chloride or muriate of potash:		
480.50	In any calendar year prior to the entry, or withdrawal from warehouse, for consumption of the quantity proclaimed by the President for such year under headnote 2	Free	Free
480.51	Other	40% ad val.	40% ad val. ,,

(b) The headnote to schedule 4, part 11, of such Schedules is amended—

(1) by striking out "headnote" in the heading and inserting in lieu thereof "headnotes"; and

(2) by adding after headnote 1 the following new headnote:

"2. (a) Before the beginning of the calendar year 1970 and of each subsequent calendar year, the Secretary of Agriculture shall determine and certify to the President—

"(i) the estimated domestic production and estimated domestic consumption of potassium chloride or muriate of potash during such calendar year, and

"(ii) the estimated domestic production of potassium chloride or muriate of potash during the calendar year in which such determination is being made.

"(b) On or before January 1, 1970, and on or before January 1 of each subsequent calendar year, the President shall, by proclamation, fix the quantity of potassium chloride or muriate of potash which may be imported free of duty during the calendar year under item 480.50. The quantity so proclaimed for any year shall be the greater of—

"(i) the quantity by which the estimated domestic consumption during such year exceeds the estimated domestic production during such year (as determined by the Secretary of Agriculture under paragraph (a) (i)), or

"(ii) a quantity equal to 30 percent of the estimated domestic production determined by the Secretary of Agriculture under paragraph (a) (ii).

If during any calendar year, the actual domestic production or domestic consumption is greater or less than the estimates determined under paragraph (a) (i), the President may, by proclamation, modify any quantity previously proclaimed for such year."

SEC. 2. The amendments made by this Act shall apply with respect to articles entered, or withdrawn from warehouse, for consumption on or after January 1, 1970.

S. 2885—INTRODUCTION OF A BILL TO ESTABLISH AN ORDERLY TRADE IN TEXTILES AND IN LEATHER FOOTWEAR

Mr. HOLLINGS. Mr. President, for many years our Nation has followed a foreign trade policy based on the myth that our capital-intensive industries are able to compete with world trade and that their technological sophistication will enable them to supply jobs for all the workers who have been displaced by rising import competition. Experience clearly indicates, however, that this is not the case. We have been witnessing an erosion of jobs and job opportunities in labor-intensive industries because our national trade policy exposes these industries to unrelieved pressure in rising imports without hope for limitation. The need is urgent. We must promptly undertake a realistic foreign trade policy that would preserve for our labor-intensive industries opportunity to participate in the growth of the American market with foreign products. Unless such action is taken, we are sentencing our basic manufacturing industries to economic doom and their workers to insecure and uncertain futures.

The disastrous impact of imports has been graphically demonstrated by the distressed positions of the textile industry and the domestic footwear industry. With 2,525,000 workers the textile mill products, apparel, and manmade-fiber-producing industries are by far one of the Nation's largest employers of workers in the manufacturing industries. In 1968 textile mill products experienced a foreign trade deficit of $437.3 million. In apparel and related products, the trade deficit was $674.5 million. Neither my State nor the Nation can afford to ignore the fact that the U.S. foreign trade in products like or directly competitive with such articles is ever increasing our foreign trade deficit.

In 1968 our Nation had a balance of trade deficit of $377.3 million in footwear. In that regard the domestic consumption of leather footwear amounted to 804 million pairs of shoes of which imports supplied 175.4 million pairs of shoes. These imports were equivalent to 21.8 percent of the domestic consumption in 1968 where it was only 5.8 percent in 1961.

Today the distinguished Senator from New Hampshire (Mr. COTTON) and I are introducing a bill calling for maintaining orderly trade in textile articles and leather footwear. In addition, in the national interest our legislation will provide for revision of the administration of title III of the Trade Expansion Act of 1962 to assist domestic industries, firms and

groups of workers caused or threatened with serious injury by increased imports.

Mr. President, the time has come for Members of this body to take the initiative in combating the serious problems created by excessive imports.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2885) to establish an orderly trade in textiles and in leather footwear, introduced by Mr. HOLLINGS (for himself and Mr. COTTON), was received, read twice by its title, and referred to the Committee on Finance.

S. 2886—INTRODUCTION OF A BILL CHANGING THE NAMES OF CERTAIN PROJECTS FOR NAVIGATION AND OTHER PURPOSES ON THE ARKANSAS RIVER

Mr. FULBRIGHT. Mr. President, I introduce for appropriate reference a bill to change the names of certain projects for navigation and other purposes on the Arkansas River.

Navigation on the Arkansas River from Oklahoma through Arkansas to the river's junction with the Mississippi will be the result of the dreams and efforts of many men. No men, however, worked more tirelessly and faithfully for this navigation project than my senior colleague from Arkansas, Senator JOHN MCCLELLAN, and our late colleague from Oklahoma, Senator Robert Kerr. Consequently, my bill would honor these Senators by naming this waterway the McClellan-Kerr Arkansas River Project. In addition, my bill would honor three former Members of the House of Representatives from Arkansas who worked diligently for the development of the Arkansas River project—W. F. Norrell, Brooks Hays, and J. W. Trimble.

A similar bill has been introduced in the House of Representatives by Representatives MILLS, PRYOR of Arkansas, HAMMERSCHMIDT, and ALEXANDER. I hope that this legislation may be enacted during the present session of the Congress.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2886) to change the names of certain projects for navigation and other purposes on the Arkansas River, introduced by Mr. FULBRIGHT, was received, read twice by its title, and referred to the Committee on Public Works.

S. 2887—INTRODUCTION OF A BILL AUTHORIZING A STUDY OF ESSENTIAL RAILROAD PASSENGER SERVICE

Mr. HARTKE. Mr. President, I introduce for appropriate reference on behalf of Senator MAGNUSON and myself and by request of the Interstate Commerce Commission, a bill to amend section 13(a) of the Interstate Commerce Act, to authorize a study of essential railroad passenger service by the Secretary of Transportation, and for other purposes. I ask unanimous consent that the letter of transmittal and the text of the bill be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and letter of transmittal will be printed in the RECORD.

The bill (S. 2887) to amend section 13a of the Interstate Commerce Act, to authorize a study of essential railroad passenger service by the Secretary of Transportation, and for other purposes, introduced by Mr. HARTKE, for himself and Mr. MAGNUSON, by request, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 2887

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 13a of part I of the Interstate Commerce Act (49 U.S.C. 13a) is amended to read as follows:

"13a(1) A carrier or carriers subject to this part, if their rights with respect to the discontinuance or change, in whole or in part, of the operation or service of any passenger train or ferry operating between a point in one State, the District of Columbia, or a foreign country and a point in any other State or in the District of Columbia, are subject to any provision of the constitution or statutes of any State or any regulation or order of (or are the subject of any proceeding pending before) any court or an administrative or regulatory agency of any State, may, but shall not be required to, file with the Commission, and upon such filing shall mail to the Governor of each State in which such train or ferry is operated, and post in every station, depot, or other facility served thereby, including stations, depots, or facilities on the property of other carriers which share in the operation of said train, notice at least sixty days in advance of any such proposed discontinuance or change. The carrier or carriers filing such notice may, upon the expiration of, but not during, the notice period, discontinue or change any such operation or service pursuant to such notice except as otherwise ordered by the Commission pursuant to this paragraph, the laws or constitution of any State, or the decision or order of, or the pendency of any proceeding before, any court or State authority to the contrary notwithstanding. Upon the filing of such notice the Commission shall have authority during said sixty days' notice period, either upon complaint or upon its own initiative without complaint, to enter upon an investigation of the proposed discontinuance or change. Upon the institution of such investigation, the Commission, by its investigation order served upon the carrier or carriers affected thereby at least twenty days prior to the day on which such discontinuance or change would otherwise become effective, may require such train or ferry to be continued in operation or service, in whole or in part, pending hearing and decision in such investigation, but not for a longer period than seven months beyond the date when such discontinuance or change would otherwise have become effective; except that the Commission may further require such train or ferry to be continued in operation or service, in whole or in part, for a period of no longer than two months beyond the date specified in its investigation order, pending completion of the investigation or the Commission's determination of any petition or petitions for reconsideration of its decision and order in such investigation. However, if during the notice period, the carrier or carriers discontinue or change, in whole or in part, the operation or service of any train or ferry, the Commission shall retain jurisdiction to enter upon an investigation of the change or discontinuance and may require the immediate restoration or continuance of operation or service of such train or ferry until the expiration of the notice period. When an investigation by the Commission is instituted under this section, the carrier or carriers filing such notice shall have the burden of establishing that public convenience and necessity permit the proposed discontinuance or change, in whole or in part, and that the continued operation or service of such train or ferry without discontinuance or change, in whole or in part, will unduly burden interstate or foreign commerce. If, after hearing in such investigation, whether concluded before or after such discontinuance or change has become effective, the Commission finds that the public convenience and necessity permits the proposed discontinuance or change, in whole or in part, and that the continued operation or service of such train or ferry without discontinuance or change, in whole or in part, will unduly burden interstate or foreign commerce, the Commission shall by order permit discontinuance of operation or service of such train or ferry in whole or in part. If, however, the Commission finds that the operation or service of such train or ferry is required by public convenience and necessity and will not unduly burden interstate or foreign commerce, the Commission may by order require the continuance or restoration of operation or service of such train or ferry, in whole or in part, for a period not to exceed one year from the date of such order; except that for two years following the enactment of this proviso, where any trains or ferry proposed to be discontinued represents the last remaining passenger train or ferry operated in either direction by the carrier or carriers proposing such discontinuance, between a point in one State and to a point in another State, the District of Columbia, or a foreign country or from a point in the District of Columbia to a point in any State or a foreign country, the Commission shall require the continuance of the operation or service in question for one year from the date of its order unless it finds that (1) the public convenience and necessity do not require its continuance, or (2) that it finds that continuance of the service or operation in question will impair the ability of carrier or carriers proposing such changes or discontinuance to meet its common carrier responsibilities, considering the overall financial condition of the carrier or carriers in question; except that in the case of operations and service covered by the first proviso, the Commission may attach such conditions to its order, requiring the continuance of the operations or service in question, as are just and reasonable to assure the preservation of a reasonable level of service for the passenger trains or ferries required to be continued; and except that the jurisdiction of the Commission over operations and service subject to the first and second provisos of this sentence shall be exclusive and the carrier or carriers proposing to discontinue or change any operation or service covered by these provisos shall file a notice with the Commission as provided in this paragraph, the laws or constitution of any State, or the decision or order of, or the pendency of any proceeding before, any court or State authority to the contrary notwithstanding. The provisions of this paragraph shall not supersede the laws of any State or the orders or regulations of any administrative or regulatory body of any State applicable to such discontinuance or change unless notice as in this paragraph provided is filed with the Commission. On the expiration of an order by the Commission, after such investigation requiring the continuance or restoration of operation or service, the jurisdiction of any State as to such discontinuance or change

shall no longer be superseded unless the procedure provided by this paragraph shall again be invoked by the carrier or carriers.

"13a(2) Where the discontinuance or change, in whole or in part, by a carrier or carriers subject to this part, of the operation or service of any train or ferry operated wholly within the boundaries of a single State is prohibited by the constitution or statutes of any State or where the State authority having jurisdiction thereof shall have denied an application or petition duly filed with it by said carrier or carriers for authority to discontinue or change, in whole or in part, the operation or service of any such train or ferry or shall not have acted finally on such an application or petition within seven months from the presentation thereof, such carrier or carriers may petition the Commission for authority to effect such discontinuance or change. Upon the filing of such a petition, such discontinuance or change shall be subject to all of the provisions of paragraph (1) of this section to the same extent as if the subject train or ferry operated as described in the first sentence of paragraph (1) of this section. When any petition shall be filed with the Commission under the provisions of this paragraph the Commission shall notify the Governor of the State in which such train or ferry is operated at least thirty days in advance of the hearing provided for in this paragraph, and such hearing shall be held by the Commission in the State in which such train or ferry is operated; and the Commission is authorized to avail itself to the cooperation, services, records, and facilities of the authorities in such State in the performance of its functions under this paragraph.

"13a(3) Any State, administrative or regulatory agency of a State, or person, adversely affected or aggrieved by an order of the Commission entered pursuant to paragraph (1) or (2) of this section, may bring suit to obtain judicial review thereof under those provisions of law applicable in the case of suits to enjoin, suspend, or set aside orders of the Commission."

SEC. 2. The Secretary of Transportation, acting in cooperation with the Interstate Commerce Commission and other interested Federal agencies and departments, is authorized and directed to undertake and submit, within one year after the date of enactment of this Act, a study of the existing and future potential for intercity railroad passenger service in the United States to the Committee on Commerce of the Senate and the Committee on Interstate and Foreign Commerce of the House of Representatives. In making this study, the Secretary shall consider, among other things:

(1) Existing resources of all types for meeting the Nation's present passenger transportation needs.

(2) Anticipated expansion of those resources by 1975 on the basis of current governmental or private activities (such as the interstate highway program, by Government, and auto production increases, by industry).

(3) The Nation's expected passenger transportation needs, including business, private, and defense movement, in the years 1975 and 1985.

(4) The ability of the existing resources, or resources as expanded by current governmental or private programs, to meet these anticipated needs adequately, efficiently, economically, expeditiously, safely, and comfortably, at least as far ahead as 1975.

(5) The ability of improved railroad passenger service to meet these anticipated needs.

(6) The proper role of the carriers and governmental bodies in developing the required quality and quantity of service, including methods of financing operations which are necessary but not economically viable.

The letter, furnished by Mr. HARTKE, is as follows:

INTERSTATE COMMERCE COMMISSION,
Washington, D.C., September 9, 1969.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Commerce, U.S. Senate, Washington, D.C.

DEAR CHAIRMAN MAGNUSON: I am submitting with this letter a draft bill for your consideration. The bill would amend section 13a of the Interstate Commerce Act and authorize a study of essential railroad passenger service.

As you may recall, the Commission submitted a similar proposal in June 1968, with our report, *Intercity Rail Passenger Service in 1968*, copy attached. Following that, at your request, the Commission undertook an analysis of the costs to various railroads in conducting intercity passenger operations. Our report, *Investigation of Costs of Intercity Rail Passenger Service*, was submitted July 16, 1969.

The need for legislation dealing with the crisis in intercity rail service is even greater today than it was in June 1968. At that time, there were approximately 590 regular intercity trains in operation. That number has now dropped to under 500, and more than 60 of these have been proposed for discontinuance but are currently the subject of investigation.

As a result of our report on *Costs*, there is no longer any question as to the adverse financial impact passenger operations have on the Nation's railroads. Without changes in Federal policy, and a study of the present and future need for intercity rail service recommended by the Commission in 1968, and renewed here, further deterioration in service is imminent. We believe immediate action is essential if a minimum amount of rail service is to be maintained.

We would very much appreciate your assistance in having this bill introduced and hearings scheduled thereon.

Sincerely,

VIRGINIA MAE BROWN,
Chairman.

ADDITIONAL COSPONSORS OF BILLS

S. 2146

Mr. HART. Mr. President, I ask unanimous consent that, at the next printing, my name be added as a cosponsor of S. 2146, to encourage the flow of credit to urban and rural poverty areas in order to stimulate the rate of economic growth and employment in those areas, and to provide the residents thereof with greater access to consumer, business, and mortgage credit at reasonable rates.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2847

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Wisconsin (Mr. NELSON), I ask unanimous consent that, at the next printing of S. 2847, to amend the Foreign Assistance Act, as amended, to authorize the Secretary of State to participate in the development of a large prototype desalting plant in Israel, and for other purposes, the name of the Senator from Rhode Island (Mr. PELL) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE JOINT RESOLUTION 148—INTRODUCTION OF A JOINT RESOLUTION PROVIDING SCHOOL AID TO FEDERALLY IMPACTED AREAS

Mr. MONTOYA. Mr. President, I introduce on behalf of myself and Senators ANDERSON, ALLEN, BENNETT, BIBLE, BURDICK, CANNON, CRANSTON, DODD, EAGLETON, FULBRIGHT, GURNEY, HARRIS, HART, MANSFIELD, MONDALE, MOSS, MURPHY, MUSKIE, SPARKMAN, SPONG, STEVENS, THURMOND, TYDINGS, WILLIAMS of New Jersey, YARBOROUGH, and YOUNG of North Dakota, a joint resolution to authorize the Department of Health, Education, and Welfare (HEW) to begin making allocations to local educational agencies under the Public Law 874, school aid to federally impacted areas, based upon the full entitlement for that school district instead of upon the much reduced amount in the President's budget request.

As you know, Mr. President, until Congress completes action upon an appropriation measure for an executive agency, that agency can expend funds only at the rate authorized under a continuing resolution. The continuing resolution presently in effect authorizes HEW, among other agencies, to expend funds at last year's rate or the fiscal year 1970 budget request, whichever is the lesser. This procedure has undoubtedly caused much uncertainty and many difficulties in the past on the part of agencies which must function for several months not knowing the total amount of funds they will have to operate with. Inconvenient as this may be, however, we have yet to devise a more efficient approach.

This interim funding procedure, however, is creating havoc with most school budgets and particularly those school districts which have a heavy concentration of Federal activity. We are all familiar with the Public Law 81–874 program which authorizes payments based on a formula to school districts which are federally impacted and which are thus deprived of a tax base for funding their educational system. Congress has decreed time and time again—usually at appropriation time—that we have a responsibility to assist these school districts because the Federal Government is, in effect, depriving them of school taxes. And we have decreed time and time again that we should meet our responsibility fully by paying full entitlement and not merely lipservice as represented by the small amounts that are usually recommended by the executive branch.

This year, Mr. President, the schools with heavy concentrations of Federal activity are feeling a heavy crunch, and unless this resolution is enacted promptly, there is no prospect of any immediate relief for them. We are faced with the prospect of not having final action on the appropriation measure for HEW until late this year. The Senate Appropriations Committee is not even contemplating resuming hearings on the HEW appropriation bill until mid-October.

In the meantime, HEW is bound by

the continuing resolution which only authorizes them to make payments under this program based on last year's appropriation or the President's fiscal year 1970 budget request, whichever is lower.

Unfortunately, the President's fiscal year 1970 budget request is substantially below either full entitlement for fiscal year 1970 or last year's appropriation. Figures supplied me by HEW show that appropriations for fiscal year 1969 were $505,900,000 and full entitlement for fiscal year 1970 totaled $650,594,000, but yet the President's fiscal year 1970 budget request is only $187,000,000. Further, the President's recommended budget would provide for payments only for the so-called A category children and no payments at all for the B category children. The A category children, as you know, are those whose parents both live and work on Federal property. The B category children are those whose parents work but do not live on Federal property. Thus, school districts with B category children in them, would receive no funds under this program whatsoever for their B category children unless Congress acts to amend the President's budget request.

Fortunately, Mr. President, the Congress will probably act to amend the President's budget request. The House has already increased the President's budget request for Public Law 874 funds from $187 million to $585 million. This represents almost full entitlement for each school district for fiscal year 1970 for both A and B category children. I, and others in the Senate, have pledged to seek at least the same level of funding as has the House. I am confident that we will be successful.

However, until we do pass on the HEW appropriations, HEW can allocate funds under the Public Law 874 program, and all other education programs, based on the extremely small Presidential budget request. Thus, unless we move immediately to remedy this, many school districts throughout the country which are dependent on these funds are going to be thrown into a financial panic.

I have secured from HEW a listing of all the applications which they have already received for funding under this program. The listing of applications already received and for which little or no funding will be available unless this resolution is adopted, includes school districts from the west coast to the east coast to the Gulf of Mexico. This, then, is a national problem. Apparently no State is being spared.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, a chart showing a State-by-State breakdown of the amounts which school districts in each State are entitled to for fiscal year 1970; the original budget request for fiscal year 1970 submitted by former President Johnson; and the revised budget request submitted by President Nixon. I also ask unanimous consent to have printed in the RECORD, a second chart, showing by State, the fiscal year 1969 appropriation; the Nixon budget request for fiscal year 1970; and the House amendments for fiscal year 1970.

There being no objection, the charts were ordered to be printed in the RECORD, as follows:

SCHOOL ASSISTANCE IN FEDERALLY AFFECTED AREAS

TITLES I AND III, PUBLIC LAW 874, AS AMENDED

CHART A

State and outlying areas	1970 full entitlement [1]	1970 original estimate [2]	Amendment	1970 revised estimate [3]
Total	$650,594,000	$300,000,000	−$113,000,000	$187,000,000
Alabama	12,129,000	6,177,000	−3,815,000	2,362,000

[1] Estimate based on latest data (1968) and assumes existing formula but only funding children who live on Federal property with parents who are employed on Federal property and "sec. 6" children whose education is arranged for by the Commissioner of Education.

Mr. MONTOYA. Mr. President, unless this joint resolution is enacted promptly, the school districts that are being denied their funding under the Public Law 874 program will be faced with the decision of making drastic cuts either in personnel, in services, equipment, materials, or in other vital areas all with the resultant effect of a poor quality education. Congress has pledged itself to a quality education for all American children. Let us demonstrate that commitment by enacting this resolution and freeing the necessary funds under the Public Law 874 program immediately. We may well have to provide this same type of emergency relief for other education programs in the future if Congress does not soon enact the HEW appropriation bill. However, for the meantime, let us begin by seeking early release of funds for the Public Law 874 program based on the full amount which the school districts are entitled to for both "a" and "b" category children.

Mr. President, I ask unanimous consent that the text of my joint resolution be printed at this point in the RECORD.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 148) to amend the joint resolution making continuing appropriations for the fiscal year 1970 in order to provide for payment to local educational agencies of full entitlements pursuant to the provisions of title I of Public Law 874, 81st Congress, introduced by Mr. MONTOYA, for himself and other Senators, was received, read twice by its title, referred to the Committee on Appropriations, and ordered to be printed in the RECORD, as follows:

S.J. RES. 148

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 101(b) of the joint resolution entitled "Joint Resolution making appropriations for the fiscal year 1970, and for other purposes", approved June 30, 1969 (83 Stat. 38), is amended by inserting after "Elementary and Secondary Education Act of 1965, as amended" a colon and the following: *"Provided further,* That such amounts as may be necessary shall be available to pay local educational agencies full entitlements for the fiscal year 1970 pursuant to the provisions of title I of the Act of September 30, 1950 (Public Law 874, Eighty-first Congress".

ADDITIONAL COSPONSOR OF JOINT RESOLUTION

SENATE JOINT RESOLUTION 144

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from New Mexico (Mr. ANDERSON), I ask unanimous consent that, at the next printing of Senate Joint Resolution 144, to provide for the appropriation of funds to assist school districts adjoining or in the proximity of Indian reservations, to construct elementary and secondary schools and to provide proper housing and educational opportunities for Indian children attending these public schools, the name of the Senator from Wisconsin (Mr. NELSON) be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 36—CONCURRENT RESOLUTION EXPRESSING THE SUPPORT OF CONGRESS OF A NATIONALLY PROCLAIMED WEEK HONORING MAN'S BEST FRIEND, THE DOG

Mr. STEVENS. Mr. President, September 21–27 will mark the 42d annual celebration of National Dog Week.

It is my understanding that the primary purpose of this celebration will be to encourage dog ownership and to achieve better standards of dog care through education for dog owners. The week has as its slogan "Deserve To Be Your Dog's Best Friend."

The people of my State have a very great feeling of appreciation for dogs. For without the faithful, and in many cases extraordinary, efforts of our huskies and malemutes much of the Northland's tundra would be impossible to travel during the winter months. It is no exaggeration that many native Alaskans depend on their dog teams for their very existence. For without their dog teams it would be impossible for these people to hunt and fish.

I ask unanimous consent that the text of the concurrent resolution which I have submitted be printed in the RECORD following these remarks.

The PRESIDING OFFICER. The concurrent resolution will be received and appropriately referred; and, without objection, the concurrent resolution will be printed in the RECORD.

The concurrent resolution (S. Con. Res. 36), which reads as follows, was referred to the Committee on the Judiciary:

S. CON. RES. 36

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress that man's best friend and ally, the dog, be so honored by proclaiming a National Dog Week, September 21–27, 1969. It is fitting and proper that Congress urge citizens to pay respect to this animal that contributes so much to our civilization and way of life. It is especially fitting because—

(1) The dog was the first animal to be domesticated by man, and since the earliest days of his domestication has aided his master down through the centuries in procuring food, and

(2) The dog stands always foremost of the protectors of man's life and property, and

(3) Transportation in the regions of perpetual ice and snow is in some places entirely dependent upon this hardy animal, just as he was the first beast of burden of man, and

(4) Man's best friend is a staunch and able ally of those sworn to uphold the law, as well as those who defend their country, and

(5) The dog is the only animal trained to guide the blind, or capable of such training, and

(6) Mankind's life is made happier and safer because of the companionship and devotion of this four-footed friend who stands by his master through the most bleak of times, and

(7) The week of September 21 through 27 should be designated as National Dog Week.

ADDITIONAL COSPONSOR OF CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 32

Mr. STEVENS. Mr. President, on behalf of the Senator from Colorado (Mr. ALLOTT), I ask unanimous consent that, at the next printing, the name of the Senator from Montana (Mr. METCALF) be added as a cosponsor of Senate Concurrent Resolution 32 providing for the Secretary of Transportation to make an investigation of potential rail transportation over existing lines and rights-of-way for passenger and mail transportation in the United States.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF RESOLUTION

SENATE RESOLUTION 245

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from New

Mexico (Mr. MONTOYA), I ask unanimous consent that, at the next printing of Senate Resolution 245, calling for the release of American prisoners of war, the Senator from Massachusetts (Mr. BROOKE), the Senator from Nevada (Mr. CANNON), the Senators from Kentucky (Mr. COOK and Mr. COOPER), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Indiana (Mr. HARTKE), the Senator from Louisiana (Mr. LONG), the Senator from South Dakota (Mr. MCGOVERN), the Senator from Iowa (Mr. MILLER), the Senator from Minnesota (Mr. MONDALE), the Senator from Utah (Mr. MOSS), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Ohio (Mr. SAXBE), the Senator from South Carolina (Mr. THURMOND), and the Senator from New Jersey (Mr. WILLIAMS) be added as cosponsors.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARINGS ON TERRITORIAL LEGISLATION

Mr. BURDICK. Mr. President, I wish to announce, for the information of Members of the Senate and other interested persons, that the Subcommittee on Territories and Insular Affairs of the Committee on Interior and Insular Affairs will hold an open public hearing on Wednesday, October 1, on four bills concerning our offshore territories: S. 232, to promote the economic development of the Trust Territory of the Pacific Islands; S. 1148, to amend the Revised Organic Act of the Virgin Islands; S. 1149, to amend the Organic Act of Guam; and S. 2314, to amend section 4 of the Revised Organic Act of the Virgin Islands relating to voting age.

The hearing will be held in room 3110, New Senate Office Building, beginning at 10 a.m. Anyone who may wish to testify on these proposals should contact the staff of the committee at the earliest possible time in order that a list of witnesses may be prepared.

PROPOSED CLOSING OF 19 GENERAL CLINICAL RESEARCH CENTERS

Mr. MUSKIE. Mr. President, on August 7, 1969, on the floor of the Senate, I called attention to President Nixon's warning that the Nation faces a "major crisis in health care unless something is done about it immediately." In view of the President's statement and its support by the Secretary of Health, Education, and Welfare Robert Finch and Dr. Roger O. Egeberg, Assistant Secretary for Health and Scientific Affairs, I find myself increasingly concerned about administration proposals for the curtailment of programs which are playing an important role in the crucial stage of medical research. I refer to a news item in the New York Times of September 9, 1969, regarding the proposal to close down 19 of the general clinical research centers throughout the country next year because of lack of funds. I ask unanimous consent that this article be printed in the RECORD.

Mr. President, the history of the general clinical research centers program of the National Institutes of Health may not be familiar to millions who may benefit in the future from its activity. Physicians and surgeons working in hospitals during the 19th century advanced medical science as far as they could through empirical observation. This was followed during the first half of the 20th century by a remarkable increase in the scientific base of medicine. This led to the realization that something new and different was required if clinical science were to keep pace with the rapid changes occurring in the biological sciences.

In 1959, in response to this emerging requirement, the U.S. Senate recommended that centralized facilities be created in universities to provide highly integrated research opportunities and services to large numbers of investigators and research groups. The National Advisory Health Council interpreted this directive to mean creation of clinical research centers to support research of the highest quality, centered around patients and backed by laboratories and other ancillary facilities. The goal of the GCRC program is to provide centers where physicians and scientists can define and attempt to conquer the great unsolved problems of human disease. Each center provides a highly coordinated environment that allows the controlled conditions necessary for precise clinical investigations. They are essential to much of the clinical research supported by project grants, since the studies require the special facilities available in the centers.

There are now 93 general clinical research centers located in 32 States, the District of Columbia, and Puerto Rico. During the past year, 2,762 investigators used these resources, and 2,525 physicians and 2,538 medical students received training in research techniques in these centers. The program has been hard hit by rising hospitalization costs and by the increased need for sophisticated equipment and facilities to carry out the end of the programs. For fiscal year 1970, the National Advisory Research Resources Council recommended the amount of $48.5 million to operate the 93 centers; the administration budget provided $35 million; and the House Appropriations Committee increased the amount of $39 million, the amount requested in the original 1970 budget. This would provide funds for the operation of 93 centers at an absolute minimal level.

Of the 93 general clinical research centers, 19 specialize in clinical research on children's diseases. Progress is being made at these centers on many fronts to reduce this Nation's relatively high infant mortality rate and morbidity rate. Infants with assorted physical abnormalities have been recognized and early treatment instituted. Of the 19 centers that have been warned they may have to close down next year because of lack of funds, eight are pediatric centers. This represents nearly one-half the number that have been making vast strides in improving the health care of young children.

In view of the administration's proposal for a 5-year plan that would expand federally financed health care for the young, it would appear that this program is not one that should be cut back. This is still another example of the disparity between the goals expressed by the administration and the financial support it recommends.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NINETEEN CLINICAL UNITS FACING SHUTDOWN—MEDICAL RESEARCH CENTERS WARNED THEY MAY LOSE U.S. FUNDS NEXT YEAR

(By Harold M. Schmeck, Jr.)

WASHINGTON, September 8.—The directors of 19 medical research centers throughout the nation have received letters from the National Institutes of Health warning them that they may have to close down next year because of lack of funds.

Most of the centers are affiliated with major medical schools, where they play an important role in the crucial final stage of medical research. This is the phase in which new ideas, drugs and devices that have been tested in the laboratory are first made available to patients.

In short, it is the phase where the benefits of advanced science and technology are first used to improve patient care.

The research units are called general clinical research centers. The National Institutes of Health supports 93 of them at present. Some have been in existence since 1960. All of those that may face closing next year have been operating for several years.

The centers have been described as "hospitals in miniature." Each is equipped to care for a few hospitalized patients at a time—the range is between four and 35. The care is particularly thorough, designed to test the merits of promising new concepts in medical and surgical treatment.

Much of the modern experience in organ transplantation has been gained in such centers. They have also contributed to improvements in care of shock patients and high-blood pressure cases and in understanding of many aspects of maternal and infant health.

Indeed, parents of the children who have been treated at one such center in Chicago have protested to their representatives in Washington on learning yesterday that the unit might lose its financial support. This center has been in operation for about five years at the Children's Memorial Hospital in Chicago.

Dr. Robert B. Lawson, professor and chairman of pediatrics there, said today that he had been shocked when he received the letter saying the center might have to be phased out during the next 12 months.

He said comparable facilities for dealing with infant and maternal health problems were scarce. Furthermore, he said, the hospital cannot afford to support the center through nongovernment funds.

In answer to a query today, Dr. William R. DeCesare of the National Institutes of Health confirmed that he had sent out letters to 19 of the 93 centers on Aug. 15.

RELUCTANCE EXPRESSED

Dr. DeCesare, chief of the general clinical research centers branch of the institutes' division of research resources, said that the step had been taken with great reluctance.

The letter said that no final decisions had been made but asked the institutions to draw up contingency plans for phasing out their Government-supported activities by Oct. 1 of next year.

During the fiscal year 1969, the 93 centers have been funded on a minimal basis with a total of $35-million. Because of continued inflation in medical costs, that same amount next year would not allow even minimal operation for all of them.

As one planner explained, the choice was between substandard operation for all 93

centers and reduction in the total number so that the surviving centers could operate effectively.

The hard choice of which centers to consider dropping was made with the aid of two independent advisory groups—the National Advisory Research Resources Council and the General Clinical Research Centers Review Committee.

Four of the centers that may lose their Federal support are in New York State. They are at Albert Einstein College of Medicine in the Bronx; the Albany Medical College of Union University in Albany, and the State University of New York Medical Centers in Buffalo and Syracuse.

The others are situated in 12 other states. Seven of them specialize in clinical research on diseases of children.

The full list of 19 was supplied today by Dr. John A. D. Cooper, president of the Association of American Medical Colleges. All of the institutions at which the centers are situated are members of the association. Dr. Cooper said that his organization was deeply concerned over the probable cutback in clinical research centers.

"It will be a substantial setback in clinical research which aims at getting the real answers to disease," he said during an interview today.

OTHER CENTERS LISTED

He said that the centers were usually major research and training resources for their parent institutions and sometimes for their entire regions. They have had an important impact on medical education, he said, and on the effort to increase the ranks of medical manpower and effectiveness in delivery of health services to patients.

In addition to the four in New York, the centers that have received letters warning of a possible cutback are at:

University of California at Los Angeles; Children's Hospital of Los Angeles; Medical College of Georgia; Children's Memorial Hospital, Chicago; University of Illinois College of Medicine, Chicago.

Also, Indiana University School of Medicine; University of Kentucky Medical Center; University of Maryland School of Medicine; Wayne State University Children's Hospital of Michigan; University of Mississippi School of Medicine.

Also, Children's Hospital Research Foundation of Columbus, Ohio; University of Cleveland; Children's Memorial Hospital of the University of Oklahoma Medical Center; Jefferson Medical College in Philadelphia and Baylor University College of Medicine in Houston.

MAXIMUM USE OF OUR NATURAL RESOURCES

Mr. STEVENS. Mr. President, the tremendous interest in the natural resources of the Far North, generated in part by the great petroleum discoveries on the north slope of my State, is evidenced by the renewed efforts to develop the mineral wealth of the Yukon Territory.

While we sit on the greatest storehouse of mineral wealth in the world and, at the same time, are plagued by dwindling supplies of critical raw materials, the Yukon Territory, through incentives and cooperation with private developers, is dramatically increasing Canadian mineral production. In light of the passage by this body of S. 719, which establishes a policy favoring development of our mineral resources, the efforts of the Yukon to stimulate development of its mineral wealth may well offer a useful example of how we can eliminate this paradox and carry out our national policy.

Don Sawatsky, Whitehorse correspondent for Alaska Industry magazine, describes this new development in a recent article. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YUKON MINING: WHAT MAKES IT SO SUCCESSFUL?

(By Don Sawatsky)

The Yukon territory—comprising 207,000 square miles and only about 18,000 people—is finally beginning to come full circle.

After more than 60 years of almost total political, social and economic limbo (except for a few short years during the building of the Alaska Highway), Canada's most northerly and westerly territory is beginning to feel the first effects of millions in development money. It's the mines and exploration companies that are pumping this economic lifeblood into an otherwise starved economy and unlike the famed and fabled Klondike gold rush of 1898, this rush looks as though it's here to stay.

The advent of a couple of new mines may seem to be a rather narrow base on which to rest an entire economic analysis but it must be kept in mind, that an estimated 65 prospecting syndicates, exploration companies and operating mining companies were active in Yukon during 1968. Their spending on Yukon projects amounted to about $7 million.

This, considering that Yukon was almost completely dormant prior to 1965, is a jolting amount of money to be plunged suddenly into an area with such a small population, and, except for tourism, little economic base.

And, there's virtually no one in the territory, both from government and private enterprise, who will deny that it's just the beginning. D. W. Carr, president of D. William Carr and Associates, conducted an economic survey of the territory in 1968 on behalf of the federal government. The findings were optimistic beyond the wildest beliefs of many Yukoners:

"For the first time the territory may look forward with reasonable assurance to a sustained and rising tempo of investment, employment, growth and development in all phases of life—economic, social and cultural. It is no longer a question of if, but when.

"The activity to date has been the result of a number of influences. A growing world demand and price for the ores found in the Yukon, the longer-run view of sources and the increased willingness to expand exploratory horizons as ores are dug out of more and more remote regions of the globe are the wider influences at work," the report stated.

But, more concretely, the advance of technology is reducing the real costs of cold, darkness and exposure on both men and machines. Transportation and communication are being improved and cheapened in real terms so that time and distance from head office to the field are not so significant.

Additionally, the Yukon has enjoyed the "legacy of the defense period" which has provided a more reasonable base from which to move. Government development incentives have bridged the critical gap between discovery of a potential ore body and proving it up for production.

Most mining men feel that the government incentives, such as Tote Trail Assistance, prospector assistance and a cost-sharing program for resource development airports in the North, have been one of the keys to unlock the hitherto resource riches of the North.

Until the mid-1960s, federal government policy generally has been based on a short-term, ad hoc approach that dealt with emergencies after they were passed and formed policies largely with little idea of the unique local circumstances. Policy was directed basically toward exploitation of a few high-grade ore bodies that were discovered from time to time. Now, this narrow, myopic approach seems to be changing.

It all started with the discovery of the giant lead-zinc ore body near Ross River, 230 miles northeast of Whitehorse. The apparent size of the discovery by Yukon prospector Al Kulan sparked a frenzy of staking throughout 1965 and 1966. The announcement in August of 1967 that the Anvil Mining Corporation Ltd. would bring the orebody into production in 1969 maintained the excitement.

Prospectors from across Canada flooded the country, examining old mines and discovering new, promising properties. As a direct result of the Vangorda discovery at Ross River, new finds of silver-lead have been reported in the Mayo area, Ketza River and McMillan River country and new copper discoveries have been reported in the Quill Creek, Bonnett Plume, White River and Whitehorse areas.

At the moment, the lead-zinc reserves that have been proven by Anvil and Kerr Addison in the Vangorda area are estimated at well over 80 million tons. By 1970, with the coming into production of Anvil, the value of mineral production in the Yukon will reach more than $50 million.

There are six producing mines or mines that will be in production this year as well as about 30 small placer operations in the Dawson City and Mayo areas:

New Imperial Mines Ltd. (copper) situated about five miles south of Whitehorse, came into production in June of 1967. The mill has a capacity of 2,500 tons a day and employs about 170 men in an open pit operation. Cost of the complex was $7 million. Relatively little exploration work has been carried out so far. However, during the past few months some work has been done with the view to going underground. The company has an estimated 8.7 million total known tons of reserves, 3.7 million tons of 1¼ to two per cent copper underground. Underground work will begin next year. Concentrates are shipped by White Pass to Skagway for Japanese markets.

United Keno Hill Mines Ltd. (silver-lead). Once the largest silver-lead mine in North America, operations were cut back from 525 tons a day to about 200 tons in August of 1967 because of failing ore reserves and mounting production costs. Recently, the company has been prospecting, carrying out geochemical surveys, over-burden drilling, diamond drilling, trenching and underground exploration in the Galena Hill, Keno Hill and Mount Hinton areas of Mayo and the results have encouraged rehabilitation of the Sadie-Ladue Mine on Keno Hill. A new vein near the Elsa camp has been uncovered.

Cassiar Asbestos Corp. (asbestos) at Clinton Creek, 40 miles northwest of Dawson, brought its property into production in October, 1967, at a rated capacity of 60,000 tons of asbestos fibre a year. The mill is designed to increase to 80,000 tons at a later date. It employs about 200 men and the estimated cost of building the plant was $24 million. (In addition, the federal government spent $4.5 million on roads and bridges in the general area. The fibre is trucked to Whitehorse where White Pass rails it to Vancouver.)

Arctic Mining and Exploration (gold-silver) announced production plans for its property on Montana Mountain near Carcross, 45 miles south of Whitehorse, and construction of the 200 ton-a-day mine and mill was completed in 1968. Drilling indicated a strong vein of good grade silver ore 180 feet by four feet and other veins have also indicated promising grades.

Venus Mines Ltd. (gold-silver) is across from Arctic Mining on Windy Arm and plans to come into production later this year or

early next. It has at least 50,000 tons of gold-silver, valued at $29.61 per ton.

Anvil Mining Corporation (lead-zinc) announced in 1967 that their ore body would come into production in early fall of 1969 but a forest fire that destroyed the half-built townsite of Faro will likely put the original schedule behind. Anvil will produce 370,000 tons of lead-zinc concentrates a year. A road has been completed between Ross River and Carmacks at a cost of $9 million and concentrates are to be hauled to Whitehorse by truck and then railed to Skagway for Japanese markets. Seven million dollars is being spent by White Pass on improving the existing rail system and building new dock facilities at Skagway.

Activity is bubbling in practically every corner of the territory. There are promising properties around Mayo, Watson Lake, the 60-Mile country west of Dawson and Hart River, all of which may come to the fore within the next couple of years.

Northern Development Minister John Chretien feels that the future is promising but in a recent speech to the third annual Northern Development Conference in Whitehorse issued this warning:

"Development does not occur in a vacuum—it is closely related to political, social and economic development and priorities in other parts of Canada and the world, many of which cannot be controlled by the government. Thus the rate of future growth in the Yukon depends upon more than the rate of future government investment in the territory."

Dr. Carr touched on this point, too, in his report: ". . . economic history has demonstrated that economic development is much less a function of resources and technology than it is of institutions and attitudes. Resource potential may be a necessary condition for development but it is by no means a sufficient condition to ensure it.

"Public policy must do much more to identify the resource potential and much more to provide sufficient conditions for its exploitation. Its role is not one of selective paternalism toward particular enterprises nor is it a partnership with them.

"It is a serious recognition that the benefits from development are not regional but national and that the public sector is the agent responsible for the location and nature of development. Its priorities ought to be based more closely on the widespread multiplier effects on employment and income than on the short term project pay-out."

Dr. Carr said Yukon and most of the northwest regions of Canada have reached a critical plateau in their economic progress, where the potential for economic growth seems to warrant a new departure from the philosophy of development that has dominated the region over so much of the past 60 years. It is a departure not unlike that which brought the great plains of Canada into the national economy.

Gordon McIntyre, Yukon mining inspector, is convinced that government incentives provide a major impetus to the wide exploration activity, particularly for the small prospector and young company.

"It's far easier to launch a mining company in Canada than in the U.S.," he said. "It's easier to float a stock issue to finance an operation through the Vancouver Stock Exchange than through any of the American exchanges because U.S. securities administration is much tighter than in Canada."

Most of the companies who have come to Yukon since the boom started in 1965 are Vancouver-based people. He added that mining activity in Alaska is at a near standstill because of the higher labor costs.

"They've priced themselves right out of competition by their higher cost of production."

Most of the men who work in mining in the territory are immigrant labor from other parts of Canada or from Europe, mostly Germans, Italians and Hungarians. But, mining operations are having a rather peculiar problem with finding miners to man their equipment: Canada is just too prosperous. Men don't feel they have to go into the mines to make a buck! This was part of the reason for United Keno Hill cutting back on its production.

Those who do go into the mines make a fairly decent living. Virtually all are organized. Following is a list of estimated wages that are pretty well basic throughout the territory:

Laborers for underground operations get from $2.75 to $2.80; surface laborers $2.90 to $3; miners $3.20 to $3.50; drillers $3.50; blasters $3.50 to $3.60; trades people about $4; heavy duty operators $3.60; shovel operators $4 to $4.25.

Miners also receive a bonus for tonnage or danger which can amount to from $10 to $50 a day depending on the individual and most employes get a guaranteed $3 a day bonus.

They work a 44-hour week with time and half after eight hours and double time after 12. They also get nine statutory holidays, $75 a week in sickness benefits for up to 36 weeks, $10,000 in life insurance while they are employed with the company, paid transportation to either Vancouver or Edmonton for a man and his wife at least once a year and sometimes twice, two weeks holiday after one year, three weeks after five years and four weeks after 10 years along with special leave provisions.

Problems facing Yukon companies are similar to those experienced in Alaska; severe winter conditions, distance from consuming markets and from source of supply of both materials and adequate experienced labor, inadequately developed transportation routes and lack of cheap power. These all add to the cost of operation.

Transportation is the key. Roads are being pushed into more remote areas every month. There has been talk of a railroad, either an extension of White Pass or the nationally-owned Canadian National Railway which is now conducting a survey of the area up to Whitehorse and into Ross River country.

One of the world's largest iron ore deposits is in the Snake River country northeast of Dawson City, for example, and this potential production depends on the three main factors—financing, transportation and markets.

It's the giant Crest Exploration development that offers tens of billions of tons of ore with several billions of tons available for open pitting. The iron content of the hematite jasper ore varies between 45 and 50 per cent and varies in gross thickness from 90 feet to a maximum of 340 feet in its exposed length of 30 miles.

This fabulous find was first recognized by the California Standard geological field party during the late fall of 1961 and staking started along the boundary of Yukon and Northwest Territories in the spring of 1962, although the general location was common knowledge since gold rush days.

But, throughout the past 60 years private prospectors still represent the main-stay of exploration in the territory. It's anybody's guess, but there are probably more than 50 full-time independent prospectors in the territory and 150 more representing companies and syndicates.

Wally Hyde of Whitehorse feels that since the Dynasty discovery the odds to come up with a paying proposition has risen from 15 per cent and 25 per cent to 50 per cent or more. Three or four years ago it was generally accepted that only about five per cent of the entire Yukon had been thoroughly prospected. Now, this has risen to about 10 to 15 per cent.

Hyde decries the "Al Capone attitude" of some companies who pick up moose pasture and promote strictly on the basis of speculation. "Although there are a very few of these types of characters, they are the type that mine the people and not the properties. It makes a bad name for the industry as a whole and there's no defense against them—just common sense."

Generally, he claims, the people who are working in the Yukon are honest.

The Yukon Chamber of Mines is one of the strongest organizations in the territory and it has been one of the leading advocates of change for the Yukon Quartz Mining Act, an Act that most mining men accept as antediluvian. Proposed amendments to the Act have been held up in the federal cabinet for the past year or two but time is running out.

"We simply have to have these changes in the Act now," Chamber president Bert Boyd has said. "The present legislation is worse than none at all."

Boyd said many of the sections are so vague you have no guide lines, some are so discriminatory they simply aren't fair to anyone—some are too lenient and some are too strict. "The whole thing has to be opened up."

Many mining men in the territory feel that while the current boom is a result of the Anvil development, another large find is going to have to be announced soon or the present high enthusiasm is quickly going to be dispelled.

Mining is a non-renewable resource and to attain highest amount of recovery there must be a mutual agreement between private enterprise and government to approach the problems jointly and intelligently.

It's generally felt that the entire proposition is a partnership between the territory and the Ottawa and the United States and other foreign markets. Without the cooperation, the terriory's minerals are useless.

As Northern Development Minister Chretien says: "If the promise of development is to be fulfilled, there will have to be continued incentive programs, road development, transportation development, power development and social capital in large amounts. The federal government is committed to Northern development, not for purely economic reasons, although we hope they will be economic, but for social reasons, for national reasons. We cannot leave the North undeveloped."

BIG DOLLAR IMPACT BY IRRIGATION IN NEBRASKA

Mr. HRUSKA. Mr. President, agriculture is Nebraska's greatest industry. In 1968, the Nebraska cash receipts for livestock and livestock products were $1.27 billion and, for crops, cash receipts were $484 million. Most Nebraskans, whether selling shoes or insurance, are greatly affected by the well-being of the agricultural community.

The Cornhusker State rates fifth in corn production and sheep feeding, first in the production of alfalfa meal, wild hay, and great northern beans, second in grain-fed cattle marketed and in commercial livestock slaughtered, third in sorghum production, grain storage capacity, and number of cattle, and fourth in wheat production.

In making Nebraska the thriving State that it is today, irrigation has had a tremendous role. Its 3.3 million acres under irrigation make it the third highest State in irrigated land. Most of the irrigation is provided by pumps. In 1967, only about 420,000 of those 3.3 million acres were supplied with water by facilities constructed by the U.S. Bureau of Reclamation.

Major benefits in terms of dollars have resulted from the growth of irrigated agriculture.

The August 1969 issue of Reclamation Era, a Water Review Quarterly, published by the U.S. Department of Interior, contains an article entitled "Big Dollar Impact in Nebraska." This article discusses the great advantages that irrigation has brought to Nebraska agriculture.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG DOLLAR IMPACT IN NEBRASKA: $812.3 MILLION PER YEAR FROM IRRIGATION

(By Richard F. Barber, Jr., regional economist, Grand Island)

Between rocky bluffs and such landmark mounts on western prairies were spread miles of plains over which travelers made their way years ago. When they used that section of the Oregon Trail which traversed Nebraska prairies, Scottsbluff always was one of their reliable landmarks.

Many of these travelers stopped at likely prairie locations along the way, took plows from their wagons and tried them. Generally the soil they prepared was fertile. But most of the thirsty crops did not get a wetting before withering and dying.

In making Nebraska the thriving State it is today, a big change was made. Major benefits in terms of dollars, and other obvious ways, have resulted from the growth of irrigated agriculture. It is the primary reason that agriculture is the State's dominant industry. The once parched prairie around the majestic Scottsbluff—as only one of the soil-rich areas—now includes irrigated fields of lush alfalfa from which a farm operator profits with multiple harvests annually.

So many men have taken the opportunity for irrigation farming in Nebraska, that more than 3 million acres are now under irrigation—the third highest State in such acreage. A greater percentage of the cropland is without irrigation. But it is revealed in an economic impact study that the value of crops which farmers were able to produce by irrigation exceeded equivalent dryland farm values by $121.6 million in only 1 year.

SUPPLIERS $157 MILLION

That year, 1963, is when the Census of Manufacturers was available for analysis. The recently completed penetrating study of that census and other data showed that businesses providing farm products and services, direct and indirect—being induced by the large irrigation production in the State—received sales increase of $157 million. This is 29 percent greater than the farm production increase.

Businesses which received the $157 million supplied such wide ranging items as machinery, fertilizer, seed, and other commodities farmers need for growing crops.

Meanwhile, the sales increase to the business sector which handles and processes the irrigation production, was $534 million for the year. This is a comparison of $4.39 to $1, referring to use of the products in the greater segment of the economic community such as households; and by such manufacturers as mining, metals, and machinery; and such businesses as livestock, finance, insurance, real estate, and transportation.

In other words, the high value of irrigation for 1963 increased the total business volume by $812.3 million, or about $300 per irrigated acre, figured in view of the slightly more than 3 million irrigated acres in the State.

Although there are 40 million acres of land under irrigation in the United States, few people understand or appreciate the chain reaction of benefits which results from the productivity of these lands. For this reason the Bureau of Reclamation has sponsored economic impact studies of this and other irrigation areas.

A study completed in 1966, in cooperation with Washington State University, focused on the economic significance of the Columbia Basin water development project in the State of Washington.

This economic analysis, was completed by the University of Nebraska's Bureau of Business Research under contract with Reclamation. The Nebraska study team was headed by Dr. Theodore W. Roesler, professor of economics. He was aided by Dr. F. Charles Lamphear, associate professor of economics, and David Beveridge, a student Ph. D. candidate.

Roesler and Lamphear were able to work full time on the project from July 1967, to September 1968.

RESEARCH METHODS

Census statistics were augmented by questionnaires and personal interviews which enabled the researchers to sample from 22 to 89 percent of industries within specific categories operating in the State.

The Cornhusker State of 1.5 million persons rates fifth in corn production and sheep feeding. However, it is first in the production of alfalfa meal, wild hay, and Great Northern beans. It is second in grain-fed cattle marketed, and in commercial livestock slaughtered.

It is third in sorghum production, grain storage capacity, and number of cattle. It is fourth in wheat production.

Of the 3.3 million acres irrigated in Nebraska in 1967, about 420,000 were supplied with water from facilities constructed by the Bureau of Reclamation.

Growth of irrigation in the postwar period has been rapid and shows a significant future potential. Between 1947 and 1963, the value of total crop production produced on irrigated land increased from 10 percent to 27 percent.

A significant $3.5 billion of increased business activity was generated during the 20-year period from 1946–65 directly by the farmers and by businesses where farmers make purchases for their agricultural production.

Industry stemming from processing farm goods was not studied in detail for the 20-year period, but was estimated in the study to be at least another $6.5 billion, producing an overall economic impact of more than $10 billion over the 20 years.

While the effects of this increased activity due to irrigation extended well beyond the State, no attempt was made to measure its economic impact. However, it is significant that in 1963 an estimated 60 percent of Nebraska's irrigated crop production was sold outside the State.

For a State of "parched prairies"—but of productive action which only irrigation developments could have caused—Nebraska is making a valuable impact on the Nation.

TINDERBOX IN LATIN AMERICA

Mr. JAVITS. Mr. President, our distinguished former Ambassador to the Organization of American States, the Honorable Sol Linowitz, has written a sensitive, disturbing, and highly perceptive article for the Saturday Review on the state of our relations with Latin America. I commend the article to all Senators who are interested in the state of our relations with this crucial area of the world whose population is now more than that of the United States.

I invite the particular attention of Congress to two sections of the article.

Ambassador Linowitz writes:

Obviously, it is far from the intent of the Congress to do anything that would slow the rhythm of development in Latin America, for that could only weaken the constructive forces of peaceful change and give impetus to those who believe in violence as the way to alter the status quo. But cutting our share of the alliance appropriation has this precise effect, whether that is the intent or not, and the United States cannot evade responsibility.

Later in the article, Ambassador Linowitz observes that the Alliance for Progress "is not a bilateral aid program, but rather a cooperative self-help program, to be carried out primarily by the people of Latin America. The United States is one partner in the program, of which 90 percent is financed by the countries of Latin America."

Ambassador Linowitz then goes on to describe our Alliance appropriation "as a hand of help extended in friendship."

In acting on this year's aid request, I would urge Congress to continue the financing of this hand of help extended in friendship—it is important to Latin America and to the United States.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TINDERBOX IN LATIN AMERICA

(By Sol M. Linowitz)

(NOTE.—Sol M. Linowitz, former United States Ambassador to the Organization of American States, is presently practicing law in New York and Washington, D.C.)

For some time now it has become a tired Washington cliché to issue periodic pronouncements to the effect that United States relations with Latin America are in a state of crisis and we must, finally, do something about it. It would be difficult to find anyone, no matter how sparse his knowledge of the hemisphere, who would argue about the crisis half of the cliché. It is the latter part—"do something about it"—that causes all the trouble.

James Reston once observed that the American people will do anything for Latin America except read about it. The apathy is so widespread and endemic, however, that the usually reliable Mr. Reston may have overstated the case with regard to the American people's willingness to do anything for their hemispheric neighbors.

There is a paradox about the situation that contributes to making it one of the most perplexing among the many foreign policy problems that periodically plague Washington administrations, no matter what their political gender. Beginning with Franklin Roosevelt and his Good Neighbor Policy through John Kennedy and the Alliance for Progress, Lyndon Johnson and the summit meeting of American presidents, and now Richard Nixon and the Rockefeller Latin American study mission, no President, Democratic or Republican, in nearly two generations has denied the importance of Latin America, or has claimed it can be negelcted or ignored.

Yet despite all the programs and official avowals of concern, who can find any sense of excitement about Latin America among the people of the United States? That does not mean we do not get worked up over a Castro, a Cuban missile crisis, a Dominican Republic crisis, an oil company expropriation, a fishing boat seizure. Or that we are not shocked when the visit of a Governor Rockefeller, who is rightly regarded as a friend of Latin America, touches off nasty demonstrations.

That is the heart of the paradox, for the emotions are genuine and the concern is real. Yet when the crisis of the moment is over, emotion subsides and concern is shrugged off, and once again we turn our attention to another part of the world—until some new Latin explosion, such as the El Salvador-Honduran clash, reluctantly drags it back again to our own hemisphere.

To suggest that this lack of public interest is directly responsible for the state of affairs in Latin America would be less than accurate. Surely it is not responsible for the nagging economic underdevelopment that grips the continent and its 240 million people—240 million who will be 600 million before the century is out, and, if circumstances continue as they are, many times poorer.

The other side of the coin, however, is that our public disinterest sharply points up the inescapable fact that there is no real Latin American constituency in the United States—a political nuance that the Congress has not failed to notice.

Last year, for example, we disappointed the people of Latin America with cuts in our appropriation for the Alliance for Progress—cuts that made it the lowest since that vital program was launched in 1961: $336-million against some $500-million in 1966 and $460-million the following year. This year President Nixon has proposed an appropriation of $603-million, and already we are beginning to hear the sound of chopping on Capitol Hill.

Obviously, it is far from the intent of Congress to do anything that would slow the rhythm of development in Latin America, for that could only weaken the constructive forces of peaceful change and give impetus to those who believe in violence as the way to alter the status quo. But cutting our share of the alliance appropriation has this precise effect, whether that is the intent or not, and the United States cannot evade responsibility.

What it all boils down to is that we cannot help Latin America solve its economic problems with bargain-basement tactics. We cannot do it on the cheap. Rhetoric is fine in its place, and the ringing words of our regard for Latin America make for fine speeches. But without the financial commitment to back up the words we are in trouble in this hemisphere, and we had better make no mistake about it.

Too often in our relations with Latin America over the years we in the United States have not done as we said, nor have we always said clearly just what it is we would do. Our promises, moreover, have not always withstood the test of time or pressure. The people of Latin America have good reason to be confused about how seriously we regard them and their problems and, based on past experience, even better reason to have skepticism with regard to the credibility and continuity of the commitments we make to them.

There should be no doubt that this uncertainty in Latin America is a contributory factor in the repeated demonstrations of anti-U.S. sentiments that crop up with disturbing frequency, or that it is a potent weapon in the hands of those who relish the notion of a fragmented Western Hemisphere, with the South being played off against the North. Nor can there be any question that the time is long past for Washington to undertake a credible commitment to the republics of Latin America that will resolve the doubts that now give rise to such uncertainty and even to fear.

President Johnson, following the summit meeting of American presidents at Punta del Este in 1967, went a long way toward extending such a commitment when he said, "We will persevere. There is no time limit on our commitment." But realistically speaking, the words he spoke did not have the force of law or of a treaty—a fact Congress made all the more evident when it cut the alliance funds last year. And with a change of Administration, accompanied by all the uncertainty that such a change brings with it, the Latins are still wondering how far we will go, and to what extent we will persevere.

It was not, I am sure, President Nixon's intent to add to this uncertainty when, a few months after taking office, he addressed the Organization of American States and strongly criticized the alliance for all that it had left undone. Even the dispatch of Governor Rockefeller on his fact-finding mission, rather than help assuage fears that Washington was contemplating a major change in its Latin American policy, only intensified the uncomfortable feeling that, once again, things were up in the air.

Inevitably, there will be much of value in what Governor Rockefeller will be reporting to the President, but the point cannot be overstressed that we need, above all, patience, perspective, and the determination to see the job through, Latin America should not be an issue for domestic party politics. Quite the contrary, it offers what is perhaps the most inviting area for constructive and imaginative bipartisan foreign policy cooperation.

It is the kind of cooperation that must look beyond the immediate horizon and focus on another far off, one still shrouded in clouds of uncertainty. For no matter what we do, no matter how firm our commitment, no matter what funds we appropriate to help the people of Latin America to build and to develop their continent, no matter what our trade policies, we cannot guarantee the future; we cannot say that if we do this Latin America will be an unwavering ally and firm friend of the United States, that it will offer us a vast commercial market for our goods. No one—politician, economist, or seer—can offer any such guarantee. And even if he could, it would be a poor motivation for the kind of effort that must be undertaken for the remainder of this century.

Latin America is not for sale to the highest bidder, and if we gear our programs with the idea that it is, we are in for a sad awakening—an awakening that, as recent events demonstrate, has already begun. What we must understand is that change in Latin America is inevitable. The only question remaining is whether it is to be a violent change or a relatively peaceful one, and obviously, therefore, our own best interests would dictate that we aid those forces seeking to build and to strengthen economic and political democracy in Latin America.

If they should fail, the change that is bound to follow can only be one of violence. All the explosive ingredients are present. For in Latin America, even as in the United States, we cannot expect people denied hope and dignity to sit patiently while life and the world passes them by.

The point has been made that if Latin American governments do not pass badly needed economic and social reforms they deserve to fall. And it has been argued too that perhaps some violence may be necessary to convince the oligarchies and military governments that desperate conditions beget desperate actions. To some extent it is difficult to answer these arguments. It is all too true that in too many cases Latin governments are not doing all they should and all they could to cope with the underlying causes of economic and social underdevelopment, nor are they doing enough of what must be done to promote the growth of representative government responsive to the will of the people. These facts are all too glaring to be swept under the rug, and we should recognize them for what they are—part of the reality of Latin America today.

What all this points up is the truism evident wherever people are struggling to be free—economically, socially, and politically: Time is not on the side of those who would shelter the status quo. Those who would see democracy and freedom fulfill their destiny have the responsibility of seeing to it that the vicious circle of poverty, sickness, and illiteracy is broken once and for all. People within its orbit live outside the mainstream of society and really play no part in shaping their nation's policies; because they are not part of the democratic process, they have little stake in it.

Clearly we must do all we can to encourage the growth of orderly, democratic procedures sensitive to the needs of the people they are designed to serve. But we can not and must not elbow our way into another country's system, telling it how it should manage its affairs, as if we had all the answers. We haven't, as the problems before us of putting our own house in order aptly testify.

What we can do however—and what we have not done with any real consistency—is to make clear our firm commitment to representative government and to the growth of political democracy in this hemisphere. Such a policy will enable us to develop special friendships with Latin America's men of vision, with the men who know that peaceful social progress is endangered by any entrenchment of the privileged few.

Today the despair that exists in much of Latin America provides the climate in which a Batista or a Castro flourishes best, or in which a despotism of the right can provide the foundation for a dictatorship of the left. Or vice versa. It is a situation that only underscores the urgency of continuing the partnership launched eight years ago this month when President Kennedy, following a Latin-inspired initiative known as "Operation Pan-America," pledged the support of the United States to the Alliance for Progress.

The alliance was a magnificent concept, with goals and aspirations to match its grandeur. If it can be faulted in hindsight, it would be for assuming that the job could be done in ten years. That, and setting an annual growth-rate goal without recognizing that the birth rate was shooting up at a pace that far exceeded Latin America's growth-rate capabilities.

But who can argue that any program of the scope and reach of the alliance—a program designed to bring about the upheaval of the Latin American continent and build a healthy, vibrant, economically secure, and politically sound inter-American community—must not set its sights high, and that it must not keep them there? Surely not the people who live without amenities of civilization, or without hope of a better tomorrow. For they can attain that tomorrow only if there is no compromise in the fight to attain the goals the alliance so eloquently set forth—goals for better housing, education, health, tax and land reforms, a revitalized and modernized industry and agriculture, and an integrated continent-wide economy.

Yet the yearly per capita growth rate still is well behind the Punta del Este goal of 2.5 per cent. The birth rate soars. Fifty per cent of the people are illiterate. The cities are clogged with workless *campesinos*. Tight protective tariffs protect inefficient monopolies. Feudalism persists in the countryside, and the people there go hungry or move away.

If it was a mistake then to hope that this could be changed in ten years, it would be catastrophic now to turn our backs on what has been done. True, economic sufficiency remains a distant goal, but for the first time a way has been charted out of the Latin American jungle of underdevelopment.

The statistics add up to an impressive total, particularly in an area of the world that has never experienced such concentrated doses of progress. But no statistic can possibly convey the meaning of a new road that slices through an Amazon jungle and links up a hitherto isolated village with the heartland of its country. Nor can it convey the significance of a new classroom opened for children in the plateaus of the Andes or

in the *barios* of the cities; of a *campesino* who now works his own farm; of water supplies made potable; of infant mortality rates reduced; of a family able to quit the sordid life of the slums for a new start in a new apartment.

And with all the statistics totaled up, it is clear that the alliance has devoted more of its resources to investments in the social areas, particularly education and health services, than in any other sector.

The actual rate of Latin American development, therefore, is higher than the economic growth charts indicate simply because social investment is not reflected in Latin America's gross product. But the direct effort to speed up the processes of education and social welfare is the surest guarantee that an obsolete social order will be peacefully transformed, as in Japan or Britain, rather than explosively altered via the violent, revolutionary routes of eighteenth-century France or twentieth-century Russia.

What must be understood above all about the alliance—and perhaps the most misunderstood feature, even among a number of our own key government officials—is that it is not a bilateral American aid program, but rather a cooperative self-help program, to be carried out primarily by the people of Latin America. The United States is one partner in this program, of which 90 percent is financed by the countries of Latin America. The alliance is not ours to manipulate, and the amount we appropriate, therefore, is no handout, but a hand of help extended in friendship. Congress must not forget this when considering how much we can afford to appropriate for our share of the effort.

When all is said and done, and with all that remains undone, there is no escape from the conclusion that eight years ago the alliance launched a truly creative, regenerative development program. But it was, and is, only the first step in a long journey. In our inter-American relations, we need most of all a sense of propriety, a sense of time, a sense of scale, and a sense of destiny.

As for propriety, Americans may find wry amusement in cartoons that depict the stereotyped Latin American—the sleepy, guitar-playing, sombrero-wearing, not too ambitious but pleasant fellow. But the stereotyped North American—the Yankee with the dollar sign for a heart—is hardly the object for smiles in Latin America. The truth, of course, is that neither stereotype is valid today, if it ever was.

The people of Latin America are a combination of some of the wealthiest cultures our civilization has known. Its young people, with their passion for country and their zeal for the future, are restless and prone to impatience. They are skeptical of our aims and so are more willing to blame us for their problems than to understand the difficulties in solving them. Yet these are the people with the mystique and the vision of grandeur who can spark the enthusiasm and loyalties of their countrymen. These are the people who are so anxiously searching for a revolution of social justice—the very people we must convince that we want to work with them because our continued partnership is essential to the future of freedom. In so doing, anti-Communism as such will not get us very far. It is not a powerful argument for the average citizen who is steeped in a personal struggle to keep his head above water.

A student at the University of Chile once summed it up when he told me: "The United States is constantly talking about the value of political democracy. We agree that it is essential, but we also feel you would accomplish far more if you said less about political democracy and put more of your weight behind the concept of economic democracy."

What he was saying is that city slum dwellers denied hope and illiterate rural Indians denied even a glimpse of the twentieth century neither comprehend the meaning of political democracy nor offer any foundation to sustain or to nurture it. They will either remain mute or give their sullen support to the demagogue or "leader" who elbows his way through the masses offering them protection and food. These are the staple commodities they want and need, and no promise of a better life made possible by democracy can vie with them. As former Senator Paul Douglas once said, "When you offer a starving man a choice between the Four Freedoms and four sandwiches, he always chooses the four sandwiches."

When, however, attention is given to questions of basic order, when roads and streets are made safe, when food, clothing, and shelter are made available, when attention is given to living conditions, when the masses discover they can rear, educate, and marry off their children and leave them an opportunity for a better life, political democracy becomes not only possible, but imperative. For as living standards rise, democracy becomes the only political system through which that better life can be sustained and advanced. And this is to the mutual benefit of all the Americas.

As for time, no nation has fully modernized itself in less than sixty years. The United States took much longer. In eight years Latin America, despite false starts and frustrated hopes, has made more progress than we had any right to expect. Realistically, however, it would be unwise to think in terms of less than thirty years for full-scale modernization of the continent. After eight years the alliance must, therefore, be regarded as in its infancy. Any other view does injustice to Latin America.

And this leads to the need for a sense of scale in our relations with Latin Americans, including a sense of proportion in both the United States and Latin America. We must look at our hemisphere with a new eye of understanding, one that recognizes its importance to the future peace of the world. We cannot take Latin America for granted, believing it will be there when we need it. We need it now no less—and perhaps more—than it needs us, for what happens there in the closing years of this century may well shape the coming years of the next century.

As for Latin Americans, it is time for them to recognize that the United States is not the wielder of the big stick of the 1900s, that we mean what we say about wanting to work with them, that our commitment is to an inter-American community of equal states. In short, they must turn away from memories of the past and turn instead to our mutual hopes for the future.

We talk of destiny, of partnership, of shared hopes and efforts toward hemispheric unity. But what does that destiny look like if our hemisphere ends up half suburb and half slum? Is this the limit we set to the creative, working partnership the American presidents established at Punta del Este to meet the increasing needs of today's "revolution of rising expectations"?

Surely our destiny is more in keeping with the brave new world we have always sought to build. Surely it is more in keeping with our faith that the dream of Simón Bolívar will flourish at last, like the dreams of our own founding fathers—that this hemisphere will grow in prosperity and confidence into a model of how states, with all their diversity of cultures and differences of gifts, can work together to improve and enrich and ennoble their common life.

We shall not do this with cold, lifeless graphs and charts. We shall not do this with Congressional cuts. We shall not do this between today and tomorrow. But with time and with resources, and with the republics of the Americas all working together, it can be done.

TENNESSEE WALKING HORSE

Mr. TYDINGS. Mr. President, on July 2 I introduced a bill, S. 2543, designed to end the cruel and unnecessary practice of deliberately making sore the feet of the Tennessee Walking Horse in order to alter its natural gait.

This animal is a magnificent show horse. To sore its feet in order to promote its "walk" is a cruel and debasing practice. It is also unnecessary, for the horse can and should be trained, rather than maimed, to walk in its distinctive style.

Hearings on S. 2453 will be held on Wednesday, September 17 by the Commerce Subcommittee on Energy, Natural Resources and the Environment, beginning at 9:30.

Mr. President, the September 3, 1969, issue of the Christian Science Monitor published an editorial commenting favorably on the bill. I ask unanimous consent that it be printed in the RECORD along with certain letters of support for S. 2543 which I have received.

Additionally, I ask unanimous consent that two letters addressed to Mrs. Roger Stevens and Voice Publishing Co. be printed in the RECORD for they offer clear evidence that soring is presently taking place as it has in the past.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Sept. 3, 1969]

SORING MUST STOP

Progress in the campaign against the cruel practice of "soring" the feet of Tennessee walking horses has been painfully slow, but the most positive action taken so far seems now to have a fighting chance.

The Tennessee "walker" has a distinctive gait—a quick, high-stepping walk, in which the front feet barely skim the ground and the hind feet bear most of the horse's weight in a long stride. This gait can be developed by training, but it takes time and patience. Unscrupulous owners and trainers have found a shortcut: by various agonizingly cruel devices, they deliberately sore the front feet so that the horses will avoid putting weight upon them. So far, public opinion (perhaps not widely enough expressed) and attempts at legislation have done little to halt this abuse.

Now, Sen. Joseph D. Tydings of Maryland and Congressman G. William Whitehurst of Virginia have introduced identical bills in Senate and House. In effect, these bills would prohibit the shipping of sored horses for exhibition purposes, would prohibit the showing of such horses, and would forbid any horse show in which such horses participate.

The Senate bill is S. 2543, and has been referred to the Senate Commerce Committee, Sen. Warren G. Magnuson, chairman. The House bill is H.R. 12438, and has been referred to the House Interstate and Foreign Commerce Committee, Hon. Harley O. Staggers, chairman.

Now is the time for the public to ask these two chairmen to see that the bills are reported favorably. Senators may be addressed at the Senate Office Building, Washington, D.C. 20510; congressmen at the House Office Building, Washington, D.C. 20515.

AUGUST 12, 1969.

MRS. ROGER L. STEVENS,
President, Animal Welfare Institute,
Grand Central Station,
New York, N.Y.

DEAR CHRISTINE: This is in reply to your recent letter involving the Tennessee Walk-

ing Horse which I found it necessary to disqualify during the running of the Michigan Horse Shows Association All-Breed Show held at the Michigan State Fairgrounds May 23 through May 25, 1969. The facts are as follows.

Included among the various breeds entered at the Show was a section for Tennessee Walking Horses. Rule XXIII, Part I of the American Horse Shows Association rules provides:

"Horses foaled after January 1, 1965 with any scar (granulated tissue that can be detected from eye level which will not produce hair) on the pastern or coronet areas are ineligible for competition and any substance used in these areas is prohibited, whether or not it alters the natural color of a horse. Judges must disqualify any such entries. Horses having raw or bleeding sores in the pastern or coronet areas from either old or new scars or chain sores shall be disqualified by the Judge for the balance of the show and the owners, trainers and riders are subject to further penalty under the provisions of Rule III, Part I, Sec. 7."

And Part II of the same rule reads as follows:

"Boots will not be dropped or removed for inspection in the ring unless the judge requests it on a specific horse or horses. At any show, a mandatory inspection must be conducted by the Show Veterinarian and the Show Steward not more than ten (10) minutes before the class enters the ring. Horses will be presented for inspection with the boots, which will be worn in the class, in place. The boots will be removed for inspection at the direction of the Steward. The Steward and Veterinarian shall work as a team. The Veterinarian shall inspect the pastern and coronet areas of the horse to determine if they meet the standards set in Part I, General. The Steward shall examine the boots to determine if they meet the standards set in Part I (a) or (b). He shall also observe the height of the heels of the front hooves and where, in his opinion, the height exceeds the standards set in Part I, measurements will be taken. In either case, the Steward will excuse horses not meeting the standards."

In this particular instance, I as Steward, working with the Veterinarian as a team, inspected all the Walking Horse entries just before the beginning of the class. The entries were presented for inspection with the boots on and when I requested that the boots be removed, I noted that in all cases the pastern and coronet areas were heavily coated with a material which prevented the visual inspection for sores. I requested that all such material be wiped off the entries. A couple of the exhibitors protested strenuously that neither the Veterinarian nor the Show Steward had the authority to "touch the horse." I referred, however, to the one sentence in Part II of the rules which says: "The Veterinarian shall inspect the pastern and coronet areas of the horse to determine if they meet the standard set in Part I, General." I told the exhibitors that I interpreted this to mean that the Veterinarian could inspect by physical contact any part of the horse. When I instructed the Veterinarian to put slight pressure on the flesh part of the one entry's pastern area, the horse reacted violently against the pain. With the removal of the material from the pastern area, blood could be observed slowly weeping from the wounds created by chains fastened to the hoof during training periods. I summarily dismissed the horse from showing in that or any subsequent class of the Show. I also observed in every other case obvious scar and granulated tissue around the pastern areas of all the other entries, but this was the only one that showed weeping, bloody sores. In my Steward's report to the American Horse Shows Association, under the paragraph reading "Were there any instances of cruelty to a horse?" I wrote as one of two Stewards: "No instance of cruelty to a horse occurred. The two Stewards and the Veterinarian, however, rejected one horse in the Tennessee Walking Horse Division with running and bleeding sores in the pastern area, with questions on one or two other entries. This Steward believes it most unfortunate that such conditions are tolerated in this Division."

I would appreciate your sending me a copy of the proposed bill to which you refer.

Sincerely yours,

ALFRED R. GLANCY, Jr.

SEPTEMBER 4, 1969.

DOUGLAS F. WEBB,
Goodlettsville, Tenn.
VOICE PUBLISHING CO.,
Chattanooga, Tenn.

GENTLEMEN: I am writing you in regard to the recent publicity we as breeders of Tennessee Walking horses have had with primary reference to the soring and scaring of horses in training with "so-called" professional trainers.

We recently had a fine three year old Midnight Duke stud out of a Merry Boy mare and also a six year old stud by a son of Merry Go Boy in training with a "so-called" professional trainer at Lewisburg, Tennessee. These horses were sound as a "gold brick", not a hair off their ankles or legs, when we sent them to this so-called trainer. He was to finish breaking and professionally train the three year old and put some speed on the six year old. After ten (10) months and approximately twelve hundred dollars ($1,200) later paid for training and such, we were compelled to bring them home. They were so scarred around their pastern area that very little hair was left on their feet. We had to treat these horses for damaged legs, scars, callouses, chain bruises, and etc.; and we are still at it.

A lot of talk has been going on as to what to do about such abuse, but nothing constructive has been accomplished so far and probably will not be until the Law-makers outlaw such tactics and put some "teeth" into such laws. If the Association (TWHBA) and Trainer's Association want to do something about these abuses, why not outlaw boots, chains or any other loose objects around or on the horse's ankles or legs. By doing this the so-called "nichol" horse will be eliminated and the natural Walking Horse will be recognized as it should be.

We have raised, bred, and shown the Walking Horse for thirty (30) years and have never shown what people would call a sore horse. When we tell the ring master and/or judge at shows that our horses are clean, they just look at us and say, "Well, they sure are clean"; but when the ties come up, we usually get the Gate, and the sore horses get the winnings.

We contend that this is rotten judging and it seems that the following are the only alternatives to try and clean up this situation: namely, (1) the judges guilty of such tactics as tieing sore horses should be barred from ever judging another horse show, or being licensed to judge any show where the Tennessee Walking Horse is to be shown; and (2) bar every showman or exhibitor from allowing their horse to be shown before any such judge under penalty of $500.00 fine to anyone violating such rules—including the judge and/or exhibitor.

If the powers that be want to stop all this criticism and bad publicity, and really clean up our breed, we dare them to try these recommendations for at least five (5) years. It will take that long to get back our reputation as true Walking Horse showmen.

We are signing our name to this letter, because we are not "chicken" as to whom knows whence it came.

We are not members of the Walking Horse Trainers Association, but are members of the Tennessee Walking Horse Breeders and Exhibitors Association (TWHBEA) and have been for years.

Sincerely.

DOUGLAS F. WEBB.

WASHINGTON, D.C.,
August 28, 1969.

Senator JOSEPH D. TYDINGS,
Senate Office Building,
Washington, D.C.

DEAR JOE: I want to express my appreciation and support of your bill S. 2543 to prevent cruel soring of Tennessee Walking Horses.

I saw the Tennessee Walking Horses classes at the Washington International Horse Show last October. I can truthfully say the audience was shocked by the apparent pain the horses were enduring. This deliberate cruelty so inflicted approaches downright torture and certainly should be stopped.

Thanks for your important help.

Sincerely,

CECI CARUSI.

FLORIDA FEDERATION OF HUMANE SOCIETIES, INC.,
Jacksonville, Fla., August 31, 1969.

Senator JOSEPH TYDINGS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR TYDINGS: Let me express the appreciation of our Federation for your introducing the bill S. 2543 which should prevent the soring of Tennessee Walking Horses.

The bill definitely has the support of our 5000 or more members of the Florida Federation of Humane Societies and of countless other just ordinary people who are horrified when told the odious practice.

It is amazing how many people never heard of the practice and find it hard to believe that "horse" people could be so unutterably cruel.

I had factual evidence of it some time ago when two Tennessee teachers told me that one of their pupils had told them that one of his jobs was to place acid or other irritants on the delicate part of the horses' front feet at a near-by stable where he was employed part time. Objective: to make them high steppers.

Count us all in as supporters of your bill.

Sincerely yours,

Miss MABEL E. CRAFTS,
Cochairman, Legislative Committee and Chairman Animal Welfare Committee.

RED BANK, N.J.,
August 31, 1969.

Senator JOSEPH D. TYDINGS,
Washington, D.C.

MY DEAR SENATOR TYDINGS: All humanitarians are grateful to you for your support of S. 2543 and all the related efforts to stop cruelty.

Most sincerely,

ABBIE V. STRICKLAND.

BALTIMORE, MD.,
September 4, 1969.

Senator JOSEPH D. TYDINGS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR TYDINGS: I read in The Christian Science Monitor about your Bill S. 2543, regarding the "Soring" of Horses. I congratulate you on the stand you have taken, and I trust that your Bill can become Law without delay. It is high time that suffering to dumb animals be stopped by Law.

You have my wholehearted support, as well as the support of many other right thinking people.

With every wish for your success.

Sincerely yours,

CHARLOTTE K. SMITH.

CHELSEA, MASS.,
September 1, 1969.

Senator JOSEPH D. TYDINGS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR TYDINGS: I am writing to express my heartfelt thanks to you for the creation of the bill S. 2543—designed to help prevent the unbelievable cruelty of scoring which is inflicted—nation-wide, upon the Tennessee Walking Horse for show purposes.

This brutal practice that produces such torture for the defenseless horses—has long tortured those of us as well—who so bitterly deplore the senseless suffering endured by all these unshielded creatures.

We will follow with deepest concern and vigilance the outcome of hearings re this all-important bill—S. 2543—scheduled for September 17—in Washington, D.C.

Again thanking you.

Most sincerely,

Miss BEATRICE GRIFFIN.

YORK, ME.

Dear SENATOR: Please accept the sincere thanks of myself and all animal lovers for your bill S. 2543 to protect the Tennessee Walking Horses. The humane leadership of all who sponsored this bill is deeply appreciated.

Sincerely,

Mrs. BETH H. BANKS.

NEW YORK, N.Y.,
August 31, 1969.

Hon. JOSEPH D. TYDINGS

DEAR SENATOR: All humanitarians congratulate you on introducing the bill to prevent the soring of the feet of Tennessee Walking Horses. This cruel practice must end. I feel that people only have to be informed of such cruelty—to be revolted against it.

I urgently hope that S. 2543 becomes law.

Your truly,

JANE M. MCAULIFFE.

BIAFRANS ARE STILL STARVING

Mr. PEARSON. Mr. President, for more than 2 years a brutal struggle has been waged in West Africa between the country of Nigeria and its secessionist eastern region which now calls itself the Republic of Biafra. During this time perhaps as many as 1½ million innocent victims have died by starvation—most of them women and children. An entire generation of talented and energetic human beings is slowly wasting away.

Many distinguished Members of Congress have joined our President in urging that more be done. Often frustrated by the tangles of the bureaucracy these good intentions have not been translated into the speedy action required. More must indeed be done and done quickly.

As an excellent editorial published in yesterday's Washington Post observes, the blame for the current relief impasse is not easy to ascribe. It now appears as though the Biafran leaders are primarily responsible for the failure to resume Red Cross flights, though given past Nigerian behavior, it can be fairly said that neither side is free from guilt in this terribly complicated tragedy.

In any event, it is neither our responsibility nor our right to comment on the internal workings of other states, though in this case it is a great temptation to do so given the number of lives involved. Moreover, to date, such an approach has appeared, to me at least, to be counterproductive. The one salient fact that cannot be disputed is that we all must redouble our efforts to strengthen existing relief operations and open new avenues as quickly as possible.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BIAFRANS ARE STILL STARVING

While everybody else was vacationing this summer, the secessionist regime of Biafra went about its by-now routine business: starving. Much of the responsibility of this calamity, which has gone on for so long that few people outside the area pay much attention to it any longer, falls upon the harsh imperatives which halted all relief flights of the International Committee of the Red Cross after early July. Nigeria insisted, as it had a right to do, that relief cargoes touch down in its territory for inspection. Biafra's leadership regarded fulfillment of that demand as an acknowledgement of federal authority, and it preferred to starve its own people instead.

Now, however, Nigeria has magnanimously abandoned its earlier inspection demand. General Gowon, its leader, says Nigeria will allow food planes to fly to Biafra direct from Dahomey; he claims only a right to call the planes down for inspection. Biafra, however, is still balking. The Biafran chief, Colonel Ojukwu, evidently is willing to accede to even more suffering and death, rather than accept the new Nigerian stand. The world's humanitarians, if they are to be fair, ought immediately to turn their appeals from General Gowon to Colonel Ojukwu.

The war, already in its third year, goes on. Nigeria has a heavy logistical preponderance but Biafra stays in the field. So far no effort at outside mediation has gotten anywhere. Lagos won an important public relations victory by the defection to its side of Dr. Nnamdi Azikiwe, Nigeria's first president and and Ibo tribesman who had formerly supported the Ibo-led administration in Biafra. Addressing himself to the critical issue in the Ibos' fears, he termed reports of Nigerian genocide a "cock-and-bull fairy tale." But General Gowon is under heavy pressure from his own military colleagues to go for a "quick kill," and it is uncertain whether he can demonstrate to Biafra the generosity necessary to capitalize on "Zik's" stand. In these stalemated circumstances, it becomes all the more vital for arrangements to go forward on relief.

SENATOR EVERETT McKINLEY DIRKSEN

Mr. ANDERSON. Mr. President, I have listened with great appreciation while others have praised Everett McKinley Dirksen for his leadership and his responsibility to that leadership during his long service in the Senate. I have been particularly impressed by the work he has done, especially when I reflect that he left Congress in 1949 with an eye condition which apparently indicated that he would be completely away from active participation. Subsequently, he found medical men who felt that his sight could be improved. He received some expert care.

He became a candidate for the U.S. Senate in 1950. I felt that the reason he was elected to the Senate was the care he displayed in meeting the people at every level. He wore out two automobiles in that campaign. He traveled back and forth throughout his State, over and over, and many participants in that election asked him to do almost impossible tasks while speaking to their local groups. But he took real joy in campaigning. He was determined to participate in every segment of the State and every occupation whether it was banking or partisan activities.

I came to know and like Senator Dirksen when he was serving in the House of Representatives. I sought to persuade him that many of the Truman activities involved all types of leadership. Best of all, he remembered his friends and always had a kind word for those who had known him for a long time.

His family rated very high in his responsibilities. He was not interested merely in official activities in the Senate but recognzed what needed to be done to take care of his friends and his duties. Many people in Illinois can testify to the fact that he searched out their problems and did his best to take care of them.

As a member of the Committee on Finance, he was an excellent representative of his people, yet he never tried to usurp leadership in the Senate. Time after time we all enjoyed his friendly personality, and we will all miss him in this committee as we try to work out a tax proposal. He was a true friend of all of us. I certainly hope that the country will appreciate all that he did.

WITHDRAWAL OF TROOPS FROM VIETNAM

Mr. GOLDWATER. Mr. President, recently, I discussed with the Senate the President's decision to withdraw 25,000 troops from South Vietnam, the date that the promise was made, and the target date for completing the withdrawal.

That was necessary because there were those who were contrasting the number of troops in Vietnam in January with those there in mid-August and using these figures to insinuate that the President was not living up to his commitment. They did this even though they knew he made his promise in June and that the target date was August 31.

Mr. President, August 31 has now come and gone. And more than 25,000 fewer troops are in Vietnam than there were in June.

In fact, as of last Monday, fewer than 509,600 troops were in Vietnam compared with 537,500 on June 7, the day before the President's announcement—that is, a reduction of 27,500.

In addition, and even more important, the Pentagon tells us that it hopes to keep the number of troops there at or below the 515,000 figure. Last January 1, the troop ceiling was 549,500. That figure was never reached, but it allowed for nearly 40,000 more men than are now there.

Mr. President, I bring this subject up only because I hate to see politics played with a war and with our American fighting men. We all have one interest, an honorable peace. I hope we all would support the President's efforts to gain peace. And I further would hope that future criticisms would be based on solid fact, not on political expediency.

ACTIVITIES OF REPRESENTATIVE LEONOR SULLIVAN, OF MISSOURI, IN CONSUMER AFFAIRS

Mr. EAGLETON. Mr. President, Representative LEONOR SULLIVAN, of St. Louis, is a public servant of whom Missouri and the Nation can be proud. Her leadership efforts over the years in the fields of consumer education and protection have been outstanding. From her sponsorship of the first food stamp bill to the recent truth-in-lending law, she has been a tireless supporter of legislation benefiting all Americans.

I have the honor and the privilege of serving with Mrs. SULLIVAN in the Missouri delegation, and I ask unanimous consent that an article describing her activities in consumer affairs and published in the St. Louis Post-Dispatch of September 5, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MRS. SULLIVAN PUSHES FIGHT FOR CONSUMER

(By Lynn Langway)

WASHINGTON, September 5.—The woman who wrote the new truth-in-lending law made her last credit purchase 40 years ago.

"It was a Victrola, and when I found out the little bit I was getting for all that extra cost, I decided to stick to cash," says Representative Leonor K. Sullivan, the only woman on Capitol Hill to head a consumer committee.

A senior member of the House Committee on Banking and Currency, the St. Louis Democrat is chairman of its subcommittee on consumer affairs. A fighter for strong laws on food, drugs, cosmetics and credit, she was the author of the 1968 Consumer Credit Protection Act, which took effect last month.

"I'd like to think the law will educate consumers, but I have no real conviction that the information it provided will cure credit addiction," says the handsome, silver-haired widow, who has occupied the seat held by her late husband since 1952.

"People buy too readily on credit, without realizing that of course it costs to use someone else's money. They aren't inquisitive enough because they don't want to look dumb," she adds.

Mrs. Sullivan is worried that borrowers will not ask for clarifications of credit charges that merchants and moneylenders now must give. She notes, for example, that many people believe that an "8 per cent discount," loan means an 8 per cent interest rate.

"In fact, if they'd ask, they'd find it means that the 8 per cent is deducted first. You get $92 for a $100 loan. But you pay back on the full amount, so it's really 16 per cent interest," she explains, sitting in a House office feminized by flowering plants, homey blue leather furniture and a bouquet of peonies on the desk.

Leonor Sullivan's consumerism began with a question and she hasn't stopped asking them since. A St. Louis consumer group asked the newly elected Representative to explain the Food, Drug and Cosmetics Act to them and "I found I didn't know anything.

"So I began poking around and saw a lot of changes that needed to be made," she says. The search led to sponsorship of the first poultry inspection act and the first food stamp law. She has also been a major force in passing laws on food and color additives, drug control, labeling, and meat inspection. And every year since 1962, she has gamely submitted an omnibus bill that would extend Food and Drug Administration coverage to medical devices, diet foods and cosmetics, none of which are now regulated until proven harmful.

"The FDA doesn't act on anything unless someone is seriously harmed and Congress is often the same. We couldn't get the FDA to act until people went blind from coal tar and we couldn't get drug control until thalidomide.

"The committees are loaded with consumer legislation, but people don't push enough until a tragedy happens, and we're not getting any help from the Nixon Administration," she said.

(Mrs. Sullivan, like other Democrats, is particularly annoyed at lack of response from the Department of Agriculture and Commerce, which have not answered her queries on specific bills and problems.)

The feisty Representative shops and cooks for herself in her small Virginia apartment, decorated with some of her hobby—hooked rugs. She is as fearless about questions at the checkout counter as she is in the Capitol.

"I don't believe in picket-type boycotts, because they've been overused to the point of ineffectiveness. But if the price is too high or the quality is low, I boycott it by not buying.

"And I make sure to tell the supermarket manager why in a loud, clear voice," says the Congressional consumer, who often cooks with stew meat and ground round steak. "They have just as much nutrition and you can dress them up with a little suet," she says firmly.

She uses the same "supermarket voice" in pointing out the costliness of games and stamps, which her subcommittee soon may probe.

"I don't think we should outlaw them, but I'd like to see stamps redeemable in the same stores for cash or discounted goods. I usually ask the checker audibly if this is possible. She answers 'no' and then the next lady in line gets intrigued."

Wise about credit and costs, Mrs. Sullivan is wary over the proliferation of charge cards. "We're all going to rue the day they multiplied, because 5 per cent or more is added to the price of things for everybody, even those who pay cash."

She does admit to one sloppy shopping habit: "I'm an impulsive buyer of clothes, like most women with little time to shop."

The only woman Missouri has sent to Congress, Mrs. Sullivan is enthusiastic about another active woman newer to the scene—Mrs. Virginia Knauer, President Richard M. Nixon's special assistant for consumer affairs.

"She has the enthusiasm and the know-how to give consumers a great boost—if she can get the ear of the President.

"That remains to be seen," concludes Leonor Sullivan and you know she'll be avidly watching and asking questions.

THE STUDENT IN THE MIDDLE

Mr. JAVITS. Mr. President, the majority of students in the Nation's colleges do not participate in campus disruptions and, as a matter of fact, many find the activities of the more militant of their fellow students disruptive to the very education which they seek and desire.

The plaint of one such student "in the middle" and the frustration he feels is well stated in a letter from a Queens College undergraduate, Leonard A. Leon. Mr. Leon has sent me a copy of his letter to the President and has given permission for its publication here. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I am one of the "apathetic, middle-class bourgeoise" undergraduate college students. The fact that I go to Queens College of the City University of New York is not important. I could go to Harvard, Cornell, Columbia, Stanford or Queensboro Community. I am very grateful for the education I am receiving and feel that many new ideas and experiences have been opened to me. I realize that this is not just the result of going to college, but that fact that I was willing to give of my time, interest and determination to accomplish what I have.

But I am one of the "apathetic, middle-class bourgeoise" college students. This means that I do not belong to Students for a Democratic Society and I do not support their student strikes and disruptions on campus. I do not join counter-demonstrations because these groups use the tactics of the SDS and I have more constructive ways of using my time.

My problem, as with many students today is that I feel that I am being abused. Abused by the small minority of protestors that are disrupting my classes and causing the closing-down of my school. I am also being abused by the power structure that refuses to protect the rights of the majority by enforcing the present laws and halting the illegal actions taken by the minority.

At this point I am frustrated by this contradiction. The laws are being broken and my education is being hindered, but the power structure refuses to protect my rights and interests. Where do I turn? The administration refuses to act and if I join the counter-demonstrations I defeat my purpose. For these reasons I am writing to you, the people of the power structure, so you can readily see my dilemma.

Another characteristic of the "apathetic, middle class bourgeoise" student is patience and understanding. I understand that the present disorders that are sweeping the country are a complex problem and that there are no easy answers. But my patience, although greater than some of these other factions who demand immediate action to alleviate their problems, is not unlimited. There comes a time when the frustration that I am feeling and the millions of other college students like me, will become intolerable. It will not be tomorrow or next week, but a person cannot suffer this kind of abuse, seemingly without recourse, indefinitely.

I sincerely hope that you get the message. I am sure this is one of many letters of this nature that you have received recently. But this cannot go on, so I urge you to put your power behind some constructive measures to alleviate the problem.

Sincerely yours,

LEONARD A. LEON.

THE PESTICIDE PERIL—XLVI

Mr. NELSON. Mr. President, the continuing controversy over the use of DDT has come to a head in the last year as more and more evidence has become available to the public regarding the danger to fish, wildlife, the total world environment and potentially to human health.

Conservationists and scientists have testified to the already alarming death toll of certain wildlife species which are threatened with total extinction because of the presence of DDT in their systems and have revealed results of studies which link this highly persistent, toxic

pesticide to stomach and liver ailments in man.

Much has been written about this issue. An article published recently in the Eau Claire, Wis., Daily Telegram offers a good summary of the status of the controversy on the national scene. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN NOT ALONE IN DDT FIGHT

(By Sherry Conohan)

Michigan has banned the sale of DDT.

Arizona has banned its use.

In Wisconsin, the Natural Resources Department recently concluded hearings on a request for a ban and is considering whether to impose one.

The Illinois Legislature sent a bill to Gov. Richard B. Ogilvie for his signature giving the state Departments of Agriculture and Public Health the authority to regulate the sale and use of pesticides. The Minnesota Legislature passed a bill authorizing the state secretary of agriculture to ban the use of any pesticide.

Other legislation dealing with DDT is pending in a number of states but the greatest concern in the building controversy is centered in the Great Lakes area where high concentrations of DDT have been found in fish.

DDT is a nerve poison. The initials are an abbreviation for the chemical dichlorodiphenyl-tricholoroethane, a chlorinated hydrocarbon. The discovery in 1939 of the insecticidal properties of DDT led to the development in the 1940s of a series of chlorinated hydrocarbons for use as pesticides. Paralysis spreads from any part of the insect body that comes in contact with DDT.

Some scientists and conservationists contend that DDT has contributed to the extinction of certain wildlife species and poses a serious threat to the health of man, while others, such as Dr. Gordon Guyer, head of the Michigan State University pesticide research center, dismiss the warnings as overblown.

Guyer said coho salmon and other fish caught in the Great Lakes are "perfectly safe to eat." The pesticide controversy he said, has raised a scare which is not founded in scientific fact.

"We need to take it out of the press and put it back into the scientific ground," he said. "When anything gets this much publicity, there are misunderstandings that develop and spread."

But the controversy cannot be suppressed and, in fact, drew wide public interest when the Federal Food and Drug Administration (FDA) in early March seized 28,150 pounds of coho salmon caught in Lake Michigan on the grounds the fish contained dangerous concentrations of DDT.

A few weeks later, on April 16, the Michigan Agriculture Commission imposed the ban on sale of DDT in that state. The ban was appealed early this month by four pesticide manufacturers. Hearings on the appeal were scheduled for June 18.

Subsequent to the imposition of the ban in Michigan, the FDA set an interim maximum of 5 parts per million DDT for fish sold in interstate commerce. The interim maximum is to remain in effect until studies can be completed and permanent standards set.

The World Health Organization has set a DDT tolerance level of 7 parts per million.

The Lake Michigan fish seized by the FDA contained up to 19 parts per million DDT residue. Concentrations of up to 2,000 parts per million have been found in fish in Clear Lake in California.

Figures from the National Agricultural Chemicals Association in Washington, D.C., show use of DDT in the United States has declined significantly in recent years. In the 1966–67 crop year, 40 million pounds of DDT were used (including 27 million pounds in agriculture) compared to 71 million pounds 10 years earlier in 1956–57.

A spokesman for the association attributed the reduction to the development of other chemicals that are more effective than DDT.

An encyclopedia says the average sized person in the United States in the mid-1960s contained in his body tissues about 7 parts per million DDT. In recent testimony before a congressional committee, David Brower, former executive director of the Sierra Club, put the figure for an average person at 12 parts per million.

Arizona, in January, outlawed the use of DDT for agricultural and commercial purposes for a one-year period. The ban, which will be either renewed or lifted in January, 1970, by the State Board of Pest Control Applicators, was levied after alfalfa and other forage crops had become contaminated by DDT to the extent the DDT content in milk had risen to levels higher than allowed by federal laws.

In Minnesota, public agencies stopped using DDT in 1962 for spraying forests and in metropolitan areas.

In New York, the use of DDT has been banned since 1964 on all state owned lands under the jurisdiction of the state Conservation Department.

In Wisconsin, the Natural Resources Department has prohibited the use of DDT on state-owned lands and some Milwaukee suburbs have discontinued the use of DDT for tree spraying.

The DDT question perhaps has been given its best public airing in the lengthy hearings conducted by the Wisconsin Natural Resources Department.

The hearings were ordered after three citizens groups—the Citizens Natural Resources Association, the Wisconsin Division of the Izaak Walton League of America and the Michigan Audubon Society Inc.—petitioned the department for a ban on DDT, contending the chemical has entered state waters and polluted the environment.

Twenty-seven days of testimony ensued over a six-month period beginning Dec. 2 and concluding May 21, with chemical companies and agricultural interests waging the fight against the petition. Attorneys for both sides have said any decision will be appealed through the courts.

Environmental scientists favoring the ban on DDT made these points:

DDT does not break down and is highly mobile, spreading throughout the world.

DDT has been traced to the extinction of various forms of wildlife, particularly birds. Witnesses said DDT throws the birds' calcium-producing mechanism out of balance, causing them to produce thin-shelled eggs that often do not hatch.

DDT is having an unknown, harmful effect on man.

Dr. Richard M. Welch, Terrytown, N.Y., a biochemical pharmacologist, testified that concentrations of DDT far below those found in man produce alterations in the sexual mechanisms of both male and female rats. He said DDT also interferes with common drugs by causing the body to break down the drugs faster than normal.

Opponents of the ban claimed DDT is safe and that it does not have the effects attributed to it by scientists supporting the ban. They also argued that DDT is the only pesticide that can be used economically to control some insect pests.

Dr. Weyland Hayes, an official of the World Health Organization, testified: "I think it is safe."

Hayes described FDA studies on DDT, saying: "Volunteers were fed doses of DDT 200 times what you and I would get every day for 12 months and they showed no ill effects."

In New York State, traces of DDT have been found in fish since 1960, but the state Health Department is not worried about any "immediate health risk." Health Department scientists estimate a person would have to eat 70 pounds of fish a day to be affected adversely by the current levels of DDT found in the state's fish.

ARCHIE MOORE FIGHTS FOR YOUTH

Mr. MURPHY. Mr. President, one of my close friends and fellow Californians, Archie Moore, former light heavyweight champion, is engaged in a vital and praiseworthy battle which is as challenging as any he faced during his long career in the ring. This battle is to save youths from a life of juvenile delinquency and push them in the right direction so that they may become productive and successful citizens of our country. His own city is as proud of him and his work as he is of San Diego. Certainly, this is a kind of program that deserves more attention and support. I ask unanimous consent that two articles praising Archie Moore be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Saginaw (Mich.) News, Feb. 13, 1969]

MOORE FIGHTS FOR YOUTH—FORMER LIGHT HEAVYWEIGHT CHAMPION VISITS SAGINAW

(By Joe Hart)

They called him ancient Archie Moore a decade ago when he was light heavyweight boxing champion of the world.

Nothing could be farther from the truth. The mustachioed and goateed Moore, with flecks of gray streaking through his hair, is ageless. He is blessed with the eternal spirit of youth.

Moore, an unscarred veteran of 235 professional bouts for more than a quarter of a century, was fighting for the youth of America this morning when he began a busy two-day schedule of appearances in the Saginaw area as a Boy Scout executive at a press conference at Saginaw High.

"I am not a civil rights leader, as some people say. I'm a leader of youth," Moore told a youthful audience of high school reporters. "True, I seek equality. But the only way that can be accomplished is to motivate the youth of our nation. This must be done or all the undeveloped talents will go down the drain."

What is Moore's primary job with the Boy Scouts of America? "I am especially interested in community relations, particularly in areas where the Boy Scouts have not been able to establish a foothold. What I am trying to do is to open up opportunities for youngsters of all races and creeds. Not only for jobs, but for positions in administrative posts, particularly in corporations, and in the professions."

Moore warned that parents can make or break a child. "A father or mother who does not provide the proper food or clothing, or discourages an ambitious child from obtaining an education can reap unmeasurable harm."

What can a neglected youth do? "To keep a parent from killing his spirit, he must have fierce determination to succeed."

Archie should know. He spent time in a reform school as a youngster. "When I got out, I wanted to become a good fighter. One night, while I was still a 19-year-old amateur boxer, I sparred with a good pro in a gymnasium. When I got home my mother told me I would never amount to anything hanging around gyms. It was exactly 20 years from that day that I became world champion."

How old is Moore? "I never reveal my true age." But according to Ring Book and Boxing Encyclopedia, Archie was born Dec. 13, 1913 in Benoit, Miss. He knocked out the Poco Kid in the second round in his first professional fight on Jan. 31, 1936 in Hot Springs, Ark.

Moore became the lightweight heavyweight champion of the world Dec. 17, 1952 when he won a 15-round decision from Joey Maxim in New York. He fought classic battles against the likes of Bobo Olson, Yolande Pompey, Tony Anthony and Yvonne Durelle. He twice tried to capture the world heavyweight title. In 1955, Moore was knocked out by champion Rocky Marciano in the ninth round in New York. Floyd Patterson scored a fifth round knockout over Moore in 1956 in a battle for Marciano's vacated heavyweight crown at Chicago.

Moore's last fight was in 1962. Would you believe at the tender age of 49? An upstart named Cassius Clay ended Archie's career with a fourth round knockout. In his 235 fights, Moore knocked out 137 of his foes and was the winner of 54 decisions. That's a lot of mileage for a boxer.

But ageless Archie was raring to go this morning. Following a student assembly at Saginaw High, he attended a combined luncheon of the five Kiwanis Clubs in Saginaw at the YWCA. Another student assembly at Arthur Eddy School and a meeting with inter-city project workers kept him busy until tonight when he will be the speaker at the Eagle Scout Recognition Dinner at the Bay City Country Club.

Tomorrow, Moore has morning meetings with community leaders and a luncheon with youth agency directors from Saginaw and Bay City at the YMCA. A student assembly at Washington Junior High School in Bay City in the afternoon and an open forum meeting for inner-city boys and parents at UAW Hall (Sixth Street) will conclude Moore's whirlwind visit to Saginaw.

How's that for going 10 fast rounds?

The former light-heavyweight boxing champion of the world, Archie Moore, last night "sparred" with some 20 West End youngsters at the Goodwill Industries plant on Ocean terrace.

Throwing questions instead of right hooks, the former fighter turned youth leader demonstrated the value of "position."

Over 300 people, many of them Boy Scouts and Cub Scouts, turned out to greet Mr. Moore, whose visit was co-sponsored by the Pomperaug Council of the Boy Scouts of America and the Greater Bridgeport Chamber of Commerce Social Services committee.

"You, you, you, you and you," the leader "volunteered" some 20 recruits, a number of them Boy Scouts in uniform, a couple of them girls.

Because, he said, like any group, they would need organizational discipline to function properly, the leader lined up the "volunteers" by height from tallest to shortest, and in sharp, rapid-fire commands, he ran them over a series of mental hurdles.

"You people can do what I tell you to because I knew you were tremendous when I picked you; all you've got to do is try," he said.

Setting his stage to get everyone present involved, the ex-champion said, "We're going to need judges, we don't want any drop-outs, but we're going to need judges," and turning to the audience he said, "You people are the judges."

"Repeat after me, judges, 'Sorry about that.' That's what you say when somebody up here doesn't do what I tell him," the leader told the group.

Then he ran the recruits through their paces.

"Tell me this, all of you have younger brothers and sisters or cousins going to school. What one thing would you tell the youngster not to do while he's in school?

Hands at their sides and feet apart, one at a time until all had finished, the volunteers shouted out "Fight unless he had to, steal, swear, not take part in athletics, smoke, play in the streets, drink, skip classes, beat up the teacher, write nasty things on the wall."

Mr. Moore then told the group to do again what they had just completed and cautioned them not to repeat any of the given suggestions. Applying pressure, he said, "You've got until I count three or the judges will count you out."

This task completed, the leader asked the youngsters, "When he gets out of school, what would you want that young person to become?"

The 20 youths had the "judges" literally rolling in laughter, as they stuttered and stumbled their way through occupations ranging from truck driver, to dictator.

Mr. Moore toughened the task, warning no repetitions, and the group exhausted possibilities ranging this time from X-ray technician to disc jockey. Five times the leader tested their ingenuity, interrupting frequently with "Come on baby, you can do it, you've got 'til 3."

This completed, Mr. Moore explained that there were many occupations open, and many people who "will help you get there."

PHILOSOPHY UNPACKED

Unpacking some of his own philosophy, he added: "The word to get you there is position. Position is your stance in life, and the man who stands neutral stands for nothing."

Over and over again the fighter shouted the command "Position," and the youths assumed the fighter's stance, fists set and ready to throw a punch. On the command "As you were," hands fell to sides.

Then, with the word, "out" he had the youngsters strike out and recoil their punches until they were able to perform to his satisfaction.

JUDGES PUT IN ACTION

Now putting the "judges" into action and cautioning "no repetitions this time," the leader again asked the group the two questions asked earlier.

With much laughter and many calls of "Sorry about that," all but five of the 20 were eliminated.

The five, whom Mr. Moore then termed "winners" were singled out to sing any song of their liking.

Most shuffled about, nervous, and had further difficulty singing. One, instead of singing, said he'd "appreciate a seat."

Another, Eddie Burns, from Explorer Post 49, quieted the gathering with a notable rendition of "What Kind of a Fool Am I?"

Applause from the audience as Mr. Moore placed his hand over the head of each contestant choose Mr. Burns the winner, and he received a payment in cash from the ex-champion.

Concluding, Mr. Moore made certain to point out that it was not important whether anyone had a good voice. What is important, he said, is that they all tried.

INVITED TO TEEN CENTERS

James Barrett, as A B C D worker, praised the demonstration, and on behalf of the poverty agency invited the boxer to visit the teen centers throughout the city.

He said what Mr. Moore, founder-director of ABC (Any Boy Can) clubs had done in the demonstration was meaningful.

"It showed us that any of us can, as long as we feel that we can. Nothing in the world is great enough to make us feel that we cannot excell. Mr. Moore's record is what it is because of what he himself has done."

Mr. Moore who won 187 of his 229 fights and who with 136 knockouts set an all time knockout record, addressed a Chamber of Commerce luncheon yesterday afternoon at the Stratfield Motor Inn.

COMPARED TO MUSIC

The "champ" likened his work with youth to a piece of music in which every one must face each other, whether black or white, in perfect harmony.

"EGBDF—every good boy does fine," Mr. Moore stated, "and this involves communication and appreciation of youth working together."

Mr. Moore, who is the founder of the ABC (Any Boy Can) clubs, stressed that any boy who wants to get ahead must have help.

"I have often heard of the self-made man," he said, "but I do not know of one, for everyone needs help, whether spiritual or physical, to get him motivated."

He stressed that those who are willing to help and give aid to youth must follow through with their efforts, and not leave them high and dry.

ARCHIE MOORE'S GREATEST FIGHT IS NOW

(By Duane Valentry)

Let's take a hasty inventory of the things which you believe are keeping you from success?

Are you getting along in years and feel you've "missed the boat"?

Archie Moore did not become light-heavyweight champion of the world until he had passed his thirty-ninth birthday.

Are you overworked and in a menial job?

Archie Moore fried chicken for thirteen hours a day, seven days a week until he could no longer stand upright.

Is your background one of poverty or lack of security?

Archie Moore is the son of a Mississippi farm laborer. He lived with his aunt when his family broke up. He is a school dropout.

Is your health poor?

Archie Moore, overworked and undernourished, weighed only 100 pounds when he was twenty-eight.

With this type of background what would you expect a man like this to be doing with his life now that he is no longer champion?

Archie Moore, today, is actively engaged in helping the nation he loves through his unique juvenile program entitled Any Boy Can. Abbreviated to initials, ABC is being seriously considered in many cities across the country as one possible answer to civil unrest.

Archie still looks as if he could handle himself in the ring against most of the current crop of fighters and his "students" in the ABC program listen to him with unusual respect. He teaches his boys to be fearless, how to defend themselves, how to walk away from a fight and how to take a licking, if it comes, with good grace. He knows how to do each. In 1955 he challenged world heavyweight champion, Rocky Marciano and he lost. He also fought Durelle, Patterson, Clay, and others—often winning, sometimes losing.

"As a boxer, Moore had a way of creating excitement inside and outside the ring," says a reporter. "His persistent pursuit of the heavyweight champion was a masterpiece. He finally got his fight, lost it, but covered himself with glory. Marciano, who never lost, has frequently said that Archie was his best and most dangerous opponent."

Now, Archie Moore is engaged in his greatest battle as he attempts to inculcate a sense of dignity, respect for others, and pride, in children who know only a world of poverty, vice, and despair.

Recently crowned "Mr. San Diego of 1968" by his proud home town, Moore is known as a humanitarian as well as a great fighter who holds the all-time ring record for knocking out 140 opponents—some of them long after even his friends thought he should quit. Said the president of the Grant Club—a group of citizens and businessman—on presenting him with the honorary title:

"He is being honored because he has brought national and international fame to San Diego and has depicted the city as a

place where people live and work together in religious, patriotic and civic endeavor."

"I try to work along uncomplicated lines as much as possible," Archie says, "so as not to be confused. At night before bed is research time for me. What did I accomplish today? Whom did I do wrong? I try not to make the same mistakes over again. I feel I'd rather hurt myself than my neighbor because I believe I could take it and keep going."

When he meets a man, Archie always learns his name and address. As soon as he can he sends him a postcard, even if it is only a few words of greeting. His friends number in the hundreds, are intensely loyal, and include the high and the low—from sparring partners to presidents. Though he is always colorful and has a way of making headlines, his good deeds do not, although he is one of the real givers whenever he senses a need, contributing his time and money freely, irrespective of age, creed or color.

"The young people of today think they have a hard lot," he says. "They should have been around in the '30's when I was coming up in St. Louis. We had no way to go, but a lot of us made it. I became light heavyweight champion of the world. A neighbor kid down the block, Clark Terry, became one of the most famous jazz musicians in the world. There were doctors, lawyers and chiefs who came out of that ghetto. One of the top policemen in St. Louis came from our neighborhood.

"We made it because we had a goal, and we were willing to work for it. Don't talk to me of your 'guaranteed national income' . . .! The world owes nobody—black or white—a living. God helps the man who helps himself!"

"But belief that God helps those who try to help themselves could be construed more than one way," says this literate and successful businessman. "The sharp businessman, the cold, crafty landlord, the loan shark, and the money lenders certainly help themselves. But if they take undue advantage of their clients, they are not adhering to the Golden Rule. My life has always been lived around the Golden Rule, 'Do unto others as you would have them do unto you.'"

In starting his ABC program, Archie wrangled a store front, a set of punching bags and a regulation boxing ring out of a chain store and opened the doors to the kids who thronged the streets and were creating a serious problem by vandalism. Though some came to sneer they stayed to become students and the vandalism stopped nearly overnight. Noting his success the American Savings and Loan agreed to back him for the duration of a pilot program in Vallejo, California.

No boy who comes to ABC can have been more tried by circumstances than the pleasant guy who now takes the time to guide them ("If some bigot can misguide, I can guide," he says.) They're too young—but their elders can tell them about a man flattened in a fight in Montreal against Durelle who got up from the canvas not once, but four times, to score a knockout. They also remember the man who didn't quit when beaten by Marciano but tried for the heavyweight title again only to be beaten by Patterson.

They can tell of his stupendous wins too. Famed sportswriter Jim Murray says of him:

"If you rent a computer and program yourself a prize fighter, you couldn't do much better than Archibald Lee Moore. He was the best mechanical fighter ever to hit a weigh-in. He was a slum kid who saw America from the back of a bus, the bottom of a freight car, the windows of a flophouse. Archie never owed America a thing. But he never figured it owed him anything, either. He never joined the Boy Scouts, or went to the aquarium, and the Junior Chamber of Commerce wasn't after him to sign up until he was too old. He was voted 'Mr. San Diego' because of all people, he's trying to save America from itself."

There have been some disappointments in acceptance of ABC. Though he has offered it to the government and recently spoke before a Congressional Committee, many promises from politicians and businessmen have yet to materialize. However, many people feel it is merely a matter of time; that the Archie Moore ABC project is one of the better solutions yet offered and as such must be given proper recognition.

Archie is without bitterness as he looks back over his eventful life, much of it spent slugging away at obstacles.

"I love God, and God loves me. He has been good to me all my life even when I thought man did not give me my rightful breaks. I can only figure God was teaching me a great virtue—patience."

Who is there to say that the patient, old champion will not win his greatest fight, help bring dignity to his people . . . and peace to a troubled land?

THE GRADUATE'S RESPONSIBILITIES AND OBLIGATIONS

Mr. TYDINGS. Mr. President, thousands of speeches were made to graduating classes this June. Many of these speeches were inspiring, educational, and informative. Earlier this summer, at the graduation exercises of Northwood High School, of Silver Spring, Md., David Gordon, president of the June 1969 class, in his welcoming address emphasized the role of the young graduate not only in participating in meeting the problems of the Nation and the community, but in doing so responsibly and with an understanding of their complexities. He urged the students to work with the older generation in making changes that are constructive. He stressed the need for students to develop their ideals to achieve practical results, and to be honest both with themselves and with others.

I believe young David's message contains sound advice which will be of interest to Members of Congress and to the public; I therefore ask unanimous consent that the text of his speech be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE GRADUATE'S RESPONSIBILITIES AND OBLIGATIONS

Senator Tydings, Mrs. Hilberg, Mr. Packard, and other members of the administration, members of the faculty, parents and friends, fellow students of the Northwood Class of '69. At last, after struggling through three years of senior high school, we are finally ready to graduate. Soon we will receive our diplomas and many of us will be saying goodbye to our friends. Thus our Commencement Exercises marks the end of our high school education.

Yet this is not the end. As you know, the word "commencement" means the beginning, because this ceremony marks the beginning of our actual involvement in society. Until now, youth has been called "the future leaders of the world." Now, some of society's controls are being handed over to us. We are going out and filling one of society's jobs, and in doing so, we are beginning to have a meaningful say in how those jobs shall be done. We are going into the colleges and universities, the educational institutions upon which our nation relies heavily for much of its research and knowledge. Therefore we are beginning to have a meaningful say in our nation's affairs. Now we will have the chance to perpetuate those things we have seen in the world that we feel are right, and to change or abolish those things which we feel are wrong. Thus our graduation is hardly an end, but rather the beginning of our generation's meaningful involvement in society.

What gives us the right to have such a meaningful say in what society does? First of all, we have had about eighteen years experience in this world, during which time we feel we have become more fully acquainted with the ways in which our society operates. Secondly, as shown by our statements and ideas on various issues facing us, such as the Vietnam war, the grape boycott, education, Biafra, and many others, we are aware of our society's problems and have already started working on solutions. In many cases our teachers comment that we are often more aware and educated in these issues than are our parents. Finally, these problems of society do not belong only to the members of the older generation because if solutions to these problems are not found, we will suffer the consequences along with our parents. If another great and crippling economic depression hits this nation again as it did in the 30's, we will go hungry just as much as our parents will. If the air and waters become strongly polluted, our bodies will suffer just as much as our parents'. Yes, even if the world is torn by a nuclear *war*, we will die the same as our parents. Therefore, these problems belong just as much to us as they do to the older generation, and therefore, as genuine members of our society, we not only have a right, but an obligation, to help in the solving of these problems.

Our generation will face numerous and extremely difficult problems, all of which will demand solutions. There will be no easy answers to the problems, and some of them may have no definite answers at all. As an example of the type of problem we will encounter, a scientist who spoke to one of the classes on "Problems of the Twentieth Century" stated that in a few years, man would have mastery over his own genes. Thus, by manipulating the genes of an unborn baby, he would be able to make that child into a musician, a mathematical genius, a great politician, a soldier, or a moron. The problem, however, is, who will decide what the child is to be and who will do the manipulating? If a nation wants a powerful army, will it have the right to manipulate genes to make nothing but soldiers and superpatriots? Shall a doctor who is prejudiced against another group of people manipulate genes so as to make morons out of that group? Who shall determine how many of each type of child is to be born? Maybe we can't conceive of this problem ever being a reality, but then many of today's problems seemed farfetched only a generation ago. We will have to find answers to this problem just as we will have to find answers to others. What are we going to do about air and water pollution? How are we to match a worldwide growing population with adequate food production? What are we going to do about the extreme poverty in our world? In our own country, how are we going to do away with racial and religious prejudices that have been brewing for hundreds of years? How are we in the Western Hemisphere going to live peacefully with those peoples of the East, some of whom are now being taught to hate and kill us? Yes, in a world where the two primary powers are increasing the number and the force of their thousands of nuclear warheads which are aimed at each other and ready on a minute's notice to be fired, how and for how long are we to maintain peace in the world? These problems are some of the most complex, if not the most difficult and serious, problems mankind has ever faced, and these are the problems that we are going to have to solve. We can't shy away from them. As members of our society,

as responsible people who are beginning to take control of society's affairs, we are obligated at least to try to solve them, and try we must. As Richard Lloyd Jones once said, "The men who try to do something and fail, are infinitely better than those who try to do nothing and succeed." The consequences for doing nothing are far too grave for us not to act. We must seek answers to these problems if we are to survive.

Our generation has not been standing by, though, and doing nothing. We have arrived at proposals for solving these problems. We have looked at our present high school education, seen a number of faults that need to be corrected, and have proposed ways of correcting them; for example, we have asked that the grading system be reviewed, that there be a greater choice of electives. We have done the same with local, national, and international issues. But one major error in our proposals and solutions is that too often they are overly idealistic. Idealism itself is not a flaw. To balance the more practical and conservative minds of our parents, we need idealistic thoughts in our society. But often our plans and proposals lack practical application and therefore appear vague and impossible to carry out. Just to give a small example, you know that I have been asking many students to take a poll of mine on education at Northwood. One of the questions on the poll reads as such: "What improvements would you like to see at Northwood concerning the manner in which courses are taught?" When I posed this question to one typical student, he replied that Northwood needed better teachers. I asked him what he meant by "better teachers." He replied, "Teachers who are interesting and make their classes interesting." But how is a teacher interesting and how does he make his class interesting? He answered, "By motivating the students." But exactly how does a teacher motivate the students? "Well," he continued, "like one of my teachers for example. She takes an interest in us. She motivates us. She's just interesting, that's all." Notice there was no mention of self-motivation. The student's ideas are excellent, but poor as proposals. Imagine that same student addressing a group of young teachers and telling them how to become better instructors by following those undefined terms. Imagine again the effect a young person would have on the Paris Peace Negotiations by telling the different sides not to fight but to sit down and love each other. Our ideas are great, but we must be able to make them explicit, specific, and practical before we can expect other people to accept them. All of us want better teachers, and I'm sure some teachers wish they had better students, but it's what better teachers are and how to go about getting them that is the problem, just as how to go about ending the Vietnam war is also the problem.

How do we then formulate workable ideas? The answer to this question is first to be thoroughly acquainted with the problem; its causes, its history and all other ramifications—what solutions that have been proposed have worked and why—those solutions that have been proposed and have failed, and why. This last point we sometimes tend to forget. Most of our ideas are not new. Everyone knows how old the concept of worldwide peace through love is, and yet few of us have studied the numerous attempts of the different religions to put this concept into universal practice.

Another example is in foreign affairs. Many people feel the United States should first concern itself with its domestic problems and limit her involvement with other countries. What these people have forgotten, or don't know, is that the United States had such an isolationist policy before World Wars I and II. If, however, after we have gone back and studied the historical and present difficulties connected with our proposals, modify them, and try to put them into effect. Thus, before we attempt to tackle these problems we must be fully prepared, fully educated.

Yes, graduation is the beginning of our generation's actual involvement in society's affairs. Soon we will be grappling with the problems our society faces. But let us remember to work with each member of society, young and old, in solving these problems.

Parents, as you realize that you do not possess all of the answers, please also realize that you are not the only ones capable of providing these answers. And just as the older generation should listen to us and consider our proposals, let us always seek to be heard, but let us never cease to listen. Let us be fully informed before we confront the problems and let us have a will to solve them.

Last week, one of my teachers commenting on students finding fault with our educational system, asked the question, "Why not become teachers if you see faults you want to correct?" He was making two points. One, that students who have complaints about the educational system should also look at the problem from a teacher's point of view: and two, that if we honestly feel certain changes should be made in the system, we should be committed enough to become teachers and make those changes. These are points that apply to almost any profession in society. Therefore you who will become our teachers, go out and right those faults you see in our present educational system. You who will become our politicians, go out and tackle those local, national, and international political problems that face us. And let us all be fully committed to enter the arena of the world to fight and tackle these problems that will confront us. But when we enter that arena, let us not be so weak in foundation that we are immediately thrown out on our heads; nor let us be so weak in commitment that we are defeated within a minute. Let us be educated and prepared so that we stay in that ring, that we solidly come to grips with our foes, and that we win. And as we are struggling in that sometimes vicious but always challenging arena of the world, we will look back on our educational institutions. We will look back at Northwood High School and say "thank you."

So my fellow students, let us continue to dissent, but let us dissent with a purpose. Let us change, but let us change constructively. Let us challenge, but let us challenge with respect. Let us be moral in all our undertakings, but let us recognize our own imperfections. Let us withdraw from society's wrongdoings but let us not withdraw from society. Let us dream, but let us not hide in our dreams of halucination. Let us love one another, but let us love honestly.

My fellow classmates, I thank you for your cooperation during our senior year. I congratulate you upon graduating and I wish you success in the future. To our parents, teachers, and friends, the Northwood Class of '69 expresses its thanks, because without your understanding, your compassion, and sacrifices, many of us would not have reached this commencement day. Thank you very much.

OBSTACLES TO FREE TRADE

Mr. JAVITS. Mr. President, I ask unanimous consent that an unusually perceptive article written by Prof. Richard N. Gardner and published in the London Times be printed in the RECORD.

Professor Gardner, an internationally recognized expert and author of "Sterling-Dollar Diplomacy" examines the growing debate on Britain's application to join the Common Market and the alternate idea of a North Atlantic Free Trade Area—NAFTA—and the obstacles both in Europe and America to freer trade.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the London Times, July 29, 1969]

HURDLING THE TRADE BARRIERS

The United States and Britain have had two opportunities in this generation to move the world into a regime of free trade.

The first was during the war, when the British Government sought American approval for James Meade's plan for a Commercial Union. The second was in the early 1950s, when France and other Continental countries sought British and American endorsement of an automatic formula for leveling tariffs across the board.

Unfortunately, the United States Government rejected the first initiative, and both the British and American Governments rejected the second. Had either of these proposals been accepted, the developed countries of the non-Communist world would today be enjoying free trade, or something very close to it in the industrial sector.

The problems of reconciling British and American trade interests and those of other countries with a European Common Market would either not exist or would be much more manageable.

We have not, however, done too badly. When the Kennedy Round cuts are completed in 1972, tariffs among the industrialized countries will be down to an average of about 10 per cent. On a broad range of industrial products, we will be within striking distance of free trade.

Yet quotas, border taxes, discriminatory procurement policies and other non-tariff barriers (as well as some severely protective tariffs) continue to obstruct trade in important sectors. Agricultural protectionism continues unabated on both sides of the Atlantic. And even the Kennedy Round accomplishments are threatened by protectionist rumblings in the United States and elsewhere.

In trade policy, as in other matters, one seldom stands still. It seems likely that we will move in the 1970s toward the free trade goal or slip backward into self-defeating policies of economic nationalism. As a matter of practical politics, it will be difficult to hold on to past gains and overwhelm the last bastions of protectionism in the most sensitive industries unless there is some kind of "grand design" in which the major trading countries commit themselves to the progressive elimination of protection by a fixed target date.

We are fortunate, therefore, that bold spirits in Britain and the United States are now exploring the possibilities of doing this. Among the most significant contributions are the pamphlets that have been issued by the Atlantic Trade Study in Britain, some of which have recently been revised and published in a book edited by Professor Harry G. Johnson.[1]

The Atlantic Trade Study was launched at a time when General de Gaulle's veto on British entry into the Common Market looked as if it would last indefinitely. At least one of the authors represented in Professor Johnson's book considers the formation of a North Atlantic Free Trade Area as a superior alternative and others regard it as a viable approach if British entry is barred.

The participants in Nafta, as they see it, would be Britain, the United States, Canada, the Commonwealth, some of Britain's Efta partners, and possibly, Japan.

To this American observer, the concept of a Nafta excluding the E.E.C. does not seem

[1] *New Trade Strategy for the World Economy*, edited by Harry G. Johnson, London, Allen and Unwin, 1969.

fully convincing. The reason is not only that, with the passing of de Gaulle, the powerful political and economic case for Britain's entry into Europe justifies a further try. It is that American participation in a Nafta excluding the E.E.C. simply does not look like a political possibility.

The United States is a global power, and will be most skeptical of any trade design that excludes the major countries of the European Continent. The United States needs the participation of the surplus countries of Europe to rebuild its lost trade surplus and resolve its balance-of-payments difficulties.

Moreover, the last protectionist ramparts in the United States are unlikely to fall as long as there is substantial European protectionism against American products.

Fortunately, most of the authors in Professor Johnson's book, including Professor Johnson himself, seem to regard Nafta as synonymous with a broadly based, multilateral free trade initiative open to E.E.C. participation and operating within the framework of Gatt.

Such an approach might appeal to the United States as a way of eliminating, or at least substantially reducing, the margin of discrimination against non-participants in the E.E.C. and also as a way of preserving a measure of economic and political unity among America's major trading partners and political friends.

The hard questions, of course, are whether the E.E.C. would really be prepared to eliminate its common external tariff and whether there could be sufficient freeing of agricultural trade to persuade major agricultural exporters like the United States to offer free trade on industrial goods.

If the answer to either of these questions turns out to be no, it is doubtful that the United States will then form a Nafta without the E.E.C. For the reasons given above it will probably seek something less than complete free trade—the elimination of tariffs in certain sectors where there is a perceived general interest in trade freedom, and modest measures of liberalization in other areas.

The United States will not be ready for a bold trade initiative, in any case, until the Kennedy Round cuts are completed and until it liquidates the political and economic consequences of its tragic military involvement in Vietnam.

The once powerful liberal and internationalist constituency, now embittered, divided and inwardlooking, has to be rebuilt.

The dangerous rate of inflation must be reduced and the United States trade surplus at least partly restored. Hopefully by 1973 a United States Administration will have the freedom to opt for a bold trade initiative that the Nixon Administration does not have now.

That is four years off, it is true, but not so long in the perspective of history considering the magnitude of the objective.

We can use the four years to consolidate the accomplishments of the Kennedy Round, explore the possibilities of Britain's entry into Europe, begin the assault on nontariff barriers, reform our inadequate international monetary system, and lay the political and economic groundwork for a free trade initiative.

That should be enough to keep us busy.

GEN. JOHN J. PERSHING URGED RATIFICATION OF 1925 GENEVA PROTOCOL ON CBW

Mr. PROXMIRE. Mr. President, in 1926, 8 years following World War I, the first war in which chemical agents were extensively used, General of the Armies John J. Pershing sent a letter to the Committee on Foreign Relations warning of the dangers of such warfare, stating:

Chemical warfare should be abolished among nations as abhorrent to civilization. It is fraught with the gravest danger to noncombatants and demoralizes the better instincts of mankind. It is unthinkable that civilization would deliberately embark on such a course.

The Senate at the time was considering singing the 1925 Geneva protocol prohibiting the use of any kind of gas or bacteriological methods of warfare. It decided not to ratify that agreement in spite of General Pershing's argument. Instead, the Senate chose to forget about the issue, and the War Department began a massive program of research, development, testing, and storing of chemical-biological warfare agents. By the end of World War II, for example, the United States was far ahead of the Nazis in the development of the means of germ warfare.

Mr. President, the Senate has before it a resolution calling on the President to resubmit the Geneva protocol to the Senate for its advice and consent to its ratification.

I urge the passage of a no-first-use agreement—such as the Geneva protocol of 1925—to make absolutely clear the position of the United States and to forestall Soviet and other international propaganda about our failure to ratify such a declaration.

INTERNATIONAL TRADE PROBLEMS OF THE UNITED STATES

Mr. JORDAN of Idaho. Mr. President, an interview with Secretary of Commerce Stans, published in U.S. News & World Report of September 8 represents the best capsule summary I have seen of the international trade problems which we face as a nation. As the interview implies, the issue is complex. Our balance of payments, tax system, unemployment situation, agriculture, banks, Federal Reserve policy, manufacturing productivity, and diplomatic relations all have their part to play in the international trade picture, and all give rise to competing goals and methods. As the interview also implies, Congress, with its power over taxation and commerce, has the leading role to play in insuring that the United States retains its traditional preeminence in world trade.

Secretary Stans describes our present weakened position in world markets, saying that "in the broad range of manufactured goods, exporters in other countries have the edge on us." He also notes that our agricultural exports have not increased in recent years. The result, as some studies point out, is that the textile industry alone is threatened with the loss of 100,000 jobs a year from further increases in imported textiles and finished textile goods.

The remedies which the Secretary describes demonstrate clearly how archaic our past trade policy has been, for each of these remedies—preferential credit terms and tax rates for exporters, a value-added tax, adjustment assistance for domestic industries harmed by imports, effective "escape clause" legislation and voluntary import agreements—already forms a part of the bag of tools of other industrialized countries.

Most of these remedies would require congressional action. Together, they would serve to put to rest the rising waves of protectionism which, though stirred up by legitimate grievances, nevertheless threaten the standing of the United States as a trade leader. For some years, Congress has complacently taken our preeminent position for granted and, with a few exceptions, has turned down some choice opportunities to enact fruitful and progressive trade legislation. Now the complacent ones need to formulate for themselves an effective plan of action, lest our national trade policy become caught in the net of quotas, prohibitive tariffs, and trade wars. I believe that the administration has finally given us some responsible guidelines for this plan of action, and I expect our trade policy to become one of our chief matters of concern in the next session of Congress.

Mr. President, I ask unanimous consent to have printed in the RECORD the text of Secretary Stans' interview.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

INTERVIEW WITH MAURICE H. STANS, SECRETARY OF COMMERCE: IS UNITED STATES BEING SQUEEZED OUT OF WORLD MARKETS?

Q. Mr. Secretary, are you worried about what's happening in U.S. foreign trade?

A. Yes, I am. In the early 1960s, this country was going blithely along with a trade balance in its favor of 5 billion to 6 billion dollars a year—that is, the U.S. sold that much more abroad than it bought.

Now, quite abruptly, that favorable balance has almost disappeared. In 1968, it fell to less than a billion dollars, and there is no present sign that it will be any better this year, or even in 1970.

Q. Is that because sales of U.S. goods abroad are lagging?

A. No, that isn't the real problem. Exports have done fairly well in recent years. They have been increasing at a rate of 8 or 9 per cent a year. But imports have been growing far faster than that. Last year, for instance, they rose by 24 per cent, while our exports rose only 10 per cent.

Q. Does this have an impact on business and jobs in the United States?

A. Yes. Take the textile industry as an example. Some studies I have seen show that if imports of textiles and apparel continue to grow at the present rate there would be a loss of 100,000 jobs a year in this country. That would be serious, particularly because many of these displaced workers would be from the black minority. So we would face not only economic problems but social problems, too.

Q. Why has the gap been narrowing between what we buy from other countries and what we sell to them?

A. There are several reasons:

One, of course, is the inflation we have had in the U.S. the past few years. This has made it more attractive to import goods from countries where wage rates—and thus selling prices—are lower.

For another thing, Americans seem to like the idea of buying imported things. There is a little touch of glamour attached to products made abroad.

Also, other countries have modernized their manufacturing capabilities to the point where they can compete with us rather well in world markets.

Q. But aren't U.S. industries modernizing, too?

A. Yes. We are ahead in technology in some areas, but not significantly ahead in such

products as radios, TV sets, typewriters and some household appliances.

A great many consumer items, and some industrial products—including machine tools—are made as efficiently and as well in other countries as they are here, and often other countries have the advantage of lower wage costs.

There are only a few industries in which our technology is so far ahead of that of other nations that we can still outdistance them in world trade. Those fields include aircraft, computers, some chemical products. But on the broad range of manufactured goods, exporters in other countries have the edge on us, not only because of lower wages but because of tax and credit advantages.

Q. What about farm products—can we still compete on those?

A. Yes, to a great extent—but competition is getting stiffer. Agricultural products make up approximately 20 per cent of U.S. foreign shipments each year. That is certainly important to our farm population in terms of jobs and income. In recent years, the rate of agricultural exports has not been increasing.

Q. Are we losing our over-all position in world markets?

A. Yes, to some extent. It has been a slow downward drift.

Over the past eight years, the U.S. share of world export trade has fallen from a level of 21 per cent of the total to about 19 per cent.

Q. Does this whole trade problem threaten to get out of hand?

A. No, I don't see it getting to the stage of crisis. But we don't want it to get any worse.

In the Department of Commerce, we are taking steps to restore our trade balance, and we hope that over the next four or five years we can rebuild it significantly.

Q. Will that be done by boosting exports—selling more goods abroad—or by asking Americans to cut down on what they buy overseas?

A. By increasing exports. We do not believe that the answer to the trade gap is to hold back on imports of foreign products into this country, except in highly unusual cases where special factors apply.

We must induce more American companies to realize that there is profit to be made by exporting, and that the feared difficulties of language, foreign exchange and differing trade customs are easily surmounted. The Department of Commerce and the State Department are both able to be of real help in guiding our producers into foreign markets.

Q. Do we have to control inflation as a first step?

A. That is vitally important, of course, but it is only one element in the picture. If we can slow down the inflationary spiral, that will automatically help to keep imports in check, because domestic prices will be more competitive. This would also help to widen our range of exports.

But we need to do much, much more than that. For example, this country needs a better means of financing exports. U.S. exporters today are not at all competitive in the financing terms they can offer buyers in other countries—and it is essential that they should be competitive. In our Department, we are spending a lot of time on this problem, working with Henry Kearns, the president of the Export-Import Bank, and with the Federal Reserve Board.

Q. What are other countries doing to help increase their own foreign trade?

A. Among other things, they are providing larger amounts of credit for their exporters for longer periods of time, and often at lower interest rates than are available to exporters in the U.S.

Q. Does this mean that governments of some countries subsidize exports?

A. Yes, in some cases. There is a tendency abroad to hold down interest rates on money that finances exports, regardless of the movement of money rates in their domestic economy.

In the U.S. we don't do that. Export-financing costs here follow the movement of our interest rates, so at a time like the present, when interest rates are the highest in years, U.S. companies that want to sell abroad are at a deep disadvantage.

Q. Should we follow the pattern set by our competitors and subsidize interest rates for American firms that sell things abroad?

A. I think we have to be more competitive with other countries, and if that means subsidizing interest rates, then we should find a way to do it.

Q. Should we also provide tax credits for exporters?

A. That is a matter we are studying. There are several ways in which our Government could help exporters through direct tax credits or tax deductions. Some of these steps could be taken without any new laws; others would require action by Congress. We are not prepared to say yet which might be the most feasible. Before the end of the year, however, we are hoping to find ways in which the tax system can be used to benefit exporters.

HOW BORDER TAXES HURT

Q. Do U.S. exporters run into problems from taxes in foreign countries where they sell goods?

A. Yes. A particular problem is the growth of border taxes abroad—taxes on goods moving into a country. An American company that wants to market its products in a country with a border tax has to pay that levy if it wants to make the sale.

In many European countries, these border taxes are a reflection of value-added taxes, imposed at various stages of the manufacturing process. There are plans now in the Common Market to get those European countries together on a uniform value-added tax on all manufactured goods, at about 15 per cent of the total price of the goods. That tax would apply to citizens of the countries involved. But U.S. exporters who wanted to sell within the Common Market would have to pay the same 15 per cent when their goods entered a member country, even though they already were priced to include our domestic taxes.

The disadvantage faced by an American producer is even more evident in dealing with a third country. A competitor in a country with a 15 per cent border tax receives a refund of that tax from his government on all exports to another country. The American company gets no such refund of the domestic taxes it pays.

All of this is the result of a major difference between tax systems. In the U.S., we collect most of the taxes by direct levies on corporations and individuals. In Europe, a high proportion of revenues is collected on merchandise, and it is these so-called indirect taxes that are reflected in the border-tax rates that are assessed on imports and rebated on exports.

We in the Commerce Department are coming to the conclusion that there should be serious study of a value-added tax in the U.S. as a partial substitute for other types of excises and income taxes.

Q. Have you made such a recommendation?

A. We have not as yet. But we want to study this possibility further with the Treasury Department to be able to make a recommendation, pro or con, at an early date.

OTHER HURDLES FOR THE UNITED STATES

Q. Besides taxes, are there other things that cut the flow of U.S. goods into foreign countries?

A. Yes, besides tariffs there are a great many kinds of nontariff barriers that restrict trade.

Q. What are some of them?

A. One example is the restrictions other countries put on the purchases of products by their government agencies or by nationalized industries. These tend to effectively shut out American goods.

Then, in addition, many countries put difficult technical requirements on imports for the purpose of regulating health or safety. In some cases, foreign governments actually subsidize exports by one means or another. And there are hundreds of other nontariff barriers that impede our exports.

Q. Do we in the U.S. have some of these nontariff barriers, too?

A. Yes, we have some restrictions on imports that are highly criticized by other nations. The "Buy America" law is one. But this Act specifies very clearly the exact measure of disadvantage a foreign company has in selling to the U.S. Government or its agencies. No other country has the equivalent of this law, and in most countries such transactions are foreclosed to American producers by local administrative procedures.

By and large, we do not have anywhere near the trade restrictions that other countries have, and that makes for a lack of reciprocity in our trading relationships.

Q. In your recent travels abroad trying to get trade barriers lifted, what attitudes have you found?

A. Governments of most countries agree that these bars to trade ought to be eliminated, or at least considerably reduced.

On behalf of the U.S., I have proposed what we call an "open-table policy"—a suggestion that we put all the facts about trade barriers and restrictions out in the open and try to find ways to reduce their number and their impact. In almost every case, this proposal has been welcomed, and steps are under way now to set up meetings at which these things can be explored.

Q. What about the Japanese? Are they cooperating?

A. The Japanese Government has not endorsed the principle as wholeheartedly as some other countries. Japan has more than 120 different quantitative restrictions on imports. Those restrictions are in violation of their commitment under the General Agreement on Tariffs and Trade—the so-called GATT agreement.

On the other hand, our own trade difficulties with Japan have been related in large measure to timing. We have been pressing them for some time to cut trade barriers and to make it easier for our people to invest there. They have set up a timetable, but it is much too slow, particularly since our trade balance last year was a negative 1.1 billion dollars, and probably will rise to a negative 1.5 billion this year.

On the positive side, for the long term, I believe the Japanese are slowly coming to the conclusion that their position as a major world power requires them to assume a greater degree of international reciprocity, and thus to modify some of their trade restrictions.

Q. Since a major trade worry now centers on textile imports from Japan, are you proposing some special kinds of voluntary import restraints?

A. Yes. We have proposed that an international agreement be negotiated with key exporting countries as a solution of this problem. Our concern over textile imports involves not only Japan but a number of other countries in the Far East and elsewhere. President Nixon and his Administration recognize it as a unique type of problem that requires a special approach. The situation is this:

For certain kinds of textiles and apparel, mostly from synthetic fibers and wool, the U.S. is the only open market in the world. Every other major nation has put restrictions on imports of those items. As a result, the producing countries all are directing their

output toward the U.S., and are increasing their capacity at an outstanding rate. This has brought a tidal wave of imports that the domestic industry simply hasn't been able to combat. Just on apparel from synthetic fibers, U.S. imports from Japan were up 51 per cent in the first six months of 1969, compared with the same months last year.

Q. Has this posed a critical problem for textile manufacturers here?

A. Yes. The labor organizations are greatly exercised at the loss of employment and the necessity for closing plants in some communities. And producing companies are finding their profit margins shrinking. Wage rates here are several times as high as those of our large overseas competitors.

Q. What can be done about it?

A. We think it can be handled by an orderly system of marketing. We are telling textile producers in Japan and elsewhere: "We do not ask you to reduce the level of your shipments ot the U.S. We are willing to accept the 1968 level and even permit an increase, year by year, as our total market grows. No one in your country need lose a job and no one in the U.S. need be forced out of work."

In other words, we are seeking to hold imports to a moderate rate of growth, rather than permitting the massive increases that have been taking place in the past few years.

Q. Why not work through GATT and get the countries that have put barriers on imports of textiles across their own borders to reduce those barriers, so the U.S. doesn't have to absorb the whole flood?

A. None of the countries we have talked to is willing to do that. They feel that a degree of protection is necessary for their own industries.

Here, obviously, is a perfect example of the unworkability of an absolute free-trade policy. There is no really free-trade country in the world. Every nation has some barriers to trade, over and above tariff walls, to protect what it considers its long-term interests.

So the U.S. has to face the textile problem on that same basis, and find a way to moderate the rate of imports. This unusual situation does not contradict President Nixon's basic belief in a freer trade policy.

Q. Are there other products besides textiles where manufacturers are demanding protection from foreign imports?

A. Yes. Congress has been getting complaints from producers of shoes, steel, electronics, flat glass and other items. In some of these instances, adjustments to the import problem might be made by the industries concerned. But I believe that we need better legislation than now exists to help companies that are clearly harmed by excessive imports.

Q. Isn't there an "escape clause" in existing law that is supposed to help companies that are being hurt?

A. Yes, but that provision is ineffective. The law is so tightly written that no company up to now has been able to qualify for aid.

Q. What changes do you propose?

A. The President should be given more authority to adjust tariffs in such cases, and access to financial and other assistance should be liberalized for a company and its workers who are clearly being harmed by excessive imports.

Q. More and more American companies are setting up plants in other countries to manufacture goods for the foreign market. Doesn't income from those subsidiaries help offset a falling-off in exports from the U.S.?

A. Yes, to a degree—and this source of income will grow increasingly significant as time goes on.

However, many American companies with subsidiaries overseas that were originally created just to supply foreign markets now are finding it profitable to send some of their merchandise back to the United States. In the future, it may be necessary for more U.S. companies, in their own interest, to move into the low-wage areas of the world and produce for the U.S. market. This is a matter of great concern to us, because it means exporting jobs to other countries.

Q. How much has that meant so far in taking jobs away from American workers?

A. There is really no way to document that or quantify it. We are in an expanding economy with high employment, so it is difficult to measure this kind of loss. But, as a result of more and more U.S. companies moving into the low-wage areas of the world, we do know that we are suffering a definite loss of job opportunities—now and for the future.

WHERE EXPORTS WILL GROW

Q. In what fields of U.S. industry do you foresee the greatest growth of exports in days ahead?

A. We have identified 17 categories of American manufacturing in which we see the greatest opportunity for export growth. At the top of this list is commercial aircraft, in which the U.S. has pre-eminence in the world. Next are computers and high-technology components in electronics. Chemicals are high on the list, and there are others, such as nuclear power plants, telecommunications systems, instrumentation and measuring devices, materials-handling equipment, and so on.

Q. What else is our Government doing, in addition to trying to increase exports, to improve our balance of payments with other countries?

A. The Commerce Department has the responsibility in two other areas which directly affect our payments balance. One has to do with travel, the other with investments by U.S. companies overseas.

In the case of travel, the U.S. presently has a "travel gap" of about 2 billion dollars a year. That is the amount that Americans spend in other countries in excess of what people from other countries spend here.

We are pushing an active campaign to induce more people abroad to visit the United States. We are expanding the program this year to induce travel agencies to offer flat-price package and group tours to foreigners to visit the U.S., and we are trying to get business and professional groups from other countries to hold conventions in this country.

In the case of direct control over foreign investments, we recognize that this is not a desirable long-range program. We want to eliminate it. We are continuing it now only because of the current stringency in the balance of payments.

Under present controls, the amount of American investment that will be permitted overseas in 1969 is about 3.35 billion dollars. That is in terms of actual net investment, which will be augmented, of course, by money that can be raised by American companies in foreign markets.

This limit is not a severe impediment to business in the present economic climate. As soon as the balance-of-payments situation permits, the Administration will want to remove the remaining controls on overseas investment.

Q. In the meantime, should measures be taken to restrict American travel abroad?

A. As you know, the Johnson Administration proposed some restrictive measures, and even taxes on spending by U.S. travelers abroad. President Nixon has decided against any proposals of this type.

We would very much like the American people to see their own country first. But, beyond exhortations of that type, we have no plans to make it more difficult for Americans to travel to other countries.

THE INTERNATIONAL EYE FOUNDATION

Mr. HARTKE. Mr. President, a unique charitable organization, one of the most valuable in the United States, is the International Eye Foundation, with headquarters located in the Sibley Memorial Hospital, Washington, D.C. In the words of its executive director, Mr. James Jay Lawlor, the IEF is dedicated to the promotion of peace and better understanding through the prevention and cure of worldwide blindness. In its work toward this great end the foundation receives no Government funds of any sort, but depends entirely upon the generosity of individuals.

In order that Members of Congress may become newly or better acquainted with the activities of the IEF, I ask unanimous consent that a statement of its history and purpose and its annual report for 1968–69 be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE INTERNATIONAL EYE FOUNDATION

HISTORY AND PURPOSE

The International Eye Foundation is the result of an expanded organization of the International Eye-Bank, to provide training in the latest eye diagnostic and surgical techniques for young American and foreign ophthalmologists. In answer to many requests, and as a result of the observations of Doctors Tom Dooley, Peter Commanduras and J. H. King, Jr., the International Eye-Bank was established in 1961 to fulfill an urgent need. Eye tissues were becoming available in the United States for the treatment of the blind who would benefit by eye tissue transplants, but no tissues were available in many other countries. This free service to provide ocular tissue to foreign hospitals and eye surgeons has been successful in the prevention and treatment of blindness in areas where no help was formerly forthcoming. During times of emergencies, such as have occurred recently in the Near East and Viet Nam, special efforts are made to provide corneal tissue for military and civilian casualties of war. The international Eye Foundation recently established an eye-bank for this purpose at the Vinh Long Hospital near Saigon. Twenty-five others have been formed throughout the world.

It became obvious soon after the establishment of the eye-bank that a much broader program was not only necessary, but in demand in practically every area of the free world. Many newly emerging countries do not have the benefit of trained medical and para-medical personnel, especially in the highly specialized fields of eye surgery and eye-banking. As a result, the International Eye Foundation program has been expanded to include fellowships, surgical teaching teams and visiting professor programs throughout the world. One facet of the reorganization has been the formation of a prominent lay board of which former President Dwight D. Eisenhower is the Honorary President.

The International Eye Foundation is dedicated to the promotion of peace and better understanding through the prevention and cure of world-wide blindness. Of the more than 15 million known blind throughout the world, over one-fourth could be cured or helped to a great degree by the services of the International Eye Foundation; thousands have already returned to a useful place in society. This is not a "missionary" program, but is an effort to teach others to become self sufficient in proper eye care and the prevention and treatment of blindness.

The general plan of the International Eye Foundation is to establish eye units in areas, including the United States, where the need for the prevention and treatment of blindness is of paramount importance and where present facilities are inadequate. Most of

these areas are those of low economic status where there are few eye specialists, nurses, technicians and trained administrative personnel. The "People to People" philosophy of assistance initiated by President Eisenhower is followed as closely as possible.

Teaching is the primary aim of the International Eye Foundation, geared to the reduction of blindness by raising the standards of eye care. These programs are primarily to encourage self-help and are designed to phase out after a specified period of time. I.E.F. doctors go only where they are invited.

Assistance is offered in the establishment of local eye-bank facilities, with new preservation methods. In some countries, this is augmented by the presence of eye specialists from the U.S.A. in residence from periods of several months to a year or more. Ophthalmologists in their last year of training, or those who have recently completed training, are assigned for a minimum of three months. These men work in a university eye clinic, in most instances, under the authority of the senior local ophthalmologist. Visiting voluntary senior professors supplement the program by teaching for two to four week assignments.

The young men are sponsored by the International Eye Foundation fellowships for travel plus a small monthly stipend. The host country furnishes housing, local transportation and food (or a food allowance).

Fellowships are assigned to countries that desire to send a young ophthalmologist to the International Eye Foundation in Washington to study eye-banking methods and new techniques in ophthalmology. These individuals are selected by their local ophthalmological societies for a tour of three months. Travel, a small monthly stipend, and in some cases, housing, are provided. These are financed by private fellowship donations to the International Eye Foundation and funds raised through the efforts of the "Foresight" club.

A research program is conducted to discover the causes and treatment of blinding diseases and to upgrade eye-banking technics and processes for the preservation of human ocular tissues. Clinics and conferences are held at the headquarters of the International Eye Foundation and are attended by local and foreign ophthalmologists, fellows and eye residents. A research fellowship is sponsored by the International Eye Foundation on a yearly basis.

In cooperation with the 60 members of the Eye-Bank Association of America, fresh and preserved eye tissues are shipped to hospitals and eye surgeons who cannot obtain them locally. United States and foreign ophthalmologists, technicians, nursing and administrative personnel are offered free courses in eye-banking, preservation, nursing care and administration at the Foundation headquarters in Washington.

The International Eye Foundation structure consists of a Medical Director, Associate Medical Director, Director of Research and Training and Executive Director. The Medical Advisory Board lists many well-known United States ophthalmologists interested in international medicine. The Board of Directors is made up of prominent laymen, interested in the concepts of the International Eye Foundation, who direct its development and recommend measures for fund-raising. Reports are submitted to sponsors of fellowships and other contributors.

ANNUAL REPORT, 1968–69

Fellowships . . .

During the past fiscal year, renewals were received for the Bunker, Hermann and Carrigan Fellowships, and a new fellowship was established in the name of Walter Atkinson, M.D. Program areas and fellows serving included:

1. El Salvador: The Hermann Fellowship provided funds for four young American ophthalmologists from Washington University, St. Louis, Missouri to teach, operate and continue their surgical training at the University Hospital in El Salvador under the direction of Professor Humberto Escapini. Each of the following men served for a period of three months: F. Thomas Ott, M.D., George Bohigian, M.D., Mitchell Shapiro, M.D. and Richard E. Lernor, M.D.

2. Karachi, Pakistan: The McCormick and Bunker Fellowships provided funds for the training of two young ophthalmologists at the Spencer Eye Hospital, Stephen P. Shearing, M.D. of San Francisco and G. David Wiltchik, M.D. of Brooklyn. Doctor Shearing and Doctor Wiltchik each served in Karachi for a period of six months and both participated in an "eye camp" program where hundreds of destitute blind patients were operated upon.

3. Haiti: The Fitzgerald Fellowship at Port de Paix, Haiti, provided training for Fred Slaughter, M.D. of Bristol, Tennessee and G. David Wiltchik, M.D. of Brooklyn, New York. Both men served at the Immaculate Conception Hospital for six months.

4. Puerto Rico: From January to April 1969, the International Eye Foundation, utilizing funds from the Bunker, Hermann, Atkinson and Smith, Miller & Patch Fellowships, granted fellowships for ten Latin American ophthalmologists to study the Basic Sciences of Ophthalmology at the University of Puerto Rico in San Juan, Puerto Rico. This course was formerly sponsored by a grant to the I.E.F. from the Agency for International Development, however, these funds were not available during the past year. As a result, it was necessary for the I.E.F. to provide $10,000 from its fellowship accounts for this purpose. The men who were sponsored, and their countries of origin are as follows:

Dr. Carlos Alberto Antonini Romero, Argentina.
Dr. Oscar Blacutt López, Bolivia.
Dr. Francisco J. Vázquez Gómez, Colombia.
Dr. Ernesto Gómez Sánchez, Dominican Republic.
Dr. José E. Marmolejo Arache, Dominican Republic.
Dra. Esperanza Mungula Salina, Nicaragua.
Dr. Silvio Colman Romero, Paraguay.
Dra. Renée Villaverde Samaniego, Peru.
Dr. Juan H. Berrios Rivera, San Salvador.
Dr. Juan Espinoza Camacho, Venezuela.

Alfredo Levisohn, M.D. was provided a fellowship to assist in the lectures given in the Basic Science Course during February. Doctor Levisohn is a senior resident in ophthalmology at Georgetown and was quite valuable to the course because of his ability to translate lectures into Spanish.

Serving with the International Eye Foundation on a fellowship from the Heed Foundation of Chicago was Ann Irish, M.D., a graduate of the Georgetown University program. Doctor Irish spent the entire year with the I.E.F. It was agreed that following her fellowship, Doctor Irish would remain with the I.E.F. as Director of Research and Training. In order to investigate locations for future Eye Foundation programs, Doctor Irish was requested to make a survey of several eye institutes in India, Pakistan, Ceylon, Egypt and Tunisia. As a result of her trip, it is anticipated that new programs will be established by the I.E.F. in India and Tunisia as soon as the necessary funds are available.

The Carrigan Fellowship provided three month's training at the Foundation headquarters in Washington and at eye centers in New York, Baltimore, Philadelphia, Duke University and the University of Florida for Roberto Fernandez, M.D. of Argentina. Doctor Fernandez spent six weeks studying eye-banking, corneal preservation methods and cornea transplant surgery at the I.E.F. headquarters, and the rest of his time was devoted to working in the various research projects which are being performed at the above-named centers.

This year, for the first time, a fellowship was granted to a social worker serving the blind. Mr. S. H. Siddiqui of the Spencer Eye Hospital in Karachi, Pakistan was sponsored by the Bunker Fellowship for study at the Columbia Lighthouse for the Blind in Washington, D.C. Mr. Siddiqui spent three months on case work in Washington, D.C. and had one month's training at the Lighthouse in New York City.

Juan Berrios, M.D. of El Salvador was provided a partial Hermann Fellowship to supplement his training at Washington University in St. Louis, Missouri.

The Bunker Fellowship provided funds for the purchase of a Jenkel-Davidson Clini-Camera to be used in the Corneal Clinic at the Sibley-Georgetown Corneal Center for close-up ocular photography. The Hermann Fellowship and a grant from Ethicon, Inc., provided new eye instruments and sutures for use in the I.E.F. programs in El Salvador and Haiti. Photographic equipment to assist in the training of fellows at the Foundation headquarters was purchased with funds from the Atkinson and Carrigan Fellowships and several new eye texts for the I.E.F. library were provided through the Bunker and Hermann Fellowships.

Mr. Grover Hermann and Mr. George M. Bunker, long-time sponsors of fellowships for the I.E.F., were both honored by the Pan American Association of Ophthalmology for their efforts to provide better care and treatment for the blind throughout the world.

Tissue shipments

During the past year, there was a marked shortage of eye tissue available for cornea transplant surgery in the United States. For this reason, it was possible for the International Eye Bank to send only 25 pairs of eyes for penetrating cornea grafts to foreign hospitals and surgeons. However, 316 preserved corneas, 42 preserved sclera and 18 specimens of vitreous were shipped. Corneas and scleral tissue were provided to the Vinh Long Hospital in Viet Nam for the treatment of both civilian and military casualties of the Vietnamese war. Other supplies and equipment were provided for the eye-bank there which was established under I.E.F. auspices in 1966. Supplies and equipment were also donated by the I.E.F. to help establish eye-banks in Quito, Equador; Buenos Aires, Argentina and Bilaspur, India.

A new eye shipping container was developed by the I.E.F. which maintains the proper temperature for shipment of eye tissue for 72 hours. The container was thoroughly tested, both in the laboratory and in the field, and has proven completely satisfactory for eye shipments to any part of the world. This multi-use container is inexpensive enough to be considered disposable for overseas use. It is felt that most eye-banks will begin using this "eye shipper" regularly in the near future.

A detailed report of the activities of the International Eye-Bank since its inception in 1961 is attached.

Surgical teaching teams

A team consisting of A. B. Rizzuti, M.D. of Brooklyn, New York; Anthony Della Rocca, M.D., White Plains, New York and Trimble Johnson, M.D., Atlanta, Georgia, traveled extensively through the Far East teaching and operating under the auspices of the I.E.F. in February and March. Areas in which the team operated were Karachi, Pakistan; Djakarta, Indonesia; Denpasar, Bali and Singapore. These surgeons were also honored guest lecturers at eye conferences being held in Djakarta and Singapore. An eye-bank to serve the South Pacific was established at this time in Singapore, with the support of the I.E.F.

Corneal conference

The First annual Corneal Conference sponsored by the I.E.F. Corneal Center was held at the Foundation headquarters, Sibley Memorial Hospital, Washington, D.C., on April 9 and 10, 1969. The conference was attended by 45 ophthalmologists and eye residents from the Washington area. Among the eleven well-known guest lecturers were two outstanding South American professors, Enrique Malbran, M.D. and Juan Arentsen Sauer, M.D. The Chairman of the Conference was John Harry King, Jr., M.D., Medical Director of the Foundation. Also attending the lectures, at no fee, were a number of ophthalmic nurses, technicians and operating room assistants from the Washington area.

Corneal center

The Corneal Center, co-founded in 1968, by the International Eye Foundation, Sibley Memorial Hospital and Georgetown University was responsible for examination and treatment of 62 patients under the direction of A. M. Reynolds, Jr., M.D., Chairman of the Department of Ophthalmology at Sibley Memorial Hospital, J. H. King, Jr., M.D. and Ann Irish, M.D.

Research

The International Eye Foundation research program involving the use of collagen was initiated at the Veterans' Administration Hospital in Washington. Doctor Ann Irish is devoting one-half of her time to the work which was begun by Doctor King in 1964. A small research grant has been made available by the Veterans' Administration to help support this important project. Additional funds have been applied for in order to expand the research program during the coming year.

Tissue distribution center

Plans for an eye-bank teletype network have been formulated by the I.E.F. which would provide instant communication between ten major regional members of the Eye-Bank Association of America. The network would greatly increase the efficiency of communications regarding available tissue, emergency needs and methods of shipment of tissue throughout the United States. The system would be valuable for not only the distribution of eye tissue, but also other human tissue used for transplantation, including heart, kidney, blood vessels and inner ear. An application to provide funds for a pilot study for the "Tissue Distribution Center" was submitted to the National Institutes of Health, however, the application was rejected and funds are still being sought for this most important project.

Eye test charts provided free

An eye test chart developed by the Prevention of Blindness Society, Washington, D.C. was sent by mail from the International Eye Foundation to over 35,000 families throughout the country during the spring of 1969. The test charts are designed to indicate eye problems such as amblyopia in young children. Early diagnosis of such problems can quite often save the eyesight of a child. The chart is designed to be used by the mother in the home with the recommendation that if problems are indicated, the child should be taken to an ophthalmologist for further examination. The I.E.F. brochure and a donation request were included in the mailing. A grateful response was received by the Foundation for this service, which will be continued on a larger scale when funds are available.

Eye dance

The 1969 Eye Dance was held at the home of Mr. and Mrs. George M. Bunker of Spring Valley, Washington, D.C. Due to the sudden illness of President Salazar of Portugal, the dance was relocated at the last moment from the Embassy of Portugal to the Bunker home. Thanks to the superlative effort put forth by the Ladies Committee, a profit of $4,500 was received to help support the I.E.F. programs.

Christmas cards

A profit of over $700 was realized from the sale of Christmas cards in 1968. The Foundation will have cards available for sale each year as a result of the success of past efforts.

Black tie dance benefit

A benefit dance for the I.E.F. was held in May of 1969 at Marwood, the Gore estate, in Potomac, Maryland. The dance was sponsored by the Black Tie Club of Washington and was highly successful. As a result of the dance, the Black Tie Club presented $5,000 to the I.E.F.

Foresight luncheon

A Ladies Committee, chaired by Mrs. John F. Kramer and Mrs. William D. Clark, both of Bethesda, was formed in April to sponsor the first annual Foresight Luncheon and Fashion Show for the benefit of the I.E.F. The luncheon will be held on September 10, 1969, at the Mayflower Hotel in Washington, D.C. The ladies hope to sell 900 tickets for the luncheon to raise a minimum of $5,000 for the support of the Eye Foundation programs. Miss Anita Colby, a prominent member of the I.E.F. Board of Directors and well-known fashion consultant, has agreed to serve as Mistress of Ceremonies. Tickets are available through the I.E.F. headquarters at Sibley Memorial Hospital.

Public service announcements

The Eye Foundation owes a debt of gratitude to Miss Anita Colby and Miss Barbara Walters of New York City and Mr. Al Ross of Washington for their generous cooperation in producing radio announcements for the Foundation. These announcements were sent to 300 radio stations throughout the country during the past year and, as a result, many letters of inquiry and offers of support were received. The announcements are played free of charge by the radio stations on public service air time.

A T.V. announcement is being planned, and a script has been sent to Mr. Bob Hope with the request that he donate his services for this one-minute announcement.

A documentary film is also being planned with production to begin as soon as funds are received for financing. The total amount needed for the documentary is $40,000.

AID accreditation

At the request of the Accreditations Committee of the Agency for International Development, three members of the Foundation appeared before their April hearing. Mrs. Florence S. Mahoney; Doctor King, Medical Director, and Mrs. James J. Lawlor, Executive Director of the I.E.F. testified regarding the Foundation's programs in order to have the I.E.F. recognized as an accredited voluntary agency providing medical services abroad. One of the prerequisites of the Committee was that the Foundation be incorporated. This was accomplished in the District of Columbia on May 25, 1969. Accreditation was received early in July.

New York office

The Foundation has rented space in New York City at 135 East 54th Street for an office and department which will be used by the New York Fund Raising Committee and I.E.F. staff, and also to house I.E.F. fellows who are sent to New York to study at various eye institutes as part of their fellowship program.

New quarters

Additional space has been provided to the Foundation on the sixth floor of Hayes Hall at Sibley Memorial Hospital. Approximately three times as much floor space as our old unit has been renovated for both administrative offices and laboratory area. This has been provided at no additional charge by the administrators of Sibley Hospital, and plans are currently under way to provide space for research animals in the animal quarters at the main hospital building. This will allow the Foundation to increase its research activities and relocate some of the programs which are being carried out at other institutions.

New board members

During 1969, the following new members were added to the International Eye Foundation Board of Directors:

Mr. John H. Meier, Hughes Nevada Organization, Las Vegas, Nevada.

Mr. James F. Ryan, Georgetown Research and Development Corporation, Washington, D.C.

DRUGS FROM THE SEA

Mr. FONG. Mr. President, in its comprehensive report to the President and Congress earlier this year, entitled "Our Nation and the Sea," the Commission on Marine Science, Engineering, and Resources called attention to the need for exploration for new food and drug resources from the oceans.

Last month, a conference to discuss this particular subject was held at the University of Rhode Island. Its sponsors were the Marine Biology Committee of the Marine Technology Society, Earl Herron, Jr., chairman; the College of Pharmacy, University of Rhode Island; and the Bio-Instrumentation Advisory Council of the American Institute of Biological Sciences.

Out of this conference came strong endorsement of S. 1588, introduced by the Senator from Washington (Mr. MAGNUSON) and cosponsored by the Senator from Rhode Island (Mr. PELL) and myself. The bill would establish a National Institute of Marine Medicine and Pharmacology in the National Institutes of Health.

The endorsement is gratifying because it underscores the need for enactment of the legislation and emphasizes the findings of the Marine Science Commission, when it stated:

> Practically no research is presently being conducted by government or industry on marine bioactive substances as possible sources of new commercial pharmaceutical products. . . . So far, less than one per cent of all the sea organisms known to contain biologically active materials have been studied.

The Commission, therefore, specifically recommended the establishment of a National Institute of Marine Medicine and Pharmacology "to effect a methodical evaluation of the sea as a source of new and useful active substances."

It is gratifying, also, that a general publication like Time magazine has devoted a full page of text and illustration to the subject of "Drugs From the Sea." I ask unanimous consent that the Time article of September 5, 1969, be printed in the RECORD at the conclusion of my remarks.

My State of Hawaii has a keen interest in marine medicine. The University of Hawaii has pioneered in various aspects of research of the sea and its products with a view toward advancing scientific knowledge which can be applied toward the causes, diagnosis, prevention, treatment, and control of physical and mental diseases and impairments of man.

Several groups of investigators at the

University of Hawaii are studying various marine biomedical products in the seas about Hawaii and in the tropical Indo-Pacific.

I have been advised that the many biomedical scientists at the University of Hawaii view with great satisfaction the proposed legislation to establish the National Institute of Marine Medicine and Pharmacology, as the institute has objectives which are consistent with those endorsed by the Hawaii State Legislature in setting up the Pacific Biomedical Research Center in 1962.

It was recognized then that the University of Hawaii could most usefully capitalize on the adjacent marine environment for undertaking studies of organisms which are of direct medical usefulness to man in that they yield drugs, and also that many marine organisms provide simple models of the more complex systems operating in man and the higher vertebrates.

In this context, for example, it is recalled that the whole range of disorders known as cancer involve the rapid and uncontrolled division and replication of cells. Some of the most sophisticated studies of cell division in the world are taking place now in the Pacific Biomedical Research Center where a group of investigators are using the sea urchin egg as their experimental tool; the sea urchins are collected right off shore from the Waikiki laboratory.

In addition to the work at the Pacific Biomedical Research Center, the Hawaii Institute of Biology at the University of Hawaii has been investigating marine toxins, especially of fishes, in a continuing program over the last decade.

The major research effort in the poisonous fish program has centered on ciguatera, the most common and widespread form of blood poisoning from eating fish. It is found in tropical regions throughout the world and involves a great many species of reef fishes.

More than 28 scientific publications have resulted from the poisonous fish investigations of the University of Hawaii.

Another group of investigators, in the school of medicine, is systematically searching for various pharmacological agents in the Pacific and Asian tropics, several of which come from the tropical seas.

A professor in the department of botany is studying chemical products of biological activity produced by Philippine algae, while several in the department of microbiology are devoting part of their search efforts to the study of products and activity of various algae, fungi, and bacteria.

In the department of chemistry, several faculty members are working on the elucidation of the molecular structure of marine biological products.

As an institution oriented toward the biologically rich tropical sea, the University of Hawaii has a deep interest in the progress of S. 1588, now pendng in the Senate Committee on Labor and Public Welfare. If S. 1588 is enacted and funded, the University of Hawaii would be in a position to move to the forefront of institutional research in marine medicine and pharmacology.

I am confident that other universities, in their own marine setting, would advance also if given the impetus possible with the establishment of the proposed National Institute of Marine Medicine and Pharmacology.

For the sake of the health and well-being of people everywhere who would benefit from marine medicine and pharmacology, I urge that S. 1588 be given early and favorable consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRUGS FROM THE SEA

Researchers will go anywhere and test anything in the hope of finding medicines to use against diseases and disorders that by present methods are either difficult to treat or incurable. One of their most fortuitous finds was made in a Peoria (Ill.) market, where they scraped from an overripe cantaloupe the parent strain of mold that fathered millions of doses of penicillin. Now that most of the world's land surface has been fine-combed for microbes that might yield new antibiotics, the scientists are turning to the sea. One useful drug, cephalothin (which is effective against many germs that are resistant to penicillin), has already been developed from a mold that was recovered near a sewer outlet in the sea off Sardinia. The search, recently intensified, extends from the Sea of Japan to the frigid waters of Antarctica, from the tepid shallows of coral reefs in the Caribbean to the far-western Pacific.

Last week 202 specialists in half a dozen sciences met at the University of Rhode Island for a roundup conference on the progress and problems connected with mining the seas for drugs. Almost to a man, they complained of lack of funds—a shortage intensified by recent cutbacks in governmental grants—and proclaimed their support of Senator Warren Magnuson's bill to set up a National Institute of Marine Medicine and Pharmacology. In speech after speech they pointed out that the vast majority of all known forms of animal life are found in the sea, which they expect to yield a proportionately rich harvest of medically useful chemicals. Dr. Paul R. Burkholder, famed for his discovery of chloramphenicol[1] (in a Venezuelan soil mold) more than 20 years ago, prodded the pharmaceutical industry to speed up its testing of sea-spawned compounds that show antibiotic promise, a number of which he himself has isolated.

Esoteric Substances. In fact, six drug companies were represented at the Rhode Island conference. Some are already active in the field, testing such esoteric substances as paolin I, an antibacterial compound, and paolin II, an antiviral agent. Both were extracted from the juices of the abalone by Dr. Chen Pien Li at the National Institutes of Health. Similar extracts from quahaugs (thick-shelled clams) have been found to be active against some forms of cancer in mice. So far, chemicals from shellfish appear to have only moderate potency, but the sea offers an almost infinite variety of other potential sources, such as algae, corals and sponges, and the bacteria that live in or on them.

Marine pharmacologists have extracted alginic acid from algae and seaweeds, and have made salts (alginates) with a wide variety of medicinal properties. Some help tablets to disintegrate more rapidly in the stomach. Others form the basis of anti-clotting drugs and of preparations to control surface bleeding. Sodium alginate has the exciting ability to reduce man's absorption of radioactive strontium by about 90%.

The most biologically potent chemicals so far extracted from marine life are the poisons that primitive creatures use for self-protection. That does not discourage the sea-going biologists. After all, they point out, the vegetable poison curare has proved invaluable as a muscle relaxant that is used with general anesthesia for surgery. The Japanese are already using molecular modifications of marine venoms as medicines.

Paul Burkholder, 66, who is now at the University of Puerto Rico and works in a laboratory at Mayagüez, also serves as senior marine scientist for Lederle Laboratories. Some of his antibacterial finds have come from sponges collected from as far away as Australia's Great Barrier Reef and Palau in the Caroline Islands. When he arrived in Rhode Island last week, he had scarcely dried off from a scuba-diving, sponge-hunting expedition on the outermost edge of the Caribbean, between the British islands of Virgin Gorda and Anegada. Burkholder made his dives with an assistant, Robert Brody, who is completing his doctoral work on the gorgonians, or "soft corals." Together they snipped off specimens of the most familiar gorgonian, the purplish fan coral, and a variety of sponges (of which about 5,000 species are known).

Semisynthesis. In the boat from which they worked, Dr. John Webb put the specimens into jars filled with alcohol. Ashore, within a few hours, some were quick-frozen, others were dried, and all were flown to Lederle's labs at Pearl River, N.Y. There the tedious and time-consuming process of searching for medicinally useful compounds began with the preparation of crude extracts. It will continue through a variety of screening tests that will determine whether the extract is active against such familiar microbes as the staphylococcus and other causes of human disease.

If an extract proves to be active, the next stage of testing will be more difficult: isolating the individual ingredient responsible for the activity. Even more difficult is the task of determining the chemical identity of the isolated substance. Once that is done, it must be tested in animals to find out whether its germ-killing powers outweigh whatever undesirable side effects it may have. If the compound proves both safe and effective enough to be tested in man, the laboratory chemists will face the task of either synthesizing it or using the natural product as the base for a semisynthetic drug, the technique that is used in producing cephalothin.

In the search for drugs from the sea, from five to seven years may well elapse from the underwater snipping of a sponge specimen to the marketing of an antibiotic. But the seafaring scientists are confident that eventually the seas will yield a whole new pharmacopoeia of valuable drugs.

[1] The most effective drug against typhoid fever, psittacosis and Rocky Mountain spotted fever, but commonly misused for minor infections.

PROJECT SANGUINE

Mr. PROXMIRE. Mr. President, the Navy is at present involved in developing in northern Wisconsin a massive communications system called Sanguine. This multibillion-dollar project will eventually dig up miles of Wisconsin farm and forest land to bury thousands of miles of wire.

My eminent colleague from Wisconsin (Mr. NELSON) has been expressing grave concern about the project which is now in a testing phase in our State. With some $50 million appropriated for initial work, Senator NELSON fears that the electrical currents given off by the grid could cause irreparable damage to the

natural ecology of the north country. He is also concerned that the electrical currents could be a threat to human safety.

On August 31, the Washington Evening Star published an excellent article entitled "Pentagon at War in Wisconsin," written by Roberta Hornig.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENTAGON AT WAR IN WISCONSIN

(By Roberta Hornig)

A "secret" Pentagon project called Sanguine is sparking a new kind of warfare in Wisconsin.

Project Sanguine calls ultimately for a massive underground electrical field covering parts of 26 counties in northern Wisconsin. The grid system would then serve as the military communications network for the United States.

But almost everyone, including the Pentagon, is worried that Project Sanguine will harm northern Wisconsin's natural environment.

And at a time of increasing concern over man's plundering of his environment, a state committee has been formed to try to halt the project.

The critics say they are worried because:

The massive electrical field could be harmful to living creatures in the area, upsetting fertility and natural cycles. Long-term effects could be fatal.

Any metallic object in the area would be electrified, unless first grounded or insulated.

The state's telephone system could be adversely affected.

Plant life within the area—which is mostly scenic woodlands—could be hurt.

The Pentagon is spending $1.6 million just to investigate those problems, and to soothe public fears in the state.

Sources say Project Sanguine eventually will cost more than $1 billion. Thus far, Congress has appropriated between $25 million and $50 million for initial work.

The Navy is coordinating construction, and a Navy spokesman says:

"Sanguine is big. It would give worldwide coverage for a single transmitter complex in the United States." No relays will be necessary, the Navy said, and no nuclear attack could knock it out.

Why Wisconsin? That state was chosen because it has "good bedrock, is an area with low conductivity and has insignificant faults" that are not likely to cause earthquakes.

Although the Navy is willing to talk about Sanguine, to tell what the goal is and all the things, the military is doing to make certain it won't hurt the environment of northern Wisconsin, the most specific information about it is coming from the Wisconsinites fighting it.

Democratic Sen. Gaylord Nelson and Prof. Ken Shifford of Northland College, who heads the "State Committee to Stop Sanguine," report that the huge military communications antenna will be made up of approximately 6,000 miles of underground, high voltage wire.

TO BE 240 SITES

In addition to the miles of cable, requiring 30-foot rights-of-way, they say, there will be 240 transmitter sites each requiring 10 fenced-off acres.

Presumably the information is coming from briefings the military is conducting both in Washington and in Wisconsin for the state's congressional delegation, governor, heads of state agencies and worried property owners.

Shifford, who teaches European history, and others putting together a statewide anti-Sanguine organization will hold a meeting at Stevens Point on September 21.

"I'm against it for a half-dozen categories of reasons," Shifford said yesterday in a telephone interview.

His big concern—and the Navy apparently agrees to this—is that no one knows what the ultimate environmental effects will be.

"At any time," Shifford said, "an electrical field could be harmful to any living creature in it.

"It could affect fertility . . . then there's fish and earthworms."

Shifford said that even simple shocks can drive earthworms from the ground. "An earthworm is an essential link in the chain of nature," he said, suggesting the electrical shock therefore could upset all plant life in the area.

"We don't know what this will do to the deer and the ducks and the geese. It could possibly cause a change in flyways—the flying patterns of waterfowl," he said.

TO CONVINCE THE NAVY

Shifford, who owns 60 acres of land around Ashland, said the group he has formed is against Sanguine "because we think it's bad for the ecology, the economy and the people. We hope to convince the Navy of these three points."

The committee has about 100 workers and, he said, is attracting people "from all political persuasions from all walks of life."

Sanguine involves electrical current in all metallic objects, meaning for example, that wire fences will carry voltage, Shifford said.

"Every doorknob, every fenceline will be electrified. The Navy calls it a 'mild electric shock'.

"I just don't want to live in a mild electric shock area."

QUOTES NAVY

Senator Nelson said that in his briefing, the Navy admitted that powerful currents will be running through the ground but argued that the problem can be "mitigated" by a massive insulating process.

"The Navy actually plans to insulate every strand of wire fence, metal guardrail, railroad track and any other type of running strip of metal that runs near the communications wire," Nelson said.

For example, Nelson said, the Navy predicts that 1,000 feet of wire, 100 feet from an underground wire, will carry 52 volts. At two miles from an underground wire, the same fence would carry 22 volts, he said.

He added that the normal voltage in an electrified cow fence is 12 volts and "a cow fence has been known to be extremely dangerous to small children or to persons with bad hearts, especially on wet days."

Nelson said that the Navy has been sending representatives to northern Wisconsin cities and towns telling concerned citizens that the voltage will be no problem because each fence will be cut at varying intervals, determined by a computer, and insulators will be installed.

"It seems unbelievable when one considers the problems a farmer will have to go through to put in new fencing or change a fence line," Nelson said.

THE DANGER

"The most frightening thing, however, is what happens in the case of old, abandoned fence lines the Navy hasn't found because they are rusting away and half buried in the forests. The chance of a hunter or a small child on a rainy day touching one of these unmitigated lines could bring a real tragedy," Nelson added.

One of these things the Navy is doing to mitigate the fears of the Wisconsonites is to spend $150,000 on tests both in the field and in the lab by the Hazleton Laboratories of Falls Church, Va.

Shifford and others say they would feel more comfortable about the tests, which are just beginning, if the Navy had picked a laboratory it had not worked with before.

They are citing language from Hazleton's research proposal, made before it won the contract last spring.

At one point the research lab reported:

"The antenna will be enormous, and therefore, many people, domestic and farm animals, fish, insects, earthworms, birds and indigenous plant life will be exposed to its field for very long periods of time, unless they are killed by it, are removed, or in the case of free ranging animals, are driven out by noxious effects."

At another point the research proposal said:

"The potential hazard from temperature increases associated with antenna elements, after power is on, will similarly be investigated only to a limited extent using plants.

"It is our opinion that such animals as groundhogs are not of sufficient economic value to be of concern."

In its testing, mostly at the Falls Church lab, Hazleton plans mostly to use cows, bulls, geese, and then, "smaller animals," presumably mice or rats.

The Navy also is having tests conducted out in the field.

THE BEGINNING

The testing is one of the ways Wisconsin citizens found out something was up. They became curious when one day, in the middle of the resort woods, teams of servicemen began building fences and a laboratory.

The test contracts, besides Hazleton's, that have gone out include:

$500,000 to the Radio Corporation of America to study fences and railroads, presumably to assure that no one gets electrocuted.

$400,000 to the Illinois Technical Research Institute "to pull together" and oversee the "mitigation on interference" program.

$200,000 to the Bell Telephone Company Laboratory, to assure no interference with telephone calls. The Wisconsin Public Utilities Commission has been promised that instead of hurting the state's telephone system, Sanguine will upgrade it.

$100,000 to the Battelle Institute, which is a part of Ohio State University, to make certain that underground pipelines won't corrode.

$250,000 to the Great Lakes Shore Electronics Activity, for a "mitigation" study.

AIRPLANES, TOO

The Navy also is conducting studies to make certain that the hot lines won't interfere with the equipment of any airplanes flying overhead.

It is also promised that as part of its "mitigation" program, it will "break long metal things (such as railroad tracks) and insulate every 1,000 feet."

The military also says it has several project "watchdogs," including the President's Science Advisory Council, the National Academy of Sciences, the U.S. Public Health Service and a governmental advisory council on electro-magnetic radiation.

At present, Sanguine is small, consisting of a 28-mile grid system in the form of a cross—to see what happens when the electricity goes on—and a transmitter building with an "interference mitigation" laboratory.

The Navy insists the voltage it plans to use will be quite small—some 64 volts per meter, or, if very near the transmission line, about 100,000 volts per meter. And it promises to use the electricity at "extremely low frequency."

Currently, for testing purposes, Sanguine looks like a bunch of fenced-in telephone lines. These will go underground if the project wins final approval.

Navy spokesmen also insist that testing is just beginning and that there is no design for a Sanguine system at this time. It's at

least a couple of years away from reality, they say.

The project's environmental effects "are an honest question at DOD," a Navy spokesman said.

There will be at least one year of testing, and that proves the military's good intentions, he said. And, he added, the government understands that "the mood of the country now is the environment."

THE INTERNATIONAL JOINT COMMISSION—UNITED STATES AND CANADA

Mr. HARTKE. Mr. President, a distinguished former Governor of Indiana, the Honorable Matthew E. Welsh, has been serving since 1965 as chairman of the U.S. section of the International Joint Commission, United States and Canada. The work of this significant body is not so widely known as it should be. To remedy that deficiency, Chairman Welsh wrote an unusually interesting article describing its structure and activities for the Department of State Bulletin. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WORK OF THE INTERNATIONAL JOINT COMMISSION

(By Matthew E. Welsh)

The five Great Lakes form a chain of inland seas whose vast size staggered the early explorers. They could not believe these were lakes. They kept testing for salt water, thinking surely the chain would lead them to Asia.

These lakes are truly one of the wonders of the world and are a precious asset to the United States and to Canada. Over 60 percent of Canada's population and economy, as well as some 15 percent of ours, is concentrated around the rim of the Great Lakes and in the St. Lawrence Basin. The area presently supports over 40 million people, and a population of 60 million is projected for the year 2000.

Not only are the Great Lakes the busiest waters in the world, but they constitute almost one-third of the earth's total supply of fresh surface water. And four of them are boundary waters.

For some reason, these sea-sized waters have been so taken for granted that their importance and their beauty have been barely comprehended. This attitude appears to be changing, however, because of the dangers to the lakes which have now become apparent to even the most indifferent. As a result, there is considerable interest in the agency which has been given wide-ranging responsibilities with respect to these and other boundary waters—the International Joint Commission—and in the methods used by this unique international institution.

The Commission was formed to carry out the purposes of the Boundary Waters Treaty of 1909,[1] which are: ". . . to prevent disputes regarding the use of boundary waters and to settle all questions which are now pending between the United States and the Dominion of Canada involving the rights, obligations, or interests of either . . . along their common frontier, and to make provision for the adjustment and settlement of all such questions as may hereafter arise."

The Commission consists of six members, three from each country. The United States Commissioners are appointed by and serve at the pleasure of the President. The Canadian Commissioners are appointed by Order in Council of the Canadian Government and serve at the pleasure of the Government.

[1] 36 Stat. 2448.

The treaty gives the IJC responsibilities in two general categories.

The first of these responsibilities is to approve or disapprove all proposals for use, obstruction, or diversion of boundary waters on either side of the boundary which would affect the natural level or flow of the boundary waters on the other side. Examples in the Great Lakes system include the regulating works at Sault Ste. Marie and those on the St. Lawrence, as well as the numerous small dams constructed by water, timber, and paper companies that might affect the natural state of the boundary waters. These projects are brought before the IJC by what are termed "applications," filed by interested persons—either public agencies or private corporations or individuals.

The second general responsibility of the IJC—which is becoming the major work of the Commission—is to investigate and make recommendations on specific problems referred to it by either or both Governments. It is under this provision of the treaty that requests—or "references"—by the two Governments have been made on such varied subjects as water pollution, air pollution, regulation of the levels of the Great Lakes, and preservation of the American Falls at Niagara.

HANDLING OF APPLICATIONS AND REFERENCES

In the case of an application for Commission approval, the burden is on the applicant to furnish all necessary information and data required. Interested persons may intervene in support of or in opposition to the application. This is followed by public hearings, usually on both sides of the boundary, after which the Commission hands down its order concerning the project, which is final.

In the case of references, the procedure is somewhat different. The Commission appoints an international technical board which is directed to make a thorough investigation of the facts involved and file written report with the Commission. The IJC then publishes the board report and schedules full-dress public hearings, normally one in each country in the areas affected, at which any person, *even the humblest*, is given an opportunity to comment on the board's finding and recommendations. The Commission then prepares its report to the two Governments.

I emphasize "even the humblest," for I believe these hearings have been invaluable as a sounding board and safety valve. We are continuously reminded that just because the experts agree on a program it is not automatically acceptable to the public.

Any controversy involving water has a high emotional content. One of the principal reasons for the creation of the Commission was to establish a permanent institution to deal with these problems, an institution that would be free of local or sectional prejudice and would be able to act more expeditiously on matters arising along the boundary than was—or is—possible through usual procedures. On controversial subjects every government tends to move slowly at best, and when the complicating factor of the many interests of another sovereign power is thrown in, movement can become very slow indeed. It was hoped that the IJC could provide a mechanism which would permit prompt as well as equitable resolution of these matters of common concern to both Governments before they festered into serious disagreement.

I believe the IJC has lived up to this expectation. The matters brought to it have been resolved, and resolved, I am sure, with much more dispatch than would have been possible otherwise. It is true that some matters have taken many years from inception to final report to the Governments, but this was because the problem itself could not be quickly or easily solved.

When circumstances require, the IJC moves with dispatch. One recent application, for instance, was acted upon only 17 days after it was received by the Commission; and this included a board investigation and report, two hearings, and the preparation and issuance of an order of approval. In this situation prompt action was necessary if the seasonal spring waters were to be maintained at higher than normal levels for availability during a period of exceptional drought anticipated in the summer and fall. While this speed was unusual, it does sharply point up the flexibility which the IJC has achieved in its procedures.

A TRADITION OF IMPARTIALITY

Another reason for establishing the Commission was to lift questions involving boundary waters out of the hands of a series of temporary bodies charged with resolving only one particular problem or controversy. A permanent commission, with equal representation from each country would, it was hoped, develop a tradition of impartiality and a body of precedent, which would encourage the use of reason in resolving what might otherwise easily become very difficult international disputes.

Here, too, I believe the record is little short of remarkable. Since the formation of the IJC, the Commissioners have divided along national lines or failed to reach unanimous agreement in only three decisions! Of course this search for a common ground, for agreement, has not been easy and frequently has taken much time. Discussions in executive sessions of the Commission are open, frank, and spirited as well as deliberate. The important fact, however, is that a decision *is* reached, but only after thorough and careful investigation, public hearings in both countries, and careful deliberation by a permanent body interested in principles rather than short-term expediency.

When the Commission is charged with a mission by the Governments, just how does it go about this business of determining the facts? In every case the problem area is, by definition, intersected by an international boundary; and within each country there are numerous overlapping jurisdictions, Federal, Provincial, and State, each of which in turn has an interest, frequently one which is very jealously defended. The energies and talents of all these agencies must be harnessed so that they are all working together toward an agreed solution rather than at cross purposes, since it is not possible to regulate only one side of a river or control pollution of only part of a lake. Unless there is general agreement by all concerned, the mere obtaining of accurate and complete data for an entire river basin, for example, would be very difficult, and the attainment of a solution even more so.

INTERNATIONAL TECHNICAL BOARDS

The IJC achieves this coordination by creation of an international technical board to assist it with each of its dockets. As a matter of policy, an effort is made to see that each board contains so far as is practicable a member from the agencies in each country which have the primary administrative responsibilities for the matter involved. This board, then, becomes an official forum where information and ideas may be freely exchanged by those most knowledgeable about the problem, with the full sanction of both Governments, having the end in view of developing a technical report which all of them will support. The members of each board are charged by the IJC to act as professional experts rather than as representatives of the point of view of their respective agencies, and in the discussion of their frequent progress reports to the Commission this aspect of their mission is emphasized.

As a result, the IJC provides a vehicle which encourages frank and constructive discussion on a continuing basis between the best technical experts in both countries who have been charged by their governments—Federal, State, and Provincial—with administrative responsibility for the particular

matter at issue. Appointment to an IJC international board is regarded as a mark of professional recognition, and the record of accomplishment of the IJC rests to a considerable extent upon the very high level of competence and dedication of those who provide the technical expertise and data upon which the Commission bases its decisions.

Another result of this procedure is that the IJC has remained a very small agency, not having found it necessary to build a large technical staff of its own. By drawing on experts from existing agencies in both countries and releasing them when the job is finished, the Commission avoids the rigidities that frequently accompany a large permanent organization.

When the Commission approves an application for works, it usually appoints an international board of control to insure compliance with the conditions specified in the order of approval. Similarly, when reporting to the Governments on completion of its investigation following a reference, it may recommend a course of action that will require continuing supervision on an international basis to insure satisfactory results. In such cases the two Governments may authorize appointment of an advisory board to establish and maintain such surveillance under the direction of the Commission. This follow-through procedure has been used successfully in connection with regulation of water levels—where international boards of control answerable to the IJC were created, such as the Kootenay Lake, Niagara River, and St. Lawrence River Boards—and with pollution references, where the advisory boards watch over the progess being made in pollution control and inform the Commission.

An additional device or technique has recently been developed by the IJC in discharge of its growing responsibilites in the field of transboundary water and air pollution, namely, the calling of public international meetings to inquire into the progress being made. The first such meeting was held last January with regard to pollution of the Niagara River. It was felt to be quite successful in bolstering the efforts of the local agencies concerned with the problem, and this procedure will see further use in the future.

The role of the IJC appears to be changing. It its first 20 years it docketed 23 applications and 8 references. From 1933 through 1952 it received 23 applications and 14 references. In the last 15 years, however, it has received more references than applications, 11 versus 9.

While the number of new dockets of the Commission is small, the scope and magnitude of each of the more recent tasks referred to it by the two Governments can only be described as enormous. Regulation of the levels of the entire Great Lake system, investigation into causes of and means of control of pollution of Lakes Erie and Ontario, and investigation of air pollution along the entire boundary are examples. Well over 1,000 engineers, scientists, and specialists and their supporting personnel, all drawn from the public service of both countries, are involved in studies of the Great Lakes under supervision of the IJC on these three references alone.

In addition, over the years a total of 27 boards of control and advisory boards answering to the Commission have been created.

Thus, the Governments are increasingly making use of the IJC to investigate and make recommendations concerning problems of mutual concern along the boundary and entrusting it with the responsibility of supervising efforts at solution. The Commission looks forward to a busy and challenging future.

NEEDED CHANGES IN EVALUATION OF WATER RESOURCES PROJECTS

Mr. DOLE. Mr. President, the neglect of our precious water resources has become a national shame and disgrace. Erosion, flooding, siltation, and, more recently, pollution are taking a staggering annual toll which cannot be accurately calculated.

Though Congress has given much attention to these problems over the years and private organizations have performed yeoman service in promoting corrective measures, much remains to be done.

One private organization which has long been in the forefront of water resource development is the Mississippi Valley Association. Mr. Grant Barcus, of Kansas City, Kans., who is presently serving as president of MVA, presented a statement to the Water Resources Council on September 9, 1969, setting forth the views of his organization concerning the role of the Bureau of the Budget in evaluating water resource projects. I commend the statement of Mr. Barcus to the attention of the Senate and ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MISSISSIPPI VALLEY ASSOCIATION, BEFORE THE WATER RESOURCES COUNCIL, WASHINGTON, D.C., SEPTEMBER 1969, PRESENTED BY GRANT BARCUS, PRESIDENT

My name is Grant Barcus. I am president of L. G. Barcus and Sons, Inc., Kansas City, Kansas, a heavy construction firm. I am also president of the Mississippi Valley Association and appear here as a representative of that Association and its members.

The Mississippi Valley Association, now in its 50th year, is the Nation's largest water resource development organization with membership extending into 42 states and including nearly 200 local and regional resource and economic development associations.

Continued dedication to the full development and the proper use of this Country's water and soil resources has put the Mississippi Valley Association in the forefront of resource development organizations and has attracted the support of individuals, corporations and organizations with an underlying membership numbering in the millions.

The value to this Nation of the development of our water and related land resources which has taken place in recent years is obvious to anyone who will look. Actual benefits have been far greater than anyone imagined or projected at the time these projects were authorized and constructed. The record is open and the results prove conclusively that these investments are among the very best capital expenditures our Federal Government has ever made. The benefits of water resource projects compare most favorably with the benefits derived from some of the "social" programs of recent years which were prosecuted without the bother of a benefit-cost ratio.

Last November, former President Johnson sent to Congress a first assessment of the Nation's water resources under the Water Resources Planning Act of 1965. The second paragraph of the former President's letter of transmittal said and I quote, "A Nation that fails to plan intelligently for the development and protection of its precious waters will be condemned to wither because of its shortsightedness. The hard lessons of history are clear, written on the deserted sands and ruins of once proud civilizations."

The letter then pointed out a number of problems relating to all aspects of water and stated, "These problems only illustrate the need to analyze and then to take positive action to assure water resources adequate to the demands of America's future."

The former President concludes with a final paragraph, "Responsible government cannot overlook the importance of water management to the Nation's economy and health. This assessment merits your close attention."

Thus we find a federal program that has clearly demonstrated its value and the national assessment which repeatedly suggests that this work should not only be continued, but expedited. However, instead of getting on with the job, we find ourselves enmeshed in a web of economic jargon attempting to prove the obvious in searching for more terms which can be equated into dollar signs, almost totally ignoring obvious developmental aspects of resource development simply because they cannot be expressed in dollars.

On August 26, 1969, Senator Allen J. Ellender, Chairman, Subcommittee on Public Works, Senate Committee on Appropriations, wrote President Nixon a letter which deals with water resources development. We commend this letter to your attention and attach a copy of it as a part of this statement.

Senator Ellender stated, "In spite of the fact that next to the air we breathe, water is our most precious resource, it seems the Bureau of the Budget first looks to the water resources program for a disproportionate share of any contemplated cuts whenever there is a need to reduce federal expenditures.

"If we are to meet the water needs of the 300 million people that you recently estimated will occupy our land by the year 2000, we must not only support adequate annual appropriations for the orderly development of these resources, but it is also essential that the unrealistic and arbitrary restrictions placed upon project evaluations be removed."

In commenting on the Flood Control Act of 1936, Senator Ellender said, "The terms, 'benefits' and 'costs,' have no meaning in the abstract. They must be related to objectives in order to give these terms meaning. Since the passage of that Act, the technicians have chosen national economic efficiency as the sole criteria for project evaluation and have disregarded the phrases, 'in the interest of the general welfare' and 'if the lives and social security of the people are otherwise adversely affected.'

"The result of such an interpretation has been that as far as flood control and hurricane protection projects are concerned, we have become a 'cow society.' If, for instance, a thousand cows were lost in a flood or hurricane, we could consider the economic loss involved since a cow has an economic value in the market, and the monetary losses sustained can be used in the justification of protective works. On the other hand, if a thousand human lives were lost, it would not add one dollar to the all-important economic evaluation of the project. The loss of life and human suffering associated with the havoc wrecked on the Gulf Coast by Hurricane Camille transcends the imagination."

As Senator Ellender pointed out, water resources project evaluation now has a long history, dating at least in its formal aspects, from the Flood Control Act of 1936, which required that navigation and flood control projects could be authorized only "if the benefits to whomsoever they may accrue are in excess of estimated costs. . . ." From that date the benefit-cost project evaluation system was established. Each year since 1936, it seems, it has grown ever more difficult with each new statement on the subject or restatement of the scoring rules for project validity and as each new academic economist

comes to hear about projects in some scholarly seminar. One may well wonder at the insistence from the academics, from the "high-church" economists of the Ivory Tower, and from the obscure but potent bureaucrats in the Bureau of the Budget that water projects survive an especially rigorous test since no other Federal projects or programs suffer such heavy scrutiny and outright doubt. Surely the historic economic success of the water projects is well-documented and water resource development constitutes only a small portion of the annual budgets. Still, the doubts are not dispelled and the scrutiny continues and is intensified. Yet the water development agencies lead the field in economic analysis and in description of project effects!

Though the Task Force Report and this series of hearings have aroused the hopes and expectations of many of us that finally an evaluation system is being devised that will record and account for all the effects of projects to their fullest, including regional effects and social welfare effects on communities and groups, the peril that the objective may be thwarted continues. The thwarting may come at the hands of the Bureau of the Budget, that obscure-to-the-public institution has prevailed in this respect before, notably since 1962, when the previous rules known as Senate Document 97 were promulgated. Those rules were supposed to apply to the Bureaus review of projects as well as to the agencies formulation of projects. Yet it is evident that the B-O-B did not regard the Senate Document 97 rules as binding on the Bureau. The evidence is most conspicuous in regard to "secondary benefits" which were acknowledged by Senate Document 97 to be valid project benefits. The B-O-B ignores such benefits in its project review. How do we know that it will regard any new document any more highly? Can there be reservations in whole or in part?

The concern and the responsibility for public policy and action do not reside entirely or exclusively in the Executive Branch of Government. The Congress has at least an equal role, and this role should not be thwarted by the Bureau of the Budget either by permitting that formidable agency to be umpire and judge or by allowing it to compose its own rules of the game and its own project evaluation principle as though it were some sort of self-appointed collection of philosopher kings. One wonders whether any agency so far removed from political responsibility and one that remains so much unchanged by elections should exercise such power in a democratic society.

Therefore, to offset the reservations and exclusiveness and to assure some measure of responsibility while retaining the proper role of overseer, critic, and commentator, the Bureau of the Budget should be required to use the same set of evaluation principles that are developed through the Water Resources Council, or by the Congress in the event the Water Resources Council fails to act, and not to keep a private set of its own.

Furthermore, the B-O-B should be required to forward all project reports to the Congress within ninety days of their receipt from the Executive Branch departments, just as other Federal and State agencies are required to do. The comments of the B-O-B, of course, with its dissents and objections as well as its praises, should go along with the reports to the Congress. This practice would establish a more forthright process and would permit the Congress to know which features of projects incur particular critical comment. This practice would also bring the B-O-B within the system of overt responsibility. Anything short of this practice will mean continuing a serious deficiency in project evaluation features with a consequent loss for sound water resources development.

The new discount rate has been discussed by others at this series of hearings but it should be pointed out that the new discount rate has adversely affected many of the longer range benefits considered in the evaluation of both new and currently authorized projects. This may result in only partial development of many projects which would otherwise have been developed to their fullest potential. Projects constructed on this basis can probably never be corrected, and the under-development can only result in a disservice to future generations.

Another aspect of the new methods and procedures for project evaluation now being developed that compels comment involves the environmental objective and the environmental account recommended in the Task Force Report. One should note that the Task Force expects that the environmental objective for each project be carefully described and the physical dimensions of the situation specified thoroughly and carefully. The intention here is that the environmental factors and considerations be made as clear and specific as possible in at least physical terms and other dimensions in recognition of the fact that the economic benefits and costs for the environment necessarily are much less susceptible to enumeration and measurement than are the development factors of a project. The specific and clear description that is urged and required by the Task Force will permit the public and the governmental decision-makers to know what they are getting for their money if environmental investments are to be made or what is being retained, preserved or enhanced if a recommendation is made that a project not be constructed or that it be significantly modified as to scale, location, or operation. In other words, it is apparent that emotional and frivolous objections to projects cannot substitute for sound evaluation. The advocates and proponents of the environmental objective must accept the responsibility for stating clearly and cogently the dimensions and significance of that objective in each case as noted on pages 113 through 117 in the Task Force Report.

The Mississippi Valley Association testified before the Water Resources Council on January 13, 1969. Following that testimony, we submitted a supplemental statement on January 20, 1969 entitled, "Additional Benefits Which Should Be Considered in Evaluating Water Resources Projects". In the interest of time, I will not discuss these benefits but have attached this list as a part of my statement.

The Mississippi Valley Association, for more than fifty years, has advocated the full development and proper use of the Nation's water and soil resources as the best capital investment which the Federal Government can make. We believe the results of the projects which have been constructed as a result of this philosophy prove conclusively the wisdom of this approach. This is a program for *all* America and not for protectionists, preservationists or other special interest groups.

The Mississippi Valley Association has been consistent in its approach, as have other resource groups who are dedicated to the principle of "the greatest good for the greatest number."

The preservationists, who insist on mislabeling themselves "conservationists", have also been consistent in advocating that the Nation's resources be dedicated to "perpetual non-use." Fortunately, or unfortunately, as some see it, the United States has progressed beyond the "bow and arrow" society and we must seek to meet the needs of our great grandchildren, not our great grandfathers.

This Country's railroads too have played the part of dinosaurs in the area of water resources development but, unlike the Mississippi Valley Association and the preservationists, they have failed to be consistent. They have been, and are, for water resources development when it benefits their selfish, self-interest but they oppose these same developments when the lines of beneficiaries are not so clearly drawn.

Railroads have been in the forefront in pushing irrigation projects because they are probably the greatest single beneficiaries. Increased agricultural production, and the equipment needed to produce it, must be transported.

Railroads have also been among the greatest beneficiaries of flood control because their tracks parallel the great rivers and they serve the cities which have grown along these rivers.

Railroads are among the chief beneficiaries of navigation projects, although they consistently oppose all of these water projects. The record will show that tonnage hauled by railroads serving areas with improved waterways has been consistently greater than the industry average, as have been the revenues.

What this Nation needs is a program to assure the full and rapid development of its water resources to meet its future needs. What the Task Force must do is develop an evaluation technique which will expedite, not curtail, this development. If the Water Resources Council is unable to do the job which Congress assigned it then the Nation must again look to its elected representatives who are not hamstrung with the phrase "with policy guidance from the Bureau of the Budget."

The Mississippi Valley Association wishes to thank you for this opportunity to present the views of its membership and to commend to you for what appears to be a step in the right direction. We look forward to seeing the fruits of your labor.

ADDITIONAL BENEFITS WHICH SHOULD BE CONSIDERED IN EVALUATING WATER RESOURCE PROJECTS

1. The value of resources, both human and physical, that would be used for project construction and maintenance which, in the absence of a project, would be unemployed or underemployed resources.

2. Employment effects as a result of the goods and services produced by a project, and especially those which take place in areas or regions where there has been a past history of unemployment or underemployment, is:

a. Through expansion of capacity of productive resources located in an area.

b. Through better utilization of existing productive capacity in a region.

c. Through location of new productive capacity in a region induced by the water resource project.

d. Through the general response of the business community as a result of increased income flows arising from higher employment levels.

e. Provision of opportunities for resource development occasioned through reduced production costs arising from a water resources project.

3. Contributions to regional development objectives.

a. Increase in total regional income as a result of the effects of projects.

b. Diversification of economic base of a region.

c. Improved redistribution of income within a region resulting in lifting the average per capita income.

d. Enhancing the growth potentials of key areas within a region that serve as focus of improved regional services.

4. Contributions to a more orderly and rational development of urban areas and rural areas.

a. Improved use and management of urban flood plains.

b. Reduction in overall costs of public services (water supply, sewage, recreation) through development of water resource projects as part of overall plans for urban and rural development.

c. Improved linkages between rural and urban areas.

[From the CONGRESSIONAL RECORD, Sept. 3, 1969]

U.S. SENATE, COMMITTEE ON AGRICULTURE AND FORESTRY,
Washington, D.C., August 26, 1969.

Hon. RICHARD M. NIXON,
The President,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: During the past several weeks, the nation has witnessed several natural disasters and near-disasters which have worked extreme hardship on our people. For example, note the following:

The brutal hurricane Camille that wrecked the Gulf Coast and resulted in more than 250 known deaths and perhaps half a billion dollars of property damage in Mississippi and Louisiana alone.

The water shortage that threatened our Capitol City in midsummer, followed immediately by severe flooding in the Washington metropolitan area.

The current floods on the James River in Virginia which may result in as many as 200 lives lost and missing and $150 million in property damage.

Although we do not have the means totally to prevent such natural disasters, this great and wealthy nation certainly does possess the means to fortify our most vulnerable areas against these ravages of nature and to minimize their toll of damage and human suffering.

We do have the know-how to minimize the effects of severe drought on our municipal and industrial water supplies. We do have the ability to prevent flooding of our great river valleys. We do know how to minimize the impact of the tidal waves which accompany coastal storms.

The fact is, however, that we are doing far too little either of a preventive or of a developmental nature and are in fact annually *decreasing*, rather than increasing, our actual effort in the field of water resources and flood control projects.

This unfortunate situation seems to me to call for a reevaluation of our priorities in the allocation of Federal funds. In effect, the Congress and the Administration must become as generous and as urgently concerned in our efforts to guard against damage resulting from hurricanes and floods as you yourself have been in your recent efforts to bring relief and rehabilitation to those who have suffered so gravely on the Gulf Coast and in Virginia.

Appropriations for water resource development has been a matter of concern to me for a number of years. On April fourteenth of this year, the senior Senator from West Virginia, Senator Randolph, discussed on the floor of the Senate a statement which Budget Director Robert P. Mayo had made before the Senate Committee on Finance, indicating that he was considering a freeze on public works construction. I joined in the colloquy that followed Senator Randolph's statement, at which time I discussed my growing concern over the delays in the completion schedule on most of the going public works projects which had been revealed to our Committee during the hearings on the Public Works appropriation bill. I concluded my remarks by restating my belief that we must do what we can to protect our two most important resources, land and water. If we failed to do that, our country will sustain great losses.

Subsequently, in May, I addressed the National Rivers and Harbors Convention, at which time I pointed out that in 1964 the construction program of the Corps of Engineers and the Bureau of Reclamation was $1,188,428,700, or about 1.09% of the 1964 budget. I noted that for fiscal year 1970, the original budget request for these two agencies was $1,038,920,000, or about .49% of the budget.

The request for the Corps of Engineers and the Bureau of Reclamation was subsequently cut by your Administration by $181 million. The revised budget represents a dollar reduction in the past six years of about 15.39%. When you take into account the rise in the cost of construction, the level of appropriations in the revised budget for these agencies represents a drop in construction capability of about 50% since 1964!

Similarly, the efforts being made by the Federal Government to control air and water pollution are completely inadequate to cope with the severe damage these problems are working on our environment and, in fact, on the very health of our citizens. For instance, in the last few years that the Federal Water Pollution Control program has been under the jurisdiction of the Subcommittee on Public Works, I have noticed an increased disparity between the authorization for construction grants for sewerage treatment facilities and the appropriations requested, as indicated below.

Fiscal year	Authorization	Appropriation request in the budget	Percent of authorization request in budget
1968	450,000,000	200,000,000	44.4
1969	700,000,000	203,000,000	29.0
1970	1,000,000,000	214,000,000	21.4

I have received well over 1,000 letters from individuals and organizations urging the Committee on Appropriations to provide the full amount authorized for construction grants for fiscal year 1970. Most of these letters point out the extent to which the states and their political subdivisions have approved bond issues to finance the non-federal costs, relying on the Federal Government's ability to meet its share of the cost.

In spite of the fact that next to the air we breathe, water is our most precious resource, it seems the Bureau of the Budget first looks to the water resource program for a disproportionate share of any contemplated cuts whenever there is a need to reduce Federal expenditures.

If we are to meet the water needs of the 300 million people that you recently estimated will occupy our land by the year 2000, we must not only support adequate annual appropriatons for the orderly development of these resources, but it is also essential that the unrealistic and arbitrary restrictions placed on project evaluations be removed.

For instance, the basis for the benefit-to-cost ratio for water resource projects had its origin in the 1936 Flood Control Act, where the policy was established that the Federal Government should improve or participate in the improvement of rivers and other waterways for flood control purposes in the interest of the general welfare if the benefits to whomsoever they may accrue are in excess of the estimated cost and if the lives and social security of people are otherwise adversely affected.

The terms, "benefits" and "costs," have no meaning in the abstract. They must be related to objectives in order to give these term meaning. Since the passage of that Act, the technicians have chosen national economic efficiency as the sole criteria for project evaluation and have disregarded the phrases, "in the interest of the general welfare" and "if the lives and social security of the people are otherwise adversely affected."

The result of such an interpretation has been that as far as flood control and hurricane protection projects are concerned, we have become a "cow society." If, for instance, a thousand cows were lost in a flood or hurricane, we could consider the economic loss involved since a cow has an economic value in the market, and the monetary losses sustained can be used in the justification of protective works. On the other hand, if a thousand human lives were lost, it would not add one dollar to the all-important economic evaluation of the project. The loss of life and human suffering associated with the havoc wrecked on the Gulf Coast by Hurricane Camille transcends the imagination.

Fortunately, the Water Resources Council is attempting to find a way to deal with this problem of recognizing loss of life and misery associated with disastrous floods, by setting up four separate accounts which recognize national objectives other than economic efficiency such as regional development, environmental benefits, and the well being of man. The Council's efforts along these lines are to be commended and they deserve and need your personal encouragement.

Had the center of Camille been 50 miles east, the damage to New Orleans in terms of lives lost and property damaged would have been incalculable. Yet, despite this near miss and in spite of the constant threat of hurricane damage to the New Orleans area, the hurricane protection project for Lake Pontchartrain will continue to drag along with inadequate appropriations, unless the Administration loosens the purse strings and cooperates with the Congress in revamping the national priorities vis-a-vis such projects.

The budget estimate for this project for fiscal year 1967 was $450,000 for planning, at a time when the Corps of Engineers had a capability of $1,600,000, which would have permitted the initiation of construction. Recognizing the potential danger to New Orleans, the Congress provided the full capability of the Corps of Engineers.

For fiscal year 1968, the original budget was $2,300,000, which was subsequently revised to $3,260,000, at a time when the Corps' capability was $4,500,000. Again, recognizing the potential loss of life and property, the Congress approved the $4,500,000.

For fiscal year 1969, the budget estimate was $7,800,000, compared with a Corps capability of $10,800,000. But in view of the expenditure ceiling contained in the Revenue and Expenditure Control Act of 1968, the Committee, although recognizing the risk involved in not moving forward expeditiously on this project, did not increase the budgeted amount for this project or any other project in the bill.

For fiscal year 1970, the budget estimate is only $6 million, compared with the Corps capability of $8,500,000. Neither New Orleans nor the nation can afford the gamble of procrastination on this project.

Similarly, the hurricane protection project, New Orleans to Venice, proceeds at an alarmingly slow rate. Since 1967, the estimated completion date for this project has slipped from June 1975 to December 1977.

Two years ago, I secured authorization for a study of the Louisiana coastal area, looking toward hurricane protection, the protection of the physical features of the coastline, and reestablishment of the former ecology of the area which contributed so much not only to the wildlife but to the marine resources of the entire Gulf Coast. Naturally, I was disappointed this year to find that the budget provided only $60,000 for the continuation of this study in fiscal year 1970. At least double that amount will be required for satisfactory progress on the study, and I intend to urge my subcommittee and the Congress to expedite the project to this extent, at a minimum.

A few weeks ago, this nation—indeed, the whole world—was thrilled when man first set foot on the moon. In reflecting on this accomplishment, I had occasion to recall the hearings which I had recently completed on the Public Works appropriation bill, where the effect of the budget cuts which your Administration made in an already austere budget submitted by President Johnson were graphically revealed to the Committee.

Among the most serious cuts that I recall

were those affecting the Southern Nevada Water District, the Folsom South Canal in Southern California, the Bonneville unit of Central Utah Project, the Chatfield Reservoir in Colorado, the Newark Bay, Hackensack and Passaic Rivers Project in New Jersey, the Wynoochee Reservoir in Washington, the New Melones Reservoir in California, the Lake Kemp Reservoir in Texas, and many more.

In a number of cases, we are finding that the expenditure ceilings imposed on the Corps will not permit contractors to pursue their work in accordance with the terms of the existing contracts, even though in many cases the funds are available or requested. Failure to provide funds and expenditure ceilings adequate to permit accomplishment of existing contracts inevitably will increase costs on all Government contracts and could even result in legal actions being taken by the contractor against the Government. I cannot help but feel that our priorities are out of balance.

These thoughts led me to a review of the requests for research and development appropriations requested by President Johnson for the NASA program, and I found that he had requested $3,051,427,000. Further research revealed that in the review of the 1970 budget, your Administration recommended a reduction of $45 million in this program, of about 1½%. In contrast, the "Construction, General" appropriation request of $769,420,000 for the Corps of Engineers was cut $142,415,000, or about 18½%. I realize that our space program is based on a national objective—but so is our water resource program.

It would require a good deal of imagination to attempt to identify the tangible benefits that will result from man's flight to the moon. Any attempt at a monetary evaluation of those benefits would be almost impossible. If, however, these benefits could be identified and evaluated, the realization of most of the benefits would be projected far into the future.

If we applied the same economic principles to the benefit-cost evaluation of our space program as are required in our water resource program (where future benefits are discounted at a rate of 4⅞ percent) the benefits expected to result from the space program would shrink drastically. For instance, benefits evaluated at $1 million to be realized 25 years from now would be worth only $304,200 in terms of economic justification for a project under today's regulations. A $1 million benefit to be realized 50 years from now would provide justification for the expenditure of only $92,600 today. Such a system would probably kill the space program, just as it is now strangling our vital water resources, flood control and hurricane protection programs.

I am enclosing a list of selected hurricanes and their damages, compiled from information provided by the Office of Emergency Preparedness. It should be recognized that many hurricanes of earlier years are not listed. In fact, during the recorded history of Louisiana alone at least 150 hurricanes or tropical storms have battered or threatened the coast of my state.

I think it is interesting to note that, based only on the partial statistics available to us, the average damage from hurricanes since the turn of the century is over $85 million per year. During the last 30 years, the damage averaged $185 million. During the last 20 years, the damage averaged $200 million and during the 10-year period from 1958 to 1968, the damage averaged about $320 million. If this progression continues, we can expect average damages of $500 million a year (or a total of $5 billion) over the next decade.

Such damage tabulations are always on the conservative side because, by their nature, they tend to exclude many categories of physical and economic loss. As I have already mentioned, the loss of human life is a factor that is incalculable in monetary terms. In addition, there are the inaccuracy of complete inventory estimates, the impossibility of fixing replacement costs, the loss of business and trade to local enterprises and to the local economy in general, the loss of employment income, the loss of earning ability by those who are too old to "get started" again and who instead become public charges. All of these factors and many others add substantially to the damage estimates that are ascribed to various hurricanes.

Yet even these staggering figures tell only part of the story of the "cost" of hurricanes, for they generally do not include the multimillion dollar rehabilitation expenditures by Federal, State and local governments following the disaster. In the case of Camille, the Army, Navy, Air Force, NASA, SBA, HUD, HEW, GSA, USDA, OEP, and numerous other federal agencies are spending large sums to assist in the recovery effort. Also, in terms of the federal costs, over the next several years both individual and corporate tax payers will be deducting from their income taxes considerable sums to which they are eligible as a result of the hurricane damages suffered.

All things considered, we might properly *double* the so-called "damage estimates." In order that you might see the disparity between these enormous damages and the feeble efforts being made to provide protection, I am also enclosing a status report of the authorized hurricane protection projects for your review.

In view of the magnitude of the floods that this nation has experienced this year, the recent hurricane, and the lack of adequate progress being made in meeting the water resource needs of our expanding population, I expect that our Committee will respond to the needs of the Country. I cannot help but feel that you also will want to take another look at your recommendations for water resource development projects, particularly those relating to health, safety and the protection of human life, prior to the time the Congress acts on the Public Works appropriation requests you have submitted, and I urge that you do so.

I would welcome the opportunity to discuss this matter with you personally, or with a small bipartisan group of concerned members of the Congress.

Respectfully yours,

ALLEN J. ELLENDER,
Chairman, Subcommittee on Public Works.

EASTLAND-HRUSKA MEMORANDUM, JUSTICE DEPARTMENT FILE, AND HRUSKA-REHNQUIST CORRESPONDENCE REGARDING THE NOMINATION OF CLEMENT F. HAYNSWORTH, JR., TO BE AN ASSOCIATE JUSTICE OF THE SUPREME COURT

Mr. EASTLAND. Mr. President, yesterday I released to the members of the Judiciary Committee and to the press, copies of the Justice Department file on the investigation made concerning the conduct of Judge Clement F. Haynsworth, Jr., of the U.S. Court of Appeals for the Fourth Circuit in participating in the decision of that court in the case of *Darlington Manufacturing Company* v. *National Labor Relations Board*, 325 F. 2d 682. Simultaneously, Senator HRUSKA and I issued a memorandum pertaining to the facts as shown by this file.

On September 2, 1969, Senator HRUSKA requested the Attorney General of the

United States to review this matter, and in response to that letter Hon. William H. Rehnquist, Assistant Attorney General, Office of Legal Counsel, wrote a letter to Senator HRUSKA.

I ask unanimous consent that the memorandum, the copy of the file, and a copy of the exchange of letters between Senator HRUSKA and Mr. Rehnquist be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MEMORANDUM OF SENATORS EASTLAND AND HRUSKA RELATING TO THE DEPARTMENT OF JUSTICE FILE ON JUDGE CLEMENT F. HAYNSWORTH, JR.

Certain questions have been raised as to the propriety of the participation by Judge Clement F. Haynsworth, Jr., of the U.S. Court of Appeals for the Fourth Circuit, in the decision of the case of *Darlington Manufacturing Company vs. National Labor Relations Board,* 325 F. 2d 682.

We have made a thorough review of all of the charges, allegations, and insinuations pertaining to these questions, and, in our considered judgment, a study of the facts clearly shows that these charges, allegations, and insinuations are utterly baseless.

In our judgment, it is clear that Judge Haynsworth owned no stock in any of the companies or corporations that were litigants in that case, that he had no financial interest or stake in the outcome of the litigation, and that he could not have been actuated or motivated by any hope of pecuniary gain in deciding the case.

With the permission of the Department of Justice we are today releasing copies of the entire file of the Department's investigation of this matter, and we are also releasing as a separate package copies of the eight most pertinent letters in that file.

A reading of these documents reveals the following facts:

That the Judges of the Fourth Circuit Court of Appeals carefully and painstakingly investigated all aspects of the conduct of Judge Haynsworth in participating in the decision of the *Darlington* case, including all surrounding circumstances, and completely exonerated him of any improper or unethical conduct;

That these findings of the Judges, along with the files, were submitted to the Attorney General of the United States, Honorable Robert F. Kennedy, who unqualifiedly approved the findings;

And that after the true facts had been established, the person who originally made the charges against Judge Haynsworth to Judge Simon E. Sobeloff, then Chief Judge of the Court of Appeals, Miss Patricia Eames, Assistant General Counsel of the Textile Workers Union of America, acknowledged that the charges made against Judge Haynsworth were unfounded.

It has been suggested by some persons that the thorough investigation conducted by the Judges of the Fourth Circuit Court of Appeals, led by Judge Sobeloff, and of the Justice Department only considered charges of bribery against Judge Haynsworth, and did not consider his conduct in the light of the issues of judicial ethics and conflict-of-interest. Thus, such persons contend that the question of *propriety* of Judge Haynsworth's conduct has never been resolved.

A study of these documents compels the conclusion that there is no basis for this contention. Rather, there is an abundance of evidence to show that the Judges and the Justice Department considered *all* aspects of Judge Haynsworth's conduct, including the questions of judicial ethics and conflict-of-interest, and that Judge Haynsworth was absolved of any misconduct.

The text of the letter of December 17, 1963, from Miss Eames to Chief Judge Sobeloff, which first made the charges and which initiated the investigation by the Judges of the Fourth Circuit Court of Appeals shows that questions were raised not only as to possible bribery, but also as to propriety and ethical conduct. We quote from portions of Miss Eames' letter found on page 3 thereof:

"Depending on a number of facts which we do not know but which could be discovered by an investigation with subpoena powers, there may or may not be violations of 18 U.S.C. sections 201 and 202. It would appear, however, that only one fact which is now unknown—namely whether or not the Deering Milliken contract was thrown to Carolina Vend-A-Matic needs to be known in order to conclude that Judge Haynsworth should have disqualified himself from participating in this decision.

"Whether or not a criminal violation has occurred, we certainly believe that if the Deering Milliken contract was thrown to Carolina Vend-A-Matic, Judge Haynsworth should be disqualified from participating in the decision in this case, and that the resulting two-to-two decision should lead to the sustaining of the NLRB decision below."

After referring to the bribery statutes, 18 U.S.C. sections 201 and 202, Miss Eames stated that whether or not a violation of the bribery statutes had occurred that Judge Haynsworth should have disqualified himself and that his vote should not have been counted in the decision of the case. Obviously, this raised the questions of ethical conduct and conflict-of-interest.

It is just as obvious that Judge Sobeloff and the other Judges of the Fourth Circuit in their thorough investigation did not restrict themselves to implications or insinuations as to alleged bribery, but rather, thoroughly examined the ethical aspects of the conduct of Judge Haynsworth. The concluding paragraph of Judge Sobeloff's letter of February 18, 1964, to Miss Eames illuminates this point:

"It thus appears that the information received, anonymously, by you was completely unfounded, and it is gratifying that after mature consideration you are convinced of this. However unwarranted the allegation, *since the propriety of the conduct of a member of this court has been questioned,* I am today, at Judge Haynsworth's request and with the concurrence of the entire court, sending the file to the Department of Justice, together with an expression of our full confidence in Judge Haynsworth." (emphasis added). Judge Sobeloff made the following statement in his letter of February 18, 1964, to Attorney General Kennedy:

"Enclosed is the file of correspondence passing between our court and counsel for the Textile Workers Union of America and Deering Milliken Corporation following the argument of an appeal in our court. Inasmuch as this relates to alleged conduct of one of our colleagues, we think it appropriate to pass the file on to the Department of Justice."

The "alleged conduct" to which Judge Sobeloff referred clearly relates to "the propriety of the conduct of a member of this court" mentioned by him in his letter of the same date to Miss Eames.

Judge Sobeloff concluded his letter to Attorney General Kennedy as follows:

"I wish to add on behalf of the members of the court that our independent investigation has convinced us that there is no warrant whatever for these assertions and insinuations, and we express our complete confidence in Judge Haynsworth."

After a review of the file by the Justice Department, Attorney General Kennedy replied to Judge Sobeloff on February 28, 1964, as follows:

"This will acknowledge receipt of your letter dated February 18, 1964, enclosing the file that reflects your investigation of certain assertions and insinuations about Judge Clement F. Haynsworth, Jr.

"Your thorough and complete investigation reflects that the charges were without foundation. I share your expression of complete confidence in Judge Haynsworth.

"Thanks for bringing this matter to my attention."

Such a ringing endorsement of the conduct of Judge Haynsworth, such broad and spacious language, cannot be reasonably taken to be restricted to charges of alleged bribery, but certainly must include all facets of Judge Haynsworth's official conduct, including the questions of ethics and propriety.

If the Justice Department review of the file had indicated that Judge Haynsworth was innocent of any violations of the criminal law, but that his ethical conduct was questionable, then surely Attorney General Kennedy would have spoken in more guarded language and would have hedged his "expression of complete confidence in Judge Haynsworth."

Senator Hruska has recently requested the Department of Justice to reexamine the conduct of Judge Haynsworth in this matter as it relates to the standards of judicial ethics.

Honorable William H. Rehnquist, Assistant Attorney General, Office of Legal Counsel, has submitted a thorough and well-reasoned reply to the inquiry of Senator Hruska. This Opinion of the Justice Department closely examines all of the pertinent facts and circumstances relating to the conduct of Judge Haynsworth taking part in the *Darlington* decision, and comes to the conclusion that his conduct in that case comported with the laws of the United States, the Canons of Judicial Ethics, and the Canons of Judicial Ethics of the American Bar Association.

The Opinion concludes that Judge Haynsworth should not have recused himself or been disqualified from participating in the decision of the *Darlington* case, and that in light of the facts he was under a duty to take part in that decision.

The Opinion further states that the opinions of the American Bar Association Committee on Professional Ethics and the decisions of state and federal courts confirm the conclusion that Judge Haynsworth acted properly, and that this conclusion is supported by common sense ethical considerations.

Two members of the Senate Judiciary Committee have requested additional information pertaining to certain additional facts and circumstances relating to Judge Haynsworth's participation in the *Darlington* decision. It is our understanding that this additional requested information is in the process of being furnished.

We firmly believe that a review of the presently known undisputed facts pertaining to this matter will lead to the inescapable conclusion that it affords no basis for opposing the nomination of Judge Haynsworth to be an Associate Justice of the Supreme Court of the United States.

TEXTILE WORKERS UNION OF AMERICA,
New York, N.Y., December 17, 1963.

Hon. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals for the Fourth Circuit, Richmond, Va.

DEAR JUDGE SOBELOFF: I have taken the liberty of marking this letter as "personal" because I believe that you should be the first person to see it. It is written to you in your capacity as Chief Judge of the Court of Appeals.

The consolidated Deering Milliken cases were decided by the Fourth Circuit on Friday, November 15, 1963. On the morning of Wednesday, November 20th, our Union received a telephone call in which the caller,

who said that he would not identify himself, stated substantially the following:

I believe that you should know that Judge Haynsworth, who voted against your Union in the Deering Milliken case is the First Vice President of Carolina Vend-A-Matic Company, and that two days after the decision in the Deering Milliken case, Deering Milliken cancelled its contracts with the company or companies which previously supplied vending machines to all of the numerous Deering Milliken mills in the Carolinas, and proceeded to sign a new contract with the Carolina Vend-A-Matic Company pursuant to which that Company would supply vending machines to all Deering Milliken mills.

We immediately proceeded to do what we could to check the accuracy of this allegation. The first element checked out readily; there is no doubt that Judge Haynsworth is or was until very recently the First Vice President of Carolina Vend-A-Matic Company. (We do not know the extent, if any, of his shareholding in the corporation, but we are informed that he has been the First Vice President since the company was founded, and that the Judge's former partner in the law firm of Haynsworth, Perry, Bryant, Marion and Johnston, in Greenville, Mr. W. Francis Marion, is and has been the President of Carolina Vend-A-Matic Company.) As to the second element of the allegation—that regarding the throwing of the Deering Milliken vending machine contracts to Carolina Vend-A-Matic—we were first informed that a notice was posted in the Drayton Mill of the Deering Milliken chain at some time prior to December 11th of this year stating that as of January 1st, a complete new set of vending machines would be installed in the mill; we were later informed that the most recent story was that as of January 1, Deering Milliken would *take bids from* vending machine companies.

We have seen two credit reports on Carolina Vend-A-Matic Company. (These reports are not our property.) The first of these reports was dated October 18, 1963. The report stated that it was based upon an interview on October 8, 1963 with the general manager of Carolina Vend-A-Matic, Mr. Wade Dennis. (The interview could not have been held any earlier than October 1, 1963, since it includes the statement that volume for *the first nine months* of 1963 had increased about 25% over that for the corresponding period of 1962.) This report stated that the First Vice President of the corporation was Clement F. Haynsworth, Jr. It further stated that annual estimated sales were $2,000,000. It happened that there was a typographical discrepancy in the report: On the first page the report stated that the company had been founded in 1960; on the second page the founding date was stated as 1950.

A second report had been sought to reconcile this typographical discrepancy. The discrepancy was corrected (the proper date was 1950) in a report sent out on December 3rd entitled "substitute Report of Even Date [presumably October 18]: Correcting Errors in Composition." This report, still stating that it was based upon the October 8th interview, claimed that "C. F. Haynsworth, Jr., formerly shown as First Vice President resigned about September 1, 1963 and no one has been elected to that office." (The corrected report further states that annual sales were estimated at $3,000,000, an increase of a million dollars—which could represent the Deering Milliken contract.) This is apparently an attempt *retroactively* to create a September, 1963 resignation from corporate office for Judge Haynsworth, since the first report of the October 8th interview (which had to have been written later than September 30th) stated that Judge Haynsworth *was* the First Vice President.

I am sure you can imagine that our union is gravely disturbed. After having lost a case of the most serious importance by one vote, we have been informed that the party which won the case awarded a significant contract to a firm in which one of the judges was interested. The allegations have checked out: (1) In fact, the Judge was (at least until recently) an officer of the corporation, and there has been an effort to hide that fact, and (2) in fact, a notice was posted in the mill at Drayton that the vending machines were to be changed.

Thus far, the allegations are clear and definite—the kind of thing that clearly means something if it is true. Because we see these allegations checking out as apparently true, then we begin to wonder about the import of facts whose significance is less clear. For example, we are informed that Judge Haynsworth is extremely close to former Senator Charles Daniels, who in turn is extremely close to Roger Milliken. If this fact stood alone, we would endeavor not to to be perturbed by it, but it does not. Knowing these facts, we cannot help but suspect that the reason why Deering Milliken moved for a hearing en banc was to be sure to have Judge Haynsworth on the panel. We cannot help but wonder whether the sentence in the decision regarding print cloth, which was evidently not a part of Judge Bryan's original text (since it was added in handwriting to the typed manuscript) and which the Court has subsequently, on its own motion, omitted from the decision, was not introduced at Judge Haynsworth's suggestion and then withdrawn at his suggestion because Deering Milliken had pointed out to him that by going this far, he had caused the opinion flatly to contradict the record in the case.

We of course have no subpoena power. We cannot examine the officers and look into the books of the vending machine corporation or corporations which previously had the Deering Milliken contract (the chief among which corporations we believe to be the Spartamatic Corporation of Spartanburg, South Carolina), the records of which should presumably reflect any contract cancellation which may have occurred and the date of such a cancellation. Depending on a number of facts which we do not know but which could be discovered by an investigation with subpoena powers, there may or may not be violations of 18 U.S.C. sections 201 and 202. It would appear, however, that only one fact which is now unknown—namely whether or not the Deering Milliken contract was thrown to Carolina Vend-A-Matic—needs to be known in order to conclude that Judge Haynsworth should have disqualified himself from participating in this decision.

We had intended to wait until January 1st to see whether Carolina Vend-A-Matic machines were installed on that date as the notice at Drayton suggested. But the making of the changes in the financial report and the story regarding a taking of bids suggest that Carolina Vend-A-Matic may already fear discovery and consequently have begun an effort to cover its tracks.

We believe that an investigation should be made immediately. We do not know whether we ourselves should ask the Justice Department to investigate or whether we should leave the handling of this matter entirely up to you. It is clear to us that you are the first person to whom the matter should be referred. Whether or not a criminal violation has occurred, we certainly believe that if the Deering Milliken contract was thrown to Carolina Vend-A-Matic, Judge Haynsworth should be disqualified from participating in the decision in this case, and that the resulting two-to-two decision should lead to the sustaining of the NLRB decision below.

If you have any questions to ask of our Union, either I or anyone else in this organization to whom you may wish to speak will make himself immediately available to you.

Very truly yours,

PATRICIA EAMES,
Attorney for Textile Workers Union of America, AFL–CIO.

RICHMOND, VA., *January 7, 1964.*

THORNTON W. BROOKS, ESQ.,
McLendon, Brim, Holderness & Brooks,
Greensboro, N.C.

STUART N. UPDIKE, ESQ.,
Townley, Updike, Carter & Rodgers,
New York, N.Y.

GENTLEMEN: Enclosed to each of you is a copy of a letter I have this day written to Miss Patricia Eames, counsel for Textile Workers Union of America, together with a copy of a letter addressed to me by her on December 17, 1963.

The court will be glad to receive any comment from you or your clients. It is suggested that a copy of any communication to the court should be sent to opposing counsel.

Sincerely,

SIMON E. SOBELOFF.

RICHMOND, VA., *January 7, 1964.*

Miss PATRICIA EAMES,
Textile Workers Union of America,
New York, N.Y.

DEAR MISS EAMES: Your letter of December 17, 1963, addressed to me at Richmond, was forwarded to my Baltimore office but an answer was delayed because I was out of the city, recuperating from a recent illness. When our term opened yesterday your letter was placed before the court. An inquiry will be made into the subject matter about which you wrote me, and I will communicate with you further.

Sincerely,

SIMON E. SOBELOFF.

TOWNLEY, UPDIKE, CARTER & RODGERS,
New York, N.Y., December 10, 1964.

Re *Darlington Mfg. Co. et al.* v. *NLRB.*

Hon. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals, Fourth Circuit, Richmond, Va.

DEAR JUDGE SOBELOFF: We acknowledge your letter of January 7, 1964, together with the enclosures mentioned. It would have been sooner acknowledged but for my absence, because of illness, on the day of its arrival.

Our preliminary inquires indicate that, so far as the facts are within the knowledge of ourselves and of our client, Deering Milliken, Inc., the innuendoes and charges by TWUA counsel against our client and Judge Haynsworth with regard to vending machines in the Drayton Mill are utterly without foundation in fact.

We have already begun a thorough investigation of the facts to enable us promptly to accept the Court's invitation to submit comments. We shall of course comply with the Court's direction that copies of all communications be supplied to opposing counsel. In doing so, however, we would assume that all correspondence between the Court and counsel on this subject is to be considered sealed and not available for public inspection or distribution, pending further directions from the Court.

Respectfully,

STUART N. UPDIKE.

MCLENDON BRIM, HOLDERNESS & BROOKS,
Greensboro, N.C., January 13, 1964.

Hon. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals, Richmond, Va.

DEAR JUDGE SOBELOFF: Your letter of January 7, with enclosures, was received by my office during my absence. The serious allegations and inferences contained in the letter of Miss Eames compel me to promptly reply to the extent possible at this time. The Court has solicited the comment of counsel or their clients, and I am replying on behalf of my client, Darlington Manufacturing Company, although it is no longer in existence. I understand that counsel for Deering Milliken, Inc., will communicate with the Court in due course as to Carolina Vend-A-Matic Com-

pany, about which I have no knowledge whatsoever.

My comments on the other points are as follows:

1. *En banc court.* Miss Eames states at page 2, paragraph 5, "we cannot help but suspect that the reason why Deering Milliken moved for a hearing en banc was to be sure to have Judge Haynesworth [sic] on the panel." Miss Eames' suspicion is totally unwarranted insofar as my client or myself are concerned. The reason why Darlington petitioned for an en banc hearing is set forth in its petition of 30 May. In brief, the reason there stated was:

"This Court wisely utilized the power to initiate an en banc hearing sua sponte in Docket No. 8908, *Simkins, et al. v. Moses H. Cone Memorial Hospital, et al.*, argued on 1 April 1963. Counsel for the parties in that case, including counsel for the Petitioner herein, were unanimous in the view that it was helpful to utilize the power of the Court to have an en banc hearing. This Court has wisely heeded the admonition of the Supreme Court that the en banc power convened by § 46(c) is too useful for a court ever 'to ignore the possibilities of its use in cases where its use might be appropriate.' In less than one year's time, this Court has heard the following cases en banc:" (Nine cases listed.)

I sincerely considered at the time that if it was wise for the Court to initiate an en banc hearing sua sponte in the *Simkins* case, certainly the importance of the present case warranted the invocation of an en banc court, particularly considering the fact that the National Labor Relations Board had decided the case by a three to two decision. Furthermore, my position for an en banc court noted that as four of the five judges of this Court were already familiar with some aspects of the case, it was particularly appropriate that "all members of the Court pool their wisdom in the hearing and the ultimate determination of these complex proceedings." Interestingly enough, the opinion of the majority was written by Judge Bryan who was the only member of the Court who had not previously participated in some of the proceedings related to the case.

Subsequently, both the National Labor Relations Board and the Union, through their counsel, responded to the petition by notifying the Court that they had no objection to the motion for a hearing and determination of the proceedings en blanc.

2. *Deletion of sentence in order.* Miss Eames states at page 2, paragraph 5, that "We cannot help but wonder whether the sentence in the decision regarding print cloth . . . was not introduced at Judge Haynsworth's suggestion and then withdrawn at his suggestion because Deering Milliken had pointed out to him that by going this far, he had caused the opinion flatly to contradict the record in the case." I do not know who introduced the sentence in question into the decision, but I do know who suggested that it be modified or withdrawn. The Clerk mailed to counsel for the parties a photocopy of the decision when it was entered and filed. I am enclosing the photocopy of page 9 of the decision as sent to me and this shows that my copy did not contain the sentence in question. On 20 November Mr. Schoemer called me over long distance telephone from his law office in New York, after he had received his photocopy of the opinion, and in the course of our conversation I learned for the first time that my copy did not contain the inserted sentence. Thereafter I telephoned the Clerk to ascertain if the sentence had been inadvertently omitted from my copy, and as to the exact language in the official copy. The Clerk then examined the record and advised that the sentence should have been written into my copy as well. I then advised the Clerk that in my opinion the statement was not entirely correct and I requested him to call my views to Judge Bryan's attention so that changes, if any, that might be made by the Court in the opinion could be handled before the opinion was sent to the printer; I also asked the Clerk to advise me if it was necessary for me to officially call the matter to the Court's attention by means of a formal document. I did not hear further from the Clerk, nor from any member of the Court, until I received the order of December 9, 1963, wherein the sentence was ordered deleted. The suggestion to Judge Bryan that the added sentence in his written opinion was not entirely supported by the record originated solely with me, and was transmitted by me to Judge Bryan through the Clerk, as indicated.

With respect and esteem, I remain

Sincerely yours,

THORNTON H. BROOKS.

[Enclosure]

"There is no decided case", the Board candidly states, "directly dispositive of Darlington's claim that it had an absolute right to close its mill, irrespective of motive". While a number of the decisions on the point mention the presence of a legitimate economic reason in connection with the right to close, an analysis of them discloses that they do not declare the existence of such a reason to be indispensible to the validity of the closing. See e.g., NLRB v. Preston Food Corp., 309 F.2d 946, 352 (4 Cir. 1962); NLRB v. New England Web, Inc., 309 F.2d 696, 700 (1 Cir. 1962); NLRB v. Rapid Bindery, Inc., 293 F.2d 170, 173 (2 Cir. 1961); Union Drawn Steel Co. v. NLRB, 109 F.2d 587, 592 (3 Cir. 1940). Nor are there precedents for the proposition that an owner or operator cannot go out of business at his option if the closure is intended to be, and is in truth, absolute and permanent. These authorities, we think, support the view that if the termination is without intent to resume the business elsewhere—as a runaway—the power to close, even if spurred by unionization, is not precluded by the act.

RICHMOND, VA.,
January 13, 1969.

Re *Darlington Mfg. Co., et al.*, v. *NLRB.*

STUART N. UPDIKE, Esq.,
Townley, Updike, Carter & Rodgers, New York, N.Y.

DEAR MR. UPDIKE: Thank you for your letter of January 10. The court will await your further communication.

Your suggestion that all correspondence between the court and counsel on this subject should not be available for public inspection or distribution pending further direction from the court, is, of course, correct.

Sincerely,

SIMON E. SOBELOFF.

TOWNLEY, UPDIKE, CARTER & RODGERS,
New York, N.Y., January 13, 1964.

Re *Darlington Mfg. Co. et al.* v. *NLRB.*

HON. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals, Fourth Circuit, Richmond, Va.

DEAR JUDGE SOBELOFF: I regret that I must call to the Court's attention that the date "December 10, 1964" on my letter sent to you last Friday should read "January 10, 1964". Please accept my apologies for the error.

Respectfully,

STUART N. UPDIKE.

TOWNLEY, UPDIKE, CARTER & RODGERS,
New York, N.Y., January 17, 1964.

HON. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals, Fourth Circuit, Richmond, Va.

DEAR JUDGE SOBELOFF: This will supplement our letter of January 10, 1964, acknowledged by your letter of January 13, 1964, for which we thank you.

On January 12, a member of our staff was dispatched to Spartanburg, South Carolina, to make a full investigation of the relevant facts concerning vending machine operations in Deering Milliken mills. (We are using that term in this letter generically to identify the mills which sell their products through Deering Milliken, Inc.) The investigation was made by John P. Reiner, Esq., who joined the staff of this firm on January 2, 1964 after service as law secretary to Chief Judge Sylvester J. Ryan, followed by service as an Assistant United States Attorney, both of the Southern District of New York. He has submitted to us a written report, backed up by copies of the relevant documents. This letter is based thereon.

The investigation was conducted primarily through two sources: (1) Deering Milliken Service Corporation, the purchasing department of which, where requested by a plant manager, advised in obtaining proposals from in-plant feeding contractors at the Deering Milliken mills; and (2) Pacolet Industries, Inc., of which the Drayton Mill is a division. Deering Milliken, Inc., as such, was not involved in the investigation.

By way of preface, we observe that the letter to you from union counsel of December 17, 1963, makes two broad charges with respect to vending machine operations at these mills:

(1) On November 17, 1963, two days after the Court's decision in the Darlington case, "Deering Milliken" cancelled its contracts with the suppliers of vending machines "to all of the numerous Deering Milliken mills in the Carolinas" and transferred or "threw" the business to Carolina Vend-A-Matic Co., Inc. (page 1 of Miss Eames' letter).

(2) While the union has been unable to verify the correctness of the foregoing hearsay report supposedly given it by an anonymous telephone caller, it has established that Drayton Mill has transferred, or as of January 1 would transfer, its vending machine contract to Carolina Vend-A-Matic Co., Inc. (hereafter "Carolina Vend-A-Matic") (page 2 of Miss Eames' letter).

Both these statements are absolutely and unqualifiedly false, as we shall now demonstrate, first dealing with the specific instance of Drayton Mill and then with the other Deering Milliken mills.

As to Drayton Mill: For a number of years, food and beverages at Drayton Mill were supplied in part by an outside independent contractor and in part by the services of mill personnel. Early in 1963, the mill manager questioned whether these operations might not be more efficiently carried out by a single outside independent vending contractor. After investigation of the subject and in late October 1963, the manager decided to transfer these operations to such an outside firm, and enlisted the aid of the purchasing department of Deering Milliken Service Corporation in obtaining proposals. At about this time, a notice was posted on the mill's bulletin board indicating that in the future, but at an unspecified date, vending machine operations would be placed in the hands of an independent contractor.

With the assistance of the purchasing department, five vending companies thought to be interested in supplying food and equipment to the Drayton Mill were invited* to submit proposals to Mr. Rogers, the plant manager. Included in the list of invitees were Carolina Vend-A-Matic and Automatic Food Service, Inc. of Spartanburg, the company which had been supplying beverage vending machines at Drayton Mill for some years. Proposals were received; most, if not all, of the invitees inspected the facilities available at the plant and the plant man-

---

*Each of the invitees, including Carolina Vend-A-Matic, was then supplying food and beverage vending operations to one or more Deering Milliken mills.

ager personally visited the facilities of each of the invitees in order to satisfy himself as to which was likely to supply the best quality food.

On or about December 10, 1963, the plant manager made his determination. To aid in the formulation of his judgment, he prepared a chart on which he tabulated what he regarded as the principal criteria by which each of the invitees was to be judged, and then awarded points to indicate his own evaluation of the invitees' qualifications. By this method. Automatic Food Service, Inc. of Spartanburg, the existing contractor at the mill, emerged with the highest rating; Carolina Vend-A-Matic was second, with a rating about 25% below the first company. Accordingly, Automatic Food Service, Inc. was notified that the contract would be awarded to it, and the four other bidders (including, of course, Carolina Vend-A-Matic) on December 16, 1963 were notified that they had lost out. The contract was signed on December 19, 1963.

Examples of the documentary evidence available in support of the foregoing are: proposals to Drayton Mill from each of the vending companies; the chart prepared by Drayton's manager during the process of arriving at his decision; and the correspondence with the various bidding concerns.

As to Other Deering Milliken Mills: During the latter part of 1963, there were approximately 40 textile mills (including related companies) which sold their production through Deering Milliken. These include the mills acquired by Deering Milliken, Inc. from Textron, Inc. in the Spring of 1963. Of these, 27 were served by 10 different independent vending machine companies, of which Carolina Vend-A-Matic was one, serving 5 different plants. (Another vending machine company served 6 plants; the rest served less than 5.) It appears that of Carolina Vend-A-Matic's 5 contracts, 4 had been in existence since 1958. The remaining one was awarded in July 1963, on the basis of an invitation for proposals, followed by an award of the contract, as has been described above in the case of Drayton Mill. In this instance, however, the mill management decided on Carolina Vend-A-Matic (out of eight competitive proposals) as the preferable bidder. The contract was awarded accordingly. The plant in question has only about 250 employees.

Needless to say, there is not the slightest evidence that any Deering Milliken mill has ever cancelled a vending machine contract with the intention of transferring or "throwing" the contract to Carolina Vend-A-Matic, nor has any such mill ever done so. In short, the charge which union counsel says was anonymously relayed by telephone on November 17, 1963, to that effect is utterly without foundation.

We are, of course, in no position to deal with the allegations concerning Judge Haynsworth's ownership in Carolina Vend-A-Matic, or what the union portrays as a clumsy attempt to divest himself of any public connection with that company on the eve of the Darlington decision. It would, we feel, be both presumptuous and unnecessary for us to assay any defense of Judge Haynsworth against the irresponsible charges in the letter from Miss Eames. From the standpoint of Deering Milliken, Inc., however, as a party to the litigation in which the innuendoes have been raised, and a company which is implicitly if not primarily charged with bribing, or attempting to bribe, a member of the Federal Judiciary we can only voice the hope that if and when there should issue from the Court a vindication of Judge Haynsworth and a flat rejection of the union's suggestion that he should be disqualified from the Darlington decision, the Court's determination should make clear that Deering Milliken, Inc. is likewise free from any possible guilt in this situation.

In view of the length which this letter has already reached, we shall refrain from commenting on the peripheral charges by Miss Eames that are dealt with in Mr. Brooks' letter to the Court of January 16. Needless to say, we adopt Mr. Brooks' statement of the facts, so far as they are known to us.

We stand ready to meet with the Court, or to supply to the Court any information desired concerning any particulars of the matters under inquiry. We shall be happy to make Mr. Reiner, and his report, available to the Court; or if the Court wishes, either Mr. Schoemer or I will be glad to attend before it for further substantiation of these statements.

Respectfully,

STUART N. UPDIKE.

RICHMOND, VA.,
January 23, 1964.

Re *Darlington Mfg. Co., et al.* v. *NLRB.*

STUART N. UPDIKE, Esq.,
Townley, Updike, Carter & Rodgers,
New York, N.Y.

DEAR MR. UPDIKE: Thank you for your letter of January 17. The court would like to be advised of the identity of the five plants referred to by you as being served by Carolina Vend-A-Matic, the dates on which such service began, the number of machines and the approximate volume of business transacted in each of these plants.

Sincerely,

SIMON E. SOBELOFF.

TOWNLEY, UPDIKE, CARTER & RODGERS,
New York, N.Y., January 27, 1964.

Re *Darlington Mfg. Co. et al.* v. *NLRB.*

Hon. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals, Fourth Circuit, Richmond, Va.

DEAR JUDGE SOBELOFF: I acknowledge with thanks your letter of January 23, 1964. I respond to your inquiry as follows:

THE FIVE PLANTS SERVED BY CAROLINA VEND-A-MATIC CO., INC.

At Marietta, South Carolina on the premises of Gayley Mill are located three separate operations. The first of these is the Gayley Mill itself; the other two are Clemson Industries and Mayco Yarns. Each of these is a separate manufacturing operation, although all three are located in the same plant premises at Gayley Mill. These operations constitute three of the total of five served by Carolina Vend-A-Matic Co., Inc. (hereafter "Carolina Vend-A-Matic"), as stated in my letter of January 17th.

The fourth plant is Jonesville Products, located at Jonesville, South Carolina. The fifth is Magnolia Finishing Plant, located at Blacksburg, South Carolina.

THE DATES ON WHICH SUCH SERVICE BEGAN

While the initial installation of two coffee machines by Carolina Vend-A-Matic at Gayley began in 1952, the more substantial operation as presently constituted began in March 1958. The servicing at Jonesville began in October 1958. The servicing at Magnolia began in August, 1963.

THE NUMBER OF MACHINES AND APPROXIMATE VOLUME

At Gayley there are six vending machines, as follows:

1 Coffee machine;
1 Cold Drink machine;
1 Candy machine;
1 Cigarette machine;
1 Hot Soup machine;
1 Sandwich machine.

The employees at Gayley Mill, Clemson Industries and Mayco Yarns are all served by the same machines. They total approximately 380 people. The average gross weekly sales is approximately $950.

At Jonesville Products there are two vending machines: 1 Coffee machine, 1 Candy machine. The plant employs approximately 50 people. The average gross weekly sales is approximately $24.

At Magnolia Finishing Plant there are *two* banks of machines, each consisting of eight vending machines, as follows:

1 Coffee machine;
1 Cold Drink Machine;
1 Candy machine;
1 Cigarette machine;
1 Sandwich machine;
1 Milk machine;
1 Ice Cream machine;
1 Pastry machine.

There are three other service areas in the plant, each with three vending machines, as follows:

1 coffee machine.
1 cold drink machine;
1 candy machine.

The Magnolia plant employs approximately 250 people. The average gross weekly sales is approximately $1,000.

For the convenience of the Court, we have prepared and enclose herewith a table setting forth the above information. As stated in concluding our letter of January 17th, we stand ready to meet the further requests of the Court.

Respectfully,

STUART N. UPDIKE.

CHART SHOWING DATES, NUMBER OF MACHINES, AND VOLUME BY PLANT

Plants	Date service began	Number of machines	Approximate volume: Number of employees	Approximate volume: Average weekly gross sales
Gayley M. Marietta, S.C. Clemson Industries, Marietta S.C. Mayco Yarns, Marietta, S.C.	March 1952 (coffee only) March 1958	6	380	$950
Jonesville Products Jonesville, S.C.	October 1958	2	50	24
Magnolia Finishing Plant, Blacksburg, S.C.	August 1963	8×2=16 3×3=9	250	1,000

TOWNLEY, UPDIKE, CARTER & RODGERS,
New York, N.Y., February 11, 1964.

Re Darlington Mfg. Co. et al v. NLRB.

Hon. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals,
Fourth Circuit,
Richmond, Va.

DEAR JUDGE SOBELOFF: In Mr. Updike's absence, I acknowledge receipt of a copy of Miss Eames' letter of February 6th to the Court.

As a comment by us or our client would seem to be superfluous under the circumstances, we shall await further instructions or advice from the Court.

Respectfully,

JOHN R. SCHOEMER, Jr.

TEXTILE WORKERS UNION OF AMERICA,
February 6, 1964.

Hon. SIMON E. SOBELOFF,
Chief Judge, U.S. Court of Appeals for the Fourth Circuit, Richmond, Va.

DEAR JUDGE SOBELOFF: Having read and reread Mr. Updike's letter to you of January 17, I believe that the facts therein set forth establish that Deering Milliken did not throw its vending machine contracts to Carolina Vend-A-Matic as was alleged to our Union on November 20. With that basic fact established, it becomes clear that my collateral concerns, as expressed to you in the last paragraph on the second page of my letter to you of December 17, become inappropriate.

I regret that Mr. Updike feels that my letter

to you was irresponsible. At the time when the telephoned message to our Union had been passed on to me, and I had noted the officerships in Carolina Vend-A-Matic and had heard what reports were available to me regarding Deering Milliken's southern plants, frankly I was sorely troubled as to what I *should* do about a half-knowledge which it would clearly be irresponsible to keep silent about. It appeared to me that the most responsible course was to write to the Chief Judge.

My letter to you has caused trouble. I am genuinely sorry for that. Since we now know that the allegation made to our Union was inaccurate, we know that that trouble was unnecessary. Thus I am the more regretful of the trouble caused.

Sincerely yours,

PATRICIA EAMES,
Assistant General Counsel.

U.S. COURT OF APPEALS,
FOURTH JUDICIAL CIRCUIT,
February 18, 1964.

Miss PATRICIA EAMES,
Assistant General Counsel,
Textile Workers Union of America,
New York, N.Y.

DEAR MISS EAMES: Thank you for your letter of February 6. Your frank recognition that the statements made to you in the anonymous telephone call were in error, and that your acknowledgment that the concerns expressed by you on the basis of that call were unwarranted, should terminate this matter satisfactorily to all concerned.

For your further information, to complete the record, and in simple justice to Judge Haynsworth, I think I should inform you of some additional facts which our inquiry disclosed.

Information which the court has obtained from officials of Carolina Vend-A-Matic is entirely consistent with that which it has received through attorneys for Deering Milliken, copies of which were sent you. There was one slight discrepancy which calls for an explanatory word. Carolina Vend-A-Matic Co. had reported that it had vending machines in *three* identified plants related to Deering Milliken, Gayley Mill being one of them. Though Gayley Mill is one plant under one roof and there is only one vending installation there, Deering Milliken classed it as three operations; but they both meant the same thing.

Your anonymous informer said that Deering Milliken had cancelled all of its contracts with other vending machine companies and was throwing all of its many plants as vending machine locations to Carolina Vend-A-Matic. Some apparent corroboration of this might be inferred from the fact that a notice of a new vending operation had been posted at Drayton Mill.

Our inquiry produces no confirmation of the cancellation by Derring Milliken of any vendor's contract. A vending machine company had coffee vending machines in Drayton Mills, but all other food services were supplied by employees of the company operating "dope wagons." As Mr. Updike has reported, officials of Deering Milliken decided to replace the dope wagons with vending machines and sought proposals for complete vending from five companies, including the one which already had the coffee vending machines in the plant. Mr. Dennis and Mr. League, of Carolina Vend-A-Matic, conferred with Mr. Rogers of Drayton Mills on December 4, 1963, and, in response to his request on that date, submitted a proposal to him on December 9. Mr. Dennis, of Carolina Vend-A-Matic, received a letter from Mr. Foster, Personnel Manager of Drayton Mills, dated December 16, informing him that it had been decided to have Automatic Food Service, Inc. provide this service. Automatic Food Service, Inc. is the company which previously had the coffee machines in the plant.

As we also have learned, Carolina Vend-A-Matic was one of a number of vending machine companies which sought the business of the new Magnolia Finishing plant in 1963. On the basis of competitive bidding, Carolina Vend-A-Matic obtained that business. At about the same time, however, in the summer of 1963, it was one of several competitive bidders for the vending business of another Deering Milliken related plant, which, like Drayton Mills, was moving to complete food vending. It did not get that business. Thus, in 1963, Carolina Vend-A-Matic sought through competitive bidding the business of three Deering Milliken related plants, obtained that of one and lost that of the other two.

The actual facts do not warrant any inference that Deering Milliken related mills have preferred Carolina Vend-A-Matic in any way over other vendors.

The circumstances of Judge Haynsworth's resignation as a director of Carolina Vend-A-Matic are also well known to us, and it was prompted by a resolution of the Judicial Conference of the United States and was in no way related to Deering Milliken contracts.

When Judge Haynsworth came on this court in 1957, he was a member of the board of directors of a number of corporations. He resigned from the board of each of those corporations which was publicly owned. He did this in order to avoid any chance that someone might undertake to influence him indirectly through a corporation of which he was known to be a director. He did not resign from the boards of two corporations. One of those two is a small, passive corporation in which members of his family have an interest. It owns real estate under long term leases and engages in no active business. He also remained on the board of Carolina Vend-A-Matic, which is not publicly owned, for he thought that the considerations which led him to resign from the boards of the other corporations were inapplicable to it and the small, passive corporation.

Some months ago it became known that judges in other sections of the country were serving on the boards of large, active, publicly owned corporations. They had not done what Judge Haynsworth had done in the first instance. Their service on the boards of such corporations led to criticism, with the result that last fall the Judicial Conference of the United States adopted a resolution that

"No justice or judge of the United States shall serve in the capacity of an officer, director or employee of a corporation organized for profit."

In obedience to this resolution Judge Haynsworth severed official relations with Carolina Vend-A-Matic and the small, passive corporation. Judge Haynsworth's colleagues knew of these matters at the time and discussed them with him. Clearly his resignation has no sinister implication; it was a prompt, natural and expected response to the resolution adopted by the Judicial Conference.

Incidentally, we are assured that Judge Haynsworth has had no active participation in the affairs of Carolina Vend-A-Matic, has never sought business for it or discussed procurement of locations for it with the officials or employees of any other company.

It thus appears that the information received anonymously, by you was completely unfounded, and it is gratifying that after mature consideration you are convinced of this. However, unwarranted the allegation, since the propriety of the conduct of a member of this court has been questioned, I am today, at Judge Haynsworth's request and with the concurrence of the entire court, sending the file to the Department of Justice, together with an expression of our full confidence in Judge Haynsworth.

Sincerely,

SIMON E. SOBELOFF.

U.S. COURT OF APPEALS,
FOURTH JUDICIAL CIRCUIT,
February 18, 1964.

Hon. ROBERT F. KENNEDY,
Attorney General,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: Enclosed is the file of correspondence passing between our court and counsel for the Textile Workers Union of America and Deering Milliken Corporation following the argument of an appeal in our court. Inasmuch as this relates to alleged conduct of one of our colleagues, we think it appropriate to pass the file on to the Department of Justice.

Happily, Miss Eames, who wrote the initial letter to the court on December 17, 1963, has herself acknowledged that the assertions and insinuations about Judge Haynsworth, made to her by some anonymous person in a telephone call, are without foundation; but I wish to add on behalf of the members of the court that our independent investigation has convinced us that there is no warrant whatever for these assertions and insinuations, and we express our compete confidence in Judge Haynsworth.

Sincerely,

SIMON E. SOBELOFF.

February 28, 1964.

Hon. SIMON E. SOBELOFF,
U.S. Court of Appeals for the Fourth Circuit,
Baltimore, Md.

DEAR MR. CHIEF JUDGE: This will acknowledge receipt of your letter dated February 18, 1964, enclosing the file that reflects your investigation of certain assertions and insinuations about Judge Clement F. Haynsworth, Jr.

Your thorough and complete investigation reflects that the charges were without foundation. I share your expression of complete confidence in Judge Haynsworth.

Thanks for bringing this matter to my attention.

Sincerely,

ROBERT F. KENNEDY,
Attorney General.

DEPARTMENT OF JUSTICE ROUTING SLIP

To: John Duffener, Bldg. 4212.

JOHN: As I began at the beginning and read this—I thought—"Shades of Bobby Baker" with the vending machine aspects.

Having read it all I agree the matter has been fully and satisfactory by Judge Sobeloff.

FEBRUARY 26, 1964.

DEPARTMENT OF DEFENSE ROUTING SLIP

To: A. G.

O.K. to sign.

———. ———.

U.S. SENATE,
COMMITTEE ON THE JUDICIARY,
Washington, D.C., September 2, 1969.

Hon. JOHN N. MITCHELL,
The Attorney General,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: The Senate Judiciary Committee is scheduled to begin hearings soon on the President's nomination of Judge Clement F. Haynsworth to be an Associate Justice of the Supreme Court of the United States.

Shortly after the President submitted

Judge Haynsworth's name to the Senate, statements in the public press have charged that Judge Haynsworth should have disqualified himself from a labor case that was decided several years ago by the Court of Appeals for the Fourth Circuit.

Because these same charges indicate that the Justice Department has a file on this matter, and because the Justice Department has been called upon in prior confirmation hearings to assist this Committee in analyses of legal points, I would very much appreciate having the views of the Department as to whether Judge Haynsworth should have disqualified himself in this case.

I would propose to share your reply with the Chairman and my fellow members of the Judiciary Committee.

Yours very truly,

ROMAN L. HRUSKA,
U.S. Senator.

DEPARTMENT OF JUSTICE,
Washington, D.C., September 5, 1969.

Hon. ROMAN L. HRUSKA,
U.S. Senate,
Washington, D.C.

DEAR SENATOR HRUSKA: The Attorney General has asked me to reply to your letter to him dated September 2, requesting that the Justice Department comment on certain charges that have been made against Judge Clement F. Haynsworth. These charges, as I understand them, are that since Deering-Milliken, Inc., was a party to the case of *Darlington Mfg. Co.* v. *National Labor Relations Board*, 325 F. 2d 682, decided by the Court of Appeals for the Fourth Circuit in 1963, and since Judge Haynsworth owned stock in a corporation which did business with Deering-Milliken, he had an "interest" in the *Darlington* case and should have disqualified himself from sitting. I understand from your letter that the Department's views will be circulated to the Chairman and other members of the Judiciary Committee, which will shortly consider the President's nomination of Judge Haynsworth to be an Associate Justice of the Supreme Court of the United States.

We have received from Judge Haynsworth a copy of a statement which he has prepared in response to a request from Senator Eastland, the Chairman of the Judiciary Committee, and have used that statement, together with the file forwarded to the Justice Department in 1964 by Chief Judge Sobeloff,[1] as the factual basis for our reply to your question.

The *Darlington* case was orally argued before the Court of Appeals for the Fourth Circuit on June 13, 1963, and was decided by that court on November 15, 1963.[2] Judge Haynsworth had been appointed to the Court of Appeals six years earlier, in 1957. During all of the time that the *Darlington* case was pending before the Court of Appeals in 1963, Judge Haynsworth held one-seventh of the stock of a South Carolina corporation known as Carolina Vend-A-Matic Company, which he had helped organize in 1950.

During 1963 Vend-A-Matic obtained slightly more than three percent of its gross sales from various plants of the Deering-Milliken combine, plants in which some 700 out of a total of 19,000 Deering-Milliken employees worked. Deering-Milliken granted space to vending machine companies on the basis of competitive bidding. During 1963 Vend-A-Matic competed for three such awards, obtaining one and losing two. None of the Deering-Milliken officials who awarded vending machine rights knew that Judge Haynsworth was associated with Vend-A-Matic. Judge Haynsworth in turn played no part at any time in Vend-A-Matic's site acquisition program, and was largely unfamiliar with information regarding its site locations at the time the *Darlington* case was before his Court.

Prior to 1957 Judge Haynsworth took some part in obtaining financing for Vend-A-Matic; after his appointment to the Court of Appeals, he took no active part in the business at all. Prior to his appointment to the Court of Appeals, he was both a director and a Vice President of Vend-A-Matic; he orally resigned as Vice President in 1957, although the minute book of the corporation continued to show him as holding that office in subsequent years. He continued as a director until October, 1963, when he resigned in compliance with a resolution of the United States Judicial Conference adopted shortly before that date.

I regard the dates of resignation by Judge Haynsworth as an officer and director of Vend-A-Matic as immaterial for purposes of this analysis. Since he remained a holder of stock in the company of substantial value after he had resigned his official positions, he was in spite of these resignations unquestionably "interested" in Vend-A-Matic. Since he was not active in the conduct of its business, and was unfamiliar with the details of the location of its machines, the fact that he was a director does not change the situation from what it would have been had he been simply a stockholder. The legal and ethical question raised by these facts is whether a judge, who owns stock in one corporation, which in turn does business with a second corporation, should disqualify himself when the second corporation is a party litigant in his court.

Those statutes and canons of ethics which regulate judicial conduct are basically of two kinds: those which govern the *extra-judicial* activities of a judge, and those which govern his *judicial* activity.

18 U.S.C. 205 prohibits judges from acting as attorneys or agents for any party in a proceeding to which the United States is a party; 28 U.S.C. 454 prohibits the practice of law by a judge appointed under the authority of the United States; several of the canons of judicial ethics likewise restrict the sort of extra-judicial conduct in which a judge may engage. The recent action of the Judicial Conference of the United States, requiring that permission of the Conference be obtained for judges to engage in extra-judicial employment, and that judges report to the Conference outside income from personal services, was addressed to extra-judicial conduct. The charges made against Judge Haynsworth, on the other hand, are directed to the second kind of judicial conduct which is regulated by statute and by canons of judicial ethics—the conduct of the judge in the discharge of his *judicial* duties.

Both a statute and one of the Canons of Judicial Ethics are relevant in assessing these charges.[3] 28 U.S.C. 455 provides that:

"Any justice or judge of the United States shall disqualify himself in any case in which he has a substantial interest, has been of counsel, is or has been a material witness, or is so related to or connected with any party or his attorney as to render it improper, in his opinion, for him to sit on the trial, appeal, or other proceedings therein."

Canon 29 states:

"A judge should abstain from performing or taking part in any judicial act in which his personal interests are involved. If he has personal litigation in the court of which he is a judge, he need not resign his judgeship on that account, but he should, of course, refrain from any judicial act in such a controversy."

Though this Canon has been mentioned in connection with the charges made against Judge Haynsworth, I do not believe that it is applicable. None of the information about the Vend-A-Matic suggests that it was an enterprise ". . . apt to be involved in litigation in the courts", and it was not in fact involved in the *Darlington* case.

In addition to the federal disqualification statute, numerous states have disqualification statutes cast in somewhat similar terms, and precedents from those jurisdictions are helpful in the absence of authoritative decisions construing the federal statute. Under the statute, the question is quite clearly whether Judge Haynsworth had a "substantial" interest in the *Darlington* case; under Canon 29, the question is whether Judge Haynsworth's "personal interests" were involved in that litigation.

Quite obviously, when we are dealing with a concept which has both a legal and an ethical content, it is not desirable to parse the language in a manner which might sacrifice ethical substance to legal form. At first blush, indeed, it might appear to be an easy solution to the question of disqualification for the judge to "bend over backwards" and recuse himself if there be even the most tenuous claim that he ought to do so. More careful consideration, I believe, suggests that this is not the case, and requires that a quite precise determination be made in each case on the basis of the statute, the canons and the facts. This is because of the generally accepted principle stated as follows by two different federal courts of appeals:

"There is as much obligation upon a judge not to recuse himself when there is no occasion as there is for him to do so when there is." In re *Union Leader Corp.*, 1st Cir., 292 F. 2d 381, 391 (1961), quoted with approval in *Wolfson* v. *Palmieri*, 2nd Cir., 396 F. 2d 121 (1968).

The delays and procedural snarls which not infrequently result from the disqualification of a trial judge are serious enough to suggest that such action should be resorted to only when justified. Additional complications occur when the judge recusing himself sits on an appellate court, since there is not the freedom to transfer a case from one appellate court to another as there is from one trial judge to another. John P. Frank, in an article entitled, "Disqualification of Judges", 56 Yale Law Journal 605 (1947), points out that from 1941 to 1946 three cases pending before the Supreme Court of the United States had to be either dismissed for lack of a quorum, *Chrysler Corporation* v. *United States*, 314 U.S. 483 (1941), continued for lack of a quorum, *North American Company* v. *Securities & Exchange Commission*, 327 U.S. 686 (1946), or transferred for final decision to a court of appeals pursuant to special statute, *United States* v. *Aluminum Company of America*, 322 U.S. 716 (1944). On more than one occasion since the date of that article, the Supreme Court of the United States has been obliged to affirm the judgment of the lower court by an equally divided vote and without opinion, because of disqualification. *Bailey* v. *Richardson*, 341 U.S. 918 (1951); *Alitalia-Linee Aeree Italiane*, S.p.A. v. *Lisi*, 390 U.S. 455 (1968); *Anderson* v. *Johnson*, 390 U.S. 456 (1968); *World Airways, Inc. v. Pan American World Airways, Inc.*, 391 U.S. 461 (1968). One of the leading antitrust cases of the 1950s, *United States* v. *E. I. du Pont de Nemours & Co.*, 353 U.S. 586 (1957), was decided by a Court consisting of only six

---

[1] The file compiled by Chief Judge Sobeloff was the result of an investigation by the Court itself into a similar, though not identical, accusation against Judge Haynsworth. I have assumed from your letter that you wished to have the views of the Department without regard to the findings of the Court, and this letter has been prepared accordingly.

[2] Though not strictly relevant to your inquiry, an accurate procedural description of this litigation is attached to this letter with the thought that it may be of interest to you and to other Committee members.

[3] Canon 26, ABA Canons of Judicial Ethics, states:

"A judge should abstain from making personal investments in enterprises which are apt to be involved in litigation in the courts; and, after his accession to the bench, he should not retain such investment previously made, longer than a period sufficient to enable him to dispose of them without serious loss."

justices, who divided 4 to 2 on the issue before them.

While disqualifications in the courts of appeals do not have the same significance with respect to final decision of important points of law as do disqualifications in the Supreme Court of the United States, they nonetheless create more akwardness than do disqualifications at the trial court level. Indeed, a serious procedural snarl would have resulted in the *Darlington* case had one of the five judges of the Court of Appeals disqualified himself. Had Judge Haynsworth disqualified himself, the Court would presumably have been evenly divided, Judges Bryan and Boreman voting to set aside the Board's order, Chief Judge Sobeloff and Judge Bell voting to enforce the order. While in the case of a direct appeal of a judgment of a district court, the result of such a division is affirmance, it is by no means clear that this would be the result in an agency proceeding where both the agency and the respondent are petitioning the appellate court for relief.

Disqualification where required by statute or by the Canons of Ethics is a judge's undoubted duty. But the disruptive consequences of disqualification, which may be readily borne in order to insure fairness where the judge does have a "substantial interest" in the litigation, should not be borne in order to gratify the desire on the part of either a litigant or of the judge himself that the judge not sit when he does not have such a substantial interest.

There is thus no escape from a careful analysis of each fact situation. The "substantial interest" referred to in the statute and the "personal interest" referred to in the canon is a pecuniary, material interest in the outcome of the litigation. The clearest case is one in which the judge is a party to the lawsuit; obviously he may not sit in such a case. Little different is the case in which the judge owns a significant amount of stock in a corporation which is a party to a lawsuit before him; he, too, must rescue himself. Parties to lawsuits either win or lose them, in whole or in part, and it is difficult to conceive of a lawsuit in which a party, or the stockholder of a corporate party, does not have a material, pecuniary interest in the way in which the lawsuit is decided.

These clear cases quite obviously do not decide the question relating to Judge Haynsworth in the *Darlington* case. Vend-A-Matic had some business dealings with Deering-Milliken, but it was in no sense a party to the Darlington litigation. One question is presented when a judge holds stock in a corporation which is a party to litigation before him. A quite different question is posed when the judge merely owns stock in a corporation which "does business" with a party to litigation before him. A general rule of disqualification in the second situation is neither administratively workable nor ethically desirable. The judge who owns stock in American Telephone and Telegraph Company must simply seek other employment if such a rule be applied, since that corporation presumably does business with virtually every party to every lawsuit in the nation. On a smaller scale, the same would be true of a judge owning stock in a local public utility. Yet surely no one would seriously contend that a judge, by reason of his stockholding in such corporations, would be influenced in favor of parties who were their customers.

A slightly different case is that of a judge who owns stock in a local bank, which in turn has loans outstanding to various individuals and businesses in the community. Where a solvent debtor of the bank is a party to a lawsuit, the interests of the bank in seeing its debtor prevail in order to increase the probabilities of repayment of its loan is theoretically present, but is remote indeed. On the other hand, a judge owning a significant amount of stock in a bank which in turn has a large unsecured loan outstanding to Company X, a company in financial difficulties, should disqualify himself in a treble damage action brought by Company X against a thoroughly solvent defendant.

It therefore seems clear that no categorical rule may be laid down in the case of a judge owning stock in a corporation which does business with a party litigant in the judge's court. Not only is disqualification in all such cases not required ethically, but the adoption of such a principle would make it impossible in many cases to even assemble the facts necessary to pass on a question of disqualification. A corporation need not be listed in Poor's in order to have a number of customers buying from it, and a number of sellers selling to it. The great majority of each are likely to be unknown to a stockholder who takes no active part in the conduct of the corporation's business.

Instead of a broad rule of disqualification in such cases, the principle behind the provision for disqualification suggests that the facts of each case must be analyzed in order to see whether the judge can fairly be said to have a "substantial interest" in the litigaton. It is clear from the examples cited that the characterization of a corporation as "doing business" with a party litigant is far too imprecise to enable one to determine whether the corporation has a "substantial interest" in the litigation. The type and amount of business done, and the effect that various alternative outcomes of the litigation would have on the corporation which is "doing" the "business" must all be considered. A corporation, and therefore those owning substantial stock in the corporation, would seem to have a "substantial interest" in the litigation if it would be probably affected in some defineable, material way by one outcome of the litigation as opposed to another.

Applying this test to Judge Haynsworth's position in the *Darlington* case, I am inescapably led to the conclusion that he should not have disqualified himself. Vend-A-Matic was one of many suppliers of food services to the various Deering-Milliken plants, and Deering-Milliken was one of many owners of installations in which Vend-A-Matic food dispensing machines were placed. It is clear from the facts presented that the Deering-Milliken officials who dealt with vending machine suppliers had no idea that Judge Haynsworth had any connection with any of these companies. As a matter of common sense, as well as of law, it is not possible to identify any conceivable effect that a decision one way or another in the *Darlington* case would have had on the fortunes of Vend-A-Matic.

The opinions of the American Bar Association Committee on Professional Ethics and the decisions of state and federal courts confirm our conclusion that Judge Haynsworth acted properly; disqualification has not been regarded as proper in circumstances such as those surrounding the *Darlington* decision.

In attempting to delineate the scope of the "substantial interest" referred to in the statute and the "personal interest" referred to in the Canon, virtually all of the decisions speak in terms of a "direct" or "immediate" interest as opposed to a "remote" or contingent" interest in the outcome of the litigation. A New York appellate court made this statement in connection with the general problem:

"The interest which will disqualify a judge to sit in a cause need not be large, but it must be real. It must be certain, and not merely possible or contingent; it must be one which is visible, demonstrable, and capable of precise proof." *People* v. *Whitridge,* 129 N.Y. Supp. 300, 304 (App. Div. 1911).

Similarly, The American Bar Association Committee on Professional Ethics decided in Formal Opinion 170 (1937) that a judge should disqualify himself from a case if he owned stock in a corporation that was a party to the litigation. In response to a questionnaire, virtually all state and federal appellate judges indicated that their practice was in conformity with the opinion of the ABA. Frank, op. cit.

At the other extreme, judges, recognizing their duty to sit, have properly refused to disqualify themselves when their interest was remote and insubstantial. For example, it has been held that disqualification was not required under the federal statute when the judge's stockholding in one of the litigants was a minuscule fraction of the issued and outstanding stock. *Lampert* v. *Hollis Music, Inc.,* 105 F.Supp. 3(E.D.N.Y. 1952).

Attempts to extend disqualification to cases where a judge holds stock, not in a party litigant, but in a corporation which had some sort of dealings with a party litigant, have been rebuffed by courts except under unusual circumstances where that interest was not remote. Several cases have arisen in which a judge owned stock in a creditor of one of the parties to the litigation before him, and his disqualification was sought, presumably on the theory that the creditor necessarily had a pecuniary interest in seeing its debtor prevail in litigation with a third party. The decided cases have without exception rejected this contention. *Webb* v. *Town of Eutaw,* 63 So. 687 (Ala. 1913); In re *Farber,* 260 Mich. 652, 245 N.W. 793 (1932).

Related efforts to expand disqualification beyond stockholding in an actual party litigant have met with no success. In *Board of Education of City of Detroit* v. *Getz,* 321 Mich. 676, 33 N.W. 2d 113 (1948), the court held that the fact that the judge was a member of the faculty of the institution for which land was being sought by condemnation did not disqualify him. The Supreme Court of Texas held that ownership of stock by a judge's brother-in-law in a corporation which was a party to the litigation was not grounds for disqualification. Texas Farm *Bureau Cotton Ass'n* v. *Williams,* 300 S.W. 44 (Tex. 1927). The fact that a judge is a taxpayer of a municipality does not disqualify him to hear the municipality's claim of ownership to certain lands, *City of Oakland* v. *Oakland Waterfront Co.,* 50 Pac. 268 (Calif. 1897), or an action brought against the city for some other sort of relief, *Prawdzik* v. *City of Grand Rapids,* 313 Mich. 376, 21 N.W. 2d 168 (1946).

The Supreme Court of California rejected an attempted disqualification even though the judge had a definite, if indirect, interest in the pending litigation. The judge there owned stock in a title insurance company which had insured the title of many trust beneficiaries whose interests would fail in the event that the plaintiff in litigation before the judge was successful. *Central Savings Bank of Oakland* v. *Lake,* 257 Pac. 521 (Calif. 1927).

I have found only two cases in which the courts required disqualification even though the judge did not own stock directly in the party litigant. *In re Honolulu Consol. Oil Co.,* 9th Cir., 243 F. 348 (1917), the sitting trial judge had earlier disposed of stock in corporations which had been named defendants in other actions brought by the United States to quiet title to certain oil lands.

The pending action was similar to the other actions, all of them being part of a "unitary plan" on the part of the United States to bring such actions against all California Oil Companies. The issue of damage was identical in all, and the litigation before the judge could have served as a precedent for the remaining ones. Under California law, as it then existed, stockholders remained personally liable for corporate debts even after their stock had been sold. The Court of Appeals held that under these circum-

stances the judge was disqualified. In *City of Vallejo* v. *Superior Court*, 249 Pac. 1084 (1926), it was held that a judge who was a stockholder in a bank which in turn held the mortgage on property that was the subject of a pending condemnation action in his court was disqualified, even though the bank was not technically a party to the action. It is apparent from the facts of these cases that they have no bearing on Judge Haynsworth's situation in the *Darlington* case.

There is no doubt in my mind that these precedents support the conclusion, equally readily reached on common sense ethical considerations, that Judge Haynsworth ought not to have disqualified himself in the *Darlington* case. While the spirit as well as the letter of the statute and canons must be faithfully applied, questions of disqualification are to be decided in exactly the same manner as a judge decides substantive legal questions which regularly come before him. He must exercise a careful and informed judgment leading him to disqualify himself in those cases in which he has a "substantial interest", and to sit in those cases in which he does not. I am satisfied that Judge Haynsworth adhered to this standard.

Yours very truly,

WILLIAM H. REHNQUIST,
Assistant Attorney General, Office of Legal Counsel.

DARLINGTON VERSUS *NLRB*: SEQUENCE OF PROCEEDINGS

The case arose out of the action of Darlington Manufacturing Company in closing and liquidating its only plant following the victory of the Textile Workers Union of America in a representation election at that plant in 1956. The Board found that both Darlington and Deering-Milliken, Inc., which owned some 40 percent of Darlington's stock, were thereby guilty of an unfair labor practice, and directed that Darlington's employees receive back pay or preferential hiring at other Deering-Milliken mills.

The Court of Appeals, in an opinion by Judge Bryan, refused to enforce the order of the Board, holding that Darlington had an unqualified right to shut down its only plant, regardless of its motive in so doing. The Court further held that even if the Darlington plant be treated as a part of the Deering-Milliken operation, the order nonetheless could not be enforced because an employer had a right to shut down a portion of his business for whatever reason he chose. Judges Haynsworth and Boreman concurred in Judge Bryan's opinion. Chief Judge Sobeloff concurred in a dissenting opinion written by Judge Bell.

Both the union and the Board successfully sought certiorari from the Supreme Court of the United States, which vacated the judgment of the Court of Appeals in *Textile Workers* v. *Darlington Co.*, 380 U.S. 263 (1965). The Supreme Court agreed with the position of the majority of the Fourth Circuit that an employer had a right to completely cease business even if motivated by anti-union animus in so doing, but held that an unfair labor practice could be found to exist if Darlington were regarded "as an integral part of the Deering-Milliken enterprise". The Supreme Court went on to hold that the Board's findings were insufficient to support such a conclusion, and sent the matter back to the Board for further findings.

The Board proceeded to find all of the necessary elements to support the sort of unfair labor practice that the Supreme Court had held could be found under the circumstances, and again sought enforcement of its order in the Court of Appeals. The case was again heard *en banc* by the court. This time a majority of the court, in an opinion written by Judge Butzner, directed that the Board's order be enforced. Judges Bryan and Boreman dissented, but Judge Haynsworth concurred specially with the majority.

VIETNAM POLICY: STALLED ON BOTH TRACKS

Mr. JAVITS. Mr. President, the blunt fact facing the President and the Nation is that the administration's "two track" Vietnam policy—negotiations in Paris and political evolution in Saigon—is badly stalled on both tracks; and that renewed progress on both tracks is both necessary and possible. I come away with this view after detailed discussions I had with Ambassador Lodge and his principal assistants in Paris less than 2 weeks ago, detailing the absence of any meaningful progress in the negotiations there. This has convinced me of the urgent need for a rethinking of the U.S. negotiating position in Paris—one of our tracks—and for shedding the optimism which still seems to be entertained in high quarters concerning the progress that could be made in Paris under present policy assumptions and objectives, which are largely inherited from the Johnson administration.

The "two track" policy of the Nixon administration is conceptually creative and I have expressed my support of this approach. But it has always necessarily been based on a policy of phased U.S. troop withdrawal.

It is vital that the President recapture the momentum of his earlier announcements. He can do this by setting a timetable for the withdrawal of 200,000 more U.S. troops by the end of 1970.

The overriding objective of a withdrawal policy should be to place the combat responsibility where it now clearly belongs—with the South Vietnamese. Uncertainty as to whether North Vietnam has reduced its forces in a reciprocal way must not be allowed to obstruct or vitiate the process of phasing U.S. forces out of the main combat role in a reasonable and orderly way.

The President's decision to suspend further troop withdrawals at this time has created a sense of uneasiness in many quarters which could lead to a serious erosion of public confidence in the way the administration is seeking to end the Vietnam war.

The failure of the North Vietnamese and NLF negotiators to respond meaningfully to U.S. offers, which our officials believe to be real overtures toward giving them an opportunity to participate in the Government of South Vietnam, has caused some understandable feelings of frustration and bitterness within the administration. Natural as these emotions may seem under the circumstances, they are no substitute for policy. And, there is renewed danger that U.S. Vietnam policy will again fall captive to the false optimism and lack of realism which continues to pervade the thinking of some top U.S. officials in Vietnam, both civilian and military.

Perhaps drawing sustenance from the perennial overoptimism of U.S. military commanders in Vietnam—for whom "victory" seems always just around the corner—President Thieu has precipitated a political showdown with the Nixon administration on the question of the composition of his government. It is essential that the United States respond. A timetable for the withdrawal of 200,000 troops is a necessary element of the U.S. response, in my judgment.

For many months, the Nixon administration has been urging President Thieu to broaden the base of his government by including civilian leaders who could help it compete politically with the Communists in an open election. President Nixon himself is reported to have raised the matter twice with President Thieu, first at the Midway Conference on June 8 and again in Saigon on July 30.

However, as reported in the New York Times:

> When the long-awaited new Cabinet was finally unveiled last week, even the boundlessly optimistic United States Mission here was hardpressed to conceal its disappointment . . . For, rather than broaden the political base of his Government, President Thieu effectively narrowed it . . . Not a single political leader of any consequence is included in the new group, nor is there any representative of the responsible, non-Communist opposition in the South.

The conclusions drawn by the New York Times report are far from reassuring. The reported stated:

> The effect of this seemingly self-defeating, exercise was to raise serious doubts about President Thieu's motives. . . . he evidently felt free to disregard the American desires for more political participation in the Government, apparently confident that he would incur only mild criticism from the embassy here. As it turned out, he incurred none at all.

The "moment of truth" with the Saigon government cannot be postponed much longer; for, it is clear that President Thieu and his military associates regard as in their highest self-interest a continuation of the status quo in South Vietnam. The stark implications of this status quo are unacceptable, I believe, to the American people. The Thieu government is seemingly committed to the political repression of all possible rival non-Communist political groups; to pressing offensive combat operations against the Communist forces by a large U.S. expeditionary force as well as by the ARVN; and to the maintenance of large ARVN forces equipped and subsidized by the United States—but with a major function to provide political and administrative support for the Saigon government.

Only when it is unmistakably clear to the Saigon government—and to the U.S. officials in Saigon—that the United States will no longer support the status quo, can there be any expectation of the kind of political evolution which may assure the survival of an independent government in South Vietnam. A timetable for the withdrawal of 200,000 U.S. troops could provide the needed catalyst.

The question of the orderly phasing out of major numbers of U.S. troops from combat also poses an important issue for the U.S. military command. In the great U.S. tradition of civilian paramountcy in the control of the Armed Forces, it is now their duty to tell the country how best, most securely and most efficiently to withdraw these forces. And, how best to use the forces which remain, as well as how to phase them out in their turn. Also, how best to aid South Vietnam consistently with these policy decisions on troop withdrawal.

The United States has accomplished its one legitimate mission in Vietnam. It has prevented the military conquest of the South by the armed forces of the North. We have no commitment to "make it good" for the Saigon government in any political settlement or contest which follows the end of the U.S. combat involvement.

Fortuitously, the inescapable "moment of truth" with Saigon has coincided with the death of Ho Chi Minh. Undoubtedly, Ho's death marks the end of an era in Vietnamese affairs. It is an event which makes it particularly timely for the United States to place its relationship with the Saigon government on a new footing and to regain control over our policies and level of involvement.

In my judgment, President Nixon should endeavor to extend the present cease-fire initiated by North Vietnam in connection with Ho Chi Minh's funeral into a permanent, inplace cease-fire.

It is significant that opposition to a cease-fire on our side is centered in the Thieu government and in the U.S. military command in Saigon. Cheered on by the GVN and ARVN commanders, our military commanders—with irrepressible optimism—seem again to have convinced themselves that the Communist forces are about to collapse and that "victory"—once again—is just around the corner. Consequently, they oppose a cease-fire on the grounds that it would concede too much residual political influence and territorial control to Communist forces within alleged cease-fire "sanctuaries." The Saigon government, and our military people, believe that "keeping up the pressure" will reduce and finally eliminate all areas of Communist strength and influence.

It is the same "threshold of victory" which General Westmoreland assured us we had attained just before the Tet offensive in February 1968.

There has been no progress whatsoever at the Paris peace talks, at least since the departure from Paris last July of Le Duc Tho, an important North Vietnamese figure in his own right. In retrospect it now appears to be possible that Duc Tho's return to Hanoi—and the ensuing freeze in the Paris talks—may have been related to the imminent death of Ho Chi Minh. It is plausible, if not probable, that Ho's death was a prolonged deathbed vigil during which no innovations in North Vietnamese policy was possible. If this proves to have been the case, renewed progress may again be possible when the new lines of political authority have been sorted out in Hanoi.

In addition to these moves, the United States should make a major effort to induce Hanoi to take a more humanitarian and forthcoming position with regard to U.S. prisoners of war. This is a task in which our traditional friends in Europe and elsewhere can play an important role. Their support of the United States with respect to the prisoners of war could mark a new rapprochement since the freeze of the Vietnam war beginning in 1965. If Hanoi would provide a list of prisoners it holds, and indicate a program for their release and repatriation, suspicion of Hanoi's motives in this country would be significantly allayed. This would make it easier for President Nixon to provide more flexible and accommodating negotiating instructions to Ambassador Lodge.

The alternatives to further administration efforts to break the stalemate on both tracks of the two-track approach are ominous indeed. In the United States tensions are bound to increase dramatically if antiwar activists again take to the streets and campuses and if public confidence in the capacity of the Nixon administration to carry out its overwhelming electoral mandate of 1968—an end to the Vietnam war—wanes.

For President Thieu and other non-Communists in South Vietnam, the prospects are equally ominous. Continued bickering and jockeying among the disparate non-Communist groups, and continued foot dragging by the Thieu government in the all-important task of seeking to create a broadbased non-Communist coalition, would leave the non-Communist majority of South Vietnam totally unprepared for the day when most U.S. troops have been withdrawn from combat. Only such a coalition could provide a viable political alternative in open competition with the NLF.

Accordingly, the Thieu government especially, but also all the other non-Communists in South Vietnam, should be given unmistakable notice that 200,000 U.S. troops will be withdrawn according to a timetable by the end of 1970. If this does not galvanize the South Vietnamese into political reform and rapprochement, then it will be clear that our policy of seeking a viable non-Communist government in South Vietnam was never based on a sense of realism. Under these circumstances the only course for the United States to follow will be the phasing out of our remaining forces.

However, if—as we all hope—the South Vietnamese can be shaken out of their torpor and inertia to demonstrate a capacity to be master of their own destiny the United States can provide continued support and assistance. But the day is past when the United States can be more concerned—and make more sacrifices in blood and treasure—for the well being and survival of our Vietnamese allies than they are doing for themselves.

DISTRICT PLAN FAVORED FOR ELECTORAL REFORM

Mr. MUNDT. Mr. President, inasmuch as the House of Representatives is about to begin discussion and action on the comprehensive and controversial question of electoral college reform, it seems appropriate to call attention of the Congress and the country to a highly informative article on this subject appearing in last night's Evening Star. I ask therefore, that at the end of these remarks, this article by James J. Kilpatrick be printed in the body of the RECORD.

Mr. President, I think most of us agree that electoral college reform is desirable but I wonder how many Members of Congress have fully considered the far-flung ramifications of the "meat-ax proposal" now before the House whereby through one big, unprecedented legislative action they propose by constitutional amendment to eliminate entirely our traditional electoral college procedures and provide instead the direct vote for President of the United States. Clearly, this is employing a pickax to do the work required by a scalpel. What is today required is a correction of certain demonstrable inequities in our electoral college system rather than a major operation attacking the very foundations of our great American Federal system of Government.

Before Americans commit themselves to undertake such a irrevocable experiment as abolishing our electoral college and thereby drastically destroying for more than half our States their present influence and authority in nominating and electing Presidents of the United States there are many questions citizens should ask and answer for themselves. Among them are the following:

First. Is it desirable to turn over to the Central Government in Washington the full authority to regulate and control the elections in our several States? At present, the States themselves prescribe the age levels for voting, the hours that the polls shall be open, the manner in which absentee votes shall be cast, the residence requirements essential for newcomers in a State to have the right to vote—and all other such considerations. Should the direct, popular vote for President be adopted as a substitute for our present electoral procedures, all of these determinations would immediately and necessarily be transferred to some authority in the Federal Government?

Second. Should sheer weight of population be the only factor to be considered in determining where and how a President is to be selected and elected and who among us is to be realistically eligible to become President of the United States? As of today, small- and medium-sized States command at least some attention since they get the advantage of a great "dividend from federalism" in that each State gets two electoral votes because it is entitled to two Members of the U.S. Senate. To force well over half our States to lose this advantage of federalism; to reduce for them substantially their influence over national policies and the determination of who shall be President would be to surrender to the "sheer weight of population" the most important choice we get to make as free men and women—the election of our President.

Third. The proposal for a direct vote for President as before the House provides a formula for the regular election of "minority Presidents" since it would declare elected any candidate receiving as little as 40 percent of the popular vote. In this connection another very serious, expensive, and disruptive situation is created since the House direct election proposal provides that there should be a national runoff election for President whenever any candidate receives less than 40 percent of the popular vote. Since the direct popular vote process for electing a President is certain to have the effect of stimulating the proliferation of splinter parties of all types in this country because each candidate will

have his votes reported for national publicity on election night, the probability of runoff elections being necessary will grow greater with each presidential election. Consequently, serious-minded Americans should reflect upon the tremendous financial and physical costs of a second presidential election as well as the disruptive and disquieting impact upon our National well-being of a second, heated presidential race so soon following the earlier, indecisive contest.

With elections coming on the first Tuesday following the first Monday in November, each 4 years, serious consideration should also be given to the time element involved as we approach our annual holiday seasons. It is only reasonable to allow 2 or 3 weeks between the presidential election and the probable runoff second election. That would carry us into late November as time must be allowed for weary candidates to get some rest, to arrange for the refinancing of national campaigns, and for the realinement of competing forces once all third party and splinter party candidates are out of the running. At best 3 weeks should be allowed for the runoff presidential election unless it is expected presidential candidates will ignore entirely all of rural America and all our smaller States to concentrate on getting the biggest possible majorities in our vast centers of population. Holding a presidential runoff election during the Christmas holidays or in the later winter months of November and December in many of our Northern States is a near impossibility as it is to hold them during the busy, pre-Christmas days of shopping, family reunions, and general holiday observances.

Mr. President, there are many other serious repercussions flowing from the hastily devised and considered proposal to drop our electoral college system which has served this Federal Republic so long and so well and substituting a direct-vote popular election concept. This Senator and others will discuss them later but in the meantime it is hoped the House of Representatives will go into these matters carefully and either reject the direct-vote experiment entirely or substitute for it the so-called district plan—Senate Joint Resolution 12—which will correct the deficiencies of the present electoral college system without abandoning our whole concept of federalism and altering the historic relationsip which has always existed between our several States and the Central Government.

Mr. President, I now read into the RECORD the article on electoral reform written by James J. Kilpatrick:

[From the Washington Star, Sept. 9, 1969]

DISTRICT PLAN FAVORED FOR ELECTORAL REFORM

(By James J. Kilpatrick)

The House of Representatives this week will debate the most important proposal for constitutional amendment, in terms of the structure of our government, since the Constitution itself was adopted in 1788.

The pending resolution calls for direct popular election of our Presidents. In my own view, the proposal is wrong. It ought to be defeated in favor of a less drastic plan that will accomplish all needed reforms. The better plan is the "district plan."

Under the proposal recommended by a divided Judiciary Committee, the Congress effectively would take over the management of presidential elections. The States could still fix an age limitation for their voters—that is the presumption, anyhow—but all other regulations would be subject to federal law.

The idea is that Congress would provide for the qualification of presidential candidates, for the make-up of ballots, for the holding of a national election, for a run-off if none of the candidates received 40 percent. Congress presumably would provide for vote challenges, recounts, and all other aspects of the elections. Every vestige of the present electoral system would be wiped out.

These are drastic changes. The proposal, if adopted, would tend to convert this Republic from a union of States into a consolidated form of democracy. Overnight, we would abandon our structure of federalism in one of its most important manifestations—the election of a President. It is a fundamental change that the House has before it.

No such upheaval is required. The great George Wallace scare of 1968 arose from the possibility that the Alabaman might prevent either Nixon or Humphrey from obtaining a clear majority of the 538 electoral votes. If this had developed, the election might have gone to the House, or Wallace might have traded off his electors in some fashion, and the country would have faced a constitutional crisis.

None of this happened, of course; no such dreadful prospects have materialized since 1828; but the apprehensions are valid. Besides, there are other things wrong with the present system of independent presidential electors, chosen in each State on a basis of winner-take-all. The system cries out for reform.

But reform is one thing, and fundamental change is quite another. The House ought to ask: Is there a way of achieving the reforms without such radical surgery? The answer is plainly, yes. In the district plan, or in the similar "proportional" plan, every procedural objective sought by critics of the present scheme could be attained. Either of the two plans would (1) abolish independent electors, (2) abolish the last resort of one State, one vote, in the House, and (3) end the evil of winner-take-all.

Under the district plan, a presidential candidate would win one electoral vote for each congressional district he carried, plus two for each State he carried. We can see how the plan would operate by looking back to 1964. Johnson polled 948,000 votes in Florida. He carried the State, and claimed all of its 14 electoral votes. Goldwater got nothing for the 906,000 votes he received, or for the seven congressional districts he carried. Under the district plan, Florida's electoral vote would have been divided 7–7. In the same election, Louisiana's 10 electoral votes went wholly to Goldwater. Under the district plan, Johnson would have won three votes for the districts he carried.

The district plan represents the least change from the federalism that has served us well. It would apply to the presidency the same basic plan used to elect the Congress. It would avoid the philosophical swamps and the cumbersome obstacles of "national democracy." It is fair and workable, and it has this further political advantage: It is far more likely to be ratified by three-fourths of the State legislatures than a radical plan for direct election.

ADDRESS BY LT. GEN. JAMES L. RICHARDSON TO GRADUATING CLASS, CALIFORNIA MILITARY ACADEMY

Mr. MURPHY. Mr. President, Lt. Gen. James L. Richardson, Jr., retired, recently addressed the graduating class of the California Military Academy. During his long and distinguished military career General Richardson ably commanded the Sunburst Division—40th—of the California Army National Guard when that unit was called into service during the Korean conflict. After a series of well-deserved promotions, and new and challenging assignments, General Richardson assumed command of the Sixth U.S. Army, with headquarters at the Presidio of San Francisco. Though now retired from the Army, General Richardson maintains an active interest in military affairs and particularly the California units he commanded with such distinction. His remarks to the graduates of the California Military Academy, are timely and valuable and I ask unanimous consent that they be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF LT. GEN. JAMES L. RICHARDSON, THE CALIFORNIA MILITARY ACADEMY GRADUATING CLASS, SAN LUIS OBISPO, AUGUST 23, 1969

General Ames, Mr. Meese, Col. Nimm, distinguished guests, members of the California Military Academy graduating class, ladies and gentlemen.

This graduation is such an important occasion in the lives of so many, that I feel very privileged and honored to be permitted to share the day with you. Thank you so very much for inviting Mrs. Richardson and me to be with you.

To you members of the graduating class this is an especially important day for you. It is the successful culmination of more than a years hard work. It represents many extra hours of devotion to your duties and your country. While others have been at the beach, or just resting in the back yard, you have been studying, training and improving your capabilities. You are far better men today as the result of this hard work, and I offer my congratulations on your successful completion of this course.

For those of you who are married, I would like to say a word to your wives. You ladies are to be highly congratulated for your strong support and sincere assistance to your husbands. You have been a great help to him. Perhaps he hasn't expressed his appreciation as adequately as he would have liked, or as affectionately as you would have liked. But never forget, he is as proud of you as you are of him. You both deserve a world of credit.

I see many parents in the audience today. It is especially nice that you are able to attend this ceremony. You too deserve a world of credit for your strong support of your son's efforts. After all, if it weren't for you, he wouldn't be here today.

Some of you new 2nd lieutenants will be going to active duty soon. Some will be attending your branch service school, while others will be taking positions of responsibility in Guard units. Whatever your next step may be, you owe a debt of gratitude to your families and friends for their patience, loyalty and assistance.

General Ames was very considerate when he invited me to speak today as he said I could talk on a subject of my own choosing. There is such a wealth of material to talk to you young men on because in being members of the National Guard you belong to a very dynamic and patriotic organization, and the California National Guard is the most dynamic of all. So I could have talked about the many outstanding achievements of the Guard, about your summer camp or about your week-end training sessions or many other subjects. I wanted though to talk for

a few minutes on a subject personal to you and so I have chosen leadership as my subject.

Those of you being commissioned today have heard about leadership since you first enlisted in the Guard. You have studied it, you have read about it and you have seen examples of it. But starting today it has a little different meaning to you. I really cannot tell you anything new about leadership, but perhaps I can tell it in a little different way. Perhaps too your wives and families would be interested in hearing something about it—what it is, what are the characteristics of a leader, how these characteristics will serve you and them.

What is leadership? It can be defined very simply as—the ability to lead men. But then women are leaders too. So, perhaps a better definition is that leadership is the ability to influence, to guide, to show the way, to motivate, to set an example.

What are the characteristics of leadership? They are many, and I will not attempt to put them in any order of priority—because, as the old cliché from the Command and General Staff College at Fort Leavenworth goes—"it depends on the situation".

In talking about the characteristics of leadership, now that you will be commissioned officers from today on, perhaps it would be best to look at them from the angle of your men—the ones you will be responsible for. What do they expect of you? What leadership traits are indispensable to success as a small unit leader?

Surely one is "professional competence". Another way to describe it, and perhaps a little more civilianized way is, "job qualification". It is part of what you have been working for by your attendance at the officer candidate school. "Know your job—and demonstrate it to the satisfaction of everyone". This is the trait that is the foundation of self-confidence and the one which will do most to gain the confidence of your men.

Another trait is integrity. Accept the responsibility for what your unit does or does not do; do not blame subordinates for mistakes and failures; be honest and fair in bestowing credit on your men when credit is due.

I mentioned the phrase, "what your unit does or does not do". That should be a familiar phrase to you because it is in so many of your field manuals. The entire statement is, "the commander is responsible for all that his unit does or fails to do". I always felt that this was so important that in our final training phase in Japan before going in to combat in Korea, I had a large sign painted with this statement on it and had it put up in front of the regimental C.P. I wanted all of those who visited the C.P., to see it, read it and think about it. Incidentally, that was when I had the privilege of commanding a regiment in the 40th Infantry Division, California National Guard. I was permitted to serve two years with the division and it was one of our finest tours of duty.

Another important trait or characteristic is "concern for your men". When I first came into the service, back in the early thirties, the old "field service regulations" repeatedly stated that the young platoon leader must look after the needs of his men before he considered his own needs. This was stressed in every officers school. Another term for this might be "compassion" or "loyalty". The latter, loyalty, is a two way street. If you look after your men, they will look after you.

Moral courage is another trait. The ability to adhere to tough and unpopular decisions. Be strict, but be fair. As a platoon leader, or in fact as any commander or officer, you are not in a popularity contest. Your men will respect you if you demonstrate moral courage.

Other traits are initiative, aggressiveness, sound judgment, common sense, resourcefulness, physical courage, devotion to duty, personal dignity, and willingness to accept responsibility.

You often hear the term "he is a natural born leader." This means, I believe, that the individual referred to has demonstrated certain of the qualities I have just mentioned. He inherently does certain things, his ability to lead is very pronounced. All of us have known individuals who were great combat leaders. Their physical courage was their greatest asset. This, I think, is an inherent quality, where as professional competence is something that must be developed.

"Effective leadership is the key to success in any endeavor, and development of this leadership should start at the lowest level." I do not know who originally made that statement, but it is a very true and a very profound statement, I think you will all agree. Leadership is important in all walks of life. In the military, in business, and in politics. Probably more so in the military than anywhere else. Perhaps I am prejudiced. But in what other profession is one man, such as a platoon leader, responsible for every act, thought, deed and the lives of forty men—responsible for training them, clothing them, feeding them, paying them, housing them, responsible for their medical care, their appearance, their actions both on and off duty, and the actions and living conditions of their families. It is a great responsibility and it demands leadership ability.

We hear a great deal today about a generation gap. Especially if you are over thirty. Certainly I qualify. But I do not know what this generation gap is. I don't think there is one in the military. I really don't think there is one anyplace. Perhaps it is because I do not know what is meant by the term. I do wonder, though, how these 18—19—or 20 year old hippies, yippies, or whatever they are called, became so smart all of a sudden. Where have they acquired the knowledge and the know-how, to say what courses should be given in our colleges and universities, how our country should be run, what we should do in Vietnam, and how society should behave? Most of them, as you see them roaming the streets and the highways, are perfect examples of failure to appreciate the things they have, and they show an utter lack of respect for authority. They do not want to accept any responsibility. They are not the future leaders of our country. Personally, I am a great believer that experience is a wonderful teacher. An 18—19—or 20 year old has had limited experience, at best. I will agree, however, that our younger generation today has had far more opportunities for rapid advancement, they are better educated and more knowledgeable than was my generation at their age. But who made all of this possible? Not today's younger generation. If they are smart they will take advantage of the marvelous opportunities created for them. The things that the MacArthurs, the Eisenhowers, the Dr. Sterlings, the Dr. Salks, the Von Brauns, to name only a few, have worked so hard to create so we could have a better world in which to live.

Speaking of those who have worked so hard to create a better world, I should mention Neil Armstrong, Buzz Aldrin and Mike Collins. The Apollo 11 shot to the moon was one of the greatest achievements of our time. As those of you who had an opportunity to see the President's State dinner in Los Angeles on television the other evening, you heard them mention many times the 400,000 who worked to make this shot a success. All of those 400,000 accepted the responsibility of their part in this great endeavor. The accuracy of this shot and the reliability of all elements make this such a huge and successful feat as to be almost beyond comprehension. This undertaking will certainly do a great deal to create a better world for all of us.

You men graduating today are young, you are smart, you are well educated and well trained. You *are* taking advantage of the advanced technology in our world today. You, and the others like you who have worked so hard to get ahead—You are the future leaders of our country. You have a perfect opportunity to demonstrate your leadership abilities. In both the guard and in your business, you have the opportunity to direct into the proper channels the energies and aspirations of the young men under you. Especially is this true in the guard. These young soldiers are willing to learn, they are eager to improve their capabilities. Whether they remain in the guard or not, they will be better citizens because you have been willing to accept responsibility.

In conclusion, those of you graduating today have a great future ahead of you. You have already set a fine example for those following you. My heartiest congratulations to you and very best wishes to your wives, families and friends. Thank you.

AIR POLLUTION

Mr. NELSON. Mr. President, I ask unanimous consent that an editorial published today in the New York Times regarding the urgent need for high priority attention to the mounting problem of air pollution from the automobile be printed in the RECORD at the end of my statement.

Clearly, if we are to properly confront this grave problem, every alternative must be considered in expeditious fashion. There are strong indications that the answer will have to be finding a substitute for the gasoline engine. If this is the case, we cannot afford any delay in initiating high priority efforts to find the most effective means of achieving this.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SLOW CLEANING

President Nixon's Environmental Quality Council has come up with all the right worries about the impurity of urban air, but the country may choke to death before anything comes of its relief program. After three hours of discussion about the problem of automobile-produced air pollution, the Council decided that what was needed is a low-pollution vehicle for the 1990's. By way of start, the Department of Transportation will spend this year a modest $2.2 million to stimulate research on substitutes for the present high-pollution gasoline engines.

One need not be a member of the "now generation" to question the adequacy of this approach, so typical of the generally lethargic Federal attitude toward ecological problems. Ironically, the President's council adopted this feeble program on auto pollution at a meeting which had before it a report criticizing such lethargy—one prepared by the Citizens Advisory Committee on Environmental Quality headed by Laurance S. Rockefeller.

A few years ago Los Angeles was almost alone among American cities in being plagued by automobile-induced smog, but that source of discomfort and ill health is now very much a national problem. The growing alarm in this city, for example, was vividly expressed recently by Mayor Lindsay when he asked, "Can we continue to permit millions of automobiles, powered by internal combustion engines to swarm through city streets . . . spewing more and more deadly chemicals in our air?" And almost a year ago, the Commissioner of the National Air Pollution Control Administration, John T. Middleton,

warned the petroleum industry that the gains made in reducing automobile pollution threatened to be wiped out by the increasing number of vehicles.

The basic facts are that automobiles now account for over 60 per cent of all air pollution in this country, while in urban areas that figure goes up to 85 per cent. A recent Senate Commerce Committee report estimated that cars annually dump over 90 million tons of pollutants into the air Americans breathe; it noted that present approaches—which focus on limiting certain types of exhaust emission—may permit a doubling of pollution levels within thirty years as the number of cars increases.

That background makes it difficult to understand the leisurely schedule suggested in sunny, smog-free San Clemente, Calif., for development of a low-pollution vehicle. In the great cities of this country, such a vehicle is needed now.

If there were a rational allocation of this nation's priorities, an intensive program for developing needed alternative engines would long since have been under way with financing far more generous than anything the Government and private industry are now spending.

MEMORIAL ADDRESS FOR THE HONORABLE CHARLES EDISON

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the body of the RECORD the very eloquent and highly appropriate funeral address delivered by Adm. Ben Moreell on August 4, 1969, at Madison Avenue Presbyterian Church of New York City in tribute to America's great and good Charles Edison.

Mr. Edison served America well in a great many capacities, and Ben Moreell's address highlights some of his great services to this Republic. Charles Edison and Ben Moreell were steadfast friends who worked shoulder to shoulder for many years as fellow officers of Americans for Constitutional Action—ACA—and in other capacities. Both in ACA and in their respective contributions to our great American way of life in other areas of activity, Mr. Edison and Mr. Moreell have done much to fortify our American freedoms and to protect our cherished institutions.

Mr. President, I hope and believe the tribute paid to Charles Edison by Ben Moreell will do much to inspire other Americans to follow in their footsteps.

There being no objection, the memorial address was ordered to be printed in the RECORD, as follows:

MEMORIAL ADDRESS FOR THE HONORABLE CHARLES EDISON, BY ADM. BEN MOREELL, CEC, U.S. NAVY, RETIRED

I am profoundly grateful for the honor of delivering the Memorial Address for Charles Edison.

It was my good fortune to be closely associated with him in the Navy, in private industry, in public affairs and in support of patriotic undertakings over a period of thirty-two years.

Our paths first crossed in January 1937, when he took the oath of office as Assistant Secretary of the Navy. Prior to that, he had been for ten years President of Thomas A. Edison, Incorporated, having previously served the same company in other capacities for thirteen years. He received his engineering education at the Massachusetts Institute of Technology.

With the advent of the Roosevelt Administration in 1933, Mr. Edison began his service with various government emergency operations whose purpose was to relieve human distress stemming from the great depression. The record of his numerous assignments is that of a "trouble shooter," who moved from one important post to another as critical needs arose.

His effective performance of those tasks resulted in his appointment to the office of Assistant Secretary of the Navy by President Roosevelt in November, 1936. He served as Assistant Secretary until December, 1939, when he was named Secretary of the Navy, an office which he occupied until he began his campaign to be elected Governor of New Jersey in 1940.

His service as Assistant Secretary and Secretary of the Navy came during a troubled period when it appeared that war would break out in Europe at any moment and that the United States could not avoid becoming involved. Even after the war began in September, 1939, there were some amongst us who opposed any measures of military preparedness. They had prestige and power sufficient to persuade a large segment of American public opinion that any preparation to defend our Nation against foreign aggression would induce our entry into the war.

In the face of this strong opposition, Mr. Edison was able to achieve some notable advances for the Navy. I will mention only a few.

Against strong resistance within and without the Service, he succeeded in having the Navy adopt the use of high pressure steam on combatant vessels, an innovation which resulted in greatly increased battle efficiency and, as it turned out later, without increased hazards.

Early in 1940, when it became clear that we would eventually enter the war, Mr. Edison strongly advocated that the Army and the Navy, with their respective air forces, be provided at the earliest practicable date with the basic facilities which could be used for future expansions to conduct a major war. The total cost was estimated at $10 billions. Secretary Edison transmitted the program to the President with his strong recommendation for immediate action. But the President was not prepared to take such a bold step. Instead he sent to Congress a drastically curtailed program to cost $1½ billions. Congress authorized the project and appropriated the funds; and the work began promptly.

In light of subsequent events it seems clear that if the $10 billion program had been undertaken in early 1940, many lives, limbs and huge amounts of treasure would have been saved later in the war years. It is probable that the sneak attack on Pearl Harbor, as well as the loss of Wake Island, Guam and possibly the Philippines would have been averted. As it was, the provision of the relatively modest sum of $1½ billions had a notably favorable effect on the later conduct of the war.

While appreciating the value of his many tangible achievements, I believe Secretary Edison's greatest contribution to the Navy was the morale-building effect of his unfailing encouragement and sympathetic understanding of our many problems in those trying prewar days when our preparations for defense of the Nation were frequently denounced as war-mongering. On many occasions he protected his subordinates from the sharp blows of critics by willingly accepting them for himself.

Charles Edison served as Democratic Governor of New Jersey from January 1941 to January 1944. His term of office was notable for his uncompromising battles with Mayor Hague, who controlled the New Jersey Democratic machine. The Governor's efforts resulted in the elimination of much of the corruption in State and local governments and the eventual elimination of Mr. Hague as a power in New Jersey politics. He initiated a movement which led to the adoption of a new State Constitution; he introduced reforms in the State Judiciary; and he succeeded in modernizing the State's tax laws.

At the conclusion of his term in 1944, he returned to business as President of Edison Industries. In 1950 he was elected Chairman of the Board of that company and in 1957 he became Chairman of the Board of the newly formed McGraw-Edison Company.

During this period he served, also, as a Director of the Jones & Laughlin Steel Corporation, the International Telegraph and Telephone Corporation and the United States Life Insurance Company.

He retired from McGraw-Edison on January 1, 1961.

While Secretary of the Navy and, later, as Governor of New Jersey, Mr. Edison had maintained his keen interest in civic affairs. When he returned to the business world, he resumed his active role in such matters.

He served as President of the National Municipal League; as a member of two of the Task Forces of the Second Hoover Commission; and on the Citizens' Committee for the Hoover Reports.

He was one of the founders and an active participant in the work of the Committee of One Million (Against the Admission of Red China to the United Nations). He was Vice Chairman of the American Afro-Asian Educational Exchange; Co-Chairman of the Committee for Monroe Doctrine; Honorary President and Trustee of the Thomas Alva Edison Foundation; Vice President and Trustee of the China Institute of America; Trustee of the Stevens Institute of Technology, the Edison Birthplace Association, the Newark Museum and the North American Wildlife Association and he took part in many other important civic activities.

Although reared in a Republican household, Mr. Edison was active in Democratic politics in New Jersey from the early thirties through his term as Governor. Subsequently, as an outgrowth of his dedication to conservative principles, he aligned himself with conservative causes, groups and candidates, irrespective of Party labels.

He was one of three founders of Americans For Constitutional Action, a conservative, non-partisan, political action organization which he served as Trustee and Treasurer until his death.

He was a member of the State Committee of the New York Conservative Party.

I have given here a skeletonized account of the career of a great American, illustrious son of an illustrious father. It falls far short of defining the true measure of the man. From my close association with him over many years, I offer these thoughts:

Based on the time-honored premise that what we *do* is far more important than what we *say* and what we *are* is most important of all, Charles Edison easily passes all of the requirements for immortality as a great American patriot.

Foremost amongst his many admirable traits were his profound reverence for his father, the greatest benefactor of humanity in the history of our Country; and his devotion to his charming wife, Carolyn, his working partner for forty-six active years.

Charles Edison was a man of principle. He knew what he believed in and he had the courage to stand up and be counted when the chips were down and the weather was rough. He never sacrificed principle on the altar of expediency. He adhered steadfastly to his own high standards of personal honor and official conduct.

He was a friendly man who inspired friendship in others.

He was an understanding man. Being fully aware of the frailties of human nature, he did not expect perfection in others just as he renounced any claims to perfection in himself. Thus, he was overly generous in his appraisals of his fellow man.

He was a humble man, who knew that without humility one cannot have an open mind which is receptive to the truth.

He was a generous man, who believed in and practiced the biblical admonition: "Give, and it shall be given unto you; good measure, pressed down, shaken together, and running over. . ." Thus, he gave freely of his time, his energies and his material means to countless patriotic, charitable and civic causes and to many worthy individuals who needed a helping hand over the rough spots of life's journey.

He was without the slightest taint of bigotry, intolerance or prejudice, appraising every man on his own merits, respecting his personal dignity and his individual rights as a child of God.

He was a self-disciplined man. He knew that the optimum in personal conduct flows from voluntary obedience to the laws which govern a good life, which are enforceable only by the power of one's own conscience.

And, finally, he was a dedicated American patriot who loved his Country, its ideals, its traditions, and its fundamental principles which, together, have enabled ours to become the greatest Nation in recorded history, in terms of human dignity, spiritual strength and material prosperity.

Charles Edison was a leader of men who, by the power of his personal example, inspired countless others to emulate his devotion to righteous causes, even those causes whose futures looked very bleak. He was always ready to fight for what was right and what was good, even when the fight appeared to be for a lost cause. For he knew that fighting for a lost cause can give meaning and savor to life; that men are tempered in the fires of adversity; and that rough seas make good sailors!

There could be no more fitting ending to this tribute than to quote the closing words of Charles Edison's address at the testimonial dinner given in his honor on May 2d, 1963. After recounting the awful perils now confronting our beloved Country, Mr. Edison said:

"The world has seen many dark times. One period of history was even called the Dark Ages. But even in those times, men carried on. In those years, there were monks who went from town to town—from country to country. Under their robes they carried with them the manuscripts, the learning of the centuries gone before. They were hunted from place to place, and yet they carried with them the light of knowledge and the light of truth. Without them, all would have been lost.

"Perhaps that is the function of Americans today—to keep on fighting and to carry with them the eternal truths laid down by our Founding Fathers.

"I have lived a good many years. No one knows all the answers, but I do know this: in the time that is left me, I will continue fighting for America—for what it really is and what it really means. And so must we all—no matter what the obstacles and no matter how discouraged we may become. To give up would, indeed, be a sin against the memory of all those heroes of the past who have given us a nation."

Charles Edison could have left us no more precious legacy than that. It is a legacy of inspiration for millions of Americans who are here now and many more who will come after us, to keep fighting for America—"for what it really is and what it really means!"

We have lost a great leader, a great fighter, and a beloved friend.

Our Nation is much the poorer for that loss. May we be comforted by the knowledge that his indomitable spirit lives on to inspire us!

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of the unfinished business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The BILL CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Minnesota (Mr. MONDALE).

Mr. STENNIS. Mr. President, the Senator from Minnesota (Mr. MONDALE) is temporarily detained. He is expected on the floor in just a few minutes. He will make the opening argument for the amendment.

Mr. President, I do not want the floor until after the Senator from Minnesota has spoken. I shall be here and hope to get the floor after the Senator from Minnesota.

I have also asked the Senator from Virginia if he could present his views. There is no time limitation, as the Senate knows. Perhaps it is possible or probable that we could get an agreement to vote on the amendment sometime late on Friday next, the Senate not being in session tomorrow. That will depend, of course, upon the prospects for attendance because we should have fairly full attendance before the amendment is voted on.

I have nothing further to announce at this time, Mr. President.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ANNOUNCEMENT OF RECESS TODAY TO ENABLE SENATORS TO ATTEND FUNERAL SERVICES FOR THE LATE SENATOR EVERETT McKINLEY DIRKSEN

Mr. BYRD of West Virginia. Mr. President, at the request of the distinguished majority leader, I make the following announcement: It is suggested that the Senate will recess at 11:45, subject to the call of the Chair. The Senate will then proceed in a body to the rotunda to pay its respects to the late minority leader, Everett McKinley Dirksen, as his body is removed from the Capitol.

Transportation will be available to the 1 p.m. services to be held at the National Presbyterian Church, 4123 Nebraska Avenue NW.

Senators attending the church services should assemble on the Senate stairs of the Capitol at 12:15 p.m.

It is likely that the Senate will reconvene by 3 p.m.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senator from Utah (Mr. Moss) may proceed for not to exceed 15 minutes on a speech he wishes to make, and that the rule of germaneness be waived.

Mr. STENNIS. Mr. President, reserving the right to object—and I shall not object—the understanding was that the Senator from Minnesota would have the floor this morning. He is on his way here now, I should like to inquire if this is agreeable to the Senator.

Mr. MOSS. My remarks will be quite brief. I understand that the Senator from Minnesota is coming over to the Chamber now.

Mr. STENNIS. I have no objection.

The PRESIDING OFFICER. Without objection the Senator from Utah (Mr. Moss) my proceed for not to exceed 15 minutes, and the rule of germaneness is waived.

Mr. BYRD of West Virginia. Mr. President, I am clearly aware of the understanding with respect to the Senator from Minnesota. I inquired of his office as to whether he was on his way over here and it was my understanding that he was. I therefore thought we might as well fill the hiatus while he was getting here and let the Senator from Utah (Mr. Moss) make his remarks.

Mr. MOSS. I appreciate that very much. I shall not be very long.

SUGGESTION THAT GENERAL HERSHEY RETIRE ON FRIDAY, HIS 76TH BIRTHDAY ANNIVERSARY

Mr. MOSS. Mr. President, I rise today for an unpleasant but necessary purpose. This Friday, Lt. Gen. Lewis B. Hershey will be 76 years old. I think that would be an appropriate occasion for the general to announce his retirement as Director of the Selective Service System.

This is an unpleasant request because General Hershey has served his country long—for 28 years—as Director of the Selective Service. And it is unpleasant because it is somewhat unfair to blame a single man for the faults and failings of an entire system.

Nevertheless, it is time for General Hershey to retire. In his age, in his manner, and in some of his deeds, General Hershey symbolizes the outmoded and arbitrary nature of the Selective Service System. His determined attempts, despite the objections of the Attorney General, to use the draft to punish dissent and his recent paralyzation of the presidential appeal board amply demonstrate his autocratic disregard for the constitutional rights of those who disagree with him.

Of course, it cannot be denied that more than a new director is needed to reform the draft. The cruel inequities and uncertainties of the present system should have been corrected long ago; yet in neither House of the Congress have hearings been held. Congress has been terribly insensitive to these legitimate criticisms by young men facing the draft. School is now resuming and nothing has been done. Such neglect is a disgrace to the democratic process, which, as we are always telling the young, is supposed to respond to the will of the people.

If press reports are accurate, President Nixon is about to issue an Executive order which would draft the youngest first. I commend this action because it will help remove some of the uncertainties which now haunt many young men over a span of 5 or 6 years.

But Mr. Nixon can go still further without legislative action by finding a new Director of the Selective Service System who understands the feelings of young people and who will at least administer the laws with an even hand. The retirement, or if it comes to that, the removal, of General Hershey could be a meaningful first gesture to the Nation's young that their Government is beginning to respond. We cannot allow any longer our young to watch with hopelessness this futility in Washington.

CONSUMER SEMINARS HELD BY SENATOR MOSS IN UTAH DURING RECESS.

Mr. MOSS. Mr. President, I would like to report to the Senate on the very useful and informative consumer seminars which I held in my home State during the recess.

In one sense, these six seminars served as a traveling complaint bureau where consumers could get a hearing for their grievances. But I believe consumers have more than a right to complain; they also have a right to participate in the making of consumer protection laws. I told those who attended—and I am even more convinced after this experience—that we Senators can sit back in Washington and pass all the laws we want. But they will do the consumer little good unless these laws are fair, unless they are reasonable, and unless they are workable. On the practical level, a law handed down from Washington is unlikely to be able to cope with the realities of the marketplace.

I made a point of trying to find out if the recently enacted consumer legislation was working as we intended. The answer to my question may be that it is too early to tell. Truth in lending just came into effect on July 1, and the impact of the Fair Packaging and Labeling Act—FPLA—is just beginning to be felt. The disclosure provisions of the Truth-in-Lending Act has, however, made many of our citizens aware for the first time just how much interest they were paying. Whether the act has affected consumer purchasing decisions is impossible to determine. Ideally, the disclosure of actual interest rates should cause credit retailers to compete by lower rates.

It is already clear, however, that consumers are not satisfied with the effects of FPLA. I heard many complaints about the difficulty of comparative shopping. Because many items are packaged in fractional sizes, one woman said she needed a "computer in her purse" in order to determine which brand was the least expensive. Even within the same brand this difficulty existed. When I held up three tubes of the same brand of toothpaste in sizes of 8.75 ounces, 6.75 ounces, and 3.25 ounces, no one could tell me which was the best buy without going through a complicated arithmetic procedure. As one woman in Brigham City said to me:

> Why do they put things in such sizes except to deceive us. Why can't we have things in good old American sizes?

I had to tell her that FPLA provided only for voluntary compliance by industry in the size of packages. She was not pleased.

Not only were the fractional sizes severely criticized, but the identity and percentage of the contents were often difficult, if not impossible, to determine. To demonstrate this problem, I would first read the contents of a can of deviled ham which listed the ingredients of ham and ham fat. Then I would read the label on a can of dog food. The label lists not only the identity of the contents, but also the percentage of each. The least we can expect, it seems to me, is that human food should be labeled as well as dog food.

Many women also despaired at finding boxes and packages not completely full. Said a woman in Ogden:

> Twelve ounces of cookies doesn't mean much to me, but the size of the box does. Boy, was I fooled.

Art Buchwald satirized the slack-fill phenomenon in a typically delightful column. I ask unanimous consent that it be printed in the RECORD at the close of my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MOSS. Mr. President, a constant subject in our seminars was the bad experiences that many have had with door-to-door sales. There are many glib, fast-talking salesmen who employ such schemes as bait advertising, fictitious pricing, chain referral selling, deceptive giveaways, and simple scare and high-pressure tactics. A man in Ogden said he was made to feel like a heel because he would not purchase a $300 fire alarm system. The Ogden man said the salesman had him "hypnotized" into believing that his children were going to burn to death that very night.

A favorite trick is to tell the unsuspecting buyer that the company wants to use the house as a before-and-after advertisement and will, therefore, sell the carpeting or the aluminum siding "for practically nothing." "Practically nothing" usually turns out to be much higher than the market price.

No law, of course, can outlaw persuasive salesmen nor can it bar all door-to-door sales. But legislation that would provide a 48-hour cooling off period during which the buyer could rescind any unsolicited sale made in the home would meet with much favor.

I heard numerous tales of woe about warranties and guarantees. A woman from Vernal noted that requiring the buyer to ship the merchandise back to the factory effectively negated the value of the warranty. Most people cannot afford to be without an essential appliance for the many weeks and months that returning it to the factory consumes.

A Price woman asked:

> What is a lifetime guarantee? Whose lifetime, mine or the chair I bought?

But the major complaint about warranties was the incomprehensible language used in the warranty. Oftentimes consumers found that significant parts of a product's mechanism were not covered, but this had not been made clear at the time of sale. As a man in Tooele put it:

> The fine print takes away what you thought the bold print had given you.

A woman from Price complained that she needed a lawyer to understand the warranty. I replied that sometimes even attorneys had difficulty.

We also discussed proposed legislation dealing with the packaging of poisonous items, toy safety, home improvement frauds, tire defects, and consumer councils. Helpful suggestions were made on all these subjects.

The purpose of the legislation we discussed was not just to protect the consumer but to make free enterprise work. Free enterprise is based on the theory that competition will create the lowest prices and the best goods, but that theory depends upon having an informed consumer who is free to choose. We cannot allow the substitution of cajoling for quality; of hidden persuasion for price. A strongly competitive market based on quality and quantity is to the best interest of all—the producer as well as the consumer.

EXHIBIT 1

[From the Washington Post, Aug. 31, 1969]

PACKAGED INFLATION—LESS AND LESS GOES INTO EVER BIGGER CARTONS

(By Art Buchwald)

The wonderful thing about American industry is that it rises to every challenge. Even something as distasteful as inflation has not discouraged most manufacturers. Their solution to the problem is not in the product but in the package.

Rather than raise the prices on many goods, American industry is devising new methods to make the product smaller while making the package larger. In this way, the

customer feels assured that nothing has changed.

I visited one of the largest packaging companies in the country the other day to see how they were doing it. The vice president in charge of inflationary design took me around the plant.

"We're going 24 hours a day," he said proudly. "Everyone is asking us for new designs to help them get through this rough period."

I noticed women in white smocks working with tweezers under microscopes. "What are those women doing?" I asked.

"Those are 5-cent chocolate bars on their tweezers. They put each one in that large aluminum foil and then they wrap wax paper around it. Over the wax paper they put the name of the chocolate bar in large letters. Here's one that's finished."

"Why, from the outside it looks like an old-fashioned chocolate bar!"

"No one can tell the difference until they open the package," he said proudly.

We went into another part of the building. There were air hoses hanging all over the ceiling and boxes were rolling along a conveyor belt.

I looked perplexed.

"We're packaging soap flakes in here," he shouted above the din. "The lady down at the beginning of the line puts one teaspoon of soap flakes into those giant-sized boxes; then those men over there with the hoses pump air into the rest of the box."

"How ingenious!" I shouted back.

"The bottom of the box is weighted with very heavy cardboard so no one will know, when picking up the box, how many soap flakes there are in it."

"That's a lot of air to put in a box."

"We don't only use the air for soap flakes. We also use it for cereals, baking products and anything that comes in a box.

"Let me show you this invention which we have a patent on. This is a see through wax paper window for noodles. Well, when you look at it, you think you're getting a full box of noodles. Right?"

"Of course."

"Now look at the inside of the box."

"Why, the only noodles in it are stuck to the window," I said in amazement.

"Yup. The windows and the noodles are magnetized. When the window fills up with noodles, the box moves on."

"Are those frozen TV dinners over there?"

"They certainly are. They look like a complete dinner, don't they?"

"You bet."

"Now look under the tray. You see how it's indented. There's nothing in the tray but what you see on the top."

"Fantastic," I said.

He took me into another building which had a large sign, "Pharmaceuticals," on the outside. "This is where we work on new packaging for medicines." He opened a door and everywhere I looked were large mounds of white cotton.

"What do you do with that stuff?" I asked.

"We put two pills in each bottle of medicine and stuff the rest of it with white cotton. If it weren't for cotton, I don't think the drug industry could survive."

"You people think of everything."

"Not everything. Our dream is to devise a package filled with nothing but air, cotton and aluminum foil. If you bought one, you'd get a second package free."

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

AMENDMENT NO. 146

Mr. MONDALE. Mr. President, at the end of yesterday's session, I called up the amendment offered by the distinguished Senator from New Jersey (Mr. CASE) and myself dealing with the pending authorization for a nuclear aircraft carrier. I refer to amendment No. 146, which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the amendment (No. 146) was ordered to be printed in the RECORD, as follows:

On page 2, line 16, strike out "2,568,200,000;" and insert in lieu thereof "2,191,100,000;"

At the end of the bill add a new section as follows:

"SEC. 402. (a) None of the funds authorized to be appropriated by this Act may be expended in connection with the production or procurement of the nuclear aircraft carrier designated as CVAN-69; and no funds may be appropriated for any such purpose until after the Congress has completed a comprehensive study and investigation of the past and projected costs and effectiveness of attack aircraft carriers and their task forces and a thorough review of the considerations which went into the decision to maintain the present number of attack carriers. Such study and investigation shall, among other things, consider—

"(1) what are the primary limited war missions of the attack carrier; what role, if any, does it have in strategic nuclear planning;

"(2) to what extent and in what way is the force level of on-station and backup carriers related to potential targets and the number of sorties needed to destroy these targets;

"(3) what is the justification for maintaining on continual deployment two carriers in the Mediterranean and from three to five in the Western Pacific;

"(4) what is the overall attack carrier force level needed to carry out these primary missions;

"(5) does the present 'one for one' replacement policy for these carriers have the effect of maintaining or increasing this force level, in light of the fact that the newer carriers and their aircraft are more expensive and have far more capability than the older carriers which they are now replacing;

"(6) would a policy of replacing two of the oldest carriers with one modern carrier maintain a constant force level;

"(7) how many, if any, attack carriers and carrier task forces are needed to back up a carrier task force 'on the line';

"(8) what efficiencies, such as the Polaris 'blue and gold' crew concept, can be utilized to increase the time in which a carrier can stay 'on' the line';

"(9) what type of military threats are faced by the attack carrier; what proportion of the costs of a carrier task force are allocated to carrier defense; what is the estimated effectiveness of carrier defense against various types and levels of threats;

"(10) to what extent does the carrier's vulnerability affect its capacity to carry out its missions; what are the plausible contingencies in which carriers may be committed;

"(11) what type of resources should be devoted to carrier defense, considering the range of threats, the costs and effectiveness of the defense, and the plausible contingencies in which a carrier can be effectively used;

"(12) to what extent can land-based tactical air power substitute for attack carriers; to what extent should the role of the attack carrier be restricted to the initial stages of a conflict;

"(13) what are the comparative systems costs for land-based and sea-based tactical air power;

"(14) what is the comparative cost effectiveness of land-based and sea-based tactical air power; and

"(15) how is the attack carrier being used in support of American foreign policy; if there is a need for a 'show of force' in support of foreign policy commitments, can this need be met by smaller carriers or other types of ships.

"(b) In order to assist the Congress in carrying out such study and investigation, the Comptroller General of the United States shall review and make a report to the Congress on items number '(8)' and '(13)' in subsection 'a', above. He shall also review any studies which have been made, or may be made, by the executive branch which relate to the other items listed in subsection 'a', above. He shall provide summaries of such studies, together with any appropriate comments or quesitons, to the Congress. The report and summaries provided for by this subsection shall be furnished to the Congress not later than April 30, 1970."

Mr. MONDALE. Mr. President, this amendment is a modification of our original amendment, and is the one which Senator CASE and I propose be adopted.

In the first quarter of this century, a great debate arose in military circles over the question of whether automatic fire and mechanization made the horse cavalry obsolete. Even though it was obvious to everyone but cavalry men that this institution had outlived its usefulness before World War I, it took another 30 years before the advocates of modern technology were able to put the cavalry to rest once and for all.

It may seem strange to us today that the horse cavalry was able to survive for so long in defiance of technology and the 20th century. But military history, as one commentator noted, "is studded with institutions which have managed to dodge the challenge of the obvious."

A clear example of this phenomenon from naval history is the battleship's durability in remaining at the center of naval planning. It was not until World War II that naval strategists recognized what had long been obvious to most military observers: that modern airpower had ended the battleship's role as the keystone of the fleet.

The most recent example of the tenacity of military institutions can be found in the military authorization bill now be-

fore the Senate. That bill contains the Navy's requested authorization for a new nuclear attack carrier, a request based upon an assumption which has gone unchallenged and generally unexamined since the end of World War II: that the U.S. Navy must maintain at least 15 attack carriers in its fleet.

Like its forerunner, the battleship, the attack carrier is now the heart of our fleet. Questions about its role and proper force level are often viewed as a challenge to the Navy's existence.

Nevertheless, I do have some serious doubts about continuing to authorize additional attack carriers without first obtaining adequate justification for a fleet of this size.

In expressing doubts about our present carrier policy, I am not alone. Within the confines of the Pentagon there has been ever increasing doubt about the attack carrier force level. Much of this debate has been kept from public view. For example, the Defense Department's Office of Systems Analysis has often recommended cuts in the attack carrier fleet, but the studies underlying these recommendations have not been made public, and many have been referred to me upon my request.

However, these recommendations did come to light in the Defense Department's posture statement for fiscal 1965—presented by Secretary McNamara on February 4, 1964—which called for "some reduction in the number of attack carriers by the early 1970's." The factors underlying this decision were the increased tactical air capability of modern carriers and modern carrier-based aircraft, the end of the carrier's role as part of our strategic nuclear forces, and the reduced need for forward based airpower due to the increased range of land-based tactical aircraft.

Criticism of the carrier force level from within the Defense Department has persisted. Dr. Arthur Herrington, a Department official, questioned the size of the carrier fleet in a recent speech at the Naval War College—published in the September 1969 issue of the Naval War College Review. He said:

> Today we still plan a 15-(attack carrier) force for the future. Yet over this 25-year period we have seen: a polarization of the world into Communist and non-Communist camps, and lately an increasing fragmentation of both; the development of the Marshall Plan, NATO, the conversion of our enemy in the Pacific, Japan, to an ally, and the conversion of our old ally, China, to an enemy; a doubling of the size of the attack carrier; nuclear propulsion; jet aircraft and nuclear weapons. In truth, 15 attack carriers (or 15 capital ships in the U.S. Navy if you will) appears to be close to an "eternal verity" in U.S. military planning.

The most revealing admission of the Pentagon's own doubts about the justification for 15 attack carriers can be found in a Departmental Statement filed with the Joint Economic Committee. Representative MOORHEAD of that committee asked the Defense Department to explain the necessity for a force of 15 attack carriers. A Department spokesman wrote in reply:

> It is very difficult to determine the precise division of effort between land-based and sea-based forces which will meet our worldwide commitments at the least cost. The program supported by the previous administration included 15 attack carriers.

He does not refer, apparently, to the Secretary's statement of 1965. Continuing:

> In response to a directive by the National Security Council to examine alternative General Purpose Force strategies, we are currently reassessing both the total requirement for tactical aircraft to meet each alternative strategy and the relative costs and effectiveness of different mixes of land-based and sea-based aircraft. Pending completion of this study, we are not recommending any major changes in the previous program.

I should like to emphasize what it is the Defense Department is telling us here. In effect, it is that the Defense Department, right now, is undertaking the very kind of study that we are asking them to undertake by our amendment. As we meet today, the Defense Department and the National Security Council are engaged in the very kind of study we are talking about. It will include both the total requirement for tactical aircraft and the relative cost and effectiveness of land-based and sea-based aircraft. That is what the Defense Department and the National Security Council are doing. Surely this is a study of sufficient significance to involve the effort of Congress as well.

It is interesting that the Defense Department takes the position that, while they see serious questions surrounding the present level of attack carrier forces, sufficient to require them to undertake this searching review of force levels. Nevertheless, pending the conclusion of that study, we should continue spending billions of dollars on a force structure that is now in doubt and under serious study. One would guess that the more proper way of proceeding would be to complete the study, find out what we need, and then establish spending levels. But the position of the Navy is the other way around: Continue to spend, assuming the continuance of a policy about which there is now, we admit, great doubt.

I think it is the wrong way around. When asked to justify a 15-carrier force level, the Defense Department tells a congressional committee that the matter is under study. In the meantime, we are asked to spend millions of dollars to maintain this force level, until Defense officials find the time or inclination to determine the proper size of the attack carrier fleet.

I think it is also important, for the RECORD, to state at this time that that study has been completed, or will be completed in the next few days.

It is in hand or soon will be in hand in the National Security Council, supposedly determining the very issue we are now dealing with. So, we are in the fortunate situation of having a defense study which bears upon the very issues which is central to the whole matter, either completed or shortly to be available.

Other high-level Government officials directly responsible for defense planning have also expressed doubts about our carrier policy. Charles Schultze, a former Director of the Bureau of the Budget, recently testified before the Joint Economic Committee that the request for an additional attack carrier was the first item to be examined in eliminating unnecessary military expenditures. And a national news magazine has reported that officials in the present administration are seriously considering cutting the number of attack carriers from 15 to 12.

Similar reservations have also been expressed by military strategists and military historians. In a lengthy case study on the evolution of the attack carrier, Dr. Desmond Wilson—now at the Center for Naval Analysis, a Navy "think-tank"—raised serious questions about the justification for 15 attack carriers.

These doubts and reservations about the need of 15 attack carriers may explain the growing congressional concern over the carrier program. In addition to those of us in the Senate who have voiced this concern, the distinguished Chairman of the House Appropriations Committee recently stated that he intends to take a close look at the Navy's request for a nuclear attack carrier.

In questioning the need for an additional attack carrier, I am not advocating any weakening of our defense posture.

It is significant that despite the abundant amount of evidence that top, responsible leaders in the Defense Department for years have been urging a serious review of the carrier force level, that the Secretary of Defense himself proposed a reduction of such level, that the systems analysis has repeatedly called for a reduction in such levels, and that U.S. scholars and responsible critics have called for such reduction, those of us who propose considering such a course are greeted with the charge that we are for unilateral or partial unilateral disarmament and are opposed to America being No. 1 in defense posture.

In response to our questions about why we should have 15 attack carriers, we have received no answer. The only answer we have received that is responsible at all is that the matter is under study and that we soon should know what the carrier-force level should be, but that until they do decide to go ahead, we should go right ahead and spend the billions of dollars requested.

The key issue concerning the 15 attack carriers is one to which the Navy has addressed itself.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. TYDINGS. Mr. President, in the Washington Post of September 8, 1969, there was an article entitled, "Air Force Study May Spur Navy Carrier Debate," written by George Wilson.

The article contained a reference to a report from the U.S. Air Force which stated that there are enough air land bases in Southeast Asia and Europe to base all of the tactical fighter aircraft which the Joint Chiefs of Staff estimate are required to meet a major contingency in those areas.

The article went on to state that the capability of the U.S. Air Force tactical

air has in no sense been diminished by land-based inactivations.

Does not this report by the Air Force buttress the argument which the Senator from Minnesota and the Senator from New Jersey are making in support of their amendment that there is no urgent defense need for the hundreds of millions of dollars requested by the Pentagon that the amendment in question would defer pending further study?

Mr. MONDALE. Mr. President, I am glad the Senator from Maryland raised the point. I ask unanimous consent to have printed at this point in the RECORD a document from the Air Force which was the basis for the Wilson argument. This demonstrates that Mr. Wilson was exactly accurate in saying that the Air Force contends that land-based air is more than adequate for any action which the Joint Chiefs of Staff would contemplate in Europe or Southeast Asia.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MAJOR BASE CLOSURES

Of the major air bases closed since the Korean War (attachment 1), only those in Morocco, France and Saudi Arabia could be classified as involuntary or political closures. All others and some in France were closed because they either were no longer needed or were closed for economic reasons. Dhahran, Saudi Arabia retains a USAF presence. Many of the bases were used by the Strategic Air Command and as auxiliary bases for tactical air units. Although listed as major installations, those designated "AFD" and "ASN" were not used to base tactical flying units on a permanent basis. With the possible exception of France and Morocco most of the closed bases could be easily reactivated if necessary to support contingency operations. In the event of a Warsaw Pact-NATO conflict it is considered probable that the use of French bases would be approved.

Only one air base closure has posed problems in contingency planning. An operation conducted in support of the Israelis could not be supported through Dhahran. Even in this case an exception might be made in the event of overt Soviet aggression. None of the other base changes to date have jeopardized contingency plans nor prevented the formulation of contingency plans to meet current commitments. There are enough land air bases in Southeast Asia and Europe to base all the tactical fighter aircraft which the Joint Chiefs of Staff estimate are required to meet a major contingency in those areas.

In addition, as demonstrated in Attachment 2, there are airfields all over the world that are adequate to support tactical air combat operations. There are more than 1,700 Free World airfields with runways 5,000 feet or longer and there are 685 airfields with runways 8,000 feet or longer. Any nation which requests the assistance of U.S. military forces can be expected to permit use of its airfields. The Air Force is developing bare base equipment which will provide the capability to deploy to any base which has a runway, taxiways, ramp space and potable water source.

In summary, the majority of the land air bases that have been inactivated were not needed or were closed to decrease expenses, although some were closed for political reasons. The capability of USAF tactical air has in no sense been diminished by land base inactivations. Attachment 3 summarizes the number of inactivated and operational USAF bases and the Free World airfields.

Mr. MONDALE. Mr. President, I have several things to say about the observation of the Senator from Maryland. First of all, I see very little evidence that the Navy and the Air Force have got together to decide what their complementary roles are.

I think that each is trying to outdo the other and that there is an overlap and waste of the tactical air available in certain areas and perhaps none at all in other areas.

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. TYDINGS. Mr. President, the more we study this area of comparative cost for air defense and air support and the different requests made by the Air Force and the Navy for multibillion-dollar projects that are redundant or largely overlapping, the clearer it becomes the Pentagon has really declined to make a judgment as to the most effective means to spend our defense dollars.

It almost appears that they feel that Congress will appropriate anything asked for and that therefore they will give both competing groups, the Air Force and the Navy in this instance, everything they want without regard to where the priorities really are or how the taxpayer is best served.

Mr. MONDALE. The Senator is accurate in making that statement. However, I think the situation is worse than that.

I have been inadvertently supplied with information about what the Systems Analysis Office has said this year concerning reduction of tactical force levels in terms of the shockingly high cost of sea-based tactical air relative to land-based air.

The Defense Department has ignored the advice of its own Systems Analysis Office in supporting and, in effect, repeating demands for land- and sea-based air without reconciling and making complementary the competing striking force.

Mr. COOK. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. COOK. Mr President, with regard to the debate just had between the Senator from Maryland and the Senator from Minnesota, would the Senator from Minnesota also admit that regardless of the fact that a report may show that there were adequate bases in Korea at the outset of the war, every land-based airfield was immediately overrun and the only air support the troops in South Korea had in the original incidents occurring in that war was from aircraft carriers?

Mr. MONDALE. Mr. President, I inform the Senator from Kentucky first that it must be clearly understood what the pending amendment would do.

We are not saying that we should have no aircraft carriers. In fact, the Senator from New Jersey and I make it very clear that we think there should be aircraft carriers. Also, we are not saying there have not been occasions when the carrier has been useful.

We are saying that we do not need 15 attack carriers.

Recently the Chief of Naval Operations in a speech before the VFW cited a need for the aircraft carriers and cited 50 wars or near wars in which this country has been involved since 1946.

I was fascinated by the figures. I asked for them. Some of the wars were wars in which carriers were not used but were only alerted.

Some wars involved enemies whose chief weapon would be a 10-pound rock incapable of sinking a carrier or even chipping paint off its side.

The question is whether we need 15 nuclear attack carriers costing $1.8 billion a year in the light of the record over the last 23 years in which we have found that kind of involvement.

This does not say that there have not been times when the carrier has been useful. The question is, Do we need 15 of them, and do we need 15 nuclear attack carrier task forces which are so exceedingly expensive?

Mr. COOK. I should like to reply to the Senator, but first I wish to get into the RECORD the fact that every airfield in South Korea was overrun. It was necessary for the first airstrikes in Korea to be totally and completely sustained by aircraft carriers. The record shows that it was absolutely necessary that the first airstrikes in South Vietnam be sustained by aircraft carriers.

To get to the second point of the Sentor's discussion, it really has never been so emblematic of the Navy and the Defense Department that there be 15 aircraft carriers. If the Senator will check the RECORD, he will find that at the commencement of the Korean conflict there were not 15 but either seven or nine, and at the height of that conflict, in fact, there were 19 aircraft carriers.

When we speak of building one, we must also remember—and I think every Member of the Senate must remember—that we now have four aircraft carriers in operation which are 19 and 25 years old, respectively. One is 19 and three are 25 years old. All four should be phased out. Three of them should have been phased out 5 years ago. All four are now in use. When these aircraft carriers are put into use in the Vietnam theater at the present time, for example, and four modern carriers are withdrawn, we are subjecting the pilots of the airplanes off those four aircraft carriers to the use of second- and third-rate airplanes, because modern Navy aircraft are not capable of landing on those four aircraft carriers in the oldest class. Is that not true?

Mr. MONDALE. First, we have repeatedly said that there may be a need for aircraft carriers in search situations, as the Navy refers to them—and that there was a short period around Korea when, for a period, most if not all of the land-based air potential on the Korean peninsula was removed.

But does that satisfy the Senator from Kentucky that a case has been established for a fleet of 15 attack carriers or for a policy that does not involve holding our own but, because these new carriers are almost twice as effective and three times more expensive than the old carriers to which he has made reference, puts us into almost doubling attack carrier potential over the next few years?

Second, as to the issue of whether we have maintained an attack carrier force level of 15 without a rationale over the past years, I am aware of the Navy's arguments, and I say that they are highly misleading.

I ask unanimous consent to have printed at this point in the RECORD an attack carrier force table prepared by Dr. Desmond Wilson, which shows that the level of attack carrier forces since 1946 has been exactly 15.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE XIV.—ACTIVE CARRIER FORCE (1946-64) (ATTACK CARRIERS OR THEIR EARLY EQUIVALENTS)[1]

Year	Atlantic/ Mediterranean	Pacific	Total
1946	7	11	18
1947	9	6	15
1948	7	5	12
1949	7	5	12
1950	9	2	11
1951	9	6	15
1952	10	7	17
1953	9	9	18
1954	9	8	17
1955	7	10	17
1956	6	9	15
1957	6	8	14
1958	6	9	15
1960	6	9	15
1961	6	9	15
1962	6	9	15
1963	6	9	15
1964	6	9	15

[1] See app. A for complete listing of carrier force by ship type.

Mr. COOK. I might say to the Senator that the number 15 really does not bother me, except in its ineptness to take care of a situation, for example, such as World War II. Prior to World War II we still had subscribed to that particular level, but during the course of World War II, of one kind or another, we had approximately 100 carriers that were available for the discharge of aircraft, in the defense of this Nation.

I can only say to the Senator that we come down to a matter of saying, "Would you rather have 15 to start from, when you may have to have 100, or would you rather have 10 to start from, when you may have to have 100, in the event of another major world war that would in essence be nonnuclear or even nuclear?"

Mr. TYDINGS. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. TYDINGS. The questions raised by the Senator from Kentucky are interesting, because they pose a point; namely, would we rather have 15 carriers or would we rather have 100? In answer to that question, perhaps we might say that it would be reassuring to have 200, assuming the worst possible contingencies. But this is all speculation. I would say that the answer should be supplied by the Secretary of Defense and the Joint Chiefs of Staff, based—and I hope the Senator from Kentucky will listen to me——

Mr. COOK. I am listening.

Mr. TYDINGS. Based on whether it is more cost-effective given current conditions to invest primarily in tactical aircraft utilizing our land bases around the world, or in carrier-based aircraft, or in some mix of the two. In addition, we need figures before authorizing more money in this area comparing present contingencies with those that existed in the Korea period and before when the figure of 15 carriers was deemed desirable.

I think that is one of the basic issues in this debate—to get the Pentagon and the Joint Chiefs to make a choice based on comparative costs and comparative abilities. I think if we got the facts from the Pentagon, we would find out that it costs, over a 10-year period, almost a billion dollars more to support a wing of aircraft carrier planes than it does to support a similar wing of land based planes.

I believe that the report which the Air Force has released stating, that their capability in operating from land bases in Southeast Asia and Europe today is equal to handling any foreseeable contingencies is of tremendous import.

I think we have to consider all these things together before making a decision to commit billions of dollars over a period of years in support of increased carrier strength. We owe it to the American people to require certain choices and decisions to be made by the Secretary of Defense and the Pentagon, and to not just give them basically everything they want enabling them to avoid the hard choice between the competing demands of the various service branches.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. MONDALE. I will yield for one more question, and then I will return to my text.

Mr. GOLDWATER. I should like to make an observation with respect to the article from the Washington Post which has been put in the RECORD.

I have to say, from very close personal knowledge of this matter, that this is another example of partial information being leaked to the Washington Post. If the Senator wanted to go into the Pentagon, he could find any number of unclassified items that are parts of war games studies or continuing studies. This is a part of a study.

The Air Force and the Navy are working very closely together in the entire field of tactical air; and I might say, in defense of the carrier in Southeast Asia, that the daily targeting committee over there meets constantly—the Navy and the Air Force—to decide on targets. The value of carriers in the Tonkin Gulf is that they can make strikes which would require air-to-air refueling if the Air Force attempted to make them, which is very expensive. It cuts down the weapons load.

The Navy has taken over the entire responsibility of the tactical attacks on North Vietnam and has relieved the Air Force from much of this responsibility, except for strikes they make from the other countries up there.

I hope that we are not subjected to a continuation of these partial reports emanating, so-called, from the Pentagon through the Washington Post. I do not know whether or not this paper was classified secret. I doubt that it was.

Mr. MONDALE. I have just put it into the RECORD.

Mr. GOLDWATER. I have the entire report, and this is merely a part of the entire report. The military planner has to lay out everything.

The old estimate of the situation still applies. We have to try to guess what the enemy will do. If they do this, what will we do? If the Navy can do this, what can the Air Force do; or if the Air Force can do this, what can the Navy do? What will be the reaction of the enemy? This is all a part of the study that goes on constantly. The Navy and the Air Force are working very closely together in theory in the Pentagon and in practice all over Southeast Asia.

Mr. MONDALE. I thank the Senator from Arizona. The report was not classified. I think the reporter for the Washington Post quoted it very accurately. To demonstrate this, I have placed in the RECORD the Air Force letter, substantiating categorically what the article said. I think this is one of the items that should be considered if the study contemplated in the pending amendment is agreed to.

Mr. GOLDWATER. I think the entire study should be in the RECORD. This is merely a part of it.

Mr. MONDALE. Maybe they would submit more of the classified studies; that would help our case.

Mr. GOLDWATER. I do not think they should do that. They are so top secret the Senator from Wisconsin (Mr. PROXMIRE) felt he should not read them. I think the Washington Post is the best source of secret information available. It is even better than going to the Pentagon.

Mr. MONDALE. My impression is that the Pentagon system of classification has more to do with political embarrassment than with hiding information from the enemy. That has been my experience.

Mr. GOLDWATER. I disagree with the Senator. In these particular cases the Senator is calling for reports and the Senator from Wisconsin has called for reports, and I suppose every other American will call for reports. However, these are probably the most highly classified bits of information in the Pentagon. I want no part of seeing them. Members of the Committee on Armed Services are cleared for the most secret documents but they refuse to see the material. It pertains to our most secret information on the enemy and I do not think we should see it.

Mr. COOK. Mr. President, will the Senator yield?

Mr. MONDALE. I yield briefly to the Senator from Kentucky.

Mr. COOK. I want to make clear to the Senator, and I am sorry the Senator from Maryland has left the Chamber, that the Senator from Kentucky is not one who has permitted the Pentagon to wildly spend money and not ask questions. I think the record is clear on this point.

Second, in regard to the increased cost of airpower by way of carriers rather than land bases, I think we should consider in this entire argument that if we refuse to continue to modernize our Navy, and obviously we have been dragging our feet in this regard for years, we place ourselves in the position where the cost to maintain old carriers and old-

er aircraft is considerably higher. On older aircraft the accident rate has a ratio of 2 to 1 compared with modern aircraft.

The Senator from Maryland will say that the cost to maintain these squadrons will continue to grow and the only way is to supply America with an adequate and modern Navy.

Mr. MONDALE. I agree with the Senator. We want an adequate and modern Navy. We have 10 carriers which are under 13 years old; we have three Midways, too, which have been modernized. One of the alternatives this study suggests is the possibility of replacing not one, but two, of the older carriers. The idea here is not to pass judgment on this, but to come up with a responsible study on the question of how many carriers we do need, how they would be used, what kind of carriers, so that we can have a modern and adequate Navy, and one which is consistent with the financial realities of the country as we see it today. This study would be a modest and long overdue effort, and one which could probe into some of the questions raised by the Senator from Kentucky.

In questioning the need for an additional attack carrier, I am not advocating any weakening of our defense posture.

My questions refer to the complete lack of justification for a continuing fleet of 15 attack carrier task forces: In light of the acknowledged change in the role of the carrier in our overall defense plans; in light of great changes in the international situation and the kinds of threats to which we must be prepared to respond; in light of the most dramatic changes in weaponry the world has ever seen—changes which must affect the relative vulnerability of every portion of our Armed Forces; and, in light of changes elsewhere in our own defense capabilities—changes which must have some effect upon the division of responsibility among all of our armed services.

Like the advocates of the horse cavalry and the battleship, the proponents of the carrier have looked first to the maintenance of an existing force level and only then to reasons which would justify this level.

It is for such reasons—reasons which I shall further elaborate upon—that Senator CASE and I have decided we cannot simply support the requested authorization for another nuclear attack carrier, contained in the current military authorization bill. This authorization now calls for $377.1 million for laying the keel of the carrier CVAN–69—the second of three planned *Nimitz*-class nuclear carriers. The first of these carriers is almost completed, and the third is programed for fiscal year 1971 funds.

We have introduced an amendment which would withhold this authorization, pending a complete congressional review of the Navy's attack carrier force level.

This is not an "anti-carrier" amendment, as Navy spokesmen would have us believe. Our amendment in no way suggests that the attack carrier is obsolete or has no viable role in the U.S. Navy.

The purpose of the amendment is to generate a rationale for the number and type of carriers required by present and future defense contingencies. Such a rationale has long been requested but never been provided by the Navy or the Defense Department. Instead, they have reacted to our questions by arguing the irrelevant issue of "carrier versus no carriers" and have ignored the far more difficult issue of the proper size and composition of the carrier fleet.

The wisdom of a new attack carrier and the wisdom of a continuing force level of 15 attack carriers must depend upon several things. It must depend upon the cost of carrier task forces—money which, if used for carriers, is not then available for other defense needs—not to mention other domestic needs.

It must depend upon the effectiveness of carrier-based air power—an effectiveness which, in turn, is greatly influenced by the carrier's vulnerability in various types of conflicts.

And, the wisdom of the current policy depends upon the capabilities of land based air power, which the carrier is designed to complement.

The fact is, the Navy has simply failed to justify in these terms the continuing need for a 15-carrier fleet.

This blind adherence to a force level is symptomatic of the failure to formulate a clear and consistent naval policy since the end of World War II. If the United States has a naval policy at all, Dr. Herrington noted:

> It is one of maintaining constant force levels and adapting these forces to the exigencies of the day.

COST OF PRESENT CARRIER PROGRAM

Such a nonpolicy is indefensible in light of the enormous costs of maintaining a fleet of 15 carriers. The Navy itself concedes that this fleet accounts for 40 percent of its total budget.

The cost of building an attack carrier rose from about $83 million in World War II to $171 million during the Korean war; the total construction cost for the nuclear carrier in this bill is pegged at $510 million, but a Defense Department official and others have estimated that it could run as high as $700 million. That amounts to a cost escalation of 600 percent since World War II, which is quite high even considering the decreased value of the dollar.

But the cost of the carrier itself is just the beginning of the story. The Navy only operates the carrier with a task force, consisting of various escort and logistical ships. And every carrier is equipped with an air wing.

The Navy estimates a $1.4 billion procurement cost for a nuclear carrier task force—consisting of the carrier and four destroyer escorts. The air wing costs an additional $409.5 million—bringing the total procurement cost for the task force—which does not include operating costs, basing costs, and other logistical ships—to $1.8 billion. Needless to say, these costs will often run a great deal higher.

But even this is not a complete picture. For the Navy normally deploys two task forces "on station" in the Mediterranean and three in the western Pacific on a continual basis. For every carrier task force "on station," two must be held in reserve as backups, since the normal rotation time of a carrier is 4 months. Since each task force contains an air wing, the Navy must pay for three wings to keep one "on station."

The Navy can operate at a higher rate of efficiency but only with great stress to the carrier's crew. The investment cost of maintaining one nuclear task force on continual deployment, therefore, amounts to a multiple of 3 times the cost of one carrier task force—or $5.4 billion.

The question of the proper attack carrier force level is therefore extremely important. For if it is determined that a smaller force level is needed, we will not only save the cost of additional carriers, but the cost as well, of numerous escorts, support ships, and air wings.

These costs dramatically illustrate the need for justifying a policy which insists on maintaining at least 15 attack carriers. But what is the origin of this number?

ORIGIN OF CURRENT FORCE LEVEL

It is generally thought that the force level of 15 carriers originated with the Washington Naval Disarmament Treaty of 1921. This treaty allotted 15 "capital ships" to the U.S. Navy. When the battleship became virtually obsolete in World War II, the carrier became the captial ship, and the Navy switched from a fleet of 15 battleships to one of 15 carriers.

Since the end of the Second World War, the Navy has maintained, with few exceptions, a fleet of at least 15 attack carriers. This number has been exceeded in only 5 of these years.

Mr. President, at this point I ask unanimous consent to have printed in the RECORD table XIV, "Active Carrier Force, 1946–64, Attack Carriers or Their Early Equivalents," which I earlier introduced in my colloquy with the Senator from Kentucky (Mr. COOK).

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE XIV.—ACTIVE CARRIER FORCE (1946–64) (ATTACK CARRIERS OR THEIR EARLY EQUIVALENTS)[1]

Year	Atlantic/ Mediterranean	Pacific	Total
1946	7	11	18
1947	9	6	15
1948	7	5	12
1949	7	5	12
1950	9	2	11
1951	9	6	15
1952	10	7	17
1953	9	9	18
1954	9	8	17
1955	7	10	17
1956	6	9	15
1957	6	8	14
1958	6	9	15
1960	6	9	15
1961	6	9	15
1962	6	9	15
1963	6	9	15
1964	6	9	15

[1] See app. A for complete listing of carrier force by ship type.

Mr. MONDALE. Mr. President, this table was prepared by Dr. Wilson, with an effective, and I think searching, analysis of the attack carrier by him. In it

he states the accurate equivalents of carrier force levels since 1946 and it comes out exactly to 15 as a modal figure. The Navy has developed some of its own figures in which it tries to show a wide and greatly varying figure year by year.

The truth of it is that Dr. Wilson's thesis has established beyond doubt that since the end of World War II we have followed a 15 capital ship policy without ever justifying the basis for that number. That is the only reason we continue that force level. If there are other reasons, the Navy has not seen fit to submit them to me or, to my knowledge, to anyone else in the Senate. In response to that question they say, "We are studying it."

Mr. President, it is evident that this number "15" is a legacy of the past, maintained without reference to the changing role of the carrier, the changing international situation, or the changing weapons against which the carrier must defend itself. The advocates of 15 attack carriers—like their predecessors who defended the horse cavalry and the battleship—are following a path of tradition rather than reason.

After World War II, the attack carrier—indeed, the entire Navy—became a force in search of a mission. There were no other surface fleets to engage, and the very existence of the Navy was threatened by the competition of new long range aircraft capable of delivering nuclear payloads. The Navy responded to these events by seeking justification for the attack carrier in strategic nuclear warfare. It appeared to the Navy planners that if the carrier task force was to survive as a major offensive weapon, it would have to get into the business of strategic bombing.

With the advent of land and sea-based missiles such as the Minuteman and the Polaris in the early 1960's, the carrier no longer had any role as part of our nuclear retaliation forces. The Defense Department's posture statement of February 4, 1964, concluded that by 1966, the United States would "have a large enough number of strategic missiles in place" to relieve the carrier forces of their strategic retaliatory mission.

Faced with the loss of their strategic retaliatory role, the Navy began to emphasize the carrier's potential tactical role in providing air support for ground troops, maintaining air superiority, and destroying supply lines. However, the argument that 15 attack carrier task forces is needed to provide sea-based tactical air power throughout the world is not a persuasive one, in view of these changing circumstances.

LAND- VERSUS CARRIER-BASED AIRPOWER

It is true that where land-based airpower is not immediately available or where political constraints limit the use of land bases, the carrier may well serve as a complement to our overseas bases. But where the carrier clearly competes with, rather than complements, land-based airpower, the role of the carrier must be justified on the basis of its effectiveness and its efficiency.

On these criteria, the maintenance of 15 carrier task forces for the provision of tactical air support around the world appears to be both wasteful and ineffective. In the first place, the sustained use of the carrier sorties duplicates and overlaps existing and potential U.S. capability for providing land-based tactical airpower.

Carrier task forces are assigned to the two major "trouble areas" of the world—nine are available for the Western Pacific and six for the Mediterranean. But it is quite clear that our capacity to deploy land-based tactical airpower is more than adequate in these areas as well as in most other parts of the globe where peace or U.S. interests may be threatened.

The U.S. Air Force maintains 23 wings of tactical fighters and bombers in active forces at home and abroad.

The geographic spread of overseas bases either operated by, or available to, the United States gives us an impressive land-based tactical capability, especially in the Mediterranean and the Western Pacific. In Europe, the United States alone—not including NATO forces—has bases in six countries, with over 400 tactical aircraft; at least four of those bases are within striking distance of the Mediterreanean. In the Pacific, we have bases in seven countries, with over 800 tactical aircraft.

Furthermore, our capacity for creating new land bases as needs arise is almost limitless. There are at least 1,000 overseas civilian airfields which the Air Force, within 3 days time, claims it can convert to a fully equipped tactical air base using the "pre-positioned kits" of the bare base support program.

These existing and potential bases do not tell the full story of the effectiveness of our land-based tactical air forces. The range of modern tactical aircraft is between two and three times greater than that of the older jets.

Mr. President (Mr. EAGLETON in the chair), I refer again to the letter, which I have already inserted in the RECORD, in which the Air Force asserts the capability of land-based air in Europe and Southeast Asia to meet any defense contingencies.

Mr. President, Secretary McNamara, in calling for a reduced carrier fleet, pointed out in the Defense Department's February 1964 posture statement that—

> The increasing range of land-based tactical aircraft has reduced our requirement for forward-based airpower.

This increased range is expanded even further by the use of midair refueling. Consequently, our overseas land-based planes are capable of reaching many more targets than they were even 10 years ago; and U.S.-based tactical aircraft can be operational anywhere in the world in a short period of time.

The Navy contends that the reduction in the number of our bases justifies the need for a 15-carrier fleet. While these bases have decreased from 119 in 1957 to 47 at the present time, the number of tactical air wings has increased from 16 to 23 during the same period. More important, the greatly increased range of these planes—both in the United States and overseas—means that far fewer land bases can provide ample tactical air support in any areas of potential conflict. And the bare base support program enables the United States to supplement existing land bases to the extent that it is necessary to do so. Even with fewer overseas land bases, then, carriers still overlap and duplicate our land-based capability.

More important than overlap alone, however, is the vastly greater cost of carrier-based airpower. As I explained earlier, the enormous initial expense of a single aircraft carrier is multiplied by the Navy's insistence upon an accompanying task force for defense and for logistical support. Added to this is the fact that to maintain a single carrier base requires three task forces and three air wings in rotation. This brings the investment cost of deploying one carrier base—with nuclear carriers and escorts—to $5.4 billion.

A land base is a far cheaper operation. According to the Air Force, a base in the Pacific can be built for $53 million; the bare base support program can convert an existing civilian runway for about $36 million.

The Air Force has indicated that many of them can be set up and made operational in 3 days.

We had an earlier discussion about the Defense Department's classification system. This is one of the areas where I believe the present policy is to be seen in its starkest dimensions, because one of the key questions in this debate, one of the key questions in this amendment, is what is the relative cost of land-based versus sea-based air, where they are equally available? That is one of the key questions. It has already been adverted to by Senators who oppose this amendment.

I have been advised secretly of information, which I cannot disclose, which shows the scandalously higher cost for sea-based over land-based air, but I am not permitted to use that information. I am not permitted to use it in defense of this amendment, even though it exists, and primarily because the Navy knows that if it were known it would hurt its case. I think that this classification has been made more because of political embarrassment and to maintain the 15 active carrier force than to protect us from having the enemy get that information.

One of the reasons why the Senator from New Jersey (Mr. CASE) and I are proposing this amendment is that a fight of this kind is an unequal one, and we need to have resources and facilities in the Senate itself that permit us to get the information we must have to make intelligent choices in this field.

I make the statement I have made because I believe it is as far as I can go under the present classification system; but if we knew, as Senators in this body, what I have seen and have been told, the issue of cost effectiveness would be put to rest once and for all, and decisively so.

The high cost of carrier-based airpower must be viewed in relation to its effectiveness. The Navy has failed to demonstrate the cost-effectiveness of carrier airpower.

For example, we know that the two carrier task forces "on station" in the Mediterranean are capable of providing a maximum of 150 offensive sorties per day. But what is the military significance of this number of sorties? Since we are flying almost 1,000 offensive sorties per day in Vietnam, it is clear that 150 sorties would only be of marginal value in a conflict of similar size in the Mediterranean. Given this fact, it is important to determine whether the Navy's policy of continually maintaining a certain number of carriers on station is worth the costs.

The reliance upon carrier rather than land-based airpower is made even more questionable by the high degree of vulnerability of the carrier in light of modern weaponry. Carriers are vulnerable to attacks by submarines, aircraft, ship-to-ship and air-to-ship missiles.

Submarines pose a particularly ominous threat to carriers. Because of the very rudimentary nature of antisubmarine warfare, there is very little a carrier can do to defend itself adequately from submarine attacks. The Navy has acknowledged in congressional testimony that one of the primary missions of the large Soviet submarine fleet is anticarrier warfare.

Rapid technological innovations in missile development have made the carrier unusable in all but the most limited conflicts. The lethal nature of even the older missiles, such as the Soviet STYX, was recently demonstrated when an Egyptian PT boast sunk an Israeli destroyer with a single STYX. Both the Soviet and the American arsenals contain far more advanced antiship missiles, with greater range and higher speed.

Once again, the basic material is classified, and probably wisely so; but it is fair to say that modern missilery raises profound doubts concerning the vulnerability of the modern attack carrier.

Unique to the Soviet inventory, according to the Chief of Naval Operations, is the guided cruise missile. The Navy estimates that 16 percent of the Soviet fleet carry 400 nautical mile cruise missiles designed primarily for use against land or sea targets.

In his testimony before the Senate Armed Forces Committee, Secretary of the Navy John H. Chaffee spoke of "the wide scope and gravity" of the missile threat to our surface fleet:

> In an effort to counter the surface forces, the Soviet Union is developing the capabilities of the terminal-homing cruise missile which may be launched from aircraft, surface units, surfaced submarines, or land sites, at short or long ranges . . . our capability to defend against a cruise missile attack continues to concern us, but we are moving forward with programs directed toward significant long-term improvements.

I would like to ask that special emphasis be placed upon the Secretary's own admission in this field when we hear the arguments, as I am sure we will, that the carrier is invulnerable.

It is not that the carrier is completely defenseless against these threats. Rather, the ever-present fear of enemy attack causes the carrier task force to concentrate its resources on defense, thereby substantially reducing its offensive capability. This idea was best expressed in a 1966 dissertation on attack carriers by Desmond Wilson, now at the Center for Naval Analysis. In Dr. Wilson's words:

> Most of the carriers' usefulness when functioning in support of a land campaign during a limited war appears to be significant only under conditions of little or no submarine opposition. It is a matter of some doubt that the carrier force could continue providing combat sorties in support of a land campaign if the task force commander had to worry about air or submarine attacks.

As Wilson observed, effectiveness of the carrier task forces in limited war is closely related to the problem of vulnerability, which, in turn, is conditioned by the rules or limits by which the war will be fought. Threats of escalation, such as the introduction of submarines or aircraft, can diminish carrier effectiveness: By forcing carriers to stay far at sea, thus diminishing the fuel available to the aircraft for combat purposes, and, by requiring continual movement of the carriers from area to area, thereby preventing it from staying in one locale to provide continual air support.

Mr. President, I understand the time has now come to recess for the funeral services. I ask unanimous consent that I be permitted to resume my speech at the commencement of the session this afternoon.

Mr. GOLDWATER. Mr. President, reserving the right to object—and I shall not object—I wonder if the Senator would ask that the Senator from Mississippi have unanimous consent to follow him for 20 minutes.

Mr. MONDALE. We had left that on an informal basis. I propose to do so. I wanted to see what would happen with the colloquy, but I propose to do so at the appropriate time.

The PRESIDING OFFICER. Without objection, the Senator from Minnesota will resume the floor at the conclusion of the recess.

Mr. BYRD of West Virginia. Mr. President, there will be a recess at 11:45 a.m., at which time Senators will assemble to go to the rotunda, to be present when the body of the late and beloved minority leader, Everett McKinley Dirksen, will be removed. Senators who wish to attend the church services at 1 o'clock will assemble on the Senate steps at 12:15.

I shall now put in a quorum call, with the expectation of calling off the quorum call at 11:45, at which time the Senate will recess.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate stand in recess subject to the call of the Chair. For the information of the Senate, we will very likely be back in session somewhere between 2 and 2:15 this afternoon.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Thereupon (at 11 o'clock and 52 minutes a.m.) the Senate took a recess subject to the call of the Chair.

The Senate reassembled at 2 o'clock and 13 minutes p.m., when called to order by the Presiding Officer (Mr. GRAVEL in the chair).

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be a brief quorum call without interfering with the rights of the able Senator from Minnesota (Mr. MONDALE) under the order.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. MONDALE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bill and joint resolution, in which it requested the concurrence of the Senate:

H.R. 471. An act to amend section 4 of the act of May 31, 1933 (48 Stat. 108); and

H.J. Res. 247. A joint resolution relating to the administration of the national park system.

HOUSE BILL AND JOINT RESOLUTION REFERRED

The following bill and joint resolution were each read twice by their titles and referred to the Committee on Interior and Insular Affairs:

H.R. 471. An act to amend section 4 of the act of May 31, 1933 (48 Stat. 108); and

H.J. Res. 247. A joint resolution relating to the administration of the national park system.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. YOUNG of Ohio. Mr. President, will the Senator from Minnesota yield to me without losing his right to the floor?

Mr. MONDALE. I am pleased to yield to the distinguished Senator from Ohio.

Mr. YOUNG of Ohio. Mr. President, I strongly support the pending amendment offered by the distinguished Senators from New Jersey and Minnesota. I favor that we do withhold the expenditure of the $377 million authorized in the military authorization bill for a proposed additional nuclear aircraft carrier until the Congress has completed a comprehensive study and investigation of the need for building an additional attack carrier.

In my opinion, Mr. President, this proposed huge carrier is just as obsolete now and will be more obsolete in future years as much as was the battleship some time back. But, of course, the big brass in the Navy did not appreciate that and did not believe it. They were proved wrong.

Over the years, it has become clear that our military and naval leaders are among the last to accept changes in the nature of warfare in this space age of change and challenge. For example, we continued to add battleships to the fleet long after it was obvious to all intelligent persons in the United States that they were ineffective and uneconomical in the age of the nuclear submarine. The fact is that the aircraft carrier is no longer part of our strategic nuclear forces. Our ICBM's, Polaris and Poseidon submarines, and land-based SAC bombers form our real deterrent force.

The best defense of the United States at this time is the power of our Polaris submarines capable of roaming beneath the surface of the seven seas for as long as 300 days and nights, capable of firing nuclear warheads and striking targets in an enemy country at a distance of 2,875 miles.

The primary mission of aircraft carriers today is to provide tactical air power. We now have 15 attack carriers, each requiring a task force of escort and supply ships. It is estimated that one nuclear carrier task force, consisting of a carrier and four destroyers, costs taxpayers more than $1.4 billion. Also, as the distinguished junior Senator from Minnesota (Mr. MONDALE), who has made extensive research and devoted a great deal of time to the subject, has pointed out, to keep one such task force on station in normal times involves maintaining two complete task forces in reserve. Therefore, the real cost of placing one carrier task force on station is approximately $4.2 billion. This is luxury that our economy and taxpayers can no longer afford. It would be an unjustified extravagance.

Neither the Soviet Union nor Communist China is building a single attack aircraft carrier. There are no indications that either plan to do so. It is a fact that the Soviet Union is rapidly building up its naval strength, but it is doing so in keeping with the realities of the nuclear age. The main emphasis is placed on nuclear submarines and other smaller more maneuverable vessels by the astute leaders of the Soviet Union. Great Britain and France are the only other nations with attack carriers in their fleets. The British have announced their decision to phase out their carriers.

At a time when the United States maintains approximately 138 squadrons of tactical fighters and bombers on land bases at home and abroad, it is unconscionable and wasteful to maintain at the same time 15 aircraft carrier task forces. An average airbase in the Pacific area costs $53 million. It accomplishes the same purpose as a carrier task force costing $4.2 billion. Furthermore, with modern midair refueling techniques, our tactical air power can be operational in a very short period of time regardless of where it may be needed.

The large, modern carriers are effective only in very limited conflicts and situations. They are extremely vulnerable to destruction by submarines, aircraft, ship-to-ship missiles and air-launched missiles. Almost one-half of the cost of a carrier task force is for defensive purposes.

It is high time that our admirals recognize and accept the realities of present and future defense needs. They seem to ignore the availability and the comparable effectiveness of land-based aircraft. Not only is there no need whatever for additional carriers, but there is no reason why the Navy cannot reduce the present number of the fleet.

Mr. President, the $377.1 million requested for the proposed CVAN–69 nuclear aircraft carrier is merely the downpayment for what will eventually be an expenditure of $4.2 billion of taxpayers' money. I am hopeful that the Senate will agree to the pending amendment, authored by the Senator from Minnesota, who just yielded to me, to prevent that expenditure until the Congress has had the opportunity to complete its study and investigation of past and projected costs and the effectiveness of attack aircraft carriers and their task forces.

Mr. MONDALE. I thank the Senator from Ohio for his excellent statement and, if I may say so, for his leadership, much earlier, in this field. He was one of the first in the Senate, some time back, to raise the question whether, in the light of modern realities, it was wise to continue at our present attack aircraft carrier levels or whether that policy should be reviewed.

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. MONDALE. I will be glad to yield in a little while.

The Senator from Ohio underscores the importance of having systems that are modern and relevant, not to World War II or to World War I, but, tragically, to the next war which we will have to fight if it is necessary to do so.

Referring to what one military historian said, military history is studded with institutions which have managed to dodge the challenge of the obvious; and one of the reasons why they have been able to do so in this country is that we in Congress have not done our job as well as we should. The job Congress is required to do under the Constitution is to raise and maintain the Army and the Navy. It is our responsibility under the Constitution. I am hopeful that in this amendment, and in other ways, we can begin to assert our traditional, and almost sacred, responsibility in this field.

I thank the Senator from Ohio for his contribution, not only today but in the past.

I now yield to the Senator from Alaska.

Mr. STEVENS. In my study of this problem, it is my understanding that the carrier to be authorized by the bill before us, which the Senator's amendment seeks to delete, will be capable of handling the F–14, but that the *Essex*-type carrier—which this newly authorized carrier will replace—not only will not handle the F–14, but also not serve the F–4, or the RA–5C, the A–6, or the F–14. There are four of the carrier-based planes that cannot be landed upon this obsolete type of aircraft carrier. It was valid in World War II but is no longer capable of dealing with these new aircraft.

If the Senator's amendment is adopted, what are we going to do with the F–14?

Mr. MONDALE. I thank the Senator from Alaska for his question. The truth of it is that at least 10, and possibly 13, of the 15 carriers can handle the current aircraft which the Navy has, and could handle the F–14 when completed, if it is authorized.

If the Senator would review the remarks by the Chief of Naval Operations in which he recounted to us the wars and near wars in which we have been involved since 1946, he would find that at least half of those wars were against "major" powers like Zanzibar.

It seems to me when we look at the question of the carrier force, we must look at it not only in terms of numbers but of the mix. To send a $1.8 billion nuclear-powered force to show our flag off Haiti, for example, seems to me the greatest waste of money. So we might wisely ask what kind of attack force we need.

What we are asking is not to strike the authorization for the carrier, but to ask, what kind of carrier force level we need, what kinds we need, and what the purpose will be.

The same questions we are asking today are the questions that were asked in the executive branch and in the National Security Council. That is all we are doing. We are not asking to pass on the merits. We are asking questions which should have been asked a long time ago as to where we can save money and avoid waste where it exists. That is the sole purpose of the amendment.

Mr. STEVENS. Mr. President, will the Senator yield further?

Mr. MONDALE. I am glad to yield.

Mr. STEVENS. I did review a statement made by Admiral Moorer, Chief of Naval Operations, the one which was made to the Veterans of Foreign Wars last month. He pointed out that the Soviet Union had quadrupled its merchant marine tonnage since 1950, and, even further, in the warship area, that 60 percent of the warships on which we based our advance strategy had passed the 20-year mark, whereas, of the Soviet Union's 1,000 or more navy or surface ships that they relied on, less than one-fourth had passed the 20-year mark.

My question to the Senator from Minnesota is that it was my understanding that this matter had been studied—it was studied in 1968, before I got here, and it

was studied particularly by Secretary McNamara who requested this building program—are we annually to get to the point where we ask for a delay? Having had a review by the executive branch and by the Congress, are we now to come up the next year and say, "Let us delay it for a year so we can study it again?" What new matters have entered into the matter which the executive branch and the Congress studied that require the review that he suggests at this time?

Mr. MONDALE. I am glad the Senator has raised the question for, as a matter of fact, after writing the Navy Department, there came a letter which says it is studying the issue of national security and is making a sweeping review of the traditional arms of the Navy and the Navy aircraft carrier and Navy aircraft carrier levels.

But even the Navy and the Department of Defense have said in writing that this matter should be, and it is being, studied. As a matter of fact, I know that it is; and it may be that as we meet here today, these recommendations are being submitted to the National Security Council.

Furthermore, I am glad that the Senator from Alaska brought up the former Secretary of Defense, because in 1964 he testified that he wanted a reduced level of aircraft carriers for the early 1970's. So the recommendation of the past Secretary of Defense, as well as the recommendations which are classified by the present systems analysis group this year, have called for reductions in the aircraft carrier level, and there has been a good deal of speculation, albeit not confirmed, that this administration is planning to cut two or three aircraft carriers from its force.

So there is plenty of inside, official consideration being given to that, and it would seem very strange that in the midst of all this, the one agency that the Constitution charges with establishing and maintaining the Army and Navy would sit back and simply continue to appropriate billions of dollars for a system that is under study. I think we can afford to take a few months and make certain we are acting wisely.

Mr. STEVENS. Mr. President, will the Senator yield for one last question?

Mr. MONDALE. I yield.

Mr. STEVENS. My last question is this: In my study, I have found that we have already obligated, in 1968 and 1969, after the time that the previous review took place, some $132.9 million for this carrier. I am informed that if a disruption of the production schedule comes about by virtue of this amendment, it will probably cost us in the neighborhood of $100 million to delay this carrier.

If that is correct, the total cost of the Senator's amendment would be approximately $232 million, as opposed to the total cost of a carrier under the program that was previously authorized, with the idea that the new carrier and the F–14 would come on the line at the same time.

Is this really wise use of our Treasury, the taxpayers' money, if we make a decision in Congress to go ahead with the construction of a new carrier, and spend the money, order the vessel, and then, a year later, come along with an amendment to delete this new carrier?

I understand we have an amendment pending to delete the F–14 also. But how can the Senator justify the spending of $132 million, if my information is correct, that has already gone by the board, and the $100 million additional that will be brought about by the disruption of the production schedule? In view of the total cost of the carrier itself, why not go ahead with the carrier?

Mr. MONDALE. In the revised amendment which I called up yesterday, and which is the pending business, we made one alteration to correct a technical error in the original amendment, to make it clear that this amendment applies only to moneys authorized to be appropriated under this act, not the earlier $130 million to which the Senator's argument makes reference.

Based on the earlier amendment, the Senator is correct; based on the amendment as revised, it is no longer relevant.

Of course, the big issue today is not whether a few million dollars will be lost, as we determine whether we are pursuing the wisest course and the wisest force levels. I regret any losses; but what we are talking about here is a nuclear attack carrier which, with its nuclear escorts and wings, will cost at least $1.8 billion, and could well be $2 billion, and a policy which involves 40 percent of the budget of the Navy. Certainly, a few days spent wisely determining these matters could save billions of dollars. If I may say so, it is a standard tactic of the Defense Department to buy long lead items, and then come in and say:

> It is too late to decide the policy matters underlying this system, because we have already spent a few million dollars; let's not get into it.

Mr. STEVENS. But as I understand the justification of this program, this is just replacing an existing carrier; it will not add to the carrier fleet.

Mr. MONDALE. The present policy of the Navy, as I understand it, is to retire one of the old World War II type carriers for every one of these massive new nuclear carriers. But that is not holding to the same military capacity; it is doubling it, because one of these old World War II type carriers had, at best, half the capacity of the new nuclear attack carriers. We are not pursuing a neutral, hold-the-line policy. Our present policy is to commit an ever-increasing share of the Navy's contribution to this Nation's defense on an ever-growing fleet of aircraft carriers.

Mr. MURPHY. Mr. President, will the Senator yield for a question?

Mr. MONDALE. Mr. President, I yield for one question; then I wish to return to my speech.

Mr. MURPHY. Does the Senator understand they are going to retire one carrier as they build one new carrier?

Mr. MONDALE. That is my understanding.

Mr. MURPHY. Then the Senator's implication is that they will have increased, actually, the carrier force?

Mr. MONDALE. No, my implication——

Mr. MURPHY. My understanding is that there are several carriers presently being used that are so old they should have been retired some time ago. As a matter of fact, last Saturday morning I saw two carriers in Long Beach, Calif., that are to be retired; and it is my understanding that the nuclear carrier, by the time it is constructed, fitted, and furnished, will just barely, if actually, maintain the present strength. That was the purpose of my question.

I thank my distinguished colleague.

Several Senators addressed the Chair.

Mr. MONDALE. Mr. President, I should like to respond to the question of the Senator from California, and I am willing to respond to one or two more questions, but I am only half-way through my speech, and would like to complete it, if I may.

In my later remarks, I intend to get into this matter. I asked the Navy if there were some shorthand way that one could refer to the capacity of these aircraft carriers, and it turns out that they have developed what they call an A–4 equivalent, which measures roughly the capacity of each of these carriers.

They rate the old *Hancock* class carrier, which is one of those scheduled for replacement by the new nuclear carrier, at 83, and the *Nimitz*-class nuclear carriers, which are at issue here, at 152—not quite two to one in terms of capacity, but nearly so.

I am happy now to yield first to the Senator from Virginia, and then to the Senator from Mississippi.

Mr. BYRD of Virginia. Mr. President, I mention this point just for purposes of clarification.

In the Senator's colloquy with the Senator from Alaska, he very accurately brought out that in 1964, Secretary of Defense McNamara recommended a reduction in the number of carriers.

Mr. MONDALE. That is correct.

Mr. BYRD of Virginia. But I think, so that the record may be complete and accurate, it should show that subequent to that, in 1968, I believe it was, or 1967, Secretary McNamara strongly recommended the building of three new nuclear carriers.

Mr. MONDALE. Yes; and the two statements may be consistent.

In other words, while I do not have his testimony before me, he may have contemplated that each of the new nuclear attack carriers, which are being built in the State of the Senator from Virginia, may in fact replace not one but two of the older carriers, so that, while we are attaining the new nuclear attack carriers the total carrier attack force level, in terms of numbers of carriers, would be reduced.

Mr. BYRD of Virginia. The Senator is correct. I interrupted him at this point only so that the record could show that the Secretary of Defense, Mr. McNamara, recommended that the carrier now under discussion be built.

Mr. MONDALE. The Senator is correct.

Mr. STENNIS. Mr. President, will the Senator yield to me briefly?

Mr. MONDALE. I yield to the Senator from Mississippi.

Mr. STENNIS. I understand that the

Senator has not finished his speech, and I certainly do not wish to detain him on that. As the Senator knows, I have in mind asking for about 20 minutes, at least, when he has finished; but I want to respond, if I may, quite briefly about this carrier-force level, and simply say this: that of the 16 carriers in operation now, number 16 is extra because of the war, and it is to come out, as the Senator knows, as soon as possible, and not count as the carrier reduction that this will cover.

The Navy has the very definite position that they will take out of operation carrier No. 15, I will call it.

I have conferred with Admiral Moorer, who is, I think, one of the ablest and frankest men in the military. I am one who will not disbelieve what military men tell me and not believe it just because they wear uniforms. They are in trustworthy positions. Until I know to the contrary, I would trust them on these direct, major questions.

Who knows what our conditions will be when the carrier provided for in the pending bill is completed? If anyone knows that, then he can give an accurate estimate about what we will do about the carriers and how many we will take out.

I have pressed for an answer on this. It is going to be reviewed and ought to be reviewed by the President, the Secretary of Defense, the Chief of Naval Operations, and everyone else, including Congress, in a position of responsibility as to how many will continue to be operated.

I think there is a very fine chance that by the time this carrier is completed, an additional one, carrier No. 14, will come out of the fleet. I hope so. I hope that even more of them will come out of the fleet. However, I think there is a high probability, with the added capacity that the Senator has already mentioned, that it will be entirely possible to take an additional carrier out of the fleet.

I do not think we can argue with any success at all now as to definitely how many carriers we will need in 1972 or 1973.

As we remember, we built airbases in France. We helped to provide hundreds of millions of dollars to build and construct those airbases. Now, we cannot use those bases or even fly across France without a day-to-day permit, as I understand it. That is the kind of world in which we are living.

I had the experience of being in French Morocco. We were there looking very closely at the bases. A bystander told me, "You will never use these bases for more than a short time."

I said, "Why?"

He said, "French Morocco will get its independence and run you out of here."

That is exactly what happened 2½ years later. That is the kind of world in which we live.

I think the Senator from Minnesota has a very fine statement here. However, the matter concerning the number we need rests with the gods.

I thank the Senator for yielding.

Mr. MONDALE. Mr. President, I thank the Senator from Mississippi. I was quite encouraged by the statement he made the other day in which he expressed the hope, and repeated it this afternoon, that when the next nuclear carrier is completed, we might displace not only one but, he hoped, more than one. I was encouraged by that statement because I think that may well be one of the possible results of this amendment.

One of the problems I have had in seeking to deal responsibly with the amendment is the remarkable degree of difference that exists between the Navy and the Air Force when each one of them describes the effectiveness of its own tactical airpower and its own bases and equipment.

The Senator from Mississippi quite correctly states that he does not disbelieve a person because he is in the Navy or wears a uniform. I agree with that statement. However, in this case we have a letter which I had printed in the RECORD earlier today in which the Air Force said in response to a question from the Senator from Oregon (Mr. HATFIELD) that we have enough land bases in all of Europe and Southeast Asia to meet all of the tactical air needs of any contingency which the Joint Chiefs have considered.

We are all aware that one of the chief uses of the aircraft in Vietnam has been the bombing of North Vietnam which we have since stopped.

Certainly the fact that aircraft were once used for functions which are no longer required ought to be some justification for lowering the task force level in that area.

The fact is, the National Security Council of the Defense Department right now, as the Senator from Mississippi knows, is undertaking, and may have completed, a sweeping review of the general purpose of the force level.

I am not content—and I am sure the Senator from Mississippi would agree with me—to let the matter of the defense spending level of this country or the wisdom of every expenditure rest in the exclusive domain of the executive branch. I have been around long enough to believe that it would be an unwise policy.

Mr. STENNIS. I will develop my idea and my argument about the level of the carriers on my own time. However, I do want to point out that I have never been and never will be a party to the argument between the Air Force and the Naval air arm as to how much the other one needs. I will never be a party to that. I have never had any patience with it. I do not now.

We need both of them in a supplemental way. And we need them very badly.

Mr. MONDALE. Mr. President, I ask unanimous consent that, at the conclusion of my remarks, the Senator from Mississippi (Mr. STENNIS) be recognized for 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. SYMINGTON. It was not possible for me to be present at the beginning of the address being made by the distinguished Senator from Minnesota.

I was back in my State last night and part of this morning and was impressed by the fact a great many of the programs considered essential in our cities, our suburbs, and the rural districts of our country are drying up because of lack of funds.

It has been my lot to be associated at least indirectly with the defenses of the United States for some 50 years, and directly in this town for over a quarter of a century.

I have watched weapons systems come and go. The RECORD will show that as a Senator at no time have I criticized the use, development, or number of aircraft carriers. But I have seen the death of the battleship. That all started when the *Prince of Wales* and the *Repulse* were sunk by some old Japanese planes off the coast of Malaysia; and continued when the *Bismarck*, after sinking the greatest battleship ever built, up to that time, was destroyed by a few old Fairey planes off an old British carrier, the *Wasp*.

It happened I was flying militarily from England to Portugal at that time—the spring of 1941—and ran into that particular fight, which thereupon also ended the concept of the large battle cruiser.

There was a time when many of us were convinced that the new strategic bomber, the B–70, was needed for the security of the United States. It is a matter of record that the B–70 was voluntarily abandoned by the Air Force, when the latter changed from the B–70 to the RS–70. At that time I left the boat, primarily because of the great development of ground-to-air missiles by the possible enemy.

For years efforts have been made to ascertain the true cost of a carrier task force; and also it is true now that we have this tremendous development in missiles, a development which is increasing in momentum rather than decreasing; it is vital that this system be examined.

Now the Senator says in his talk that the mission of the carrier, because of the development of these missiles, in effect has been changed from a strategic mission to a tactical mission. That is worthy of most serious consideration.

For the first time since World War II we are really discussing, in detail, a weapons system that never before was discussed in detail. I am not saying that we should adopt or reject this amendment, but I am saying that it is not only the right, it is also the duty of the Senate to consider this system as it considers all other weapons systems and problems of defense procurement that come before the Senate. There should be nothing inviolate, nothing sacred, about any weapons system; because, in the end, it is the taxpayer of the United States who is going to pay for it.

I respectfully commend the distinguished Senator from Minnesota and the distinguished Senator from New Jersey for bringing this matter up in such detail before the Senate.

There have been sharp and basic developments in warfare in recent years, and without question the greatest development has been in the missile field. Missiles are air to sea, sea to sea, and ground to sea, just as they are ground

to air and sea to air, and ground to ground.

The Mediterranean situation is one of particular interest to me, because my Foreign Relations Subcommittee has to do with that part of the world. A great many people have expressed new interest in, and concern about, the future of naval warfare because of the recent development of the Styx missile by the Soviet Union and the catastrophic result when it was used in an attack by the United Arab Republic in the Mediterranean.

I did not intend to make extended remarks on this subject, and look forward to listening to the able Senator from Minnesota. I do know, as does everyone in this Chamber, that this country must stay strong if it is to stay free. But it is our duty—and I believe the Senator from Minnesota is quite accurate when he says it is our duty—to discuss all weapons systems in detail. At other times I have opposed various systems in the other two branches of the services, but to the best of my knowledge, this is the first time I have ever given consideration to reducing a Navy system. Now we should examine in detail whether or not the addition of aircraft carriers is the right type and character of action in this missile age.

Somehow, in some way, we must cut the increasingly high cost of defense. If we do not, we will destroy the value of the dollar, and all that connotes also from the standpoint of the real future security of the United States.

It would be unfortunate if this discussion deteriorated at any time into a disagreement between one service and another—specifically, between the Air Force and the Navy. I would hope that does not develop. The Air Force may have too many bases abroad. So may the Navy, in this nuclear space missile, have too many bases in the form of carriers. Many bases were created and supported when the strategic bomber, Navy and Air Force, was dominant as the strongest strategic defense weapon of the United States. That is no longer the case. The Polaris is the greatest strategic weapon today.

All of us should worry about the fact that the strength of the Soviet Union in submarines is far greater than anything the Kaiser or Hitler ever had or the United States has today. We stick with the carriers while they now build an attack submarine force which is hundreds larger than ours. As they look toward modernity in weapons, however, they have not yet laid down a single carrier.

In any case the point I want to make is that it does not make any difference whether the tactical airpower of the Air Force is more important or more valuable or more desirable than the tactical airpower of the Navy, or whether the tactical airpower of the Navy is more desirable or more important than the tactical airpower of the Air Force. What is important is what is necessary for the security of the country. I would hope that many of these bases in these faraway lands, created to handle a type and character of warfare which will never occur again, are dismantled, so they will no longer be an additional burden on the American taxpayer.

I would hope we would look at all this not as rivalry between the services, rather as a possible way, manner method by which we can reduce the costs of Defense.

Mr. MONDALE. I thank the distinguished Senator from Missouri. I shall respond shortly but I had promised that I would yield to the Senator from New Jersey. I now yield to the Senator from New Jersey.

Mr. CASE. Mr. President, I thank the distinguished Senator. I have not previously joined in the discussion. I wish to say first how much I value this collaboration. It has been not only a satisfaction but also a very great pleasure to this point. My association with the Senator from Minnesota has increased my high regard for his ability. My participation in the discussions on these several amendments has also increased my regard for the Senator from Mississippi and the splendid way in which he has accommodated himself to what has been in many ways a very trying experience.

After working for months on this legislation in his committee he has had to deal with what I know has been a very trying series of amendments. To someone who has been over this ground many times already, perhaps it seems an unnecessary expenditure of time and energy on his part. However, for the good spirit he has shown in permitting us to continue what we think is our duty today I am most grateful. That was the reason I asked to be recognized.

I want the Senator from Missouri to recognize what we are attempting to do in this amendment, as in other amendments which have been and which will be offered to the bill. It is very helpful and encouraging that he has so fully accepted and so well stated what we think is the primary issue here: Shall Congress remain in control and, as some of us think, regain control of the basic decisions affecting national policy in the field of weaponry and large strategic matters?

It is our conviction, and my own very definitely, that we have not done our share of this in the past, we have not been organized to do it, and we have not regarded it as a function which we ought to perform. I can see no argument against our asking the Congress to do that job now.

I think that the matter of the carrier and several of these other strategic weapons systems are appropriate vehicles by which we can ask Congress to bring itself to this task. That is the purpose. We are not for or against this carrier, qua carrier, nor do we have any firm view as to the number of carriers, if any carriers there are to be in the armed services of the United States now and for the next 30 years. We do think Congress should take this opportunity to study that question, and that is the purport and purpose of our amendment.

I am grateful that someone so experienced in the operations of high policy in the defense of the United States should approve our effort and think it good.

Mr. MONDALE. Mr. President, I am glad to yield to the Senator from California.

Mr. CRANSTON. I thank the Senator for yielding. My purpose in rising is to address a question to the Senator from Missouri.

I wish to say first that the views of the senior Senator from Missouri carry extraordinary weight with me on military matters because of his utterly unique background in this field, and because of his careful attention to the broadest strategic implications of these matters and the narrowest details in relation to tactics, costs, and so forth. His speech the other day on the C–5A had more to do with my opposing that amendment than any other single factor.

Having said that, I would like to ask the Senator if the remote presence concept has any relevance to the carriers? Does the existence of a substantial number of carriers specifically relate to this amendment? Is there any reason to believe that by supporting the carrier presently under consideration we might have a greater opportunity to cut back on troops stationed abroad?

Mr. SYMINGTON. Mr. President, I say to my able and distinguished friend, the Senator from California, that I deeply appreciate his kind but undeserved remarks.

His question gets into tactics.

The Mediterranean Sea today is a narrow lake from the standpoint of modern weaponry; in fact, for a time, after the Egyptians sank the Israel destroyer *Elath*, it was believed the missiles must have come from the land. The fact there was disagreement as to whether it came from sea or from the land is in itself interesting from the standpoint of the question posed by the able Senator from California. Some parts of the Mediterranean are but 7½ miles wide; therefore of course ships could be attacked from the land by missiles as well as from the sea and from the air.

We know how dangerous the Sam missiles were to our planes in the Vietnam theater. For example, unless by mistake, no B–52 ever went over North Vietnam. But that Sam-2 missile is obsolescent compared with modern air-to-ground missiles developed by the Soviet Union and passed out to their friends and allies.

A ground-to-air missile works against gravity but an air-to-air or air-to-ground missile has gravity working in its favor.

Today both the United States and the Soviet Union have underway missiles far more sophisticated than those Soviet Styx missiles which sank the *Elath*.

In reviewing the speech of the distinguished Senator from Minnesota (Mr. MONDALE), I noticed the large proportion of our carrier task fleets that he says are assigned to the Mediterranean. At one time I worked for the late, great Secretary of Defense James Forrestal. He felt that the first person responsible for putting one enemy of the United States in the Mediterranean could be responsible for the first nail placed in the coffin of our security. Today the forces of possible enemies are spread all over the Mediterranean.

It is interesting to notice just how few

Mediterranean ports are now available to our fleet.

Perhaps the most dramatic development in the Mediterranean in recent months and years has been the growth of the Soviet fleet in that sea.

But even as of today they have not built a single carrier. They have a helicopter pad called the Moskua, but that is not a carrier. They also have a lot of submarines and cruisers and destroyers. If it is true, as the talk of the Senator from Minnesota brings out, that counting the backup, the money we have invested in the Mediterranean in carriers runs into many billions of dollars, as the development of the art of missilery continues, that would appear of the greatest importance in this discussion.

Is by chance this inland sea a trap to old concepts of weaponry in this missile age? If it is, should we not change our concept; or should we continue to handle it today as we did 25 years ago?

All countries that once built carriers have now discontinued building them, except the United States; and the country rising in naval power, all over the world—the Soviet Union—has never yet laid down a single carrier.

These are problems the Senator from Minnesota is bringing out on the floor of the Senate. The theory of "remote presence" is certainly designed to eliminate some Army and Air Force bases; and I would say to my good friend from California that this theory should also eliminate some Navy bases as exemplified by carriers.

Mr. MONDALE. I thank the Senator from Missouri for his most useful and gifted discussion of this issue. I share the admiration of the Senator from California for the Senator from Missouri for his lifetime of interest in this subject, the unique experience which he brings to bear, and his devotion to his country and its best interests.

Would the Senator from Missouri say that while much of it is classified, it is fair to say that the Soviets have been making an intensive effort to develop the latest, most accurate, speediest, and most powerful missilery? Would there be any doubt about that?

Mr. SYMINGTON. The proponents of the ABM system made this perhaps their chief argument in justification of that system. To the best of my knowledge, no one has questioned the fact that the Soviet Union was racing ahead in the missile field and attempting to equal, if not exceed, the position of the United States in that field.

Mr. MONDALE. Is it not correct that a good many of the currently deployed Soviet cruisers, destroyers, submarines, and airplanes have on them cruiser missiles of this kind?

Mr. SYMINGTON. That is my understanding. The missiles which sank the *Elath* are now considered to have come from what was little more than a large motorboat. The sharpness of that attack, and its decisiveness, amazed various naval people with whom I talked. The launching ship was very small, and the missiles were made by the Soviet Union, and were effective.

Mr. MONDALE. As the Senator from Missouri has already said, the Styx missile is an old generation and certainly is not in the front ranks of the current state of the art as developed by the Soviet Union; is that not correct?

Mr. SYMINGTON. I would answer my good friend that it probably does not go as far back as Sam, the Redstone, or the Thor, but it is a long, long way from what we are confident the Soviet Union has today; and what are our own plans and programs in this particular field.

Mr. MONDALE. As the Senator knows, the amendment—and we have to keep repeating this because it is being characterized in a very different way—is a very modest amendment. It would ask only that Congress ask the General Accounting Office to review the facts, the cost evaluation, and all the accounting data, and to pass this information on to Congress so that we can make some judgments as to the proper force level, the best use of our total defense budget, and the need at this time for a new nuclear attack carrier. That is all the amendment would do. As I understand the comments of the Senator from Missouri, this kind of study is not only valuable but long overdue.

I should like to make one final comment and then I should like to return to my speech.

The President made a statement about the spending level of the economy and asked some grave questions about the future value of the American dollar. We all agree that if we want to demoralize this country, erode the value of the dollar, and destroy the savings and pensions of millions and millions of Americans, all we have to do is continue to spend billions of dollars without first asking "why" or setting forth any priorities. Thus, as we look at the Nation's budget, every bit of it has to be analyzed, including the budget of the Department of Defense.

The other day, the President called certain people "unilateral disarmers." I think he might have had me in mind. I checked to see how much I had voted for in defense spending since I came to the Senate. I am a junior Member of this body and have been here for 5 years; that is two and one-half Congresses. I find that I voted for $289 billion worth of defense spending. That is direct spending—$289 billion—think of it. Does that make one a unilateral disarmer in the judgment of the Senator from Missouri?

Mr. SYMINGTON. Well, it is tiresome to have people put in the broad categories of hawks or doves just because they try to discriminate between all the weapons systems advanced instead of endorsing all said systems.

The two men who introduced the ABM amendment, one, the senior Senator from Kentucky (Mr. COOPER), enlisted in the U.S. Army as a private in the Second World War and came out an officer. The other sponsor, the senior Senator from Michigan, received his Purple Heart on Utah Beach on D-day.

One of the two Senators I joined in signing the ABM minority report of the Armed Services Committee was a decorated combat infantryman on the Anzio beachhead when he was over 50, the other, who left his right arm in Italy fighting for his country, received the finest citation I ever read, and the Distinguished Service Cross. Based on the citation, and what Gen. Mark Clark said about him to the Armed Services Committee, I still do not understand why he did not receive the Medal of Honor.

So talk of pacifism and unilateral disarmament on the part of certain Members gets a little tiresome.

I have been here longer than my able and respected colleague from Minnesota, and found out recently that I have worked for and voted for $953 billion for the security of the United States since coming into the Government. That means that by the end of this year the figure will be over $1 trillion. But just because one asks, not that a system be stopped, only deferred for additional development, he is labeled in some quarters as being antimilitary. What a farce.

I have great respect for the ultimate wisdom of the people of this country, who are watching the continuation of this sad and tragic venture in Vietnam; and because I have that respect, I believe none of us has cause for apprehension about such attacks.

It is both patriotic and constructive for the Senator from Minnesota and the Senator from New Jersey to bring this matter up for discussion. We have a right, as representatives of the people—all the people, no particular clique or caste—to ask: What is true security? Is it more important for our citizens to respect the wisdom of the leadership of the country in the expenditure of their money than to have a particular weapons system? Which is the more important? It would appear just as important to the security of the United States for us to have a sound economy as to have a particular weapons system.

Should we continue to pile armament onto armament as against continuing to make every effort to work for a just and honorable peace.

These are but a few of the questions being raised back home with respect to weaponry, on this carrier system as they have been raised on other systems. It is all constructive and I believe what the people expect of their representatives.

Mr. MONDALE. I thank the Senator from Missouri for his most encouraging remarks and his keen interest in this issue.

James Field, a naval historian, noted that a carrier task force, in fear of enemy attacks, cannot successfully participate in a campaign of interdiction. He wrote that in Korea, for example, "Logistic considerations and the dangers of air and submarine attack made it undesirable for carriers to operate for more than 2 days in the same location."

Perhaps the most crucial limitation on the carrier's effectiveness is that the threat of attack diverts potentially offensive carrier sorties to defense of the task force. Thus, during World War II and the Korean war, 23 percent of the total combat sorties flown from carriers were defensive. This contrasts with 2.7

percent flown by planes from land bases during the Korean war.

Fears and uncertainties concerning an enemy's anticarrier warfare potential also affects the rapid responsiveness of the attack carrier, which is its strongest attribute. Wilson noted that uncertainties as to weapons, belligerents, and the limits of the war did in fact impede carrier deployment early in the Korean conflict. Future limited wars will also be surrounded by "uncertainties as to who will fight and with what weapons."

Because of the tremendous investment in a carrier and its task force and because of the recognition of the vulnerability of the carrier under certain conditions, the Navy is naturally hesitant to commit the carrier to a conflict or potential conflict. Once committed, the ever-present fear of enemy attack may prevent the carrier from serving as an effective sea base for tactical airstrikes.

It should be emphasized that the threats which have limited a carrier's responsiveness and effectiveness in past wars are far more dangerous today. And since naval doctrine, as Wilson points out, "as yet says nothing about treating the attack carrier as expendable in a limited war," there is every indication that the carrier will be even less effective in future conflicts with a sophisticated enemy.

The Navy, however, refuses to fully recognize the vulnerability of carriers. Its grandiose planning for the use of carriers illustrates this fact.

Mr. President, at this point I wish to comment upon the agreements by which the Navy has attempted to demonstrate the invulnerability of the aircraft carrier. I will quote from a speech of the Chief of Naval Operations, Admiral Moorer, who said at a recent Veterans of Foreign Wars convention:

> In some 50 wars or near wars since 1946, we have not lost a carrier or had one damaged owing to hostile action.

That is what he told the VFW in order to satisfy them that the attack carrier was no longer vulnerable.

I wrote the Chief of Naval Operations and asked, "Would you please provide me with a list of those wars or near wars that you based your invulnerability argument upon?"

After some 10 days, I received a document which, surprisingly, was classified. In it, he recounted not 50, but 48 wars or near wars in which the aircraft carrier had actually been involved or alerted.

In four of those wars or near wars, the aircraft carrier was not even there; it had just been alerted. We checked the names of the various wars or near wars, and asked the admiral to declassify them, so that the Senate could know the experiences, areas, and events in which the carrier has been involved during the past 23 years. Such a list would probably be the best indication of when, under what circumstances, and in what kind of challenges the naval attack carrier was used.

We received a partially declassified list. To be charitable to the Navy, I would say the most embarrassing incidents remain classified. But it is fair to say that at least half of these alleged wars or near wars were wars in which the carrier was only remotely involved, and against alleged enemies which had no capacity at all to inflict any kind of damage upon the attack carrier, even if they wanted to; and in most cases there is no evidence that they did.

I do not think that it says much about the invulnerability of the carrier in those incidents where the carrier was not involved, to say it was not sunk; or to say, when in about half the instances that he has listed in this message the enemy had no capacity to respond at all, or showed no intention of responding, that somehow the carrier survived and therefore is invulnerable.

The issue on vulnerability is an obvious one: Do modern missilery, aircraft, submarines, and other kinds of technology and weapons raise doubts as to the survivability of the attack carrier under certain instances and in certain kinds of wars? That is the issue, and I deeply regret that the Chief of Naval Operations would base his case for the invulnerability of the carrier by referring to a list of minor events and foreign riots in which no carrier was sunk or damaged.

I ask unanimous consent that the declassified version of the list of instances to which the admiral made reference be printed in the RECORD at this point.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

SUMMARY OF WARS, NEAR WARS SINCE 1946

(The following list represents only major/minor conflicts or crises where U.S. Naval units were involved as prime factors, alerted or redeployed.)

Turkey (4/46): USSR-Iran hostilities and USSR-Turkey diplomatic tensions; Naval unit deployed as affirmation of U.S. intentions to shore up Turks against Soviet imperialism.

Trieste (7/46): Trieste ownership dispute; U.S. and British Naval units dispatched to scene with open warfare imminent. Commenced Adriatic Patrol which lasted until Trieste issue resolved in 1954.

Greece (9/46): Political crisis. Naval Units visit requested by U.S. Ambassador.

Indochina War (11/46–7/54): Naval units employed in evacuation, assistance, alert status.

Israel (6/48–4/49): Naval units assigned UN mediator for the Palestine Truce. Evacuated UN team eventually in July.

Greek Civil War (46–49): Presence and alert.

Korea (50–53): Combat operations.

Tachens Crisis (7/54–2/55): Evacuation of civilians/military personnel; alert and operations.

Vietnam Guerrilla War (9/55–Present): Presence, assistance, combat operations.

Red Sea (2/56): Naval unit patrols established in view of developing Suez Crisis.

Jordan Tension (5/56): Provided presence.

Pre-Suez Tension (7/56): Alert.

Suez War (10–11/56): Alert, evacuation, provided presence.

Jordan Crisis (4/57): External conspiracy charged with intent to subvert Jordan. Naval units dispatched.

Kinmen Island (7/57): Communist shelling. Naval units dispatched to defend Taiwan.

Haiti Disorders (6/57): Alert, surface patrols.

Syria Crisis (8–12/57): Alert, provided presence.

Lebanon Civil War (5/58): Support operations.

Jordan/Iraq Unrest (8–12/58): Alert, surveillance, surface patrol.

Cuba Civil War (12/56–12/58): Alert, evacuation, provided presence.

Quemoy-Matsu Crisis (9–10/58): Evacuation, combat operations.

Panama Invasion (4/59): Provided presence.

Berlin Crisis (5–9/59): Alert, provided presence.

Nationalist China-Communist China Crisis (7/59): Provided presence.

Panama Demonstrations (8 & 11/59): Alert.

Laos Civil War (12/60–5/61): Alert, provided presence.

Congo Civil War (7/60–8/63): Alert, evacuation.

Caribbean Tension (4–12/60): Alert, air and surface patrols.

Guatemala-Nicaragua (11/60): Alert, air and surface patrols.

Bay of Pigs Crisis (5/61): Alert.

Zanzibar Riots (6/61): Alert.

Berlin Crisis (9/61–5/62): Alert, provided presence.

Dominican Republic (11–12/61): Alert, air and surface patrols.

Guantanamo Tension (1 and 7/62): Alert, provided presence.

Guatemala (3/62): Alert, provided presence.

Thailand (5/26): Alert, provided presence.

Quemoy-Matsu Crisis (6–62): Provided presence.

Cuban Missile Crisis (10–11/62): Provided presence and intervention.

Yemen Revolts (2–4/63): Alert, provided presence, surface patrols.

Laos Tension (4/63): Alert, provided presence.

Jordan Crisis (4/63): Alert, provided presence, surface patrols.

Caribbean Tensions (1963): Alert, air and surface patrols.

Vietnam Civil Disorders (8–9 and 10/63): Alert, air and surface patrols.

Dominican Republic (9/63): Alert.

South Vietnam Crisis (11/63): Following death of President Diem. Provided presence.

Indonesia-Malaysia (12/63): Alert, provided presence.

Panama (1–4/64): Alert, provided presence and evacuation.

Guantanamo Tensions (4–7/64): Provided presence, surface patrols.

Panama (5/64): Provided presence.

Dominican Republic (6 and 7/64): Air and surface patrols.

Tonkin Gulf (8/64): Combat operations.

Dominican Republic (4/65): Intervention and combat operations.

Arab-Israeli War (6/67): Alert, provided presence, covered evacuation of U.S. citizens.

Pueblo Capture (1–4/68): Redeployment of forces; maintained presence in area to take actions as directed.

EC–121 Loss (4/69): Redeployed forces; maintained presence to take actions as directed.

Mr. MONDALE. The Navy, however, refuses to fully recognize the vulnerability of the carrier.

The Navy justification for 15 carriers is based on the theory that the carrier fleet must be adequate to fight, simultaneously, two and one-half wars—that is, a major conventional war upon both the Atlantic and the Pacific, plus a brush-fire war somewhere else.

The Navy assumes that the carrier will be a vital participant in the full range of conventional conflicts—the relatively minor, Dominican Republic type, the mild-range Vietnam type, and the full-scale conventional war—whatever that would be in this nuclear era.

By allocating to itself such a major role in such a range of possible conflicts, the

Navy refuses to acknowledge that events have changed the proper role of the carrier since 1945 by limiting the scenarios in which carriers can be effective.

When engaged in a major conventional war with a sophisticated enemy, the carrier task force will be exposed to a complete range of anticarrier weapons. While the Soviet Union represents the greatest military threat to the carrier, other countries possess various weapons designed for anticarrier warfare.

For example, Desmond Wilson points out that Cuba, China, Indonesia, and Egypt, in addition to the Warsaw Pact states, are known to have large numbers of Soviet-built IL–28 Beagles—bombers which are capable of striking carrier task forces with a 4,400-pound bomb load at a combat radius of about 800 nautical miles. Moreover, the Soviet Union has distributed at least some of their 1,500 to 2,000 TU–16 Badgers, a bomber capable of being used against surface vessels. The Badger, known to have been supplied to China and Indonesia, can carry two air-to-surface missiles or a 7,000-pound load to a radius in excess of 1,500 nautical miles. Large numbers of Mig–21's have been made available to Communist satellites and some neutral states. Furthermore, the Styx missile and other antiship missiles are also in the arsenal of many of the Soviet allies.

In addition to high performance aircraft and missiles, the Soviet Union has distributed a number of its *Whiskey* class long-range conventional submarines to several satellite and neutral nations.

There are, therefore, relatively few scenarios in which you can imagine a carrier free from threats of enemy action and thus able to function effectively in an offensive tactical capacity. This is not to say that the carrier has no role in a conflict where the enemy has some anticarrier capability. But as the capability increases, so does the threat, and carriers simply do not operate effectively in such an environment.

The Navy is quick to remind us that land bases for tactical aircraft are also vulnerable to enemy attack. This is, of course, true. Land bases are subject to attack by aircraft and missiles; in addition, they are uniquely subject to ground attack and artillery, particularly in a guerrilla war as in Vietnam.

But in examining the relative vulnerability of land and sea-based tactical airpower, we must look at their relative effectiveness. The historical record strongly suggests that land bases are less inhibited than carriers by the threat of attack and that they are capable of delivering more offensive sorties.

The threat of enemy attack also makes the carrier less desirable from a cost point of view. It has been estimated that at least one-half of the cost of a carrier task force is allocated for carrier defense. This high allocation of resources to defense sharply raises the cost of each carrier-based offensive sortie. In return for this large investment in carrier defense, we have carrier task forces which, in all probability, would be of little value against high level threats—and are overly oriented toward defense against low level threats.

FAILURE OF OTHER NATIONS TO BUILD CARRIERS

It may well be that all of these considerations explain the reluctance of the Soviet Union—and almost every other nation—to rely on attack carriers. In fact, the United States is the only major military power with an attack carrier in its fleet. Neither the Soviet Union nor China has built a single attack carrier, and neither plans to do so. England is in the process of phasing out its attack carriers, and France is the only other country with such a carrier.

According to a 1969 report by the Seapower Subcommittee of the House Committee on Armed Services, the Soviet Union in recent years has built over 500 surface ships in 20 classes. The report states:

> The Soviet Union is developing a massive well-balanced program in virtually all phases of seapower.

The U.S. Navy not only agrees with this assessment, it constantly stresses the growing menace of the Soviet's surface fleet. Only the absence of attack carriers prevents the Soviet fleet from surpassing ours, according to the Navy. The Chief of Naval Operations recently stated that these carriers "are the key to our present superiority," and that "with too few, or none" in the U.S. fleet, "the Soviets would probably be the leading naval power."

Even assuming that carriers are the key to our naval superiority, it is obvious that we do not need as many as 15 carriers to maintain this superiority.

But if the carrier is really such a vital ship, then why have the Soviets failed to build a single attack carrier? Why do they have no plans to do so? Since they are currently in the midst of a massive shipbuilding program and since they obviously have the technological capability to build carriers, their decision to rely on other surface ships cannot be due to limited resources. The U.S. Chief of Naval Operations offered the following explanation for the Soviet failure to build attack carriers:

> Geography, more than any other reason has kept the Soviets out of the aircraft carrier business. The routes of egress from Soviet naval bases to the open oceans are, by way of choke points, controlled by other powers. For an aircraft carrier such a situation could spell disaster in a shooting war. If the Soviets were to gain control of the points, however, the situation might change.

But this constriction of egress from Soviet naval bases to the open seas has not deterred the Soviets from building a large number of almost every other type of surface warship. If the Soviets can move their carriers and destroyers through those choke points, then why would a carrier pose a different problem? It would seem that Soviet naval planners have decided that attack carriers simply are not worth their enormous cost.

Regardless of the reasons for the Soviet decision not to build carriers, our Navy cannot have it both ways. Either carriers are not that vital to a surface fleet and the Soviet Navy is a threat without them, or else the Soviet's surface fleet is not a significant naval threat.

FAILURE OF NAVY TO RECOGNIZE COMPLEMENTARY ROLE

All of these arguments are not intended to prove that there is no need for attack carriers. Indeed, carriers can serve as a complement to land-based air power—but primarily in limited conflicts where land bases are not immediately available.

Despite the Navy's recognition that carriers should be complementary to land-based airpower, it has been unwilling to accept the fact that the need for carriers is reduced where there is ample land-based air capability.

Carriers, for example, were useful in the beginning of the Vietnam conflict when land bases were still limited. But a serious question can be raised whether the Navy's continuing level of involvement in the Vietnam conflict—once sufficient land bases were constructed there—reflects as much the need to give the Navy a "piece of the action" as a reasoned military judgment.

Mr. President, I point out here that the decision to stop bombing in Vietnam, with which I heartily agree, has certainly reduced the need for attack air carrier force levels. One would like to see what response the Navy makes to that change of circumstances.

The designation of six carrier task forces to the Atlantic and nine to the Pacific also attests to the Navy's unwillingness to recognize the complementary nature of carrier-based airpower. Commenting on the Mediterranean task forces, Desmond Wilson wrote:

> With the subsequent development of land-based air covering NATO's southern flank, and with the later introduction into the region and coverage of the region by sea and land-based missile systems, the Sixth Fleet may have become increasingly redundant. It almost certainly became increasingly vulnerable with the marked growth of the Soviet nuclear capability, along with submarine, aviation, and missile delivery systems.

But even this type of fleet deployment can be carried out with less than 15 carriers. The Navy claims that 15 carrier task forces are required to keep five continually on station—two in the Mediterranean and three in the Western Pacific. While the Navy points out that the rate of "on station" deployment has actually been higher in the past, they continue to insist that three task forces are needed to maintain one "on station" throughout the year. This method of deployment is explained as arising from the need to rest the crew, make necessary repairs, and take care of other logistical problems.

The Navy does concede that, but for the need to relieve the crew, a carrier task force could remain on station for a longer period of time. However, they have never satisfactorily explained why the relief of the crew should force the carrier to be withdrawn from forward deployment.

The Navy itself has successfully dealt with this problem in the operation of Polaris submarines by using what is called a "blue and gold" crew concept—

the submarine stays on active duty and the crew is simply rotated. By this method, a Polaris submarine is able to stay on active duty for a significantly longer time than the carrier. And yet, the Navy has failed to adapt this method or a similar one to the attack carrier. Such a procedure would make it possible to deploy five task forces on station with a reduced carrier fleet.

MORE EFFICIENT USE OF PRESENT FLEET

Those who favor the authorization for the new carrier in the pending bill argue that the carrier is needed, even if the carrier force size is reduced. In a recent news conference, Secretary Laird stated:

Whether we have a 12- or 15-carrier force does not affect the request for CVAN-69.

The assumptions underlying this argument are that the older attack carriers are no longer usable; that they, therefore, must be replaced with modern nuclear carriers; and that a congressional decision to defer the building of CVAN-69 will insure that there is a substantial percentage of obsolete attack carriers in the 1970's; and that such a decision will weaken the capacity of our attack carrier fleet, thereby weakening our overall defense posture.

This argument does not square with the facts. To begin with, the attack carriers which have joined the fleet since the mid-1950's are almost double the size of the older carriers, are equipped with the most modern aircraft, and, therefore, have far greater capability for tactical air than the oldest carriers which they replace. The Navy has stated that the nuclear carrier air wing is tactically more than twice as effective as that of the World War II carriers.

But since the Navy has followed a one-for-one replacement policy in the past, the actual capacity of the carrier fleet in terms of providing tactical air power is far greater than the 15 carrier force level would imply. The Navy's carrier replacement policy would, therefore, more accurately be described as a two-for-one policy—an escalation, in fact, of the carrier force level. Even if the Navy can support a case for replacing the older carriers with nuclear carriers, there is no reason why at least two of the older carriers could not be replaced as each new carrier joins the fleet.

We tried for some time, as I indicated earlier, to determine whether the Navy had a shorthand way of indicating the relative effectiveness and capacity of the various carriers.

I am pleased to find that they have worked it out in terms of what they call the A-4 equivalent, which indicates the number and the amount and the type of aircraft that operate on each carrier.

As I said earlier, the older *Hancock* class has an equivalent of 83. The *Nimitz* class has an A-4 equivalent of 152.

I ask unanimous consent to have printed at this point in the RECORD a tabulation setting forth that information.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Nominal air wing complements

Enterprise/Kitty Hawk/Forrestal classes:	
Fighter squadrons (F-4)	2
Light attack squadrons (A-7)	2
Attack squadron (A-6)	1
Electronics warfare/tanker squadron (EKA-3)	1
Airborne early warning squadron (E-2)	1
Reconnaissance squadron (RA-5C)	1
Rescue squadron detachment (UH-2)	1
Total A-4 equivalents	132
Midway class:	
Fighter squadrons (F-8) (F-4's assigned when available)	2
Light attack squadrons (A-7)	2
Attack squadron (A-6)	1
Electronics warfare/tanker squadron (EKA-3)	1
Airborne, early warning squadron (E-2)	1
Reconnaissance squadron (RF-8G)	1
Rescue squadron detachment (UH-2)	1
Total A-4 equivalents	108
Hancock class:	
Fighter squadrons (F-8)	2
Light attack squadrons (A-4)	3
Electronics warfare/tanker squadron (EKA-3)	1
Airborne early warning squadron detachment (E-1B)	1
Reconnaissance squadron detachment (RF-8G)	1
Rescue squadron detachment (UH-2)	1
Total A-4 equivalents	83
Nimitz class (the air wing listed below is planned for the *Nimitz* in fiscal year 1973):	
Fighter squadrons (F-14)	2
Light attack squadrons (A-7)	2
Attack squadron (A-6)	1
Tanker squadron (KA-6)	1
Electronics warfare squadron (EA-6)	1
Airborne early warning squadron (E-2)	1
Reconnaissance squadron (RA-5C)	1
Rescue squadron detachment (UH-2)	1
Total A-4 equivalents	152

(NOTE.—The types of aircraft which can be operated by a carrier depend primarily upon the flight deck and its installations such as the catapults, arresting gear and elevators. Ship-installed support facilities also limit aircraft types which can be operated. The number of aircraft which can be carried depends upon deck area and the mix of types. Some types of aircraft are considerably larger than others, and a smaller total of generally larger aircraft can be physically accommodated. The smallest tactical aircraft in the U.S. Navy's carrier inventory is the A-4 *Skyhawk*. Therefore, for standardization purposes, the Navy expresses carrier aircraft capacity in terms of A-4 equivalents.

Mr. MONDALE. This increased capability of the carrier fleet means that today's 15 attack carriers can deliver more tactical air support than the 15 carriers which comprised the fleet in the mid-1950's. That is why Secretary McNamara relied on the increased capability of the newer carriers as a justification for reducing the size of the carrier fleet. Unless it is assumed that the need for tactical airpower has substantially increased in the past 15 years, a decision to defer the building of an additional nuclear carrier will not endanger national security.

Nor does a decision to postpone this carrier mean that we will be stuck with an obsolete attack carrier fleet. I referred to this argument several times today. Excluding the oldest four carriers, the attack carrier force consists of one nuclear carrier, the *Enterprise*; eight *Forrestal* carriers, and three *Midways;* in 1972, the second nuclear carrier, CVAN-68, will join the fleet. At least 12 of these 13 carriers are suited for handling all modern aircraft with safety and efficiency.

I emphasize that because the Armed Services Committee report cites as one of its main reasons the fact that many of the new aircraft cannot be accommodated on these carriers.

The truth is that 12, or perhaps 13, of these carriers can handle everything we are making and plan to make. In addition, the three *Midways* are the only carriers in this group over 13 years old, and two of these carriers have recently been modernized.

This means that we will have 13 attack carriers which are not obsolete by the Navy's standards, at least through 1976, and probably longer in light of the modernization of the *Midways*. Even if we decide not to authorize funds for CVAN-69, the attack carrier force level will remain at 13 fully effective ships—by the Navy's definition—for some time.

But why are the World War II attack carriers called obsolete?

Secretary McNamara testified before Congress in 1964 that the chronological age of a particular ship was not important in determining fleet obsolescence. Rather, the key question was whether a ship "is able to perform its mission in the face of the expected threat."

Mr. President, I ask the Senate to look at the list of occasions on which the carrier has been used as set forth by Admiral Moorer, and I ask how many of these minor events are events in which, if a carrier has to be used at all, one of the older carriers would not be adequate and how many events as listed by the admiral require the latest, largest, and most advanced carriers?

The Armed Services Committee, as well as the Navy, maintains that these older carriers are "simply inadequate to serve efficiently and safely the newest aircraft now operating in the fleet." However, these carriers can certainly handle other jet aircraft—such as F-8's—with safety and efficiency. And since the usefulness of attack carriers is limited to conflicts where there are low-level threats, there is no reason why these older carriers cannot continue to provide tactical air support—that is, if the Navy insists that it needs a minimum of 15 attack carriers.

It should be pointed out that the Navy's carrier fleet is not limited to attack carriers. There are, in addition, six smaller carriers, used primarily for anti-submarine warfare. These carriers are capable of handling several types of tactical jet fighters, and one of them is being currently used in Vietnam in an "attack" capacity. Surely such carriers could be used to supplement the existing attack fleet in many cases where limited tactical air power is called for. It be-

comes all the more difficult, therefore, to justify the beginning of a brandnew attack carrier in light of the overwhelming cost of a fleet which actually numbers not 15 but 21.

The Navy claims that a "modern force" of 15 attack carriers, in which each ship is retired after 30 years of service, requires a construction program including a new carrier every other year. But there are several alternatives for maintaining or increasing the number of carriers capable of providing tactical air support, without resorting to such a costly construction program. Given the more limited role of carriers called for by modern military realities, the requirement for a fleet composed entirely of huge attack carriers, all capable of handling the most modern aircraft, is at best questionable.

It is likely that the Navy will not accept a more limited carrier role. The Navy insists that the attack carrier can meet any conventional war contingency, claiming the carrier to be no more vulnerable today than it was in World War II. Such a position ignores a warning made some years ago by the great naval historian, Alfred Mahan:

> He (the strategist) will observe also that changes of tactics have not only taken place after changes in weapons, which necessarily is the case, but that the interval between such changes has been unduly long. This doubtless arises from the fact that an improvement of weapons is due to the energy of one or two men, while changes in tactics have to overcome the inertia of a conservative class; but it is a great evil. It can be remedied only by a candid recognition of each change; by careful study of the powers and limitations of the new ship or weapon, and by a consequent adaptation of the method of using it to the qualities it possesses, which will constitute its tactics. History shows that it is vain to hope that military men generally will be at pains to do this, but that the ones who do will go into battle with a great advantage—a lesson in itself of no mean value.

FOREIGN POLICY IMPLICATIONS

There is another basic motivation for our amendment, other than the call for an evaluation of the proper carrier force level. For, in addition to these problems of efficiency and effectiveness, the use of the aircraft carrier has serious foreign policy implications. For example, it is official naval doctrine that one of the main advantages of carrier airpower is that it can be employed unilaterally, without involving third parties and without relying upon treaties, agreements, or overflight rights.

One such instance is the use of the carrier task force to show the flag or to establish our military presence in an unstable region. There may have been times in the past when a show of force has lent stability or discouraged hostilities. On the other hand, there is reason to believe that the ready availability of American power has, at times, generated unilateral action where such intervention has actually been harmful to our image and our interests.

The Senate has an obligation to debate whether it is in our national interest to maintain 15 carrier task forces "posed for unilateral action." In fulfilling this obligation, we need to know the situations in which carriers have been used in this "show of force" role and the reasons for such a use of the carrier. Even if it is determined that this is a legitimate use of naval power, the question arises whether attack carriers are essential in performing this mission—would smaller carriers or other warships have the same effect?

The Navy also contends that a carrier can always be counted upon for tactical air support in a limited engagement where land bases may not be available because of political constraints. To be sure, there may be times, as in the early days of the Korean war, when land bases are actually held by enemy forces, and carrier-based air support may be a valuable temporary complement to nearly all land bases.

But how much of our overall defense capability should be devoted to that unlikely possibility where we might be called upon to defend a nation and, at the same time, be denied the use of its bases for tactical support? And, if the commitment arises out of a multination treaty, such as SEATO, should there not be land bases available to us in at least some of those nations in the treaty organization? If we need carrier-based airpower to allow us to meet foreign commitments in areas where the United States is denied the use of land bases, it may well be that there is something amiss about the nature of these commitments.

In recent congressional testimony, the Chief of Naval Operations stated:

> The carrier will be necessary in the future if the U.S. is to have the flexibility and the selectivity of operations in areas *without first having to make some political arrangement to do so.* [Emphasis added.]

In light of such testimony, it is important for Congress to be involved in determining those situations in which the United States should be prepared to intervene in conflicts unilaterally and "without first having to make some political arrangements to do so."

A congressional inquiry into the foreign policy implications in the use of carriers is necessary to assure that foreign policy determines the need for military expenditures—rather than the other way around.

CONCLUSION

Because of these foreign policy implications and, more important, because of the overwhelming evidence that the carrier is an extravagant and often unnecessary means of providing tactical air support, the request for an additional carrier raises fundamental questions which must be answered.

Throughout this statement, certain contentions have been made about the role of the attack carrier, the manner in which it is deployed, and the proper size of the carrier fleet. It should be emphasized, however, that the burden for justifying the carrier in this bill—as well as other carriers—is and should be on the Navy. And while there may be strong disagreement with some of the points raised herein, there should be little doubt that the Navy has simply failed to meet its obligation in this matter. The one point the Navy has made in response to the question of whether we need 15 carriers is that the matter is under study.

The Navy has responded to questioning of the carrier force level with vague and general assertions that at least 15 attack carriers are needed to meet the various contingencies which might arise in fulfilling U.S. commitments and in protecting national security. There has been little or no explanation as to why changing missions and contingencies have not altered the carrier force level.

Again I bring up the fact that none of our carriers in Vietnam was used primarily in the bombing of North Vietnam. I am glad we stopped bombing there. Is this not, then, a proper time to consider whether we could reduce some of the attack carrier force levels, now that that mission is no longer necessary?

In response to doubts about the efficacy of sea-based air power, the Navy points out that since the seas cover three-fourths of the earth's surface, the carrier can be used in many more places than land bases. The military historian will recognize the disturbing similarity between this argument and that advanced in 1922 by a major in the Cavalry who, observing the absence of roads on much of the earth's surface, wrote:

> To base our transportation needs solely upon conditions existent in the comparatively tiny portion of the earth's surface containing roads . . . is putting too many eggs in the same basket.

As we have seen, there are substantial doubts within the Defense Department as to whether a fleet of 15 attack carriers can be justified. Indeed, the Defense Department's official response to a congressional inquiry about the need for this many carriers is that the entire matter is under study. We know that classified recommendations from the Systems Analysis Office have recommended the same thing. It has made observations about the relative costs of sea-based air that should be the subject of and should be available for the Senate's consideration, but because of classification by the Defense Department, it cannot be produced here. Until this study is completed, Congress is asked to continue spending for carriers as if the need for a fleet of 15 was clear.

In effect, the Defense Department would have us reverse the normal authorization process. Instead of seeking funds for items which have already been justified, we are being asked to provide funds in expectation of a rationale. We are not following a policy of one for one. Our policy is not neutral, even with respect to force levels, because each new nuclear task force attack carrier is nearly twice as effective as the one it is replacing.

It would be fiscally irresponsible for Congress to act in this manner. At a time when the American people are bearing an overwhelming tax burden, at a time when the President is calling for a 75-percent cutback in Federal construction, and when inflation is demanding economies in every area of Government spending, we must demand adequate justification for all programs.

That is why we have introduced our amendment. The amendment in no way

questions the integrity of military leaders or of the civilian officials at the Defense Department. If anything, the amendment is a bipartisan recognition of the fact that those of us in Congress have failed to ask the hard questions concerning military spending that we have asked in the domestic area. Our past history of blanket acceptance of the military budget not only is in sharp contrast to our close scrutiny of proposed domestic programs; it also amounts to an abdication of our responsibility under the Constitution "to provide for the common defense," "to raise and support armies," and "to provide and maintain a navy."

The acquiescence in military matters is particularly true of that part of the military budget involving the general purpose forces—as opposed to strategic nuclear forces. These forces, which include everything from carriers to manpower, make up 60 percent of the peacetime defense budget. And yet, their underlying assumptions and objectives are seldom discussed by Congress and the public.

In calling for congressional vigilance over military spending, I am acutely aware of the high priority of national defense. In my earlier colloquy with the Senator from Missouri, I pointed out that in the 5 years I have been in the Senate, I have voted for $289 billion in defense spending. But approval of questionable items in the defense budget does not serve the cause of national defense. It has been observed that national security can best be maintained if we are "efficient in the forces we buy"—any time forces cost more than is necessary to do a job, our inefficiency may require us to give up other policy commitments.

There is another reason why it is imperative to take a close look at military expenditures. Because of the pressing nature of our other national priorities, any form of unnecessary and unjustified Federal spending must detract from our commitments to our children, our cities, our towns, our farms, and our natural environment.

Budget Director Charles Schultze observed:

> The benefits and costs of proposed military programs cannot be viewed in isolation. They must be related to and measured against those other national priorities which, in the context of limited resources, their adoption must necessarily sacrifice.

The time when we could afford the luxury of such "eternal verities" as a fleet of 15 carriers has long since passed. I am very much afraid that unless we take a close look at this carrier program, our children will observe in the future that our blind adherence to 15 attack carriers was every bit as absurd and wasteful as the failure to recognize the demise of the battleship and the obsolescense of the horse cavalry.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. PROXMIRE. Mr. President, I commend the distinguished Senator from Minnesota on a remarkable speech. It is remarkable because there is no question that this enormous amount of spending does require a challenge. We have not had this kind of documented and thorough challenge in the years I have been in the Senate. There have been times when we objected to aircraft carriers in the past, but it was suggested that there had been a comprehensive study of the kind that this speech represents.

As I understand what the Senator said, as long ago as 1965, the Secretary of Defense, in his posture statement, called for some reduction in attack carriers by the early 1970's.

Mr. MONDALE. The Senator is correct. The former Secretary of Defense cited a number of reasons in support of a reduced role for one attack carrier. He cited the effective end of the carrier's role in strategic retaliation, given our land and submarine-based missiles.

He referred to a number of developments in modern carriers, modern aircraft, and modern refueling techniques. These developments give our existing carriers a far greater capability. They also give our existing land bases a far greater range and effectiveness. For example, in the last few years the reach of land-based air has increased from two to two and a half times and with refueling techniques it is even more than that.

Mr. President, I ask unanimous consent to have printed in the RECORD excerpts from the posture statement of the then Secretary of Defense, Robert McNamara.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

EXCERPT FROM STATEMENT BY SECRETARY MCNAMARA

By the early 1970's we plan to make some reduction in the number of attack carriers. Therefore, in the fiscal years 1965–69 program the new investment in aircraft and ships is limited to that which would be required by a somewhat smaller CVA force.

This judgment is supported by four major considerations:

(1) The *Forrestal* class carriers are much more effective than the *Essex* class they are replacing. A *Forrestal* class costs between one-third to one-half again as much as an *Essex*, but this differential does seem justified. For example, the area available for spotting aircraft is about 50 percent greater; overhead clearances in the hangar bays are about 40 percent greater, permitting larger aircraft to be stowed; aviation fuel and ordnance storage spaces are greater, allowing longer periods of sustained combat; and so forth.

(2) The capabilities of carrier-based aircraft are improving steadily. In the attack aircraft field, we are replacing the early A–4's with the A–4E's, and an entirely new all-weather, large payload aircraft, the A–6, is being introduced. In the fighter field, we are replacing the F–8 low supersonic, fair-weather day fighter armed with Sidewinder missiles, with the supersonic all-weather F–4, armed with Sparrow air-to-air missiles. Further gains in combat capability will be realized when still more effective aircraft, such as the new VAL (which I will discuss presently), and the F–111 (TFX), become available later in the planning period.

(3) By fiscal year 1966, when we will have a large number of strategic missiles in place, the CVA forces will be relieved of their strategic alert retaliatory mission, thus releasing additional capabilities for the carriers' limited war misison. Assignment of carriers to strategic missions restricts their flexibility in terms of areas in which they can operate and the kinds of operations they can conduct. If pilots and aircraft must be held on nuclear alert, limited war capabilities are reduced.

(4) The increasing range of land-based tactical aircraft has reduced our requirement for forward based airpower. The F–4's with inflight refueling, can be flown to Europe and the West Pacific. The TFX will be able to deploy to Europe without any inflight refueling.

Although a precise analysis of the optimum number of carriers is difficult to make, it seems clear on the basis of these factors that some reduction in the number of attack carriers will be possible by the end of this decade.

We have deleted from the shipbuilding program the previously planned fiscal year 1965 carrier but have tentatively programed another new carrier in a later year.

Mr. PROXMIRE. The Senator from Minnesota also points out that the notion that we should have 15 attack carriers goes back to a time when we faced Japan in the Pacific.

Mr. MONDALE. It actually goes back further.

Mr. PROXMIRE. To 1921.

Mr. MONDALE. Dr. Wilson wrote a thesis on the attack carrier and he tried unsuccessfully to determine what policies and decisions justified what he called the "eternal verities" of a fleet of 15 battleships, followed after World War II by 15 attack carriers. The only thing he could find was the agreement in 1921, the Washington Naval Disarmament Treaty, that we should have 15 ships. The Navy came back and said we said they had not had 15 ships.

We called an expert on the matter and we have had printed in the RECORD today a table. As a matter of fact the number of carriers we have had every year since 1946 has been 15.

Mr. PROXMIRE. This research has not been done publicly before. It has not been publicly disclosed. I think it is very significant.

In World War II we were facing Japan, which was a great sea power in the Pacific where positions were so farflung. Japan had its own attack carrier fleet and a great air force. A large number of attack carriers was then logical and necessary. Now, Japan has disarmed.

What kind of navy does China have? Roughly how big is China's navy?

Mr. MONDALE. It is insignificant, I am sure.

Mr. PROXMIRE. I am talking about in comparison with the navy we faced in Japan.

Mr. MONDALE. I would not think there is any comparison. I am not an expert.

Mr. STENNIS. Mr. President, will the Senator yield to me briefly?

Mr. MONDALE. I yield.

Mr. STENNIS. Mr. President, I do not wish to intrude on the time of anyone, but as a matter of taking inventory of our time, I wish to make an observation. We are not going to be in session tomorrow. The Senator from Minnesota will remember that I suggested he obtain the floor first today, and I objected to anyone else obtaining the floor until he arrived this morning.

However, in fair play, several other

Senators wish to speak. The Senator from Washington has been waiting. The Senator from Virginia has been waiting all day. I think the chairman of the committee should say at least a few words without attempting to cut off anyone else. In that sense of recognition, if the Senator could conclude shortly, I would take just a few minutes. The Senator from New York has a speech he feels compelled to make this afternoon.

Mr. MONDALE. I thank the Senator. The Senator has been very kind to me. We had the recess for the funeral. I have yielded a good deal, and thus it has taken me nearly 5 hours.

Mr. STENNIS. The Senator does not have to yield indefinitely. I do not want to make a point of order, but the Senator cannot yield to anyone to make a speech.

Mr. MONDALE. I shall yield the floor in just a moment. I thank the Senator.

Mr. STENNIS. I thank the Senator from Minnesota.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MONDALE. I yield.

Mr. SYMINGTON. Mr. President, I fully support the position of the able and distinguished chairman of the Committee on Armed Services. This matter is one which should be discussed extensively.

I hope we do not have the vote on Monday; and before we vote, I hope we can develop the issue thoroughly.

I have listened with a great deal of interest this afternoon to the Senator from Minnesota.

It was necessary for me to be in my State part of yesterday. I hope not to miss the vote on this issue. Let us continue until all the facts are on the table.

Mr. MONDALE. I thank the Senator.

Mr. PROXMIRE. Mr. President, I shall continue briefly. I appreciate the need for others who want to speak and speak soon.

I am delighted that the Senator in his presentation stressed at the outset that he is not making a proposal that we eliminate all of our carriers. He is saying we should consider whether we need 13 or 14.

On the 14, this is the issue that should be debated again and again, I am sure, in the course of debate, as in the course of the so-called briefings—the brainwashing to which we have been subjected by those who oppose the amendment—that we cannot eliminate all the carriers, because if we do, we will be defenseless. No one is suggesting that. The Senator from Minnesota would provide merely for a study as to whether it is necessary to spend this additional money for this additional carrier.

Mr. MONDALE. The Senator could also observe that this is not a bizarre request. In fact, as we gather here this moment, we know that the Defense Department and the National Security Council have requested and may have already received a study on the very issue we are talking about today. It is obvious that this is a case where the legislative and executive branches can work together with mutual studies and come up with a rational decision that can bring about the most effective and sensible defense and would generate the kind of public confidence which that would bring about.

Mr. PROXMIRE. I was present at the joint economic hearing when former Director of the Budget Schultze testified. In my view, he is the most able man who ever served in the Budget Bureau. He of course was responsible for expenditures covering a vast area, including military expenditures, for a number of years. This kind of question is rarely asked. Either the Senator from Missouri (Mr. SYMINGTON) or Representative MOORHEAD asked Mr. Schultze if he could designate the area of military spending which, in his view, should have the lowest priority where we could justify most clearly a reduction. Without any equivocation or qualification at all. Budget Director Schultze said, "Yes, a 15th aircraft carrier." In his view, it was the hardest to justify of all that was in the $80 billion budget.

I am very happy that the distinguished Senator from Minnesota brought that out, because I think it is the kind of thing that should make us stop, look, and listen.

May I also commend the Senator from Minnesota on his stress on the revolution we have had in military weaponry. It is a revolution. Some people say we have had a revolution almost every 5 years. There has been a dramatic change. Yet we go on and on on the basis of a set justification that we had 20 years ago and we must have exactly the same now. We make the same kind of argument that we have to have the same fleet we had in the past. I would also like finally to commend the distinguished Senator from Missouri on what I think is a most impressive analysis of the cost of maintaining a carrier fleet. He points out, first, not only that we have the ships, but the planes, and the escort carriers and another fleet behind it, and a third fleet. So, we end up with something that we were told in World War II cost $83 million, was $171 million at the time of the Korean war, and is now $510 million to $700 million for this one——

Mr. MONDALE. It might be $700 million, but somewhere between $510 million and $700 million.

Mr. PROXMIRE. It could be. I have heard the figure in committee unchallenged, as given by the Senator from Missouri, of $1.8 billion for the whole fleet.

Mr. MONDALE. The Navy says it will cost $1.8 billion for an attack carrier, the wing, the destroyers, and the escorts. Of course, that has to be times three.

Mr. PROXMIRE. Yes, times three. Then we get $5.4 billion to maintain a carrier fleet with replacements. The 15 carriers, that is right. This refers to 40 percent of the entire operating budget of the U.S. Navy. This cost is so astronomical, I suppose the only way we can appreciate it is in proportion to other spending. That $5.4 billion is 15 times as much as we spend on low- and middle-income housing for the entire country. It is more than twice as much as is spent on Federal aid to elementary and secondary education in the entire Nation. So that I think to put this in perspective and to challenge it is not to say that we tear down the military force or weaken it or enfeeble it, but as the Senator says so well, it will save money to be used more wisely in our defense, or in some other areas which are so essential.

Mr. MONDALE. I thank the Senator. I want to yield, because the Senator from Mississippi (Mr. STENNIS) has been very kind to let me complete my message.

I would simply say this in closing, that the one set of nuclear carriers, destroyers, and so forth, to keep one wing on station, would cost nearly $1 billion more than the President's widely heralded new welfare program which is supposed to bring sustenance, health, and the good life to 22 million Americans.

One other point in closing, and that is that Systems Analysis has completed this year in July a study of cost effectiveness, a cost comparison between the same wing of aircraft, one on sea and one on land. It is classified. I cannot give the figures. But the cost comparison shows astonishing savings that can be made through land-based aircraft.

I want to thank the Senator from Mississippi for his impressive patience here today. I regret it has taken so long, but I have yielded to so many Senators both pro and con that it has taken this much time.

Mr. STEVENS. Mr. President, the attack carrier is the backbone of the surface Navy of the United States. The carrier force is the primary naval strength which assures us freedom of the seas in the face of a growing Russian maritime capability. And freedom of the seas is absolutely essential to the security of these United States. The Soviet Union, which is situated on the large land mass of Europe and Asia, has access to most of the world's raw materials over land lines of communication. On the other hand, the United States must use the sea lanes to provide critical raw materials not available in this hemisphere, as well as the tremendous amounts of fuel that are needed to operate an industrial machine in peace or a war machine during hostilities. Our reliance on the high seas for the movement of the bulk of our overseas cargo is a simple matter of geography: We are essentially an island and this is not a transient condition but a permanent, unchanging physical fact.

To maintain our capability to preserve the freedom of the seas for the pursuit of our own national interest under the threat of a growing Russian Navy, we must have a strong modern Navy. This can only be achieved through the continuing input of new and modern ships. Let me just make this point, Mr. President—we are not building a new fleet; we are trying to maintain a viable force by replacing aging ships which can no longer perform their mission in the face of the rapidly increasing strength of the threat that they face. The attack carrier is the basic building block of our Navy's strength. It seems to me that delaying the acquisition of this carrier, while costs continue to rise, and funds are spent on obsolete equipment, constitutes false economy.

As a maritime power with our very survival as a first-class Nation depending on freedom of the seas, it is a matter of

great concern to me, Mr. President, that our capability of insuring the uninterrupted use of the sealanes of communication is being actively threatened. I was impressed by some rather startling statistics which were cited by Admiral Moorer, the Chief of Naval Operations, in an address last month to the Veterans of Foreign Wars. He pointed out that the Soviet Union has more than quadrupled its merchant ship tonnage since 1950. On the other hand, today the United States has less than a third of the merchant shipping which we operated in 1950.

Admiral Moorer pointed out that the same trend prevails in combatant ships. Mere numbers tell only part of the story though: Nearly 60 percent of our warships upon which our forward defense strategy depends, are 20 years old or more, while in the Soviet Navy, of the 1,000 or more surface combatants and submarines currently in the Soviet Fleet, less than one-fourth of 1 percent are past the 20-year mark.

In the face of this dramatic increase in naval capability by the Soviet Union, I consider it the height of imprudence for us to allow our own fleet to rust away into obsolescence while we drag our feet and fail to provide the replacement ships that will keep our Navy a viable force.

On the subject of modernization, Mr. President, I think it is important for Senators to recognize that the need for the carrier which is funded in this bill does not depend for its validity on a carrier force level of 15 or 16 carriers. When this ship goes into the fleet in 1974 it will replace a carrier which at that time will be 30 years old—it replaces an *Essex*-type carrier of World War II vintage which is not capable of handling such modern aircraft as the F–4, the RA–5C, the A–6, or the F–14. Thus, Mr. President, the *Essex* class carrier today is restricted to second class fighters and by 1974, when it is replaced, it will be operating what is, in effect, third-rate planes. I think it is clear, Mr. President, that we are approaching the time when the *Essex* class air wing cannot survive in the threat environment established by the newest Soviet tactical aircraft. Certainly we will reach that point before CVAN–69 can be completed, even if it is started this year. I for one am not willing to say to our pilots and crewmen, "Do the best you can with these inferior weapons. They are all your country can afford." I can see no valid reason for delaying the funding of this carrier any further while we restudy the requirement. The requirement has been validated by careful study and analysis in the Navy, the Department of Defense, and the Congress when we studied this three-ship building program in 1968. The sea lanes are too vital to us as a maritime power to risk their loss. We need this carrier and we need to start it this year.

The reasons for this action are as follows:

First. For all levels of military action other than all-out nuclear war—from a show of force to general war—the attack carrier is the primary striking force of our Navy. It provides the offensive power necessary to assure free use of the seas and the air over the seas in support of our national objectives.

Second. Despite the tremendous technological progress that has been made in transportation and weapons systems in this century, free use of the seas—which cover three-fourths of the earth's surface—continues to be essential to the security of the United States, whether we are forced to fight to defend ourselves or to help defend our allies.

Third. Today our overseas allies depend upon our support, which must come by sea. There is no valid plan for overseas military operations of the Army, Air Force, or amphibious forces with embarked marines that does not depend on our free use of the seas. For example, 98 percent of all of the supplies which have gone to Vietnam have been carried by ships.

Fourth. Our present national strategy relies heavily upon military forces deployed overseas—forces capable of responding to a spectrum of contingencies in overseas areas of primary national interest. These forward deployed forces, which must be supplied by sea, provide this country with flexible and rapid response to whatever pressures our potential enemies may apply.

Fifth. A change in national strategy resulting in the withdrawal of our deployed military forces, would increase the requirement to maintain a strong maritime posture. The capability of the United States to fight for an extended period in defense of its territory and areas of interest is dependent on our ability to maintain the flow of materials and oil over the seas. The sheer bulk of the daily use of oil for military and industrial needs precludes stockpiling quantities for more than short-term needs.

Sixth. An effective tactical air capability is essential to sustain our general purpose and logistic support forces against a determined enemy using modern weapons. Sea-based and land-based tactical aircraft are required to provide support for our forces in the areas of the world where we must be prepared to fight.

Seventh. Land-based tactical aircraft can be employed when their land bases have been adequately prepared, provisioned and defended, and when they are located within range of the area of conflict.

Eighth. Sea-based tactical aircraft are required when land bases are not available or do not have the capacity to meet the required tactical aircraft needs. The attack carriers can quickly concentrate this sea-based tactical air power.

There are those that say that carriers are provocative; that they tend to involve the United States in the affairs of other nations and commit us to wars we do not want to fight. To this I can only say that of all our major instruments of national power, the carrier is the least provocative. U.S. bases on foreign soil invariably involve political and military commitments in exchange for base rights. The bases themselves, as centers of U.S. power and influence, invite attack from dissident elements in the host country, involving us in unwanted confrontations, committing us to measures not in consonance with our overall national policy. Sovereignty questions associated with our overseas bases have caused problems between our Government and host nations and have been a major source of the Yankee-go-home sentiment. Attack carriers, on the other hand, are mobile air bases which can be retained in home waters and deployed or withdrawn to meet changing international situations without altering our international commitments. Carriers can remain in home waters and then deploy to an overseas trouble spot. When deployed, the carrier can remain in the wings, out of sight, so as not to upset a delicate situation but still be available to unleash its power at a moment's notice or should the situation dictate, the deployed carrier can appear on the scene and by its very presence provide a stabilizing influence by serving as tangible evidence of U.S. interests.

A final word, Mr. President, about the effect that delay in funding this carrier this year would have. I am sure the Senators are aware that we have already obligated in 1968 and 1969 funds, some $132.9 million, and that a large portion of this has either been spent or would be lost in termination charges if the contract for long leadtime nuclear propulsion components were terminated. In addition, the Navy estimates that the disruptions in the production plan might well add an additional $100 million to the projected total cost of this carrier should we make the delayed decision next year to fund the carrier with fiscal year 1971 funds. Mr. President, I am proud of the efforts of the Senate this year to reduce the spending level of our national defense. I know that this has been a sincere effort, a dedicated effort, but we must all recognize that the threat we are facing is not diminishing and if we reduce the level of our spending to oppose that threat, then we must get more for our money. We must spend our available defense funds more wisely. In my judgment, Mr. President, it is not wise to waste funds on indecision. It is not wise to delay the introduction of needed capability into our fleet needlessly, and that, in my judgment, is what this amendment would do: First, inject needless delay, and second, substantially increase the cost in the weapon system which I am convinced is urgently required to maintain modern naval forces that are vital to our national interests. I hope that the amendment will not be adopted.

The PRESIDING OFFICER. Under the previous order, the Senator from Mississippi (Mr. STENNIS) is recognized for 20 minutes.

Mr. STENNIS. Mr. President, I shall not undertake today, particularly at this time, to outline all of the real, basic reasons for inclusion in the bill of the carrier. I shall do so in the course of future debate. But many other Senators are prepared to speak on the subject. As chairman of the committee, I wish briefly to sum up what I think are the real issues and the real decision to be made.

In the first place, there is no law that sets 15 or any other number as the level of the carrier force. They are not authorized in that way. The President can order them cut in half tonight. He would not be violating any law if he did so. This matter is passed on every time a

bill on the subject comes before the Senate, or on an appropriation bill. The Appropriations Committee could recommend cutting down on the number of carriers by cutting down on the money. That would be the issue. So there is no single, fixed law about it.

This afternoon, I have already explained that this is purely a replacement. We have four types of planes, four of the major ones of all the planes that fly from carriers, that cannot even use the old carriers. In the course of time, something must be done about them. The only thing to do, anyway, is to have the modern weapons and phase out the older ones as fast as can be done with prudence. How much is taken out because of this one going in will be determined by conditions that exist in 1974.

That will be a judgment matter for the President of the United States, the Secretary of Defense, and the Congress.

We start with the fact here that 3 years ago Mr. McNamara—he has been quoted on both sides of this matter, but he is a very knowledgeable man—decided that this country should have three modern *Nimitz*-class carriers. The plan was to get them over a period of 6 years, one every 2 years. We have already slipped on that 1 year in time; $140 million, in round numbers, has already been appropriated for the carrier we are talking about, and a great deal of that has been spent under authorizations of the Congress. Virtually all of it has been authorized under the authority of the Congress. Now this is for the final payment on it.

But someone comes along and says, "Wait. We ought to have the General Accounting Office look into this. We ought to cut back and overrule these people until we can get certain information from them."

I understand an amendment has been offered to change the provision from the General Accounting Office to the Congress, but, anyway, that is the motivation, or part of it, involved in the amendment.

There are no overruns involved, because there has not been time for overruns with respect to this particular carrier. However, I have the figures for the overruns for the last two we built of this kind. One had an authorized total cost of $280 million, with an actual cost of $298 million. The second one had an authorized cost of $293 million. The actual cost was $247 million, so that cost was almost $50 million less than the estimate.

So we are talking here in a category of something that is fairly definite and fixed. The matter has already been started. The money has been spent. The only issue here, after all, is the modernization of weapons.

There is another item that has been spoken against already, the A–14, which is to be an ultramodern Navy plane to take the place of the one that did not pan out, the Navy version of the TFX. Those two go together to show the need for modernization. We must be up front with the best weapons that science and money can afford.

In my humble opinion, Mr. President, this carrier fleet is the best possible investment we could make, world conditions being what they are and our leadership being what it is. There has been talk about Soviet Russia having no carriers. Of course Soviet Russia does not have carriers as compared with us. She does not have any commitments, either, in the Pacific to protect Japan. She does not have any commitments to protect the Philippines or the State of Hawaii in the middle of the Pacific Ocean. She does not have any commitments with reference to Formosa. She has no commitments with respect to protecting Korea over all those water miles, even if she has commitments with respect to North Korea. It is a land-based nation, living off the land, where the life of the people is, and the country has few commitments.

This carrier force, after all, which is able to exert a deterrence, and which has a stabilizing influence, has been the single most powerful influence in world affairs since World War II.

I have a list of the incidents which have happened when our carrier force was directly involved. In the Korean war, 10 carriers engaged in combat operations during the period of that unfortunate conflict. We remember that our air bases were knocked out earlier. If it had not been for our carrier fleet, where would we have been or where would the United Nations Forces have been?

I will skip down the list to the Kinmen Island, 1957, Communist shelling, in which the naval units were dispatched to defend Taiwan. Four carriers were on the scene. Taiwan was once the symbol of our efforts to protect those parts of Asia from encroachment.

The Lebanon civil war in 1958. Three carriers provided air cover for the Marine landing.

Does anyone belittle the Mediterranean Sea? When the conflict came, what was it there that did the work and carried the protection?

Quemoy and Matsu crisis in 1958. Many of us remember that. Three carriers were sent to cover evacuation and two additional carriers alerted.

The Cuban civil war in 1956 and 1958. One carrier was on the scene to cover evacuation and provide a presence.

The Quemoy and Matsu presence again in 1962.

The Cuban missile crisis in October and November 1962. Naval forces provided protection and intervention. Eight carriers were on the scene.

The Arab-Israel war, June 1967. Two carriers were on the scene to cover evacuation.

We saw the headlines in the morning newspapers. Shooting is going on over there now.

In my humble opinion, if it were not for the American fleet in the Mediterranean area—and I am not trying to stir up anything—within 6 months' time Greece and Turkey could be invaded and more serious troubles and clashes could, and probably in time would, occur in the Near East.

Those are the practicalities. We are talking about hardware. We are talking about modernization. We are talking about some of the most effective and some of the most immediately available weapons we could possibly use.

It is all right to challenge this matter. Debate is always wholesome. But no one need think this subject has been a quiet subject all these years. This matter has been heard in the Appropriations Committee year after year after year, and we on the Appropriations Committee are all familiar with the conflict of interest between the Air Force and the Navy. I speak with proper respect for both branches, but I do not have any patience with their eternal argument about which is the best and which is the worst, which is the most effective and which is the least effective. It is just "trade talk," mostly, and very few members of the Appropriations Committee who have followed the matter all the way through have any doubt about the need for this weapon to be there at the right time at the right place.

I will help take the lead in reducing the amount of the cost of the operations of the Navy as to carriers or anything else. I will help anyone who goes at it in the right way. But I will not come in here and attack from the side or from the rear in any way on the foremost and the keenest possible naval weapon we could have, except for our modern submarines, which serve in another field.

Let us get down to someone who knows something about the subject, another man who wears his uniform. I will take his word anywhere, any time, any place, in a statement for himself or against himself.

That is Admiral Rickover. I wrote Admiral Rickover a letter; I did not call him up and ask him what he thought, what he would say, or anything else. I just wrote him a letter and told him I wanted to know what he thought about carriers. I knew one thing: He would put submarines first, which he did. He knows the subject, and he knows why, and we can thank God there has been a Rickover, and that Congress would not let them put him out of the Navy 10 years ago. We can be thankful for that.

But that very fine man and very gracious officer said:

> There are, however, some important Navy missions, which cannot, in any known practical way, be carried out by submarines.

Then, after he complimented the submarines, he said:

> One of these is the provision of sea-based tactical air power to protect our sea lanes and our air lanes over the seas, as well as to support amphibious operations and overseas military land operations beyond the range of the land-based tactical air power available to us.

Then he goes on, and I shall read more from this letter, but briefly now I shall read, as he gives them, the reasons for his conclusions about this *Nimitz*-class carrier and the need for it.

He said:

> Three-fourths of the earth's surface is covered by water; 95 percent of the world's population live within range of carrier aircraft.
>
> The United States is essentially an island between two oceans—an island dependent on free use of the seas for transport of material and fuels necessary for our survival—

I mentioned our commitments a while ago. He continues:

> No valid plan exists for overseas military operations by the Army—

This is Rickover speaking—

by the Air force, or by amphibious forces, which does not depend on our ability to guarantee free use of the seas. Virtually all supplies to Vietnam, for example, have been carried by ships.

That will be true a long, long time, in spite of the C–5A's, to Vietnam or some other Vietnam. A lot of it will have to go by ship, the followup part particularly. He continued:

Without a modern attack carrier force, the United States is not assured free use of the seas in those areas of the world that are important to us. It is simply not practicable to establish enough land air bases adequately prepared, provisioned, defended, and within range of potential areas of conflict.

This is still Rickover speaking:

Seven of the sixteen carriers currently operating in the attack carrier role were launched during or shortly after World War II. Five of these cannot operate several of the modern aircraft types now in the fleet. They will not be able to operate air wings which can survive against Soviet weapons technology of the 1970's.

That is the admiral still speaking, Mr. President.

Each *Nimitz*-class carrier—

And that is what we are arguing about—

will carry 50 percent more aircraft ammunition and twice as much aircraft fuel as the latest conventional powered attack carrier. This, combined with the unlimited high speed endurance provided by nuclear power will greatly increase their capability for sustained combat operations.

* * * * *

The *Nimitz*-class will be the best protected and least vulnerable carriers ever designed—

That is the *Nimitz* class, which is what is in this bill—

The added protection is provided by extensive use of armor against bombs and guided missiles, as well as by improved anti-torpedo hull design. The unlimited endurance at high speed and freedom from the need to slow down to refuel provided by nuclear propulsion further reduces the carriers' vulnerability.

Our friends here say all the carriers are vulnerable. Is there any weapon that is not vulnerable? Is there any invulnerable weapon? Not even the igloo in the frozen north can be made invulnerable. Certainly those of us down home in the path of that hurricane know that man devises or plans, but a superior power acts. And a superior power decides in the military. Nothing is invulnerable. But he says they are the best protected and least vulnerable of all carriers ever designed.

The second ship of this class, the CVAN—

That is the one in the bill—

is scheduled for delivery in 1974.

And he says what it will replace. That, of course, was already known. He continued:

Were the Navy required to operate a smaller carrier force, the improved capabilities of the *Nimitz* class would become even more important.

I hope we do operate a smaller number of carriers, and I believe we will. The best way to get the number reduced is to have this modern type, with its additional capabilities. He continued:

The 3 *Nimitz*-class attack carriers are the only ones authorized or planned from FY 1964 through 1972, a period of 9 years; this will average out to but one new attack carrier every 3 years.

He says further:

If we do not continuously modernize our attack carrier force, its ability to protect our naval and overseas military forces and the logistic lifeline for our military and industrial needs against the increasing capabilities of potential enemies will be degraded.

Mr. PASTORE. Mr. President, will the Senator yield at that point?

Mr. STENNIS. I yield to the Senator from Rhode Island.

Mr. PASTORE. Speaking on this question of modernization and improvement, I think the one thing that we have to bear in mind is that we cannot rest on the accomplishments of the past to guarantee the security of the future.

Take the *Enterprise*. The *Enterprise* was the first nuclear propelled aircraft carrier. The *Enterprise* has eight reactors, and its maneuverability, was proved in the Mediterranean and in the Cuban crises. It has been further proved in Vietnam.

But now, the *Nimitz*, instead of the eight reactors, will have two reactors. Mind you what improvement has been made in such a short time. The *Nimitz* will hit the water, I understand, in 1971.

Mr. STENNIS. The first one, that is right.

Mr. PASTORE. Those two reactors have the same power of the eight reactors in the *Enterprise*. And do you know what those two reactors are the equivalent of, in power? They tell me the power of those two reactors is equivalent to that of the line of oil freight cars stretching a distance of 500 miles. That is the power, and that shows the progress that we have made. If we stop at this point, what we are going to do is rely on the past to protect us in the future. That is the mistake of stopping now.

Furthermore, we have already invested, in this new aircraft carrier, almost $130 million, that will go right down the drain. The question here is, How far can we go in flirting with disaster when it comes to the security of this country?

I thank the Senator.

Mr. STENNIS. I thank the Senator from Rhode Island very much for his splendid contribution. No one is more knowledgeable as a legislator—I make no exceptions—in this field and related fields than is the Senator from Rhode Island, who has contributed so very much indeed as chairman, for a while, and then as a member of our Joint Atomic Energy Committee.

The PRESIDING OFFICER. The 20 minutes of the Senator from Mississippi have expired.

Mr. STENNIS. Mr. President, I ask for 1 additional minute. We are not under controlled time, but I shall take 1 additional minute.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 1 additional minute.

Mr. STENNIS. Mr. President, the argument made by the Air Force—I have heard it over and over—is that they are able to take care of all situations that we might have anywhere with their ground bases.

Fine as they are, our land bases overseas have shrunk from 105 to 35 in the last 10 years, in round numbers. I remember being in France, as I have stated before so many times, where so many of our air bases were dedicated—I know of nearly a billion dollars that we spent there on those bases—and now we cannot even land there without a permit. We cannot even fly over the airspace above France, the heart of Europe, without getting a permit. Of course, this is a diplomatic thing, but you have to fly. Thirty days in advance, you have to get that.

It shows that we are skating on the thinnest possible ice and are talking about an imaginary thing when we talk about having airbases wherever we might need them.

I yield the floor.

Mr. GOLDWATER. Mr. President, in an effort to clear up what I think was a misunderstanding this morning, before today's debate ends on this issue, I should like to clarify remarks made this morning by the Senator from Maryland concerning Mr. George Wilson's article published in the Washington Post entitled "Air Force May Spur Navy Carrier Debate." The article was printed in the RECORD as evidence of Air Force efforts to discredit the capability of the naval air force.

Part of the information was taken from a letter from the Air Force to a U.S. Senator in response to these three questions:

(1) What is the number of overseas-air bases that the Air Force has relinquished since the Korean war? Why were these bases given up? And has the release of these bases jeopardized the USAF tactical air capability?

I stress and underline the words "the U.S. Air Force tactical air capability." It does not say anything about the level of the Naval Air Force tactical capability.

The other questions were:

(2) What is meant by the "KIT" method of quick construction of land bases as briefly described in the August 25 edition of the Washington Post?

(3) What is the capability of the Air Force's new air superiority fighter, the F–15?

The Air Force capability refers only to Air Force tactical capability. In fact, the words "Navy carrier" are not even contained in the letter. Consequently, to quote from the letter and then refer to it as an "Air Force paper likely to have short- and long-range impact on the debate on the American Military Establishment" is an incredible exaggeration.

More specifically, I feel that in his statement made his morning, the distinguished Senator from Maryland clearly implied that the Air Force was attempting to discredit and replace the Air Force carrier. Such implication is erroneous.

Air power, land-based and sea-based, each has its separate and distinct role to play.

The Air Force clearly recognizes the complementary nature of the mission in support of the aircraft carrier and the mission of the U.S. Tactical Air Force.

I have some confidential information with me which, if I eliminate enclosure No. 1, is no longer classified. Enclosure

No. 1 has to do with major base disclosures, going into it item by item.

I ask unanimous consent to have printed at this point in the RECORD the letter addressed, "Dear Senator HATFIELD," from the Air Force.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SEPTEMBER 2, 1969.

Hon. MARK HATFIELD,
U.S. Senate.

DEAR SENATOR HATFIELD: A few days ago, Mr. Michaelson of your Staff asked the Air Force to provide you with information regarding air bases overseas, quick construction of bases and the performance capability of the F–15. More specifically, I understand your questions were:

1. What is the number of overseas air bases the Air Force has relinquished since the Korean War; why were these bases given up; and has the loss of these bases jeopardized the USAF tactical air capability?

2. What is meant by the "Kit" method of quick construction of land bases as briefly described in the August 25 edition of the *Washington Post?*

3. What is the capability of the Air Force's new air superiority fighter, the F–15?

Although an attempt was made to keep the answers to these questions unclassified, to be completely responsive, an additional classified answer was required for the F–15 because some of the performance parameters of the aircraft are classified and similarly, a portion of the information relating to base closures is classified.

If we can be of any further assistance, please call.

Sincerely,

JOHN R. MURPHY,
Major General, U.S. Air Force, Director, Legislative Liaison.

Mr. GOLDWATER. Mr. President, I will eliminate enclosure No. 1 which will downgrade the classification from confidential to normal. I then ask unanimous consent that attachment No. 2 and attachment No. 3 be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[1] Bases in U.S.-owned territory excluded.

Mr. GOLDWATER. Mr. President, I did not mention the "KIT" construction matter that the Washington Post brought up. The Air Force does not

know what the Post is talking about. I am not surprised. That is customary.

I should like to comment on the matter because the distinguished Senator from Missouri (Mr. SYMINGTON) was present earlier and called for overseas base reduction.

I would point out that since the Korean war, we have inactivated 67 overseas bases, and there remain 61 active overseas Air Force bases. There are 685 overseas national air fields, with longer than 8,000-foot runways. There are 2,390 airfields in all.

Mr. President, I will eliminate any reference to the F–15 question, because that remains, as it should remain from the nature of the information, a highly classified one. However, I did want to get this matter disposed of today, because I felt distinctly that it was an effort to generate a feud between the Air Force and the Navy. And I have sat through too many hearings to think for one moment that the Navy is out to get the Air Force, or that the Air Force is out to get the Navy. They work in a complementary way. There are differences, of course; there always will be argument about weapons.

I did not want the debate to proceed further with Senators thinking that the Navy was out to get the Air Force, or that the Air Force was out to get the Navy. Such is not the case.

There is a distinct difference in the basic need for sea-air power as brought out very distinctly by the chairman of the committee.

When I note that the basic requirement of sea-air power is to provide air superiority for the fleet and for the conveyance of merchandise and troops and heavy cargo overseas, their distinct use for tactical operation is largely for attacking tactical targets that we cannot attack from land because of the long distance involved.

I cite the part played by the Navy in basing the carriers in the Tonkin Gulf and eliminating the need for the U.S. tactical aircraft to make long missions which require refueling.

Mr. President, I appreciate the opportunity to clear up this matter.

Mrs. SMITH. Mr. President, I would like to commend the proponents of amendment No. 136 for drastically changing their original proposal. The distinguished Senator from Minnesota and the distinguished Senator from New Jersey have demonstrated wisdom and foresight by rewriting their amendment.

As originally proposed, Mr. President, there were two items out of 14 that the Comptroller General could properly perform.

The amendment as rewritten now seeks to have the Comptroller General investigate and report on only those two of the original 14 tasks.

The amendment as originally prepared, after striking $377 million from the bill, sought to impose the Comptroller General as a new form of congressional systems analysts reminiscent of that office that has caused such fearful headaches during the McNamara regime.

I am particularly delighted that the original amendment has been withdrawn because the Congress never intended that the General Accounting Office should second guess the Joint Chiefs of Staff. This is what that amendment sought to accomplish.

The rewriting of amendment No. 136 also demonstrates that the debate on the C–5A aircraft has provided a warning signal that the meat-ax approach is an exercise in futility.

Mr. President, I would like also to say that I am pleased that the distinguished Senator from Minnesota has now returned to his earlier thinking about the proper functions of the Comptroller General and the General Accounting Office.

During hearings on Economic Opportunity Amendments of 1969 in May of this year before the Subcommittee on Employment, Manpower, and Poverty, Senator MONDALE addressed the Honorable Elmer B. Staats, Comptroller General of the United States as follows, from page 367 of the printed hearings:

> I don't wish to be unduly critical. I think that it was the Congress that insinuated the General Accounting Office in this whole arena. But I have grave doubts that this is the role that the General Accounting Office should perform because these are political judgments. These are judgments in addition that require the sophistication of professionals in education, in health, in legal services, that involve a lifetime of the most rigorous sophisticated academic and practical background coupled with experience.

I agree wholeheartedly with the distinguished Senator from Minnesota.

Thank you, Mr. President. During the debate I will further comment on the subject of this amendment.

UNANIMOUS-CONSENT AGREEMENT

Mr. STENNIS. Mr. President, the pending matter is the amendment of the Senator from Minnesota and the Senator from New Jersey, and I ask unanimous consent that when the Senate convenes on Friday the time on the amendment be controlled, commencing at 10:30 a.m. I understand that an order already has been entered that the Senate convene at 10 a.m. on Friday.

I also ask unanimous consent that the Senator from New Jersey (Mr. CASE) be recognized first to speak on the amendment; that the time, beginning at 10:30, be controlled by and be equally divided between the proponents of the amendment and the Senator acting as floor manager of the bill on behalf of the committee; and that we vote at 3 p.m., not before, on Friday.

The PRESIDING OFFICER (Mr. CRANSTON in the chair). Without objection, it is so ordered.

The unanimous consent agreement, subsequently reduced to writing, is as follows:

> *Ordered*, That effective at 10:30 o'clock a.m., Friday, September 12, 1969, further debate on pending amendment No. 146, offered by the Senator from Minnesota (Mr. MONDALE), to S. 2546, the military procurement proponents (Mr. MONDALE) and the opponauthorization bill, be limited to 4½ hours to be equally divided and controlled by the ents (Mr. STENNIS), and that the Senate proceed to vote on said amendment No. 146 at 3 o'clock p.m. on that day.
>
> *Ordered further*, That at 10:30 o'clock a.m., Friday next, the Senator from New Jersey (Mr. CASE) be recognized by the Chair.

Mr. JACKSON. Mr. President, I speak in opposition to the pending amendment which would strike from the fiscal year 1970 Department of Defense authorization bill the funds necessary to build our third nuclear-powered attack aircraft carrier, CVAN–69.

My opposition to this amendment derives from three main considerations:

First, there are only two practical ways to project modern tactical airpower into those parts of the world where we have vital interests—tactical aircraft flying from Air Force land airbases and tactical aircraft flying from the Navy's attack carriers. The United States could not build the number of land airbases around the world that would be required to meet all of our tactical air requirements. In fact, we are experiencing continuous erosion in the number of overseas bases available to us. For example, at the end of the Korean war we had 551 overseas bases. Today we have less than 173. Operational U.S. Air Force overseas bases have declined in number from 105 in 1957 to 35.

The difficulties involved in keeping foreign bases are becoming increasingly evident as the United States tries to negotiate or renegotiate foreign base agreements. Also, land bases on foreign soil are vulnerable to political action. Regardless of treaties or agreements, a nation can unilaterally cancel a treaty and our bases in that nation are no longer available. This happened to us, for example, in Morocco and France. Furthermore, the use of land bases can be temporarily denied to us for political reasons—and without warning.

Naval attack carriers, by contrast, are mobile airbases which can be kept in home waters or deployed to meet contingencies, without political involvement. Operating from international waters, the carriers are normally unencumbered by overflight clearances and base restrictions so frequently encountered by land-based air.

Second, if any reduction in our carrier force level is decided upon in the next several years, I believe it should be made by retiring our World War II carriers, not by canceling or delaying the construction of our new nuclear-powered attack carriers.

The Navy has built nine modern attack carriers since 1952, including the nuclear-powered *Enterprise*. The remaining six attack carriers operating today were launched during or shortly after World War II; four of these are of the *Essex* class.

It is not practical to further modernize the *Essex*-class attack carriers. They cannot operationally support several of the new aircraft: F–4 Phantom II, RA–5C Vigilante, A–6 Intruder, E–2 Hawkeye, F–14. The problem is that aircraft size and speed have become too much for the smaller size decks of the World War II carriers.

There are three carriers in the *Midway* class which were laid down at the peak of World War II. These ships are

larger than the *Essex* class, but much smaller than the *Forrestal, Enterprise,* and *Nimitz* classes. The Department of Defense had planned to modernize all three of these carriers over the next several years. However, the modernization of the *Midway* which is nearing completion has turned out to be so expensive that plans to modernize her sister ships, the *Franklin D. Roosevelt* and *Coral Sea,* have been abandoned.

The *Nimitz*-class carriers incorporate the most modern technological advances including nuclear propulsion and the capability to handle and support the newest tactical aircraft. In designing the CVAN–69 the Navy has drawn on many lessons learned in carrier operations in the Vietnam war, particularly in the areas of command and control, intelligence processing, ordnance handling, firefighting, and damage control.

Also, since the nuclear carrier does not have to carry propulsion fuel oil, it can carry much larger amounts of aircraft fuel and other combat consumables which greatly increases its combat capability. The nuclear cores being built at the present time for the *Nimitz* and the CVAN–69 will fuel the ships for at least 13 years of normal operations.

If it proves necessary for us to operate a smaller carrier force in the future, it will become even more important that each ship in the operating forces be as up to date and capable as possible. In this regard, it should be noted that proceeding with the CVAN–69 will not increase the number of carriers in the Navy's active inventory. When this carrier joins the fleet in 1974 it will replace the *Bon Homme Richard*—which will then be 30 years old—a veteran of World War II, Korea, and Vietnam.

Third, this ship—CVAN–69—has been in the 5-year defense plan for 4 years. Each year the need for the ship has been thoroughly reviewed and reconfirmed by the Department of Defense and Congress.

Congress has already appropriated a total of $132.9 million for this ship over a 2-year period. The propulsion machinery for the CVAN–69 is well along in fabrication. The procurement of the remaining components and the ship construction are carefully sequenced with the *Nimitz* for maximum economy—this economy can be achieved only if the funds required for this ship are retained in the fiscal year 1970 budget.

To delay this ship now by further study—as would be done if the proposed amendment were adopted—would waste tens of millions of dollars due to the disruption and inefficiency that would be forced into the ship construction by the holdup.

Mr. President, I cannot see that it makes any sense to delay or otherwise interfere with the construction of this *Nimitz*-class carrier. I shall vote against the proposed amendment.

Mr. BYRD of Virginia. Mr. President, I wish to commend the distinguished Senator from Washington for his very excellent presentation as to the reasons the pending amendment should be defeated.

Mr. President, I support the authorization of $377 million for the CVAN–69 nuclear aircraft carrier. It is a vitally important part of the military procurement program and will provide an equally important element of our seapower. Our Nation must remain militarily strong if it is to remain free.

The aircraft carrier is the primary striking force of our Navy. Our aircraft carriers must be modern if our Navy is to be modern.

The carrier proposed for fiscal year 1970 originally was scheduled to be funded in fiscal year 1969. Congress already has appropriated nearly $133 million for this carrier, making a total cost of $510 million.

The cost of a modern, nuclear aircraft carrier is great. But the stakes involved in control of the seas are even greater.

The distinguished senior Senator from Vermont (Mr. AIKEN) recently used these words in discussing nuclear submarines:

> Whoever controls the seas will control the overriding question of peace or war.

Because of sea power, I strongly urge authorization of the new nuclear carrier, which will be our third such ship.

I speak as one who does not believe in blank checks for Pentagon projects: I already have voted for a reduction of $2 billion in the current military procurement authorization.

Mr. President, it is important to put in perspective the money involved in the total procurement program. The budget submitted by the administration of President Johnson in January called for a $23 billion outlay for military hardware, research, and development. When President Nixon came into office, this was reviewed and the Nixon administration brought in a budget of $22 billion.

The Armed Services Committee, under the leadership of the distinguished Senator from Mississippi (Mr. STENNIS), went very carefully into the military procurement program, and the committee recommends to the Senate that $2 billion be taken out of the request from the administration, leaving a military procurement authorization bill of $20 billion. Thus, the committee favors a reduction, and the Senator from Virginia favors a reduction. We favor cutting the fat out of the military budget, but we do not favor cutting out the muscle.

The carrier now being considered is the second in the *Nimitz* class. The name ship of the class, the *Nimitz,* now is under construction. The *Nimitiz* will be our second nuclear-powered carrier—the *Enterprise,* of course, already is in action—and the ship requested in the current authorization will be Navy's third.

This program is essential if we are to maintain mobile bases for our tactical aircraft.

Tactical aircraft are vital to the defense of our national interests. Tactical aircraft, like any other, need a place to land and a place from which to take off. Since 1954, the United States has lost two-thirds of its overseas bases, and there is nothing in the world political scene that indicates a future reversal of this trend.

The aircraft carrier, therefore, is the only assured overseas "base" for tactical aircraft that can be bought today. The carrier does not come cheap, but the cost is not prohibitive, considering the stakes that are involved.

It has been proposed that a review be made of the role of carriers in contingencies, the vulnerability of carriers, the policy of replacing carriers on a one-for-one basis and the foreign policy implications of the carrier force.

This kind of review is being carried on continually. I believe that the whole spectrum of American foreign policy and military posture should be under continuous review by the Congress and the administration.

However, even though such a review is carried out, it would not eliminate the need for this carrier.

For one thing, no review of the international situation and our military posture can result in an accurate prediction as to when, or where, or under what conditions wars may be fought in the years to come. The only way to insure that a war will be fought in a particular place is to start it yourself, and that is not the policy of the United States.

On the contrary, our policy is to deter war—either limited or general—to the very best of our ability.

I do not favor extension of U.S. military commitments overseas. As a matter of fact, I feel that this country already is overextended in its commitments.

But this does not mean that the United States can stage an instant withdrawal from the world at large, nor does it mean that we can let our guard down.

I do not favor a "world policeman" role for this country.

I have felt from the beginning that the involvement of the United States in a ground war in Southeast Asia was a grave error of judgment. But in this uncertain and imperfect world, I want our Nation to remain militarily strong.

There is a critical difference between declining to police the world because we do not choose to do so, and declining because we are unable to do so.

Choosing not to do so is an act of judgment, which implies the existence of an American deterrent that discourages adventurism on the part of potential enemies.

Being unable to do so implies a posture of impotence that can only encourage aggressors.

We must be in a position of choice, not a position of impotence.

We cannot escape our position of responsibility in this imperfect world. I do not favor a policy of intervention—certainly not a policy of unilateral intervention—but I believe in looking at the world as it is, not as we might wish it to be.

In the world as it is, the aircraft carrier is an important instrument of national policy.

Before the Senate now is an amendment proposed by the Senators from Minnesota and New Jersey which would eliminate the nuclear-powered aircraft carrier from this year's military procurement authorization.

I do not believe that the course recommended in this amendment is either wise or safe.

The sponsors of the amendment maintain that the status and mission of our

carrier force should be reviewed. I do not disagree.

As a matter of fact, all weapons systems should be under continuous review. The Navy, the Defense Department, the President, and the Congress have the obligation to see that our defense dollars are wisely spent.

But this should be a continuing process. Such questions as the mission of carriers, their overall effectiveness, their relative vulnerability, and the comparative effectiveness of alternate weapons systems should be reviewed regularly.

However, this is being done. The Defense Department constantly weighs the effectiveness of weapons systems against their cost.

So far, experience has taught us that the aircraft carrier is a valuable and versatile member of our weapons family, and that nuclear power has great advantages over conventional power. That is why the Department of Defense now supports this third nuclear aircraft carrier.

Mr. President, at this point, I might mention that the Senator from Minnesota (Mr. MONDALE), in making his presentation today, pointed out that the then Secretary of Defense, Robert S. McNamara, recommended in 1964 that the number of aircraft carriers be reduced. That is an accurate statement by the Senator from Minnesota.

What I think should be emphasized is that while he recommended that the number of carriers be reduced, he equally strongly recommended that three new nuclear carriers be built, because he recognized, as I think most officials in the Department of Defense recognize, that if we are going to have a Navy, we had better have a modern Navy.

In addition to Defense Department studies, there is the annual review of military spending proposals by the authorizing and appropriating Committees of Congress, and debates like the ones that have occurred on the floors of the House and the Senate over the past 6 to 9 weeks.

If it is true that weapons systems once were automatically approved by the services, the Secretary of Defense and the Congress, that certainly is not the case today. I should say at this point that I heartily approve of the close scrutiny now being given military appropriations.

I think it is well that the Senator from Minnesota presented this amendment. I think it is well that the Senator from Wisconsin presented the various amendments he has presented. I think it is well that the Senate and the Congress debate fully matters of military appropriations, because we should want to give the taxpayers a dollar's worth for every dollar of their funds that is spent; and that can only be done if there is a careful review on the part of the Congress. I approve of this debate. But, while I approve of this debate as a symbol of alertness to possible waste in the military, I cannot approve of the amendment proposed by my distinguished colleagues from Minnesota and New Jersey.

One of the announced aims of the pending amendment is economy. But even as an economy move, the amendment makes no sense.

The fact is that $133 million already has been spent for a second *Nimitz* carrier. If the carrier is eliminated from the budget, this money will be down the drain.

If the construction of this carrier is delayed, of course, the cost will go up.

Of course, it might make sense to sacrifice $133 million if there were real reason to believe that the new carrier will not be needed. But this is not the case.

I believe the role of aircraft carriers and the need for this particular nuclear carrier have been sufficiently studied and is sufficiently established.

However, if the Senate should decide that additional study is required, without delaying the second *Nimitz* carrier, I would have no serious objection. I do not believe the study would be harmful. There may be some value in a review of the need for 15 carriers.

Let us indulge in fantasy for a moment. Let us suppose that the proposed study is carried out and the verdict is that the United States will need only three aircraft carriers in the 1970's and beyond. Personally, I would call into question the judgment of anyone who would come to such a conclusion, but for the sake of argument, let us assume for a moment that this unbelievable conclusion is reached and accepted.

How would we go about reducing our future force to three carriers? By keeping the newest, of course, and retiring the older ones.

But it is axiomatic that the smaller your force, the more important its quality. Surely we do not have to prove again, having finally hammered it home even to Mr. McNamara, that nuclear aircraft carriers are the carriers of the future.

The United States now has only one active nuclear-powered carrier, the *Enterprise*. A second, the *Nimitz*, is under construction. That is all we have.

So if this Nation were to have only three modern carriers, carriers with nuclear power—why, even then, the ship proposed in this bill would demand immediate authorization.

Proponents of the amendment now before us maintain that land-based tactical aircraft can do the job of carrier-based aircraft more cheaply and efficiently.

But tactical aircraft based on land cannot substitute for carrier-based forces. As a matter of fact, during World War II and in the Korean war aircraft based on carriers often were essential to provide air superioity in areas. where we seized bases that later became airfields for land-based tactical planes.

I may point out that during the Lebanon crisis, a base was available in Turkey, but the use of this base was denied us because Greece, a NATO ally, refused to allow overflights. Our carrier fleet provided air cover for the Marine landing after the order was issued.

The carrier force which we have today is rapidly aging. Of our 15 attack carriers, seven were built during World War II or shortly thereafter.

I have a list of all of those. Three of them were built 25 years ago. When these are replaced under the program which has been worked out, some of them will be 33 years old before they are taken out of service. I submit that those no longer can be called modern aircraft carriers.

Three of these ships, the *Essex* class, are unable to operate some of the Navy's newest aircraft, including the F–4 Phantom II, A–6 Intruder, and the RA–5C Vigilante. The safety record of these old carriers is unsatisfactory; the landing accident rate aboard these ships is about twice that of their more modern sisters.

It is possible that a review of our foreign policy and overseas commitments may conclude that fewer than 15 attack carriers will be needed in the fleet in the future.

I do not argue as to whether we should have 15 carriers. I do reason we must have some modern, nuclear-powered carriers, and to date, we have only one.

Another is being built and should be in service in 1971, and a third one is the one which is being considered today.

It has seemed to me somewhat sad that the memory of that fine sailor, former President Kennedy, should be honored with an aircraft carrier powered with an outdated propulsion system.

The decision to build the *Kennedy* with oil-fired engines was an error of judgment—nearly all military authorities agree on this point—and it is an error that should not be repeated. It was an error, I might say, not on the part of the professional military leaders, but rather on the part of Secretary of Defense McNamara.

Sooner or later, this new nuclear aircraft carrier proposed in the bill now before the Senate must be built. Delay in providing the necessary funds will only increase the cost and lessen our security.

We have only one nuclear carrier today—the *Enterprise*. The *Nimitz* nears completion, and a second *Nimitz* is the carrier to which the current authorization would apply. Thus, even with the currently sought authorization, we will have only three modern nuclear-powered aircraft carriers.

Unless we want to get out of the seapower business entirely, the very least we can do is have three nuclear-powered modern aircraft carriers.

In analyzing and studying the excellent speech made this morning by the Senator from Minnesota—excellent from his point of view; I heard most of it; I read it twice—what impressed me about that speech was that his main argument is built along the line that we should not have 15 attack carriers.

That is not the point at all, as I see it, Mr. President. The point is, shall we have a modern Navy? It is not a question of how many carriers we should have. That is not the question at issue today. The question at issue today is that we have one modern nuclear-powered carrier now, we have a second one being built, and the question is, Shall a third modern nuclear-powered carrier be built?

That is the issue. It is not the issue whether we should have 15 carriers or 12 carriers or 10 carriers, or whatever. This year, shall we have a modern fleet? Shall we have at least some modern carriers?

I submit that these fossil fuel carriers

cannot be considered to be modern carriers. The only modern carriers are those which are nuclear powered.

Mr. President, I wish to say again that I believe very strongly that Congress has an obligation to cut the fat out of any military budget submitted to Congress. I have voted for very considerable cuts in budgets submitted by President Johnson, and I have voted for cuts in the current budget which has been submitted by President Nixon. I believe in cutting out the fat.

But, Mr. President, we must not cut the muscle. We must not cut the muscle, and I say that if you cut out, eliminate, scuttle the nuclear-powered aircraft carrier, we are cutting the muscle of the U.S. Navy.

Mr. President, I was tremendously interested in one aspect—I was interested in many aspects of it, but particularly in one aspect—of the address of the distinguished Senator from Minnesota, in which he said—and I read from page 4 of his manuscript—speaking of his amendment:

> This is not an "anti-carrier" amendment, as Navy spokesmen would have us believe. Our amendment in no way suggests that the attack carrier is obsolete or has no viable role in the U.S. Navy.

Mr. President, that is a very significant statement, I believe. And I might say that the able Senator from Minnesota repeated several times in his comments today that he felt that the Navy has an important role to play.

If that is the case—and I think it is—then I say we must have a modern Navy. There are Senators—and many of them have told me so—who do not believe that we should have aircraft carriers. They say there is no need for aircraft carriers, they are obsolete, and we ought to do away with them.

I say that Senators who feel that way certainly should vote for the Mondale-Case amendment. It is the only logical vote for them to cast. But I point out, Mr. President, that Senator MONDALE and Senator CASE do not believe that the Navy is obsolete, and I have just quoted a passage from the speech of the Senator from Minnesota to justify that assertion. They do not believe that the Navy is obsolete and should be done away with. What they do want to do is eliminate from the present authorization bill the funds to construct a third nuclear-powered aircraft carrier.

I can see the point of some Senators who say we should not have aircraft carriers. I do not agree with their view, but at least they have something that they can stand on. They just do not believe in aircraft carriers serving a useful purpose. If they believe that, they ought to vote for the amendment. But I am convinced that the large majority of Senators do not feel that way. Most Senators feel we must have aircraft carriers.

I submit that if we feel we must have aircraft carriers, then it is only logical that we have modern, nuclear-powered ones, and not be forced to utilize carriers which are reaching a high age, and which, as a consequence, are and will continue to be much more costly to operate.

Mr. President, I think it would be unwise if the Senate were to adopt the amendment of the distinguished Senator from Minnesota and the distinguished Senator from New Jersey. I say again, it is not a question—and the amendment is built on this premise—of how many carriers the Navy ought to have. I do not argue whether the Navy should have 15 carriers, 10 carriers, seven carriers, or whatever it should have; but if you concede that the Navy should have carriers, if you concede that we must have carriers if we are to maintain a modern navy, then I submit, Mr. President, that the least number of modern nuclear-powered carriers we can or should have is three.

We have to date one, the *Enterprise*. We have the *Nimitz*, which will be in use in 1971, and the funds for the third nuclear-powered carrier are included in this bill, which the Senate has been debating for the past 8 or 9 weeks.

So, Mr. President, I support the authorization of this third nuclear-powered attack aircraft carrier, and I oppose the amendment offered by the Senator from Minnesota and the Senator from New Jersey.

Mr. President, in connection with my remarks about the value of aircraft carriers, I ask unanimous consent that a study of the use of carriers, entitled "Carrier Employment Since 1950," by Adm. David L. McDonald, former Chief of Naval Operations, be printed at this point in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

CARRIER EMPLOYMENT SINCE 1950

(By Adm. David L. McDonald, U.S. Navy, president, U.S. Naval Institute)

At this time of international tensions that require large national investments for defense, at this time when technology makes possible a wide selection of complex, costly weapons, it is well, perhaps, to back off and look at the practical results recently achieved by any given major weapon under consideration. If it is true that the proof of the pudding is in the eating, then it is true that the proof of a weapon is in its employment. Let us examine, then, the employment in recent years of one of the Navy's major weapons—the aircraft carrier.

The end of World War II found the Navy with an inventory of 24 *Essex*-class attack carriers commissioned or building, eight light carriers, 74 escort carriers, and three obsolete prewar carriers. Of the 111 carriers of all types used in the War, 11 were lost in combat, none of which were *Essex*-class. If the performance of carriers in World War II can be summarized in one sentence, it is this—carrier strike forces, Japanese as well as American, always defeated land-based air forces. The issue was in doubt only when they were carriers on both sides of the battle.

At the outbreak of the Korean War in the summer of 1950, the Navy had seven attack carriers, four light carriers and four escort carriers in commission. Three of the attack carriers were of the 45,000-ton *Midway*-class—the *Midway*, *Franklin D. Roosevelt*, and *Coral Sea*, CVBs 41–43, respectively—which had joined the Fleet between 1945 and 1947. The bulk of the force was in the Atlantc or Mediterranean; the Pacific Fleet included only three attack carriers and two escort carriers. The one Pacific Fleet attack carrier west of Pearl Harbor, USS *Valley Forge* (CV–45), was in the South China Sea on 26 June; on the 27th she was ordered to Korean waters. En route, she was diverted to make a show of force in the Taiwan Straits because of possible Chinese Communist invasion preparations. Operating in the Yellow Sea a few days later, she launched the first carrier strikes of the War on 3 and 4 July against Pyongyang, capital of North Korea and focal point of its western railroads. The *Valley Forge* was then ordered south to stand by to counter possible hostilities in the Taiwan Straits. Back in the Sea of Japan on 18 July, she supported the landings at Pohang. Remaining in the area for several days, she operated to the south and west of the peninsula with offensive missions against enemy troops and supply lines in support of the holding actions of Americans and South Korean ground forces.

The *Valley Forge* remained the only engaged carrier until the beginning of August when another Pacific Fleet attack carrier arrived. The build-up continued with two escort carriers whose ASW aircraft had been replaced by Marine squadrons and by the third Pacific Fleet attack carrier—the USS *Philippine Sea* (CV–47)—which arrived in mid-September. The first Atlantic Fleet attack carrier—the USS *Leyte* (CV–32) arrived in early October. At this point, four of the seven attack carriers in operation at the beginning of the War were committed to Korean operations; the fifth and sixth were in the Mediterranean, and the seventh was operating in the Caribbean.

In the meantime, reinforcements were arriving from the United States, and an amphibious force was organized to land at Inchon, behind the front and halfway up the west coast. After delivering a capacity load of ammuntion, 145 F–51s for the U.S. Air Force, and a number of radar vans, jeeps, and other material, from Alameda, California, to Yokosuka, Japan, the USS *Boxer* (CV–21) returned to Alameda for reloading and rejoined the forces in the Western Pacific just in time to participate in the landing. Under cover of naval gunfire and sea-based aircraft from three attack carriers and two escort carriers, the landing force went ashore at Inchon on 15 September and pressed inland toward Seoul.

The fighting during this period, ranging as it did from the retreat to Pusan to the Inchon invasion, comprehended a number of interesting characteristics. The final North Korean drive to the Pusan perimeter resulted in the withdrawal of all Air Force fighter bombers to Japanese bases, and this reduced the payloads and loiter time available for close support. Carrier-based aircraft thereafter provided a substantial advantage in sortie rates, weapons, and time on station, but it proved difficult to exploit this. Even relatively modest numbers of aircraft tended to saturate the existing air control system (although targets were not lacking). Action reports of the period contain frequent complaints of the inability of the control system to absorb profitably naval close support missions.

Following the Inchon landings our forces moved rapidly toward the Yalu River. Victory appeared imminent, so the *Boxer* was permitted to return to the United States for her delayed overhaul. The *Valley Forge* was also ordered home on 21 November.

Chinese Communist forces from Manchuria attacked en masse on 26 November. In addition to throwing back the Eighth Army in the west, they succeeded in cutting off the Tenth Corps near the Chosin Reservoir. At this point, with land-based tractical air being pushed off advanced bases, the situation was critical; with only the *Leyte* and the *Philippine Sea* on the line, reinforcement was urgently required. The USS *Prince-*

ton (CV–37), freshly out of mothballs and already on the way, arrived on 2 December. A fourth attack carrier having just arrived in San Diego on 1 December, embarked the *Boxer* Air Group and returned to action on 22 December in time to cover the last days of the evacuation. Marine Corps squadrons ashore, now without airfields, were used to fill empty deck spaces on three carriers offshore (two escort carriers and one light carrier) and continued their support missions. For 16 successive days, the surrounded Tenth Corps received on the order of 220 close support sorties a day with a record peak of 315 on one day at the height of the breakout. Each carrier-based sortie remained on station from one to 1.5 hours and made between five and nine attack passes. Over three-quarters of these sorties were provided by carriers, and it is unlikely that the Tenth Corps would have broken out to the coast without them. As a result of the severe losses inflicted on the Chinese by the Tenth Corps and tactical air, the subsequent evacuation of over 100,000 troops and their full equipment was accomplished with negligible loss.

Carrier operations in the remaining years of the Korean War emphasized sustained interdiction of the logistic net in the eastern half of Korea. When the Chinese undertook offensive ground action there were diversions to close air support and to airfield neutralization during the periodic Chinese efforts to regain air superiority. The fact that the front line was perpendicular to the coast line gave carrier aircraft shorter radii and therefore higher payloads and sortie rates for many interdiction and airfield targets. Throughout 1952 and 1953, about half of the Pacific Fleet carriers were maintained in Korean waters.

Of the 11 attack carriers which ultimately saw action in Korea, only four were in active status at the start of the War. The carrier force level rose during the three years of war from seven at the beginning to 18 at the end by reactivating ships from the Reserve Fleet inventory which had been created as a result of World War II.

The Korean Armistice went into effect in July 1953. Soon thereafter, the Communist effort was stepped up in Southeast Asia. In response, the Navy shifted the bulk of its Western Pacific carrier forces to the south. During the desperate battle of Dien Bien Phu in May 1954, two attack carriers were standing by to intervene on behalf of the entrapped French and Vietnamese forces had a decision been made to do so.

The next major employment of attack carriers occurred in 1955, north of the Taiwan Straits. The Chinese Communists assaulted and seized one of the Tachen Islands. Of the nine attack carriers in the Pacific Fleet, five were quickly assembled off the Tachens to cover another amphibious evacuation. The commitment of this major naval force unmistakably indicated U.S. willingness to intervene, and the 1,800 sorties flown in a week also clearly demonstrated a capability to intervene effectively without recourse to nuclear weapons. The over-all posture of the carrier force at this time was as follows:

In commission	16
Overseas	7
Coastal waters	7
Overhaul	2

Active intervention in the Taiwan area was again necessary in 1958. The incident also involved coastal islands and was accompanied by renewed activity in the Straits, a build-up of forces on the Chinese mainland, and repeated announcements that Formosa would be "liberated." The timing may have been influenced by the simultaneous involvement of U.S. naval forces in the Lebanon crisis in the Mediterranean. If this was an attempt by the Communists to catch U.S. naval forces off guard, it failed. In fact, an immediate move was made to improve the readiness posture in the Western Pacific by sailing the USS *Lexington* (CVA–16) (when, in October 1952, CVs and CVBs were officially designated as CVs, they became in name what they had been in fact—*attack* aircraft carriers) from San Diego on 17 July for that purpose.

On 15 July with the situation in Lebanon rapidly approaching the crisis state, President Dwight D. Eisenhower responded affirmatively to President Camille Chamoun's appeal for intervention. At this time we had two attack carriers deployed in the Mediterranean out of a total of six in the Atlantic Fleet. Twelve hours after the President's order was issued, these two carriers supported U.S. Marine Corps landings to seize the Beirut airport. U.S. Army troops were air-lifted into the Marine-held airport four days later, on 19 July. Clearances on over-flights and landing rights were required by several European, African, and Middle Eastern nations. Since these did not affect carrier operations, the Navy retained air support responsibility until 5 September.

Turning back to the Pacific, the Communists began shelling the islands of Quemoy and Matsu, off the Chinese mainland, on 23 August 1958, thus preventing the logistic support of Nationalist garrisons there. When the Seventh Fleet intervened, all the ingredients of all-out war were present.

The pattern of Fleet operations that developed concentrated the attack carrier task groups on an arc around Formosa with their activity designed to make the enemy fully aware of both their presence and their strength. Carrier aircraft covered surface units escorting Chinese Nationalist logistic forces in international waters en route to and from the island groups under fire. U.S. support helped to keep the islands from falling to the Communists.

On the day the shelling of Quemoy and Matsu began, we had 15 attack carriers on active duty and they were located as follows:

Eastern Mediterranean (Lebanon area)	[1] 2
Eastern Atlantic	1
East coast	[2] 2
Overhaul east coast	1
Total	6
Western Pacific (Quemoy-Matsu)	3
En route western Pacific	2
West coast	[2] 4
Total	9

[1] One CVA sailed five days later for WestPac via Suez, as her relief arrived in the Mediterranean.

[2] One CVA on each coast was conducting refresher training subsequent to major overhaul.

The situation again stabilized and the immediate threat of an over-water invasion subsided. Communist forces kept the issue alive, however. Unable to achieve control of Formosa Strait and the coastal water of the East China Sea, they turned with renewed effort to expand southward on the mainland. Without challenging the naval forces present, they waged war in Vietnam, in Laos, and on the borders of India. None of the countries in Southeast Asia escaped their persistent aggressiveness.

During this general period, the carrier forces had been undergoing a gradual change in character and capabilities. Four *Forrestal*-class attack carriers—the *Forrestal, Saratoga, Ranger,* and *Independence,* CVAs 59–62, respectively—joined the Fleet between October 1955 and January 1959. Two improved *Forrestal*-class carriers—the *Kitty Hawk* and the *Constellation,* CVAs 63 and 64 were commissioned in 1961, as was the nuclear-powered USS *Enterprise* (CVAN–65). In response to announced national policy, the emphasis on nuclear delivery capabilities grew steadily. Aircraft primarily designed for nuclear strikes, such as the A–3, were introduced in quantity. Efforts were made to develop improved weapons like Bullpup despite increasing pressure to economize on conventional capabilities.

In 1960, a major short-term build-up of U.S. retaliatory capability was undertaken in response to Soviet pressure on Berlin. Among other emergency measures taken was a major increase in the degree to which the carrier force was committed to a nuclear retaliatory role. Most noticeable was the deployment of an additional carrier to the Mediterranean bringing the total there to three. This carrier and one of the three carriers in the Far East were loaded with air wings which consisted almost entirely of attack aircraft. This emergency posture was maintained from mid-1960 to mid-1961, and provided for overseas deployment of six of the 15 available carriers during most of the period. The protracted commitment placed a severe strain on Fleet resources.

During the spring of 1961, carriers were involved in readiness operations in the Caribbean and Western Atlantic, which did not receiver public notice. This is an illustration of the discreet manner in which aircraft carriers can be employed.

A more recent crisis in which carriers participated involved Cuba. In October 1962, the late President John F. Kennedy demanded the removal of Soviet missiles clandestinely introduced into the island and took firm measures to back up his demand. The USS *Enterprise* (CVAN–65) and the USS *Independence* (CVA–62) played major roles in the Quarantine action and they, along with the *Lexington,* would have supported the landings in Cuba had the President made a decision to invade. The adaptability and flexibility of the sea-air team was demonstrated by reassigning the *Lexington,* on duty as the Naval Air Training carrier, temporarily to attack carrier duty with an Air Wing embarked from a carrier in overhaul. During the Quarantine, the *Enterprise* and the *Independence* were at sea for 49 and 41 consecutive days respectively without relief or in-port replenishment, and their air wings averaged 120 flights per day. Because of the possibility of Soviet moves elsewhere, for example against Turkey, the two attack carriers in the Mediterranean were maintained on station. Similar contingencies in the Pacific motivated the movement of a carrier to the Hawaiian area to reduce the time required to reinforce the three carriers already in the Western Pacific. The resulting posture is summarized below:

Active carriers	16
Committed to Cuban operation	3
Deployed overseas	6
Coastal waters and overhaul	7

There were other crises and incidents in which attack carriers played important roles.

For almost three years following the 1948 break between Moscow and Belgrade there was a steady military build up in the East European Satellites. This was coupled with economic, ideological, and implied military pressure. In the politically critical spring of 1951, the United States suddenly doubled its Mediterranean Fleet by having the forces scheduled to relieve arrive about six weeks ahead of time and by retaining the forces due to be relieved for several weeks beyond their normal tour. In November, the United States formally committed itself to provide military assistance to Yugoslavia. A month later, a cruise by Marshal Tito in the USS *Coral Sea* (CVA–43) further underscored this commitment and advertised the immediate availability of U.S. military power in the Mediterranean even thought we were at the same time fighting a war in Korea.

During the Suez crisis in late October 1956, the USS *Franklin D. Roosevelt* (CVA–42) covered the evacuation by ship of 1,700 U.S. citizens from Israel and Egypt. Both Mediterranean carriers were kept at a high degree of readiness during this crisis.

In April 1957, Sixth Fleet units, including the USS *Forrestal* (CVA–59), were in the Eastern Mediterranean to support President Eisenhower's warning against a threatened take-over of the government of Jordan by the Communists. This show of force was maintained for a week to emphasize U.S. determination that Jordan should remain independent.

In the summer of 1960, the USS *Wasp* (CVS–18) arrived off the Congo to help in the mass evacuation of Americans should that become necessary. She also delivered aviation gasoline to support the United Nation's airlift of Congo forces.

In November 1961, at the request of Guatemala and Nicaragua, President Kennedy ordered a naval patrol of Central American waters to intercept and prevent any Communist-led invasion of those two countries from the sea. The USS *Shangri-La* (CVA–38) immediately initiated the patrol.

Pacific Fleet carriers covered the deployment of the Marines in Thailand in May 1962. This action, in response to the violation of the cease-fire in Laos, followed by major Pathet Lao successes, was designed to give a clear indication of U.S. intentions to defend Thailand, to place a precautionary impact on the situation in Laos, and to maintain positions for quick reaction in the event of a decision calling for further action.

A table of crises showing carrier force levels and inventory is given below:

CRISES INVOLVING CARRIERS

Date	Crisis	Force CVA level	CVA inventory
June 1950	Korea (start)	7	27
March–December 1951	Yugoslavia	14	27
July 1953	Korea (end)	18	27
February 1955	Tachen evacuation.	16	16
October 1956	Suez	19	17
April–May 1957	Jordan	17	17
July–August 1958	Lebanon	15	12
August–December 1958	Quemoy-Matsu.	15	12
July 1960	Congo	14	14
September 1960	Berlin	15	14
November 1960	Guatemala and Nicaragua.	14	14
February–April 1961	Laos	14	17
June 1961	Dominican Republic.	15	17
May 1962	Thailand	15	17
October–December 1962	Cuba	15	15
Present strength		15	15

Inventory includes those CVAs capable of operating all models of CVA aircraft existing in significant numbers in the aircraft inventory. Where force level exceeds inventory, in the table above, obsolete carriers with second line aircraft were included.

It is instructive to review the actual ways in which carriers have been used since 1950 with a view to comparing doctrine with practice. Since the demise of the Japanese Fleet and the appearance of nuclear weapons, carrier force doctrine (in common with many other force doctrines) had emphasized nuclear deterrence, with reduced emphasis on supporting amphibious operations, control of the sea, and showing the flag. All of these missions have continued to engage the Fleet, however. It is striking that amphibious evacuation has been encountered about as often and as importantly as amphibious assault. Perhaps it is natural that this role has been commonly overlooked. Few planners plan on disaster, and the recurrent occurrence of military and political reverses has been submerged by the generally successful results of the series of confrontations during the past decade.

The classic World War II role of the carrier—the gaining and exploiting of air superiority in a local area until forward land-based air could assume the function—has not been exercised in the recent past primarily because such a challenge was declined by the opponents. However, the potential vulnerability of airlifted forces which was inferentially demonstrated in the 1961 Laotian crisis implies that the air superiority mission of the carrier may recur with increasing importance. A new but related role has emerged since 1950 which provides cover for the arrival of airlifted troops and deploying land-based aircraft. In Lebanon, this mission was only an extension of the basic purpose of amphibious operations. But in the 1961 Laotian crisis, the potentially chaotic ground situation at the terminal airfields made troop commanders conscious of the importance of having close air support available immediately upon landing. Similarly, the proximity of the airlift route to Chinese airfields indicated the desirability of carrier-based fighter escort.

A final characteristic of the past decade and a half can also be noted. This was the tendency of crises to occur in the Taiwan Straits coincidentally with the commitment of U.S. forces elsewhere. This happened several times during the Korean War, perhaps for diversionary purposes, and the Quemoy-Matsu crisis appears to have been a test of U.S. ability to respond while major forces were committed in the Middle East.

It is interesting to note that although the carrier force is relatively slow moving in comparison with modern aircraft, carriers have been on the scene early in the development of most major crises. This appears to result from one of the salient characteristics of the force. Although it moves in an assault configuration, essentially ready for maximum effort air operations, it can be moved as ostentatiously or as discreetly as desired. One thing in common about most of these crises is the manner in which carrier forces have been moved toward the trouble spots, is they were in Lebanon, Quemoy-Matsu, and Cuba, on the most tenuous strategic warning and prior to national political decisions. They have also moved in the face of substantial enemy threats as was the case both in Korea and during the Taiwan crises.

Looking back over the last 15 years, what have the attack carriers' missions been and what have their particularly useful characteristics been? The missions can be summarized as follows:

Provide air cover for amphibious landings, as in Inchon, Lebanon, and potentially in Cuba.

Provide close air support for ground forces as in Korea.

Provide U.S. military presence, as during the Dominican Republic crisis, the Tachens evacuation, the Quemoy-Matsu and Lebanon crises.

Provide air cover and ground support for amphibious evacuations as at Hungnam.

Provide air cover for deployment of troops and land-based air as in Korea, Lebanon, and, more recently, Thailand.

Prepare to conduct blockade, search and attack, as was done off Cuba, Guatemala, and Nicaragua.

Contribute to the alert strategic forces for general war.

The particularly useful characteristics of attack carriers have been that they move in an assault configuration prepared, as they were in the Inchon and Lebanon landings, the Tachens and Hungnam evacuations, and the Quemoy-Matsu crisis, to take control of the air against air opposition. As pointed out previously, they move easily to trouble spots on the basis of even tenuous strategic warnings. Lebanon, Quemoy-Matsu, Cuba, and the Dominican Republic are examples. Top level decisions to move naval forces prior to commitment have not been required because they were operating in international waters. Because they operate in international waters, permission from a foreign country has never been necessary to proceed to the scene of a crisis, whereas U.S. land-based planes en route to Lebanon and the Congo required overflight clearances, sometimes a time-consuming requirement.

The aircraft carrier is sovereign U.S. territory. The carriers have proven themselves to be initially self-sustaining and readily replenishable at sea during all of the crises in which they have played a role. In these crises they have not had to depend on prepositioned base facilities, supplies, etc., since overseas replenishment has been made at sea from an underway replenishment group. Carrier's launch and recovery areas have proven as extensive as international waters; for example, a show of force over the Taiwan Straits and a few days later a strike from the Yellow Sea against Pyongyang. Tactically, carriers have been able, as in the Tachens evacuation and the Quemoy-Matsu crises, to concentrate as a single force to obtain desirable odds.

The records show that attack carrier force levels rose from a low of seven at the beginning of Korea to 18 at the end by recommissioning from the inventory created by World War II; force levels subsequently ranged from 19 in 1956, to 14 in 1960, to 15 at the present time. The average number of active carriers has been slightly more than 15.

Secondly, in the Far East, a maximum deployment of five carriers has been recurrent; in the Mediterranean, three have been used with additional carriers pushed forward in the Eastern Atlantic; and in the Caribbean, three have been called out.

This history, covering a decade and a half, suggests the following conclusions about attack carriers:

They have typically been on the scene when needed.

They have been directly involved in the majority of post-World War II crises.

They have been ideally suited for the projection overseas of U.S. military power either discreetly or ostentatiously.

They have been adaptable to a wide range of missions.

Carriers have always been used advantageously by the United States; it is difficult for me to conceive of accomplishing the same results with fewer.

SUMMARY OF USES OF CVA'S SINCE 1950—CRISIS AND MISSION

Inchon: Provided air cover for amphibious landings.

Inchon, Lebanon, Thailand: Provided air cover for deployment of land-based air and troops—in Lebanon from time of landing of troops until relieved of air support responsibility six weeks later.

Korea: Provided close air support for ground forces.

Yugoslavia, Tachens, Jordan, Lebanon, Congo, Quemoy-Matsu, Dominican Republic: Provided U.S. military presence.

Cuba, Guatemala, and Nicaragua: Prepared to conduct blockade, search, and attack.

Hungnam, Tachens: Provided air cover for amphibious evacuation.

Korea: Interdicted logistic net and neutralized airfields.

Berlin: Contributed to nuclear strategic deterrent.

Suez, Cuba: Provided air cover for evacuation of U.S. civilians in crisis area.

Korea: Transported Army and Air Force equipment including planes, jeeps, vans, ammunition, etc.

Congo: Transported gasoline to U.N. forces.

Mr. SPONG. Mr. President, today we begin the debate on the amendment to defer the construction of a second attack carrier already funded in part; and once again, as is so well pointed out in an editorial published in the Virginian-Pilot of September 8, 1969, the effectiveness of the attack carrier is being challenged.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NAVY CHALLENGED AGAIN: THE CASE FOR THE CARRIER

The Navy has had, heaven knows, experience enough at defending the aircraft carrier—in concept, propulsion, numbers. Its current campaign against the Mondale-Case amendment in the Senate to cut the projected third nuclear-powered carrier from the 1970 military authorization bill is a reminder that one decade ago Senator William Proxmire was arguing against the construction of a second nuclear carrier on the grounds that the first, which was a year from launching, would be obsolete in this "age of intercontinental and intermediate-range ballistic missiles."

In those days the Navy was insisting that the big attack carrier had a nuclear-deterrent role, just like the Polaris-missile submarines and the land-based ICBM. "In a nuclear war," Admiral George Anderson said when Chief of Naval Operations in the Kennedy years, "any carrier that could launch its air group equipped with nuclear weapons would have performed its mission. Even if ten of our fifteen carriers were caught before they could launch, planes from the five other attack carriers could destroy any country in the world."

That argument soon was shifted; the Navy began to justify the attack carrier for its guarantee to the Nation of "strategic air mobility" in distant corners of the world. Should United States air bases abroad become untenable—as surely they would in many circumstances—the carrier's usefulness as a mobile airfield would become highly important. And even if land bases remained intact and available, carrier readiness and speed would be advantageous. "The best example of comparative reaction time between carrier-based and other air power was the Lebanon crisis," said Vice Admiral P. D. Stroop, then Chief of the Bureau of Weapons, in 1963. "Strike aircraft from the Sixth Fleet were flying 120 sorties a day on the first day—within twelve hours of President Chamoun's request for aid—covering the landing of 5,500 Marines. The carrier planes continued this sortie rate for three weeks until the first land-based aircraft—a TAC strike group flown in to the big NATO jet base at Anda, Turkey—were available for sustained operations."

The Lebanese affair of 1958 remains an argument for the aircraft carrier. It also is an anti-carrier argument. For U.S. people have become progressively skeptical, largely in reaction to the Vietnam War stalemate, of the Government's involving itself in the far-place flareups that from time to time become inevitable. There is opinion that the carrier fleet tempts Washington into sticking its nose where it should not—into continuing its dubious role of world policeman.

Yet there is an overwhelming case for a powerful carrier force. Control of the seas is vital to the North Atlantic Treaty Organization and to the system of Western alliances upon which the security of the United States has been built. So the Soviet Union's current drive for maritime dominance threatens to become the most important development of this half of the Twentieth Century. The principal Western check on that drive is the carrier and her family of escorts and auxiliaries—is, in brief, the U.S. surface fleet. It is indispensable to the Free World.

AUTHORIZATION FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS ON FRIDAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate convenes on Friday morning at 10 o'clock, there be a period for the transaction of routine morning business not to extend beyond 10:30 o'clock.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR UNFINISHED BUSINESS TO BE LAID BEFORE SENATE ON FRIDAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the pending business be laid before the Senate as the unfinished business at the conclusion of the transaction of routine morning business on Friday morning, but not later than 10:30 o'clock.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum will be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL FRIDAY, SEPTEMBER 12, 1969, AT 10 A.M.

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the order of September 9, 1969, that the Senate stand in adjournment until 10 o'clock Friday morning.

The motion was agreed to; and (at 5 o'clock and 50 minutes p.m.) the Senate adjourned until Friday, September 12, 1969, at 10 o'clock a.m.

NOMINATIONS

Executive nominations received by the Senate September 10, 1969:

DIPLOMATIC AND FOREIGN SERVICE

Joseph S. Farland, of the District of Columbia, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Pakistan.

NATIONAL COUNCIL ON THE ARTS

Nancy Hanks, of New York, to be Chairman of the National Council on the Arts for a term of 4 years, vice Roger L. Stevens, term expired.

U.S. ATTORNEY

Edward R. Neaher, of New York, to be U.S. attorney for the eastern district of New York for the term of 4 years, vice Joseph P. Hoey, resigned.

U.S. MARSHAL

Gaylord L. Campbell, of California, to be U.S. marshal for the central district of California for the term of 4 years, vice George E. O'Brien, retired.

Arthur F. Van Court, of California, to be U.S. marshal for the eastern district of California for the term of 4 years, vice John C. Begovich.

Anthony T. Greski, of New Jersey, to be U.S. marshal for the district of New Jersey for the term of 4 years, vice Leo A. Mault.

IN THE ARMY

I nominate the following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. George Gray O'Connor, O21088, U.S. Army.

The following-named officers for temporary appointment in the Army of the United States to the grade indicated under the provisions of title 10, United States Code, sections 3442 and 3447:

To be major general

Brig. Gen. Robert Clinton Taber, xxx-xx-xx... xxx-x... Army of the United States (colonel, U.S. Army).

Brig. Gen. Charles Carmin Noble, xxx-xx-x... xxx-x... Army of the United States (colonel, U.S. Army).

Brig. Gen. James Francis Hollingsworth, xxx-xx-xxxx Army of the United States (colonel, U.S. Army).

Brig. Gen. Burnside Elijah Huffman, Jr., xxx-xx-xxxx Army of the United States (colonel, U.S. Army).

Brig. Gen. Warren Kennedy Bennett, xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. John Reiley Guthrie, xxx-xx-xxxx xxx-x... Army of the United States (colonel, U.S. Army).

Brig. Gen. Edwin I. Donley, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Thomas Matthew Rienzi, xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. Felix John Gerace, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Thomas Harwell Barfield, xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. Edward Michael Flanagan, Jr., xxx-xx-xxxx Army of the United States (colonel, U.S. Army).

Brig. Gen. Bernard William Rogers, xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. Allen Mitchell Burdett, Jr., xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. John Albert Broadus Dillard, Jr., xxx-xx-xxxx Army of the United States (colonel, U.S. Army).

Brig. Gen. Richard Logan Irby, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Richard McGowan Lee, xxx-xx-x... xxx-x... Army of the United States (colonel, U.S. Army).

Brig. Gen. John Daniel McLaughlin, xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. George Mayo, Jr., xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. Albert Hamman Smith, Jr., xxx-... xxx-xx-xx... Army of the United States (colonel, United States Army).

Brig. Gen. John Stephan Lekson xxx-xx-x... xxx-x... Army of the United States (colonel, U.S. Army).

Brig. Gen. Franklin Milton Davis, Jr., xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brigadier General Leo Edward Benade, xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. Theodore Antonelli, xxx-xx-xxxx, Army of the United States (colonel, U.S. Army).

Brig. Gen. William Bennison Fulton, xxx-... xxx-xx-xx... Army of the United States (colonel, U.S. Army).

Brig. Gen. James George Kalergis, xxx-xx-x... xxx-x... Army of the United States (colonel, U.S. Army).

Brig. Gen. Erwin Montgomery Graham,

Junior, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Harry Lee Jones, Junior, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Robert Paul Young, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. John Joseph Hennessey, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Darrie Hewitt Richards, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Howard Harrison Cooksey, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Verne Lyle Bowers, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. William Warren Cobb, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Fred Kornet, Junior, [redacted] Army of the United States (major, U.S. Army).

Brig. Gen. Harold Gregory Moore, Junior, [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Brig. Gen. George William Casey, [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Brig. Gen. Alexander Russell Bolling, Junior, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. William Love Starnes, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. John Howard Elder, Jr., [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Joseph Edward Pieklik, [redacted] Army of the United States (colonel, U.S. Army).

The following-named officers for appointment in the Regular Army of the United States to the grade indicated, under the provisions of title 10, United States Code, sections 3284 and 3306:

To be brigadier general

Brig. Gen. Leo Edward Benade, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Richard Logan Irby, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Charles Carmin Noble, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. George Mayo, Jr., [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Felix John Gerace, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Franklin Milton Daxis, Jr., [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. George Samuel Beatty, Jr., [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Robert Clinton Taber, [redacted] Army of the United States (colonel, U.S. Army).

Maj. Gen. Paul Alfred Feyereisen, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Albert Hamman Smith, Jr., [redacted] Army of the United States (colonel, U.S. Army).

Maj. Gen. Richard George Ciccolella, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. James Francis Hollingsworth, [redacted] Army of the United States (colonel, U.S. Army).

Maj. Gen. Wesley Charles Franklin, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Edwin I. Donley, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. William Warren Cobb, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Edwin Montgomery Graham, Jr., [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Thomas Harwell Barfield, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. John Daniel McLaughlin, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Richard McGowan Lee, [redacted] Army of the United States (colonel, U.S. Army).

Maj. Gen. Jack Jennings Wagstaff, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Warren Kennedy Bennett, [redacted] Army of the United States (colonel, U.S. Army).

Maj. Gen. Harris Whitton Hollis, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. John Stephan Lekson, [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. John Albert Broadus Dillard, Jr., [redacted] Army of the United States (colonel, U.S. Army).

Brig. Gen. Robert Paul Young, [redacted] Army of the United States (colonel, U.S. Army).

Maj. Gen. Francis Paul Koisch, [redacted] Army of the United States (colonel, United States Army).

Brig. Gen. Thomas Matthew Rienzi, [redacted] Army of the United States (colonel, United States Army).

Maj. Gen. Willis Dale Crittenberger, Jr., [redacted] Army of the United States (colonel, United States Army).

Maj. Gen. Kenneth Lawson Johnson, [redacted] Army of the United States (colonel United States Army).

Maj. Gen. Donald Hugh McGovern, [redacted] Army of the United States (colonel, United States Army).

Brig. Gen. Joseph Edward Pieklik, [redacted] Army of the United States (colonel, United States Army).

Brig. Gen. William Love Starnes, [redacted] Army of the United States (colonel, United States Army).

Brig. Gen. Elvy Benton Roberts, [redacted] Army of the United States (colonel, United States Army).

Brig. Gen. William Bennison Fulton, [redacted] Army of the United States (colonel, United States Army).

Brig. Gen. Harry Lee Jones, Jr., [redacted] Army of the United States (colonel, United States Army).

Brig. Gen. James George Kalergis, [redacted] Army of the United States (colonel, United States Army).

Maj. Gen. Leonard Burbank Taylor, [redacted] Army of the United States (colonel, U.S. Army).

To be brigadier general

Col. Thomas McKee Tarpley, [redacted] U.S. Army.

Col. John Willson Donaldson, [redacted] U.S. Army.

Col. Ira Augustus Hunt, Jr. [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Frederick James Kroesen, Jr., [redacted] U.S. Army.

Col. Ernest Graves, Jr., [redacted] U.S. Army.

Col. Herbert Joseph McChrystal, Jr., [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Alexander Meigs Haig, Jr., [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. George Shipley Prugh, Jr., [redacted] U.S. Army.

Col. Frank Ambler Camm, [redacted] U.S. Army.

Col. William Roy Wolfe, Jr., [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Robert Morin Shoemaker, [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Adrian St. John II [redacted] U.S. Army.

Col. Charles Robert Myer, [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Gordon James Duquemin, [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Henry Everett Emerson, [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Herbert Ardis Schulke, Jr., [redacted] Army of the United States (lieutenant colonel, U.S. Army).

Col. Eugene Priest Forrester, xxx-xx-xxxx, Army of the United States (lieutenant colonel, U.S. Army).

CONFIRMATIONS

Executive nominations confirmed by the Senate September 10, 1969:

U.S. ATTORNEYS

Wayman G. Sherrer, of Alabama, to be U.S. attorney for the northern district of Alabama for the term of 4 years.

Peter Mills, of Maine, to be U.S. attorney for the district of Maine for the term of 4 years.

U.S. MARSHALS

Harold S. Fountain, of Alabama, to be U.S. marshal for the southern district of Alabama for the term of 4 years.

John H. deWinter, of Maine, to be U.S. marshal for the district of Maine for the term of 4 years.

Marvin G. Washington, of Michigan, to be U.S. marshal for the western district of Michigan for the term of 4 years.

Charles S. Guy, of Pennsylvania, to be U.S. marshal for the eastern district of Pennsylvania for the term of 4 years.

EXTENSIONS OF REMARKS

ONE MILLION STUDENTS BENEFIT FROM COLLEGE WORK-STUDY PROGRAM—ROXANNE LAHTI RECOGNIZED AT OFFICE OF EDUCATION CEREMONY

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 10, 1969

Mr. RANDOLPH. Mr. President, in the 5 years since it was passed by the Congress, the college work-study program has opened the door to a college education to many young people who might not otherwise have had the opportunity.

This morning it was my pleasure to participate in a ceremony at the U.S. Office of Education recognizing Miss Roxanne Lahti, of the University of Minnesota, as the one-millionth student to participate in this valuable program.

Miss Lahti was presented a certificate signed by Dr. James E. Allen, Deputy Assistant Secretary for Education, which read as follows:

Given in recognition of Roxanne Lahti as the one-millionth student in college work-study program of federal financial assistance to the youth of America in her education.

Dr. Preston Valien, Acting Associate Commissioner for Higher Education, presided and an informative address was made by Timothy Wirth, assistant to the Under Secretary of Health, Education, and Welfare. Two distinguished legislative leaders from the House of Representatives, Hon. JOHN A. BLATNIK, who represents Miss Lahti's district in Minnesota, and Hon. JOHN BRADEMAS, member of the House Education Subcommittee, had timely remarks about this young lady and the program that is helping her obtain a college education. I was privileged to speak for the Senate Education Subcommittee.

Also participating in the program were James W. Moore, Director of the Office of Education's Division of Student Financial Aid, and these Office of Education staff members: Norman Brooks, James Allen, Mike Oliver, Warren Troutman, and Ed Sanders.

Mr. President, I ask unanimous consent that the address of Mr. Wirth and my remarks be printed in the RECORD.

There being no objection the addresses were ordered printed in the RECORD, as follows:

ADDRESS BY TIMOTHY WIRTH

It is a pleasure to greet the distinguished guests who have come here this morning to join us in the Department of Health, Education, and Welfare in honoring Miss Roxanne Lahti, the one millionth student to hold a job under the College Work-Study program.

Roxanne grew up on a farm near Barnum, Minnesota, where she attended high school, taking an active part in her school's activities—including playing clarinet in the band. She has done all the work there is to do in running a farm—beginning with milking cows at age four—and learning, by age nineteen, to say "You can't beat the tranquillity of the country."

As a former peach farmer from California, I know Miss Lahti has long been interested in medical science. This, with her natural love for animals, has led her to an early and logical career choice. She is going to be a veterinarian.

Her school—the University of Minnesota, Duluth Campus—also made a logical choice in arranging Miss Lahti's summer time job under the College Work-Study program. She was employed by the Duluth Zoo, where she bottle fed baby tigers and other young animals, and worked in the museum.

Wherever possible, the 2,200 colleges participating in the College Work-Study program try to provide employment for their students in occupations related to their career objectives. For example:

James Bryant, a 30-year old veteran majoring in special education here in Washington at D.C. Teachers College, spent the summer working with elementary school children with learning difficulties;

Horace Williams, a major in graphic designs at the Kansas City Art Institute and School of Design, has been writing pamphlets and taking pictures for the Police Department this summer;

Findley Scribner, a deaf mute vocational student at Idaho State University, who plans to become an upholsterer, has been refurbishing a college office this summer.

Lydia Sonia Vasquez, a business administration major at Metropolitan State College in Denver, works as a secretary in the College's Financial Aid Office;

Eilien Duda, a senior at Alaska Methodist University in Anchorage, who wants to be a nuclear technician, is working as a hospital x-ray technician;

William S. LaCorte, a pre-med student at Johns Hopkins University in Baltimore, has worked this summer in biomedical research with NIH's National Cancer Institute;

Employment in the College Work-Study program is varied: Some students are also food service workers, typists, library assistants. Some mow the lawns and others work with sophisticated computers, or work off-campus in hospitals, local units of government or in the school system. But they have one thing in common: They are performing a useful service, and they all need their job to help pay college expenses.

As a Nation we move toward the goal that no talented young American will be denied a college education because he can't afford the costs. We are not there yet—but every year we get a little closer to the goal, and our society is that much richer for it.

This year more than a million young Americans will continue their education beyond high school with the help of about one billion dollars in Federal support through the four major programs of financial assistance administered by the Office of Education: The College Work-Study program, the National Defense Student Loan program, the Educational Opportunity Grant program, and the Guaranteed Loan program.

Many of you in Congress who are here today have worked hard, using your time and creative talents in developing and supporting the legislation that makes these statistics possible. And I am certain that you share with us a pride in the knowledge of

what it means, in human terms, to say simply: One million young people are in college today who could not have made it without the help of one or more of these programs of assistance to students.

Some day we will be proud that we invested enough of our resources to make it possible for these young people to attain a college education, to develop their own human potential and make their maximum contribution to our country's continued growth and strength.

REMARKS BY SENATOR JENNINGS RANDOLPH AT CEREMONY RECOGNIZING MISS ROXANNE LAHTI

Thomas Wolfe said: "To every man his chance; to every man, regardless of his birth, his shining, golden opportunity; to every man the right to live, to work, to be himself, and to become whatever his manhood and vision can combine to make him. This is the promise of America."

Wolfe hardly thought in terms of a College Work-Study Program. He did, however, have visions—rather in his time a dream—of a better America.

It is this dream that we continue to strive to achieve. To create that "golden opportunity" regardless of one's birth is our unfulfilled task. And a very real part of this task is access to education and learning—not just at the elementary or secondary level but in college, to the extent of an individual's potential.

The College Work-Study Program, through employment and the benefits of earned income, is providing that access to higher education for young men and women. In no sense is this effort the final answer. But in serving a certain level of need—as do direct loans and grants and insured loans—it becomes an integral and vital part of our total task in affording educational opportunities to our young people.

We sometimes fail to realize how substantial a portion of our population is composed of young people of college age. There are now 14 million Americans, seven per cent of the total population, between the ages of 18 and 21.

Today we honor Roxanne Lahti—the one-millionth student to participate in College Work-Study. In honoring her, we also express tribute to the hundreds of thousands of young men and women who are defraying or partly defraying their college expenses through this program. We commend their initiative and their accomplishments.

As a member of the Senate Education Subcommittee, it was my privilege to actively work on the legislation authorizing this program in late 1964. Its purpose was: "to stimulate and promote the part-time employment of students, particularly students from low-income families, in institutions of higher education who are in need of earnings from such employment to pursue courses of study at such institutions."

And now one million students have been aided, with over two thousand colleges involved. This is a remarkable record. College Work-Study has been an effective means of assisting students in financing their education through meaningful and, in many cases, career-related employment.

I can assure those present today that the Committee on Labor and Public Welfare chaired by the able Sen. Ralph Yarborough and the Subcommittee on Education under the direction of the diligent Sen. Claiborne Pell, remain alert to the needs of higher education and responsive to ideas for making education more readily available to our young people.

Roxanne, congratulations! I commend and congratulate those in the Office of Education who have made such a concerted and splendid effort in achieving the first million. They share—and rightly so—genuine gratification in this accomplishment. Now, let us look to the second million. We hope, Roxanne, that you and the other young women and young men who have benefitted, will help toward this goal.

The late Henry Kaiser, a great industrialist, in his 85th year, said to me: "Tell our young people that we have only scratched the surface. There is so much yet to be done." In College Work-Study there is indeed much to be done. It is a challenging future.

MILITARY REVIEW BOARDS—SOCIO-MILITARY EXPERIMENT CONTINUES

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 9, 1969

Mr. RARICK. Mr. Speaker, in discussing race riots in the military no interest is being displayed in retaining an effective armed service; rather the crux of the investigation is directed toward defusing the explosive effects of forced integration. Social differences have been, heretofore, an unknown consideration of the military which has successfully mixed all classes through the use of strict discipline and uniform dress.

Yet, the self-styled experts whose only concern is admittedly purely racial, with no interest in maintaining an effective military force, refuse to face the reality—that the cause of the problem is of their own creation in misusing the armed services as a massive, prolonged and failing social experiment in integrated living. How can the race problem be solved until it is understood that race mixing is the problem.

The attacks against the military as racist must be exposed as a farce. For if they were true, the solution would be very simple—merely to segregate the troops by color so that there could be no question of an order's being racist. But the socio-military experimenters abolished segregated troops on the theory that segregation was racist. But, at least, under the segregated troops, we did not have the race riots and tension now being investigated.

Military officers and men have no free speech to "sound off" publicly as to what has caused the erosion of morale and breakdown in disciplinary conditions. So, it is incumbent upon retired military men to tell the American people before the entire military is destroyed.

One of the more outrageous recommendations offered as a solution to race riots would handcuff officers in command with biracial committees—a type of civilian military review board—which would examine and analyze orders to eliminate any racist overtone before being given, and probably even the right to countermand the order.

The Commandant of the Marine Corps, one of the best disciplined military organizations in the world has now approved of black marines being granted the special privilege of wearing "Afro" haircuts. Once permissiveness is accepted, what is to stop marines from wearing peace medallions over their uniform, hippie beards and haircuts, and even authorize Black Panthers to wear leopard skins in lieu of the usual marine uniform.

Career military men—those who have developed a pride for and a love of discipline in the service of their country—are and can be expected to decline serving in an undisciplined mob wherein any serviceman can be indulged in special privileges merely because of the color of his skin or other personal tic.

The present undermining attacks against our armed services as well as appeasement by those in position to know better are not conducive to reenlistment or extended service by the caliber of men that are needed to defend our people and our country.

The President's promise of a volunteer army is being precluded by this policy of compensatory military privilege. Based upon the human behavior displayed elsewhere in our society under similar attack, as conditions now exist and faced with the present recommendations, we can expect few enlistments and career servicemen from the Caucasian race. As conditions of service become more disagreeable and discriminatory against merit any volunteer army of the future could be expected to be composed predominantly of Negroes.

Vast appropriations of tax money and statistics indicating large numbers of men in uniform do not constitute an army. Without discipline, without responsible leadership including the commensurate authority to carry out that leadership, there can be no fighting force.

Mr. Speaker, I insert several newspaper clippings following my remarks:

[From the New York Times, Aug. 18, 1969]

MILITARY WEIGHS BIRACIAL COUNCILS—PENTAGON ALSO CONSIDERING REVIEW OF JUSTICE SYSTEM

(By William Beecher)

WASHINGTON, August 17.—The Defense Department is considering requiring all American military posts throughout the world to establish biracial human relations councils.

The councils would consist of officers and enlisted men and would seek, among other things, to determine the causes of racial friction and try to eliminate or minimize them.

Although the idea has been studied before, racial incidents at Camp Lejeune, N.C., and at other posts have given it new impetus, according to Pentagon officials.

Other actions under consideration include the following:

A review of the entire system of military justice to determine whether nonwhites have been regularly discriminated against, as is sometime alleged.

Special indoctrination courses, not only for incoming recruits but for troop commanders as well, on the need for racial harmony if the military is to perform its missions effectively.

The busing of young women to isolated posts for weekend dances in an attempt to minimize the natural frustration of young servicemen lacking female companionship.

A NEW DIMENSION

"There are problems within the military that we must tackle," said L. Howard Bennett, acting deputy assistant secretary of defense for civil rights. "But there is a new dimension to the recent troubles. They represent a spill-over from the problems of the civilian community."

Mr. Bennett, who is a Negro, cited a conversation he had recently with a Negro marine at Camp Lejeune. He quoted the marine as saying:

"I've been to Vietnam. A good many of my brothers died over there. And I exposed myself to all the risks. I've come back home and

found there hasn't been much change for my brothers and sisters in New York, Chicago, Louisville and Cincinnati. It's as bad as before."

Mr. Bennett, a tall, white-haired man who was a municipal judge in Minneapolis before going to the Pentagon to work in the civil rights area nearly six years ago, said Negro servicemen were not talking that way as recently as two years ago.

Their complaints then, he said, centered on such things as promotion policies and the housing available near camps.

ARTICULATE AND ANGRY

"The young black today is aggressive, articulate and angry," Mr. Bennett said. "He even looks at his Negro sergeant as an Uncle Tom, someone who has achieved his rank by working hard, keeping his mouth shut, ignoring insults."

Mr. Bennett and other defense officials feel there has been a breakdown of communications in the military, both from top commanders down and from low-ranking servicemen up. Senior noncommissioned officers and junior officers are blamed by many.

GENERATION GAP

Officials talk of a generation gap problem. Some sergeants, for example, tend to consider as cry-babies some of the young servicemen who resent barracks harassment and name-calling by those who outrank them. In addition, if the sergeants pass along many individual complaints, this tends to reflect on their own leadership.

Prejudice does exist in the military, as it does in civilian life, officials concede, but in the military a man is not as readily able to walk away from it. He is often forced into daily contact with his tormenter, and is sometimes assigned the bunk next to him.

The human relations councils would be intended to force men at all levels to tackle local problems. Proposed orientation courses would be aimed at reminding officers and enlisted men of the value of getting along, as well as the dangers of not trying.

On July 20 at a Camp Lejeune dance, 30 Negro marines attacked 14 white marines, one of whom later died.

After talking with a number of Negro servicemen there, Mr. Bennett said that a frequent complaint was that there were not many women around, either on the post or in nearby Jacksonville, N.C.

"You put 10 to 15 girls in a club with 200 men and you have a volatile situation if only because of the mixture of blacks and whites," he said. "You add dancing and drinking and it becomes increasingly volatile."

MILITARY JUSTICE

Mr. Bennett, who was an official of the United Service Organizations in World War II, would like to borrow a page from U.S.O. experience and bus in women from Raleigh, Wilmington, Wilson and Rocky Mount, N.C., to ease this problem.

Similar activities should be considered for other posts that are far from large cities, he said.

Mr. Bennett recalled a Negro marine's complaint that he got a stiffer sentence for being absent without leave for 15 days than did a white marine who had been away for five months.

"I dont know if this is true, or of the extenuating circumstances," Mr. Bennett said. But complaints of discrimination in military justice are frequent and a major study is contemplated.

Among other things, he would recommend that race be noted in the original docketing of a case. This would allow the Pentagon to compare the treatment of whites and nonwhites for similar offenses.

The striking of racial identification from most records, once thought to be a device to reduce discrimination, often has the opposite effect, Mr. Bennett said.

He said that troop information programs should go out of their way to publicize certain racial information. For example, various young Negro marines have asserted that the Marine Corps has only about half a dozen Negro officers.

"But the marines have a good record. From 65 Negro officers in 1965, they now have 271," Mr. Bennett said. "But who knows that?"

Mr. Bennett, pushing his steel-rimmed glasses back on his nose, conceded that the military had a major, growing problem on its hands. "But, I'm convinced we can get hold of this with vigorous, affirmative action," he said.

[From the Washington Post, Sept. 4, 1969]

MARINES TO PERMIT "AFRO" HAIRCUTS IN MOVE TO DISPEL RACIAL TENSION

(By Fred S. Hoffman)

Acting to cool racial friction, the Marine Corps commandant yesterday granted black Marines permission to wear limited "Afro" haircuts and moved to remedy what he said were some "valid causes of complaint."

At the same time Gen. Leonard F. Chapman Jr. sent messages to his commanders around the world emphasizing the requirement for "total impartiality" in dealing with Marines of all races, colors and creeds and ordering measures "to dispel the racial problems that currently exist."

The commandant, whose corps has been embarrassed by recent racial disorders at bases in North Carolina and Hawaii, stressed that acts of violence between marines "cannot be tolerated, and must stop." The message is to be read to all marines within 24 hours.

His message, and a subsequent news conference, showed that Chapman felt it necessary to permit Negro Marines more leeway in expressing racial pride, provided everything remains within regulations.

So far as the Afro haircut is concerned, Chapman's message said "commanders will permit the Afro-natural haircut providing it conforms with current Marine Corps regulations." He read a regulation which suggests that the Afro haircut would have to be quite limited. The rule says:

"Hair should be worn neatly and closely trimmed. It shall be clipped at the sides and back so as to present an evenly graduated appearance.

"The hair on top must not be over three inches in length. Long or conspicuous sideburns are prohibited."

Marines are supposed to keep their faces clean shaven, although they are allowed what is termed "a noneccentric mustache."

Chapman said "such gestures as the Black Power clenched-fist salute should be discouraged, but not banned except during formation or when rendering military courtesies to colors, the national anthem, or individuals."

"They are . . . expressions of individual belief and are not, in themselves, prohibited," Chapman said. "However, they are grounds for disciplinary action if executed during official ceremonies or in a manner suggesting direct defiance of duly constituted authority."

Chapman suggested that regulations and other materials avoid provocative wording such as paleness to describe a symptom of heat prostration.

He also urged commanders to remedy minor annoyances. For example, he said, there is sometimes a lack of "soul music" in juke boxes at servicemen's clubs on base.

"That sounds like a small thing, but it means something to my black Marines," Chapman said.

He told newsmen his message was an attempt to re-emphasize, especially to younger officers and noncommissioned officers, what he described as the "father-son relationship" between the enlisted man and his superiors.

[From the New York Times, Aug. 17, 1969]

BLACK SERVICEMEN, LAST TO BE CALLED UP IN PAST, MAY BE IN VANGUARD OF DRIVE FOR SOCIAL CHANGE

(By Thomas A. Johnson)

While supervising a security guard detail at the dusty, sun-drenched First Infantry base south of Saigon in South Vietnam, S. Sgt. James Frost mopped perspiration from his nut-brown face and told a visitor why he was a "lifer," or career man in the United States Army.

"The Man can't overlook talent when he wants the job done," he said. "That's pure and simple."

Black career men in the nation's military—especially the Army and the Air Force—have frequently expressed this idea since the armed forces were integrated during the early nineteen-fifties.

For while the military restricts the mobility a civilian enjoys, it has provided career opportunities nonetheless for many persons of varied, or very little skills.

While there are still problems of racial discrimination in the military, as pointed up by recent reports of some racism and some violent outbreaks in the Marine base at Camp Lejeune, N.C., black career men insist that the idea of equal opportunity is more a reality in the military than in most civilian occupations.

REENLISTMENT RATES HIGH

This attitude is reflected in re-enlistment statistics in recent years. These consistently show black servicemen re-enlisting at rates at least twice as high as those of whites in the Air Force, Navy and the Marines and about three times as high in the Army.

Pentagon statistics show that Negroes in the armed services number more than 320,000, or about 9.4 per cent of the total. In the Army, black soldiers come to some 11.5 per cent of the total.

While Negro privates and privates first class in the Army range from 12.4 to 13 per cent, black sergeants first class come to 20.6 per cent and master sergeant 15.7 per cent, showing a concentration by Negroes on military careers.

Two out of three of the Army's drill sergeants in the United States are black, as are one out of four front-line supervisors in Vietnam.

Among Army officers, there is one black general, Brig. Gen. Frederic E. Davison; 42 full colonels (0.7 per cent of the total); 620 lieutenant colonels (3.7 per cent); 1,302 majors (5.5 per cent); 1,322 captains (3.7 per cent); 1,129 first lieutenants (2.9 per cent) and 616 second lieutenants (2.3 per cent).

LARGEST NUMBER IN ARMY

The Army has the largest number of black Americans of the military services, with some 167,599. This compares with 32,934 (4.5 per cent) for the Navy; 33,420 (10.7 per cent) for the Marine Corps and 78,879 (8.9 per cent) for the Air Force.

Black officers in the Navy total 373 (0.4 per cent), while in the Marine Corps they come to 231 (0.9 per cent) and there are some 2,417 officers, (1.8 per cent) in the Air Force.

The highest ranking Negro in the military is Air Force Lieut. Gen. Benjamin O. Davis Jr., former commander of the 13th Air Force in the Far East. He is scheduled to retire soon after 30 years service.

The war in Vietnam has given black fighting men what they call "a sudden visibility" as it is both "the world's first television war" and the first major conflict since the armed forces were fully integrated.

The percentage of Negroes on the front line far exceeds the 10.5 per cent figure that reflects their participation in Southeast Asia.

This is in part because their mostly disadvantaged backgrounds, say Army officials, place them in the basic soldier or rifleman

classifications and also because black youths have volunteered at a very high rate for combat and elite military units.

Front line visitors who watched Airborne units in Vietnam found rifle and reconnaissance platoons that were almost completely black. Large numbers of Negro marines are in the volunteer Community Action Platoons that live in isolated Vietnamese villages.

NEGRO CASUALTIES

Since 1961, Negro combat deaths in Vietnam have come to 13.3 per cent of the total. As of March, 1969, some 3,044 soldiers, 1,410 marines, 24 sailors and 16 airmen had been killed.

Historically, Negroes have fought in every war in which this nation has been engaged. Ironically, the pattern was always to keep them out of the military but then to relent, as the need for manpower grew.

Gen. George Washington set the pattern during the Revolutionary War, ordering his army not to enlist "any deserter from the ministerial army, nor any stroller, Negro or vagabond or person suspected of being an enemy to the liberty of America."

He relented as the British, promising freedom for black slaves, began enlisting them into Dunmore's Ethiopian Regiment. By the war's end 5,000 of the 30,000 soldiers who fought against the British were black.

The pattern of using Negroes as a last resort continued until the Civil War. The first permanent black military units, the 9th and 10th Cavalry and the 24th and 25th Infantry, came out of that war. These regiments fought in the Indian wars on the frontiers, in Cuba, the Philippines and in World Wars I and II.

UNIT SCORES VICTORY

The 24th Regiment, just before it was phased out as an all-Negro unit, scored this nation's first military victory against the North Koreans in 1950 at the South Korean town of Yechon.

Like every other institution, today's military has been greatly affected by the new black consciousness.

Many Negro career men, who rejected the militants' accusations that they are "mercenaries," contend that they are as much involved in the black struggle as any one else.

"We're holding the line," Lieut. Col. Felix L. Goodwin in Longbinh, South Vietnam, insisted, "making sure that Negro youths have alternatives so they can go either into the military or into industry."

A Negro intelligence officer in Saigon, Lieut. Col. Robert B. Burke, stressed the point that "we need a 'brother' in every phase of American life, in everything 'the Man' has going."

The military's public position is that there is no difference between white and black servicemen, but many Negro youths are now insisting that they are "black first" and servicemen second. In recent months Negro youths in the service have insisted on having Afro-styled haircuts.

The Defense Department's director for civil rights, Judge L. Howard Bennett, said in a recent interview that he had noticed in recent months "a dramatic new dimension in young black troops expressing a far greater concern for their black brothers and sisters on the outside than had their predecessors."

Much of the racial outbreaks in recent months on military bases, Mr. Benentt said, can be traced to black reactions to acts of discrimination in the civilian society.

Judge Bennett, who is a Negro, also said part of the current military's difficulties was that the services had become an instrument for social change and that many career men were not used to this new role.

He said it was necessary that the military return young men to the civilian community with positive experiences of racial cooperation and mutual respect because "they can either become the seeds for a dangerous discontent or cadre for leadership in building a better society."

[From the New York Times, Aug. 17, 1969]

RACIAL VIOLENCE MARS THE INTEGRATION RECORD

(By Thomas A. Johnson)

CAMP LEJEUNE, N.C.—"Frequently a marine or a paratrooper doesn't believe he's had a weekend unless he's had a fight," the marine officer said. "But racial clashes put this on another plane. The normal brawls help build individual confidence, unit spirit too, but racial fights could destroy the corps."

In recent weeks this camp and several other military installations have been witness to serious outbreaks of racial trouble. Here at Camp Lejeune the racial conflict has already resulted in the death of one white enlisted man. A feeling of concern and urgency felt by marines at the base is shared by civilians. And members of Congress, Pentagon investigators, and journalists have flocked to this sprawling eastern North Carolina amphibious training camp in days to look for themselves.

FLOCKING TO MILITARY

The United States military, in many respects a totalitarian society, is at the same time probably the most thoroughly integrated society America has produced. Many of its Negro members have praised its efforts to assure equal opportunity.

Black Americans have flocked to the military services in unprecedented numbers and their re-enlistment rates have been consistently at least twice as high as the rates for whites.

But racial discrimination still exists within the military. In addition, the civilian patterns of discrimination prevail in localities close by the military installations.

The question raised by a black civilian during a "soul session" in Saigon some months ago is pertinent to the present. The civilian asked: "Can that black cat [the Negro serviceman] walk like a dragon in Vietnam and like a fairy in the land of the big PX [America]? And can America expect him to?"

A major fear in the Pentagon is that many black servicemen and especially veterans of Vietnam will react violently to continuing patterns of racial discrimination in and outside of the military services.

Judge L. Howard Bennett, director for civil rights in the Department of Defense who warned recently of the danger of racial explosions, rushed to Camp Lejeune where most of the marines are recent Vietnam veterans for a first hand inspection last week.

"We find a new dimension in Camp Lejeune," Judge Bennett said: "There is a far greater concern among young black marines for their brothers and sisters in the civilian community who are suffering discrimination."

He found, too, that they were far more vocal in criticizing both the civilian community and the marines than had been their black predecessors.

A white marine officer suggested this was because the mostly teen-aged marine enlisted men "grew up during the civil rights movement . . . with the boob-tube (television) as their babysitters."

One black marine, a decorated veteran of Vietnam, who was branded a "militant," or troublemaker, on the base, told a newsman that he had grown tired of trying to make it in the corps and being thwarted by discriminatory practices. "You get tired of trying behind that action," he said. "One day Chuck (white people) gets down wrong and you try to take that beast's head off."

A report by Negro and white marine officers here in April had warned of the danger of "an explosive situation of major proportions" primarily because of some white officers and sergeants who "retain prejudices and deliberately practice them."

Some whites here have charged, too, that "black power" advocates and "other militants" have infiltrated some black marines to fight other marines.

"They always cry outside 'agitators,'" said Hurtis Coleman, a Negro barber on the marine base, "because they don't want to admit that they are prejudiced and mistreating black people."

VIETNAM VETERANS

Much of the racial difficulty at Camp Lejeune comes from the non-racial situation of working thousands of marine enlisted men, recently returned from Vietnam, into new organizations and into new patterns of peacetime, barracks life.

One marine colonel has noted: "They have been rushed and scared and catching hell without letup for many months. First, at Parris Island, they were screamed at, pushed around and harassed during basic training. Then there was 13 months in Vietnam, fighting a war, killing and seeing their buddies killed. Suddenly, while they are still teenagers, they are combat veterans and expected to quickly and easily adjust to the spit and polish routine of Stateside."

And, of course, they cannot "quickly and easily" adjust.

The question of race in America today both complicates and exacerbates their adjustments.

RESULTS OF QUESTIONNAIRE

HON. JAMES W. SYMINGTON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. SYMINGTON. Mr. Speaker, I am pleased to provide for the RECORD the results of the opinion survey I recently conducted among my constituents. Questionnaires were returned by over 10,000 families living in the Second District of Missouri, which I represent. I invite readers of the RECORD to draw their own conclusions and impressions from these results. I do want, however, to observe that this profile of public views has been highly informative and useful to me, and that I greatly appreciate the time and thought invested by the thousands of my constituents who completed and returned questionnaires. Results of the questionnaire follow:

OPINION SURVEY, 1969, SECOND CONGRESSIONAL DISTRICT, MISSOURI

[Answers in percent]

1. Concerning the Vietnam war, which of the following policies do you think the United States should follow?

Expand the war on all fronts in an attempt to achieve a military solution	14.0
Establish an accelerated time table for U.S. withdrawal, shifting responsibility for the war to the South Vietnamese government, with or without agreement in Paris	57.4
Continue to prosecute a limited war, with no major U.S. withdrawal, continue negotiations with the South and North Vietnamese and the Vietcong at the Paris talks	6.2
Accept a substantial compromise in Paris as the basis for early mutual withdrawal of the U.S. and North Vietnamese troops from the South	15.2
No response	7.3

2. There have been several suggestions for the reform of our present system of drafting men into the armed services. Which do you favor?

Creation of a draft lottery system which selects men from a nationwide pool of 19-year-olds and recent college graduates	46.8

OPINION SURVEY, 1969, SECOND CONGRESSIONAL DISTRICT, MISSOURI—Continued

[Answers in percent]

Creation of an all volunteer army	31.5
Retention of the existing Selective Service System with local draft boards	16.2
No response	5.5

3. Congress is currently debating two new nuclear arms programs, the ABM and the MIRV. The proposed ABM is designed to defend our offensive missile sites; the MIRV would equip U.S. offensive missiles with multiple nuclear warheads designed to hit several enemy targets. Which of the following would you prefer?

Deploy the ABM missile site defense estimated to cost $11 billion; develop and deploy MIRV	33.1
Delay nuclear arms expansion pending a decision on a strong arms-control agreement with the Soviets at the upcoming arms-limitation talks	33.4
Do not develop either of these systems because they may trigger a dangerous and expensive escalation of the arms race	26.0
No response	7.5

4. There have been several proposals for changing the present electoral college system. Which do you prefer?

Direct election of the President	66.7
Abolish the electoral college but retain the electoral vote, which would be cast automatically for the winning candidate in each State	9.2
Abolish the electoral college; apportion each State's electoral votes among candidates, based on their popular vote either statewide or by Congressional district	15.6
Retain the present system	5.5
No response	3.0

5. Should the voting age be lowered to 18?

Yes	49.4
No	47.3
No response	3.3

6. Do you approve my legislation which would provide grants for schools and communities to conduct special educational programs concerning drugs and drug abuse?

Yes	75.9
No	18.4
No response	5.7

7. I have introduced a bill to permit parents to deduct the major portion of higher education expenses from their total income tax liability. Do you favor this proposal?

Yes	82.0
No	15.6
No response	2.4

8. The House Ways and Means Committee is now analyzing tax reform proposals. Please indicate whether or not you agree with these possible changes.

Should religious and charitable organizations be required to pay taxes on their outside business activities?

Yes	89.9
No	7.7
No response	2.4

Do you feel the oil industry's 27½% oil depletion allowance should be decreased or eliminated?

Yes	74.9
No	15.6
No response	9.6

Should the personal exemption of $600 be raised?

Yes	84.2
No	11.9
No response	3.9

9. To fight inflation, do you favor extension of the 10% surcharge on personal and

OPINION SURVEY, 1969, SECOND CONGRESSIONAL DISTRICT, MISSOURI—Continued

[Answers in percent]

business income, coupled with the repeal of the 7% investment tax credit?

Yes	46.6
No	44.0
No response	9.4

10. Of the following, which should be given the highest priority by Congress and the Administration?

Ending the Vietnam conflict	69.9
Strengthening law enforcement and crime prevention	10.7
Pollution abatement	3.9
Reforming Federal tax structure	3.3
Federal assistance to education	1.8
Building an ABM and/or MIRV system	1.3
Strengthening the peace-keeping function of the United Nations	1.1
Developing adequate housing	1.0
Settling campus disorders	0.7
Exploring space	0.3
Building mass rapid transit	0.2
No response	5.7

11. In dealing with the problem of campus unrest, which of the following do you feel is most necessary?

Tougher enforcement of existing rules and laws by college administrators and local officials	41.3
Greater university, government and business effort to be more responsive to student and citizen involvement	29.3
Additional Federal legislation denying financial aid to those students who participate in disorders	13.2
No response	16.2

BOGGS FAMILY HELP REBUILD MISSISSIPPI GULF COAST

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. COLMER. Mr. Speaker, there is an old saying to the effect that lightning never strikes twice in the same place. Unfortunately, this is not true about hurricanes. The beautiful and prosperous little city of Long Beach on the Mississippi coast was the victim of the 1947 hurricane and again was the victim of the recent destructive storm Camille. This attractive little city is the birthplace of our assistant leader, Congressman HALE BOGGS. The Boggs family, including his mother, still resides there. The Congressman's aunt was killed in the 1947 hurricane. While the family suffered substantial property loss, they were more fortunate with Camille in that there was no loss of life.

Mr. Speaker, Long Beach, hurricanes, and the Boggs family seem to be inseparable as is illustrated by the enclosed story from the New Orleans Times Picayune:

BOGGS COMPOUND TO BE REBUILT IN LONG BEACH

The Boggs Compound in Long Beach will be rebuilt!

Spearheading the undertaking of rebuilding the five homes destroyed by the hurricane is the 81-year-old matriach of the family, Mrs. W. R. Boggs, whose spirit and courage is so exemplary it is spurring the younger generations to get on with it.

Hurricanes are not new to the Boggs family. The compound was partially destroyed in the 1947 hurricane in which the aunt of Rep. Hale Boggs (D-LA.) lost her life. The homes were rebuilt.

But in the great blow, the family portraits, heirlooms and antique furniture dating back over 150 years to the Stanley, Morrison and Boggs plantations were saved.

Camille in her onslaught spared nothing this time—not even the new wedding gifts for Claire Josephine (Jo Pepper) Morrison and her groom, John Tuepker, which were on display for family and friends at their wedding reception Saturday afternoon, Aug. 16.

The young couple was married at 5:30 p.m. in St. Thomas Catholic Church of Long Beach where the bride was christened, as was her mother before her, her uncles, aunts, brothers, sisters and cousins: where the Boggs family had attended worship services for several generations. Jo Pepper's wedding was the very last in the old church, now heavily damaged by wind and water.

The reception in the Boggs large community living room, reception halls and smaller family living rooms were filled with friends and neighbors although the weather was threatening.

The bride's aunt, Miss Mary Boggs, had used native flowers from the gardens to decorate the rooms. She had transformed two antique hatracks into indoor bowers with Confederate jasmine. Single majestic stalks of Yucca, or, Our Lord's Candles, stood straight in old-fashioned floor baskets.

Passion flowers from the yard encircled the 60-pound wedding cake made by Mrs. Jacobie, Bay St. Louis, a close friend of the bride. Champagne toasts were drunk to the bride and groom by the guests. One of these happy guests became one of Camille's victims later Sunday night.

The bride and groom, who were sent on their happy way in showers of rice, returned early Monday morning to the site of their wedding reception to help the family pick up the debris; to shovel mud from the summer home of Dr. James T. Nix, New Orleans, at 419 E. Beach, Pass Christian, which he so generously offered the Boggs Clan. They are using the home as a base to oversee the rebuilding of the compound. They still come to Gulfport for fresh water. There is no electricity or telephone service as yet, but they are determined people.

The entire Boggs family, including grandchildren, great-grandchildren and in-laws, had gathered at the home for the wedding. All but Congressman Boggs, who was on the West Coast visiting his daughter. According to his niece, Mrs. Daniel Shoemaker, Dallastown, Pa., messages were sent East to Pennsylvania then relayed to Mr. Boggs' secretary in New Orleans thence to California to inform him of the family's safety. Also here to officiate at his niece's wedding was the bride's uncle, the Rev. Robert Boggs, S.J., Mobile.

Helping in the cleanup were not only the bride and groom, but most of the members of their wedding party; her brother, Robert Morrison, the best man and bridesmaid, Ken and Judy Pober, all three former Peace Corps members; the bride's uncle, Daniel Shoemaker, father of the four-year-old ring bearer. William Boggs Shoemaker, the bride's brother-in-law, Bobby O. Homes Jr., New Orleans, and of course, the parents of the bride, Mr. and Mrs. Stanley Morrison, nee Claire Boggs.

The Boggs family lost not one house, but all of the homes in the compound. They included the homes of Miss Mary Boggs, Mr. and Mrs. Stanley Morrison, Archie Boggs (his summer home), and Mrs. W. R. Boggs and son, William R. Boggs, Jr. All will be rebuilt, including a new home planned by Representative and Mrs. Boggs. In fact, if the contractors had been a week earlier than the hurricane, the foundation for this new home would have been down.

The family took refuge in New Orleans during the hurricane but returned to the Coast early Monday, as did the bride and groom, who had gotten to Meridian, and the rebuilding began.

Following the 1947 storm, the compound was named Will-Stan, a play on the first names of Mrs. Morrison's father and husband with the connotation, "It will stand."

When Mrs. Morrison and Mrs. Shoemaker, both dressed in sturdy work clothes came to Gulfport for fresh water and to give an account of the wedding, they could laugh at the idea that they are thinking of calling the new compound Stan-Dee.

Spirited, proud families like the Boggs will build back the Coast. The true pioneers can never be washed away.

Although the Morrison-Tuepker wedding was the last in the historic little Catholic church with its many side altars, there will be other weddings, christenings and funerals in the new church that the determined congregation in St. Thomas Parish is already making plans to build.

Mr. Speaker, I am happy that Camille was better to the Boggs family insofar as the loss of life is concerned and I am delighted to know this splendid family is to continue to retain its Mississippi ties by rebuilding.

PENTAGON POLICIES PROMOTE DISORDERS

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. HAWKINS. Mr. Speaker, last week I addressed a letter to President Nixon concerning the policies of the Department of Defense in reference to personnel, manpower, and race relations. This was the latest of a series of communications on this subject in which I was fervently seeking clarification and, hopefully, positive results.

Our intense concern with the Military Establishment is not incidental. No single institution has pervaded so many aspects of our life as the military.

In sheer magnitude of Federal expenditures, about $80 billion annually, the military is in a strategic position to substantially affect economic trends and influence the quality of American life.

Of the 50 million males over 18 in the labor force, more than half are veterans or are currently in the services. In fact, almost all young men will spend 2 to 3 years on active duty during their lifetime. However, less than 1 out of 4 servicemen engages in combat activity. Most are used in logistic support requiring technical skills comparable to those used in civilian life. Thus, the potential for counseling, training, and skill development in the military is tremendous.

The military is our largest "employer," our most elaborate "boarding school," the biggest "contractor," an effective public affairs agency, and an international radio and television operator, but still, it is an arm of the Federal Government subject to the same laws and rules as other departments.

Earlier this year many of us criticized the Department for signing contracts with Southern textile mills whose employment policies violated Executive order 11246. Such violations were illustrative of vague and often contradictory policies emanating from the Pentagon.

Subsequently, in questioning the Department's policies on personnel, I received a report regarding Negro civilian personnel in supergrade positions which revealed the lily-white character of the Pentagon. This letter—April 11, 1969—is herein being submitted for the RECORD together with my most recent letter addressed to President Nixon. In addition, I am including a recent statement from the editorial page of the Washington Post, September 9, 1969, issue, and an article by Carl T. Rowan from the August 27, 1969, edition of the Evening Star titled "Racial Strife at U.S. Military Bases Ominous":

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., September 4, 1969.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Since March of this year I have sought some clarification of the policies of the Department of Defense in reference to its personnel, manpower, and race relations policies as they affect minorities. I have expressed grave concern about the absence of Negro civilian personnel in policy-making levels a fact which has great bearing on the overall policies and the image portrayed by this Department of the Federal Government. To date my concerns have not been eased but on the contrary have been justified as being of the highest importance to your administration and in the national interests.

The Pentagon has had its warnings. What has been happening in a few camps and posts may soon erupt throughout the military establishment. If it does there will be none to blame but the heads of our forces—military and civilian—who refuse to believe that manpower (black and white) is the key essential to adequate military posture. It is not guns or ships or airplanes or the material used by these which really counts. Rather, it is the men who must make these things work who make the difference between victory and defeat.

Manpower and its enlightened management have been relegated to the lowest position in the order of things in the Pentagon philosophy. What attention is given to this key area is limited to the logistics of getting men into service, into training, into technical schools, into units, into battle, into camps and stations which can absorb them. Little, if any, attention is given to the personnel which should be the key element in manpower or personnel management. Small wonder, then, that manpower finds its morale at a low point. There is even less mystery in the developing discontent of the black men who having served well in combat are looked down upon, maltreated, and given the dirty end of every detail without regard to their qualifications.

When the explosions begin seriously to rock the complacency of the "big brass" in the Pentagon and the White House, it will be too late to look for ways to avoid what has happened. Even now it may be too late. Certainly the clouds of disaster will not be lifted by the efforts of a meager civil rights staff in the office of the Assistant Secretary of Defense. Even if the staff were to be increased in size grave doubt exists as to whether any real achievements could be expected. What seems to escape the thinking of the brass is that "civil rights" cannot be separated from those key functions of managing the military. These rights are a part of every action which makes the machine operate. They are in Logistics, Research and Development, Budget and Finance, and in every major or minor division which together constitute the Pentagon organization. There are no key black policymakers in these divisions. There is no confidence that a black person can contribute to their functioning. But when a problem arises in which racial considerations appear the tendency is to look to the "Civil Rights" division for instant solutions. Let the Pentagon be forewarned—there are no instant solutions. With its absence of early planning for the welfare of all military manpower, planning which embraces its total responsibility for men coming into service, being utilized and being separated, the inevitable result is disaffection and distaste for the military. Add to this the special problems of the black soldier, sailor, marine or airman, and you have the ingredients of a major breakdown in discipline. Such a condition will not yield to the hasty "justice" and traditional military way of quieting discontent.

The Pentagon created a policy but has not awakened to the consequences of that policy. World Wars I and II involved masses of manpower the quality of which many field commanders attested was too low. So, responding to their pleas and the ready availability of better qualified personnel, standards for entry into the services were raised well beyond the true requirements of the duties to be performed. It appears only natural that these better educated men (black and white) would seek for their understanding something more than a mere order or command. They have been taught to think and to question. This is the essence of education. Why, then, should they not question what happens to them in the matter of performing duty, in the discipline to which they are subjected, and in all the vital details of their living and dying for what appears to many to be a remote and useless cause.

The black serviceman shares the concerns of the white serviceman. He carries another burden which is hard to bear. He sees promotions given where there seems to be less attention to qualification than to skin color. He sees discipline as harsh when the color of the disciplined is black but lenient if the color of the individual is white. He knows from experience that life is tough for his black brothers outside of the military services. He sees himself going back to civilian life where no one cares whether he risked his life for his country when he seeks a job. He knows of no special efforts to assure him that life for him will be better because he has sacrificed something for those who could make life better. He hears talk of equal opportunity but finds few evidences of it in or out of the services. He concludes that if the military can ignore policies intended to provide equality there is even less hope for such a condition in areas beyond the control of the military.

The Pentagon must be charged with many failures. It has failed to place black men in key policy positions. It ignores the advice of the few blacks to which it infrequently turns. The paucity of uniformed blacks in key roles in the Pentagon and field establishments is proof enough that opportunity is limited in the extreme. Programs which should address themselves to easing the return of servicemen to civilian life are seldom supported with any enthusiasm by the military. What hope, then, is there? One thing our service personnel have been taught and this they will remember; they, individually and collectively, constitute a force. As such, when applied, the force which they are gets results. What recourse is there for them if all other measures have failed? They, these black servicemen, are beginning to see that what is hoped for in far away places like Viet Nam

may be possible here at home if the same tactics are applied. We have taught these men to think. We have taught them to fight. How do we expect them to do anything different from what they may do if our teaching has been effective.

The Pentagon may yet have time to do something. It can place some blacks in key policy positions throughout the Pentagon and its field establishments. It can learn to listen to these blacks and act on their recommendations. It can constitute a task force which includes informed blacks to advise them as to conditions which exist and solutions which hold promise. It can cease to be the defense and it can respond positively to enlightened counsel. There is little time left. What there is of it should be utilized wisely by those who control our military establishment.

Respectfully yours,

AUGUSTUS F. HAWKINS,
Member of Congress.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., April 11, 1969.

Hon. AUGUSTUS F. HAWKINS,
House of Representatives,
Washington, D.C.

DEAR MR. HAWKINS: Secretary Laird has asked that I respond to your letter of March 18, 1969 regarding Negro civilian personnel in policy positions within the Department of Defense. Your comments and suggestions on this matter have been carefully reviewed by this Office. Please accept our assurance that such affirmative action, to assure equal employment opportunity at all levels within this Department, is a matter of first priority. As you may know, President Nixon's statement of March 28 on equal employment opportunity expresses his strong support for this program.

You also request that we supply a report on the presence of Negro civilian executives in key positions in this Department. In supplying this report we follow the paragraph order indicated in your inquiry:

1. The total number of supergrade positions currently allocated to the Department of Defense is as follows:

Army	136
Navy	88
Air Force	96
OSD & Defense Agencies	203
Total	523

2. The number and grade of Negro executives occupying three of the above positions together with a description of functions is as follows:

(a) Stanley P. Hebert, Esquire, Deputy General Counsel, Department of the Navy (GS–17):

Provides legal advice and counsel on all aspects of Department of the Navy operations. Serves as a top legal officer in the Office of General Counsel of this Department and supervises civilian attorneys supplying legal analysis and advice to the Navy Department. (Served in 1967–1968 as Deputy Director of Investigations for the Kerner Commission.)

(b) Mr. James C. Evans, Civil Rights Counselor, Office of the Deputy Assistant Secretary of Defense (Civil Rights and Industrial Relations) (GSC–16):

Reviews, audits and advises on policy formulation in equal opportunity programs for military and civilian personnel throughout the Department of Defense. Advises on all aspects of this program for the Armed Forces. Member of OSD Central Clearance Group.

(c) L. Howard Bennett, Esquire, Director for Civil Rights, Department of Defense (GS–16):

Responsibiliites include policy formulation and program supervision of equal opportunity and equal treatment in the Armed Forces including special responsibilities for Military Academy recruitment and personal reviews of DoD installations to audit equal opportunity and equal treatment programs. Advises the Deputy Assistant Secretary of Defense (Civil Rights and Industrial Relations) on equal opportunity and equal treatment policy for all Military Departments and Defense Agencies.

3. The total number of positions by Department and level are provided in the attached summary of Executive Level Positions in the Department of Defense. At the present time all positions listed are filled by incumbents. However, in past years this Department has experienced periodic changes in assignments to these positions.

I wish to assure you that my personal attention will be supplied to all equal opportunity matters within the Department of Defense. The Secretary of Defense has directed us to formulate goals and methods to assure solid results at all levels of our civilian employment. In addition, we administer a similar program for contractors of all elements of DoD.

I am also supplying an attached copy of a recent statement by the Secretary of Defense expressing his personal support of the Equal Employment Opportunity Program. I hope that the above will supply the information requested.

Sincerely,

W. P. MACK,
Vice Admiral, U.S. Navy, Deputy.

MEMORANDUM FOR ALL EMPLOYEES

THE SECRETARY OF DEFENSE,
Washington, D.C., April 3, 1969.

Subject: Equal Employment Opportunity for Civilian Employees of the Department of Defense.

I am pleased to take this opportunity to affirm the merits of our Equal Employment Opportunity Program in the Department of Defense. This program, which is based upon Presidential Executive Orders, assures all employees of the Federal Government that their working careers will be free from discrimination on account of race, color, religion, sex or national origin. In the past the Department of Defense has provided strong support for such efforts and for parallel programs of equal opportunity in the Armed Forces. This policy of equal opportunity and equal treatment will be continued and expanded by me.

Although we have made some progress in this respect under past Presidential Executive Orders and equal employment opportunity programs, we must make a much greater effort in the months to come. The social implications of this program, and elementary fairness, require that a great deal be accomplished in a short time.

The affirmative action aspects of equal employment opportunity must include equal opportunity in recruitment, career development, progression, selection for supervision, awards and other recognition, and all other aspects of employment. The requirements of this effort will make demands upon the initiative and creativity of employees, first-line supervisors and all elements of management above them.

Consistent with our function of preserving and protecting freedom in the world, we have a parallel and supporting obligation to assure this nation that our actions result in beneficial social consequences. None of these consequences is more important than equal opportunity in a lifetime of employment with this Department. Proper administration of our program must necessarily include actions to remedy employment problems created in the past.

I shall require such development and achievement during my tenure as Secretary of Defense and will personally review our progress. We must produce solid results at every employment level consistent with the high standards of the Department of Defense.

MELVIN R. LAIRD.

EXECUTIVE LEVEL POSITIONS IN THE DEPARTMENT OF DEFENSE

LEVEL I

Secretary of Defense.

LEVEL II

Deputy Secretary of Defense.
Secretary of the Army.

RACISM IN UNIFORM

Since the United States Marine Corps is as American as baseball, it can hardly be thought astonishing that, like the rest of the country, it has been infected with the cancer of racism. That cancer has manifested itself of late in some shocking instances of violence among men wearing their country's uniform. Gen. Leonard F. Chapman, the Marine Corps' commandant, is entirely right, of course, in

asserting as he did in strong, clear tones, that such violence "cannot be tolerated and must stop."

But the general's order is easier to issue than to enforce. For the unrest in the Marine Corps reflects a deep unrest in the society at large. The corps is composed, in part at least, of young white men brought up to believe, as an abstract proposition, that all men are created equal but nevertheless accustomed, as a matter of course, to conditions of life under which white men are entitled to perquisites not available to black men.

The corps is composed also, in part, of black men who have been imbued lately with a belief that the American ideal of human equality must be made a living reality and that acceptance on their part of any sort of racial discrimination is a betrayal of their race and of the very values they entered the Marine Corps to defend. In combat in Vietnam, these men learned that race makes no difference when white men and black men are exposed in common to mortal peril.

Returning from Vietnam, however, Marines are often stationed at bases in the deep South where ancient patterns of prejudice still persist among white civilians and where scorn for the uniform they wear, as an emblem of the "white establishment," is common among black civilians. They are caught up, in short, in the currents of racial antagonism and distrust which are now so prevalent in American life.

It is not to be supposed that the hostilities which exist within the Marine Corps are to be extirpated by a command any more than the hostilities existing outside the corps. But General Chapman has embellished his order with certain specifics which can help to eliminate discrimination. Most significantly he has declared that no one should stand in the way of any Marine, regardless of his rank, who may wish to lodge a complaint about racial discrimination with his commanding officer. Discrimination is a form of injustice which the Marine Corps authorities can deal with. Hostility and prejudice, being states of mind, are harder to get at. They will diminish and disappear in the Marine Corps only as they diminish and disappear in the nation.

Racial Strife at U.S. Military Bases Ominous

(By Carl T. Rowan)

From Defense Secretary Melvin Laird right down through the ranks, the Pentagon suddenly is moving urgently to adopt programs that will prevent an epidemic of racial violence on military bases.

They have been prodded, of course, by the outburst in Camp Lejeune, N.C., in which one white Marine died and another was seriously injured, by serious fighting among black and white Marines in Hawaii two weeks ago, and by at least three racial outbreaks in Vietnam which the Pentagon classified as "serious riots."

The ominous implications of these violent episodes ought to be obvious: an army full of dissension, where various factions are at each other's throats, can never be an effective army. So the Pentagon does well to act with a sense of urgency, for the nation's security is far more threatened by racial hostility within the military ranks than is it by that $3 billion budget cut that Laird says will "weaken our worldwide military posture."

There is a tragic aspect of the current racial outbursts that is not so obvious to the public. It is the fact that leaders at the Pentagon had plenty of warning of what was coming, but out of arrogance (and the notion held by some white liberals that they knew more about the problems than the Negroes who were warning them) nothing was done. So we have drifted into a situation that is far more serious than most of the public realizes.

In 1967 racial conflict broke out among U.S. troops in Germany. The Pentagon played down this conflict publicly, but Thomas D. Morris, then assistant secretary for manpower and reserve affairs, quietly ordered all military installations to "take affirmative action" to preclude racial violence.

But in June, July, and August of 1968 a series of racial eruptions occurred at Cam Ranh Bay in South Vietnam. There were "serious riots" at Long Binh and Da Nang. Then on Oct. 15 and 16 "a real donnybrook" of racial rioting broke out at Camp Tien Sha, a Navy base in Vietnam.

L. Howard Bennett, a Negro who is now acting deputy assistant secretary of defense for civil rights, went to Vietnam last fall with Jack Moskowitz, who then held the job in which Bennett now is acting.

Upon return, Bennett filed an urgent warning that if the Pentagon did not move rapidly to deal with inequities and grievances and to combat racial hostility the military could face "riots and demonstrations of epidemic proportions."

Al Fitt, a Michigan liberal and former colleague of G. Mennen Williams, had then replaced Morris. Fitt professed to be stunned by Bennett's report which he seemed to consider "alarmist." He called in Moskowitz who allowed as how he hadn't observed any signs of racial strife such as Bennett had referred to.

So Fitt and Moskowitz ignored Bennett's report.

The incoming Republicans were ironically blessed in that almost none could profess to be an expert on civil rights, human relations, or Negroes. Some of them saw the trouble that was brewing within the military and they admitted they needed help in doing something about it.

Still, a big "interdepartmental task force" on the subject did almost nothing. It did conclude that draftees coming off the nation's troubled streets and volunteers from the nation's strife-ridden high schools were bringing racism with them. So there was talk—but mostly talk—of "threshold orientation" designed to strip new GIs of their racism during their first days in the service.

Now there is frantic talk of human relations programs at West Point, the Naval Academy, schools for noncommissioned officers, in basic training and about anyplace else in the military that anyone can think of.

This may help. But it does not come to grips with the fundamental problem. This new breed of black GI feels that he is being discriminated against in a variety of ways. Reports have been coming into the Pentagon of white officers referring to black GIs as "boy" and "nigger," actions just about guaranteed to produce a fight.

Black soldiers say they are cut off from the ranking people who might do something about their grievances. They say black GIs receive inordinately severe punishment for minor offenses. They say the promotions too often go to white GIs who don't work as hard or efficiently as the passed-over blacks.

And they speak bitterly of something I warned about in a column a few months ago: the civilian hierarchy at the Pentagon is and always has been lily-white, and it is not much better at the top level of the military side.

This is the first problem that the President and Laird must do something about. Before this tense problem of racial strife within the military is solved, some top-level teams of blacks and whites from the Pentagon are going to have to visit a lot of bases and talk to a lot of men.

The magnitude of the Pentagon's problem will become obvious when Laird discovers he has a real paucity of top-level blacks to put on such a team.

OIL IMPORT PROGRAM IS VITAL TO AMERICA'S SECURITY

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. EDMONDSON. Mr. Speaker, a recent article appearing in the Bartlesville, Okla., Examiner-Enterprise newspaper carried some important comments from one of the industry's leading authorities on our oil import program.

Mr. John Houchin, president of Phillips Petroleum Co., was quoted in regard to a study made by the Charles River Association on proposed changes in our import program. I commend Mr. Houchin for his very thoughtful analysis of both our present import program and his comments on the Charles River study, and include his remarks in the RECORD at this point:

HOUCHIN CRITICIZES CHARLES RIVER STUDY

"The nation's security could be gravely imperiled, and its petroleum consumers and domestic oil business harmed if some of the conclusions made in the Charles River Associates study of the oil imports program were made a part of the import policy," John M. Houchin, president of Phillips Petroleum Company, said.

Houchin pointed out that the study, which was prepared for the office of Science and Technology and has been submitted to the Cabinet Task Force on Oil Import Control, was full of faulty assumptions, inconsistencies, and inaccurate methodology. "For example," Houchin said, "the report assumes that reserve producing capacity in 1975 without import controls and prorationing would remain at the present level of about 1½ million barrels a day, and that an increase of one million barrels a day would be readily obtainable from new drilling. This results in an overestimate during emergencies of about two million barrels daily for the conditions assumed."

Houchin also pointed out that in its hypothetical example of an emergency condition the analysis does not consider the widening gap between current oil demand and domestic production which would occur in the absence of import controls. "Because it ignores this fact, the amount of storage for emergencies, and the cost of this storage would have to be much higher than assumed in the report," Houchin stated. "These inaccuracies alone could result in a critical shortage of petroleum supplies during a national crisis," he stressed.

A wrong assumption in the study which is a deception to consumers is that foreign prices of crude oil would not increase if U.S. import controls were removed," Houchin continued. "Like so much in the Charles River report this assumption ignores reality. If the United States should become dependent on foreign nations for its petroleum, the governments of these nations would inevitably raise the price of their oil. The evidence that they would do this is clear. An announced goal of the Organization of Petroleum Exporting Countries (OPEC) is higher prices for crude oil for member countries. A recent resolution by OPEC calls upon members to deny oil contracts or concessions to consuming countries whose policy is to reduce prices of imported crude oil."

Houchin said that it follows that the assumption in the Charles River's study that the import control program costs 6.2 billion dollars is "completely out of the ball park." He said, "the January 1969 report by the Department of the Interior which is the most

comprehensive published report on the cost of the import control, concluded that savings in oil prices as a result of elimination of import controls might be about a billion dollars a year, but warned that higher prices for foreign oil would come with increased U.S. dependency on foreign supplies. These higher prices would, of course, offset the billion dollars.

"The CRA report adopts the time-worn argument of economic theorists that state proration encourages drilling of marginal wells," Houchin continued. "This argument ignores the inherent risk in finding and developing oil reserves. Few operators deliberately drill marginal wells and no one intentionally drills a dry hole. It is not normally possible to determine until after a well is drilled whether it will be good, marginal or dry," Houchin stated. "Abandonment of prorationing would not only result in wasteful use of oil and gas, but would virtually wipe out the small, independent producers who are so vital because they discover most of the new petroleum supplies in our nation," he added.

The Charles River study also does not give consideration to the cost to consumers resulting from reduced production of natural gas which would result from eliminating import controls, according to Houchin. "Some 25 percent to 30 percent of gas produced in the U.S. is oil well gas, much of which would be lost as a result of eliminating import controls," Houchin concluded.

HAROLD A. PATTEN

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. SIKES. Mr. Speaker, I am honored to join with my colleagues in paying special tribute to our esteemed friend and distinguished former colleague, the late Harold A. Patten, who passed away on September 6. He was a warm and genuine human being who spent much of his life in the service of his fellow man and his country.

As we pause to honor the memory of the gentleman who so ably represented the First District of Arizona for 6 years in this Chamber, from 1948 to 1954, we recall the accomplishments of this very able legislator.

"Porque" Patten, as we affectionately knew him, served with distinction on the Committee on Armed Services and the Committee on Veterans' Affairs. As such he was a most effective man.

He was also a very active member of the Air Force Reserve, who went on active duty every year. He was very proud of his commission and of his connection with the Air Force.

The confidence of the thousands of constituents who elected Harold Patten to the 81st, 82d, and 83d Congresses was not misplaced. He was dedicated to the highest ideals of public service and to our American democratic system. He was never too big to do a little thing—never too busy to help when help was asked, never too worried or preoccupied with his own affairs to spare a smile or a friendly greeting to visitors in his office.

Seldom does one find a man of this stature so wholeheartedly dedicated and responsive to the needs of people he served. "Porque" Patten's record in Congress earned for him the genuine admiration and deep respect of his colleagues. I extend my most profound sympathy to his bereaved family.

GREATER WASHBURN RISES

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. SHRIVER. Mr. Speaker, many Members of Congress are aware of the devastating toll in lives and property taken by tornadoes and hurricanes each year in our Nation. In 1966 a killer tornado ripped through Topeka, Kans. While great damage was suffered throughout the capital city, a crippling blow was dealt Washburn University. Nearly all of the older buildings on the Washburn campus were demolished.

However, the university has survived and indeed has grown in the months following that terrible disaster. New buildings have risen to take the place of the old, and students in greater numbers have been attracted to Washburn. Incidentally, on Saturday, September 27, the Washburn Law School of which I am an alumnus, will dedicate a new law school building.

The recovery and restoration of Washburn University results from the untiring efforts of its administration and board of regents with the wholehearted cooperation of the public, and assistance from both private and public sources.

I include in the RECORD the following editorial from the Topeka, Kans., Daily Capital which discusses Washburn University's progress. The editorial follows:

GREATER WASHBURN RISES

The sounds of construction continue on Washburn University's campus, marking progress being made since the 1966 tornado ripped it apart.

As classes open with greater enrollment Sept. 8, another new building will go into use for the first time and work has been started on still another, which, when completed in a couple of years, should make possible removal of the temporary classroom buildings.

The new law school building, to be occupied this fall for the first time, will be dedicated in three-day ceremonies ending Saturday, Sept. 27, when U.S. Supreme Court Justice Byron R. White is scheduled to speak.

A good start has been made on the Learning Resources Center, estimated for completion in 1971. It will house numerous classes, including those to meet this fall in the temporary buildings.

Until then three clusters of metal buildings along 17th—Crane, Boswell and MacVicar Villages—will house classes in psychology, sociology, business and economics, and classroom work in physical education.

The new Fine Arts Building, used and enjoyed for the first time last spring, adds beauty to the campus in addition to providing some of the finest auditoriums and classrooms in the Middle West.

Most of the scars of the storm have been erased in the 39 months since it demolished nearly all of Washburn's older buildings. Within a short time after the debris had been cleared away, the Memorial Union addition was completed, as were the west wing of Morgan Hall and repairs to Stoffer Science Hall. Carnegie building was restored and renovated, Benton Hall repaired, and the roof on Whiting Fieldhouse made whole again.

All this, in addition to the new buildings, has modernized Washburn's campus, even more than programmed before the tornado.

That students are appreciating advantages offered by Topeka's municipal university is shown by enrollment forecast for this fall. It is expected to be 4,400—which would be 1,178 more than the number attending the fall before the tornado.

Washburn, undaunted, is moving ahead.

NINTH ANNUAL QUESTIONNAIRE RESULTS

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. HARVEY. Mr. Speaker, I am again taking this opportunity to further report on our annual congressional questionnaire conducted throughout the Eighth Congressional District of Michigan. This was the ninth consecutive questionnaire, and I am pleased that interest and participation in this opportunity to vote on issues of major importance remains high.

I am further indebted to the weekly and daily newspapers throughout the district which devoted considerable space to the questionnaire and, in most instances, even published the 10-question ballot. This type of public service enables us to make absolutely certain that every citizen has the opportunity to participate and to make his views known.

The results, which are listed below along with the questions, are based on the tabulation of approximately 10,000 returns. It is likely that over 15,000 individuals took the time to vote.

The results are:

9TH ANNUAL QUESTIONNAIRE RESULTS

	Yes	No
1. If the Paris peace talks do not progress, do you favor:		
a. Gradual withdrawal of all U.S. forces in Vietnam regardless of enemy reaction?	4,211	5,843
b. Gradual withdrawal only an a mutual basis?	3,911	6,134
c. Intensifying the war effort?	2,335	7,710
2. Do you favor President Nixon's proposal to deploy the antiballistic missile system around 2 ICBM sites, to safeguard our nuclear deterrent?	6,123	3,922
3. Would you favor U.S. support for admission of Red China to the United Nations?	3,512	6,533
4. Are you satisfied with the performance of the United Nations?	2,091	7,954
5. Would you favor a constitutional amendment which would allow Congress to override a U.S. Supreme Court decision by a ⅔ vote?	6,513	3,532
6. Should the electoral college be abolished and the election of the President and Vice President be accomplished by popular vote?	8,486	1,558
7. Should the voting age be lowered to 18 years?	3,489	6,556
8. Should Federal financial assistance be withheld from those students who disrupt the academic operations of colleges and universities?	9,313	
9. Should the farm program be changed to gradually reduce dependence on price supports?	7,994	
10. Do you favor converting the Post Office Department into a Government-owned corporation to operate on a self-supporting basis?	7,424	2,618

IRISH CATHOLICS BEMOAN YEARS OF SECOND CLASS CITIZENSHIP

HON. CHARLES W. SANDMAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. SANDMAN. Mr. Speaker, in recent weeks various stories concerning the rebellion in Northern Ireland have appeared in the press. I am pleased to share with my distinguished colleagues a first-hand account of the situation as reported to the Vineland Times Journal, Vineland, N.J., by Cyril J. O'Brien who covered the story while vacationing in Ireland at the time of the outbreak:

IRISH CATHOLICS BEMOAN YEARS OF SECOND CLASS CITIZENSHIP

(By Cyril J. O'Brien)

DERRY, NORTH IRELAND.—"We are treated worse than the Black Man in some parts of the United States."

The young man who said that was about 22, dressed in soiled tweed coat he had slept in for two nights, and he carried an axe handle. He would not give his name because "I've been in jail too many times already . . ." for civil defiance.

But because I was an American the rebel barricade was let down and the young sentry and a compatriot named Francis Oakley let us across the rampart of steel rimmed beer barrels, scaffolding and debris.

Inside was Bogside, the Catholic ghetto of this ancient walled city. Although the majority population, they had been bound to their inferior housing for half a century by blatant prejudice, job inequality and gerrymandered voting districts.

Now they were tired of successive city administrations which spurned appeals and maintained a special sectarian auxiliary police force called "B-Specials" to uphold the establishment.

In their soft Irish voices the young men explained what they wanted told across the sea: how employers ask the school you attended to scratch Catholic applicants; how an archaic property-based voting system disenfranchises the poor—Protestants and Catholics alike.

The young men, in their rumpled suits with sleep-starved eyes, crowded around in relaxed poses, holding their cudgels like walking sticks and pocketing the egg-sized cobblestones they had been heaving to keep the constabulary out of the Bogside.

For two days now they had been holding off the Royal Ulster Constabulary which they considered a sectarian body which sided with the anti-Catholic extremists.

The trouble had started Monday, Aug. 12, when more than 12,000 of the Orange Apprentice Boys organization came here from all over Ireland and from Scotland to march around the Derry walls. They sang provocative anti-Catholic songs and then walked along the Bogside ghetto. Then on-lookers came out to pelt the marchers. The police then pushed the Bogsiders back into their enclaves, aided by a swarm of Paisleyites who were around for just an event and about 300 of the Apprentice Boys themselves.

However, the police stopped at the fringe of the Bogside as the people inside the ghetto returned with a barrage of stones and petrol bombs (Molotov cocktails).

The bombs were being made by a "factory" of young girls, boys and older women.

This battle for the Bogside was in its second day when the "rebels" let me through their barricade.

A block away from our flanking position came the sounds of falling rocks and the scramble of feet and rattle of shields as the RUC's charged. There followed the hail like patter as the shields deflected the shower of rocks. This continued all day.

Headquarters for the rebels is a nine-story apartment building which houses the leaders, civil rights supporters and such protagonists of the Catholic position as pretty brownette Bernadette Devlin—a member of the British (Westminster) Parliament. From its roof flies the Tricolor of the Republic of Ireland. They briefly flew the Stars and Stripes of the United States, as a tribute.

Today, all of the Apprentice Boys have gone home while Derrymen, and neighbors, fight among themselves. Paisleyits (named for the extremist anti-Catholic Rev. Ian Paisley) support the police and have been blamed for burning a Catholic-owned factory. The rebels, however, had been getting support and reinforcements from foreign students out of Belfast and a few that dribbled up from the South.

"Tell them back in the States," said Oakley, "that all we want is one man, one vote . . . that there should be a house for every family, Catholic or Protestant . . ."

"Is that too much to ask?" queried a blond fellow who had a steel helmet he had wrested from the police.

"Here, I want you to meet Herbert." Oakley joined in again. "He lost an eye to the police."

Herbert Francis McCauley, 24, with his shaggy red hair and his tweed coat turned up at the collar, was the prototype of the Hollywood IRA man of the troubles with the Black and Tans following 1916.

"They kicked it out in the Victoria (police) barracks," the young man said, brushing his hand across a false eye that looked too small for its red-rimmed socket.

Another flurry of stones and steps and most of the crowd around me moved to the wide alley off William st. where the battle line had been drawn.

"See we use rocks, not guns . . . ," one youngster explained. He demonstrated by a running throw in the direction of the police.

Another had no such aversion to firearms: "If we had guns it would be all over by now . . ." However, in an earlier skirmish an armored police van had been burned which contained rifles and Bren guns—and not a one had been removed.

"Mind now," said Oakley, "we are fighting for our homes, our women and our children. The police should go and leave us alone. The men, women and children here did nothing to the police. But they make our homes a battleground. Why don't they go away?"

"Last night," said Charles Meehan, "they came, 500 of them, and the police did not a thing to stop them. They were Paisleyites, bigots, full of hate and they fought for four hours to get at the Cathedral . . . The police even helped them with tear gas . . . But they never got to the church . . . They did not."

"There's the flag, we are fighting for," said another young fellow who grabbed the lapel of my coat.

He pointed to the brazen Tricolor over the Derry apartment building. It countered the many Union Jacks which extremists often hoist in defiance of the Nationalists (who want union with the South) as much as a nod to Great Britain.

Oakley, McCauley and the unnamed others who came around told how they considered the arrival of British troops a victory. It would show the world, they felt, that the Northern government could no longer maintain control. Their contempt for police is that the constabulary is not an impartial force.

"It can only do us good," said McCauley. "It will be a moral victory at least. The British troops will not be on one side."

(As this story was being written Thursday, the arrival of British troops in Derry was announced. The Bogsiders have stopped throwing stones and there were reports of soldiers and rebels sharing canteens of tea).

Dorman Malachy told us how things will never be the same in Northern Ireland now that the events in Derry and Belfast have centered world attention on the situation.

Earlier, John Hume, civil rights leader and member of the North Ireland Parliament, expressed the same conviction. Hume, who like Martin Luther King has pressed for non-violence among his followers, told of attacks on Catholic homes by mobs who threw petrol bombs in windows. In Ku Klu Klan fashion, the night riders have also affixed warnings to the doors of Catholic workers' homes.

Yet, Hume holds that much of the problem in Derry and Northern Ireland is economic. Religious bigotry simply exacerbates the situation.

Of course, the matter of a United Ireland is always on the minds of many of the Catholic majority. However, Hume sees no imminence of a united nation. It may come some time, he holds, when, economically feasible and agreeable to the majority. Many liberal Protestants and civil rights activists who are strong for the equality of all in North Ireland are not impressed with the political aspects of national unity.

Back at the barricades, it was obvious that the gap between Derrymen will exist a long time.

A rosy cheeked constable pulled up the visor on his steel helmet and shook his head at the fury of it all. He and his colleagues seemed much restrained in light of the Bogside accusations that they had invaded Catholic homes without provocation.

Asked how he felt about getting the brunt of attacks from both sides on the Derry confrontations:

"Not both sides," he made very clear. "We've got only one enemy—and he's there." And he pointed to the Bogside.

SPOTLIGHT ON BRUTALITY

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. TEAGUE of Texas. Mr. Speaker, the Saturday, September 6, edition of the Evening Star carried an editorial relating to our prisoners of war in North Vietnam and the treatment they are receiving from their captors.

I have been very active with a group of wives and families of these prisoners of war in the last several months in an effort to bring public opinion to bear throughout the world on the North Vietnamese with the hopes that it will change their attitudes toward the treatment our men are receiving as well as force them into releasing information on them and seeing to it that they are treated under the terms of the Geneva Convention.

The editorial follows:

SPOTLIGHT ON BRUTALITY

The press conference of Lieutenant Robert Frishman and Postal Clerk Douglas Hegdahl at Bethesda Naval Hospital marks a new phase in this government's approach to the prisoner of war problem.

Hitherto, administration spokesmen have bitten their tongues and gone along with the falsehood that the North Vietnamese were treating American POWs in a humane way. The object of this restraint was to avoid possible retaliatory action against millitary men still in captivity.

But, clearly, this policy has counted for nil with the hardhearted leadership of Hanoi.

Not only have the North Vietnamese continued to deal out beatings and other torture as a routine affair. They also have rejected all appeals to announce the names of their prisoners—which means that relations and friends have no way of knowing whether these men are alive or dead. Further, the prisoners are denied their basic rights under the Geneva Protocol to receive mail from home and to have access to competent medical care.

It was in these grim circumstances, then, that Lieutenant Frishman and Seaman Hegdahl fulfilled their pledge to their buddies back at the camp to reveal how brutal their treatment at North Vietnamese hands really has been. They spoke of solitary confinement in broiling human ovens, fiendish tortures such as exposure to swarms of mosquitoes and the yanking off of fingernails, callous disregard of injuries, and worse. They told their story, moreover, in the certain knowledge that their luckless comrades will get an extra ration of the same.

Perhaps the harsh glare of publicity will shame the North Vietnamese to modify their unspeakable behavior toward their charges. In any event, this shift in approach is worth a try.

"MR. DEMOCRAT OF GIBSON COUNTY" PASSES

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. JONES of Tennessee. Mr. Speaker, one of the "grand old men" of west Tennessee, Mr. Charley C. Berry, died on Monday, August 25, 1969, at the age of 89. His life is such an outstanding example of service that I feel it should be brought to the attention of my colleagues and the Nation. I would, therefore, like to insert the following tribute to my warm friend, Mr. Charley, which was written by Don E. Chevalia, now chairman of the division of social studies and education at Jackson State Community College in Jackson, Tenn. As a young man, Don Chevalia grew up in Mr. Charley's hometown of Dyer, Tenn., and loved and admired him as we all have through the years.

The article follows:

A TRIBUTE TO "MR. DEMOCRAT OF GIBSON COUNTY, TENN."

(By Don E. Chevalia)

Mr. Charley C. Berry, former Mayor of Dyer, Tennessee, died Monday, August 25, 1969. "Mr. Charley", as he was affectionately called by his friends, was 89.

Mr. Charley was known far and wide as "Mr. Democrat of Gibson County" because of his unswerving loyalty to the Democratic Party. He developed his party interest in 1896, when as a boy of 16 he heard William Jennings Bryan, Democratic nominee for President of the United States, speak in Humboldt, Tennessee.

His personal political career began in 1916, when he was appointed postmaster at Dyer by President Woodrow Wilson. He held this position for eight years. He served a total of sixteen years in the trustee's office in Gibson County, from 1932 to 1947. In 1947, he was elected Mayor of Dyer and was re-elected nine times by his fellow townsmen. Because of failing health, he declined to seek re-election in 1967.

While serving on various boards and in various offices, Mr. Charley remained loyal to and active in his party. He was a member of the Democratic Executive Committee of Gibson County for 55 years. He served as chairman of the committee from 1951 to 1968.

In recognition of the many years of service of Mr. Berry, the Legislature of the State of Tennessee voted unanimously to name the bridge over G M & O Railroad on South Main Street in Dyer the "Charley C. Berry Bridge." The Legislature further directed the State Highway Department to keep the bridge so posted forever.

Mr. Charley was a steward in the First Methodist Church for sixty years. He was a member of the Sons of the American Revolution, the Dyer Lions Club, and had been a member of the Masonic Lodge since 1914.

Mr. Charley's death leaves a great void in Gibson County politics. There are few who have come our way who have left a greater heritage. He had undoubtedly done more things for more people than any man in Gibson County. He will be sorely missed by all of us.

ERLANGER SOLDIER KILLED

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. SNYDER. Mr. Speaker, on Saturday, August 16, Mrs. Marion L. Zipp received notice that her husband SP/4 Marion L. Zipp had been killed when the helicopter in which he was riding was shot down by enemy fire.

Marion Zipp thus becomes another of the valiant men who has given his life in defense of his country and in protecting the free world.

The sympathy of thousands of other families who have paid this sacrifice goes out to Mrs. Zipp and the Zipp family. To them also goes the sincere gratitude of those of us whom Marion died protecting.

The Kentucky Post article of August 18, written by Burl Russell, which reports the loss of the 102d upper Bluegrass soldier to the war in Vietnam, follows:

VIET SHOOT DOWN 'COPTER AND KILL ERLANGER SOLDIER

(By Burl Russell)

"Honey, you can circle Dec. 12 on your calendar and start counting the days. That's the day I'll be leaving Vietnam."

This was part of a letter received Saturday by Mrs. Helen Zipp, 459 Buckner street, Elsmere, from her husband, Sp. 4 Marion L. Zipp, 23.

But she won't circle Dec. 12.

Instead she will have emblazoned in her memory Saturday, Aug. 16, the day she received the letter.

At 8 a.m. just hours before, an Army sergeant knocked on the door.

"Are you Mrs. Zipp?" he asked.

"When I told him yes, he said it very quickly: "Your husband has been killed," she recalled.

The soldier was a crewman aboard a troop-carrier helicopter. It was coming in for a landing at Da Nang airstrip when shot down by the enemy.

"It was not the first time he had had a brush with death," his wife said. "He wrote that about three months ago he was walking at Da Nang with a friend when a mortar attack came.

"The friend was killed."

He had been in Vietnam since Dec. 10, and in the army since July 5, 1967. He was a graduate of Campbell County High School.

The letter Mrs. Zipp received after she learned of his death stated "I'll be coming out of the field any day now."

Besides his wife the specialist leaves his mother, Mrs. Omega Martin, Alexandria, and two brothers, Robert, Alexandria, and William, Covington.

The death of the helicopter crewman marked the 102nd casualty for Northern Kentucky and Kenton County's 40th.

PROPOSALS PRESENTED BY THE OREGON STATE LEGISLATURE

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mrs. GREEN of Oregon. Mr. Speaker, developing the harbor, recreation, and land transportation facilities of the Pacific Northwest are concerns which hold importance for the future growth of this country.

Aware of this, the Oregon State Legislature recently passed a number of joint memorial resolutions advising action by the National Congress. The proposals are presented here for consideration by my fellow colleagues:

SENATE JOINT MEMORIAL 2

To His Excellency, the Honorable President of the United States, and to the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the Fifty-fifth Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the Port of Coos Bay, Oregon, is one of the great natural port sites on the west coast of North America; and

Whereas full development of this port will create new heavy manufacturing and other industries and encourage the growth of existing manufacturing, distributing and construction industries, provide full and fair employment and insure a better life for all in this area and provide Oregon and the west coast of North America with an additional major access to world trade and the ocean's wealth; now, therefore,

Be It Resolved by the Legislative Assembly of the State of Oregon:

(1) The President of the United States and the Congress of the United States are memorialized to:

(a) Institute a plan to develop the Port of Coos Bay, Oregon, into a major world seaport.

(b) Coordinate all federal agencies toward development of this plan, including the agencies involved in commerce, atomic power generation, oceanography, geology and mineral recovery, outdoor recreation, timber management and sale, highway, rail and water transport, pollution control, fish and wild life habitat, and developmenal finance.

(c) Cooperate with private businessmen and investors and with state and local governmental agencies including the port commissioners of the Ports of Coos Bay and Bandon and the county commissioners of Coos County in providing aggressive but orderly comprehensive development of the port site, the estuarine and ocean resources and the industrial potential of the area; and

(d) Adopt a program to provide sufficient funds for the establishment of atomic power generation facilities, improvement of the existing highway system from the port inland to the Willamette Valley with long-range plans to create a new direct freeway route inland and other such developments that will promote access to and facilities for the Port of Coos Bay.

(2) A copy of this memorial shall be transmitted to the President of the United States, each member of the Oregon Congressional

Delegation, the Secretary of Transportation, the Secretary of Interior, the Secretary of Agriculture, the Secretary of Commerce, the Director of the Bureau of Public Roads, the Bonneville Power Administration, the United States Army Corps of Engineers and the Federal Power Commission.

SENATE JOINT MEMORIAL 7

To the Honorable Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the Fifty-fifth Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the Federal Government has established and is assisting the several states in the construction of the National System of Interstate and Defense Highways; and

Whereas the National System of Interstate and Defense Highways is designed to connect principal metropolitan areas, cities and industrial centers, to serve the national defense; and

Whereas Astoria, because of its strategic location, has served and is serving military establishments, business, industry and recreation on the Coast of Oregon, is a center for business and industry from a large area of the coast with substantial new industries now locating in the area and even greater potential for expansion and development since the opening of the Astoria Bridge on the Columbia River, is a recreation center for Oregon and the Pacific Northwest, is the base of a Job Corps Center and the location of a new United States Coast Guard installation; and

Whereas United States Highway No. 30 extends between Astoria and Portland and Portland is on Interstate Highway No. 80 North and the designation of this part of United States Highway No. 30 as part of the National System of Interstate and Defense Highways would complete the route to the Pacific Coast; now, therefore,

Be It Resolved by the Legislative Assembly of the State of Oregon:

(1) The Congress of the United States is memorialized to direct the Secretary of Transportation, acting in cooperation with the Oregon State Highway Department, to designate as part of the National System of Interstate and Defense Highways that portion of United States Highway No. 30 which extends between Astoria and Portland, Oregon.

(2) A copy of this memorial shall be transmitted to the Secretary of Transportation and to each member of the Oregon Congressional Delegation and to the Oregon State Highway Commission.

SENATE JOINT MEMORIAL 9

To the Honorable Senate and House of Representatives of the United States of America, in Congress assembled, and to the Honorable Secretary of Agriculture:

We, your memorialists, the Fifty-fifth Legislative Assembly of the State of Oregon, in legislative session assembled, most respectfully represent as follows:

Whereas the United States of America constructed Timberline Lodge as a public recreation facility in 1937 at the 6,000 foot elevation on the slopes of Mount Hood within the boundaries of the Mount Hood National Forest in the State of Oregon, at a distance of approximately 60 miles from Portland, Oregon; and

Whereas Timberline Lodge is under the administration of the United States Forest Service and has been operated since 1937 for the benefit of the public as a recreation facility; and

Whereas Timberline Lodge has been called the world's most magnificent wooden structure and is one of the outstanding architectural wonders in the United States; and

Whereas in excess of 600,000 members of the public annually visit Timberline Lodge, both during the winter skiing season and the summer tourist season, by reason of which Timberline Lodge has become and is one of the outstanding tourist attractions of the State of Oregon; and

Whereas the facilities of Timberline Lodge for some time have not been adequate to provide proper recreation facilities for such extensive use by the public; and

Whereas Timberline Lodge also lacks many vital service facilities needed for an economic, businesslike resort accommodation; and

Whereas the United States Forest Service has undertaken studies and prepared detailed plans for improvements and additions to the present facilities of Timberline Lodge; and

Whereas it has come to the attention of the Legislative Assembly of the State of Oregon that consideration is now being given by the Congress of the United States to providing funds for the implementation of such studies and plans by the construction of additional facilities and improvements; and

Whereas the citizens of the State of Oregon and the members of the Legislative Assembly believe that the best interests of the general public and of the United States would be promoted by the construction of the additional public recreation facilities at Timberline Lodge proposed by the United States Forest Service; now, therefore,

Be It Resolved by the Legislative Assembly of the State of Oregon:

(1) The Congress of the United States and the United States Forest Service are urged to take all necessary steps to construct the additional facilities and improvements at Timberline Lodge within the Mount Hood National Forest in the State of Oregon as proposed by the United States Forest Service.

(2) A copy of this memorial shall be transmitted to the President of the United States, to the Secretary of the Department of Agriculture and to each member of the Oregon Congressional Delegation.

CITY OF WATERTOWN, N.Y., CELEBRATES ITS 100TH YEAR

HON. ROBERT C. McEWEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. McEWEN. Mr. Speaker, the city of Watertown, N.Y., is celebrating its 100th anniversary this year. The city has been recognized in the July–August issue of the Industrial Bulletin of the New York State Department of Labor in an article entitled "Watertown's Centennial Year, Bright Future Seen for Garland City." Because the story is well written, and because it so accurately describes the exciting atmosphere of the centennial year, I would like to share it with my colleagues. The article follows:

WATERTOWN'S CENTENNIAL YEAR, BRIGHT FUTURE SEEN FOR "GARLAND CITY"

"A proud heritage—a bright future" . . .

The bustling city of Watertown, heralded as the International Shopping Center of Northern New York and "the Gateway to the Thousand Islands," could not have selected a more perfect theme for its year-long Centennial celebration. From the establishment of the settlement on the shores of Black River some 169 years ago by a handful of far-sighted pioneers, who foresaw its development as an industrial and business center, Watertown has enjoyed a proud heritage.

And as far as the future is concerned, the prospects have never been brighter, what with expansion of existing industries and businesses and the building of new plants—all part of what is being described as the greatest building boom in the city's history. The picture for 1969 shows projects estimated at $33 million to be completed or started during the year.

Biggest of the jobs slated to begin this year will be the $8.5 million New York State Office Building at Washington-Sterling-Academy streets. Second comes the $4.25 million Mercy Hospital community mental health project, followed in size by the proposed $3 million elementary public school complex.

A $2.6 million high-rise, 16-story federally sponsored apartment building for senior citizens is scheduled to be started this year, along with the first of three commercial complexes of the city's $11 million Court-Arsenal streets urban renewal development.

Million dollar projects will be fairly common this year as at least eight other projects of this magnitude are initiated.

In looking ahead, one mustn't overlook Watertown's stake in the mushrooming tourist business. Only a "stone's throw" from the Thousand Islands area and the Canadian border, less than 30 miles from the St. Lawrence Seaway and only 100 miles from the St. Lawrence Development, Watertown stands to reap a good share of the benefits as hundreds of thousands of outdoor-minded Americans and Canadians pass through the city en route to vacation havens.

A prosperous city of 34,000 population situated in the heart of Jefferson County, "New York State's vacationland." Watertown can rightfully take pride in its colorful history, its industrial growth and its burgeoning economy, but by far its most important asset is its people. From the business executive to the policeman on the corner of Public Square, the service station attendant and store clerk do more to "sell" Watertown and the nearby resort area than all the posters and brochures. They always have time for a friendly greeting and are quick to sing the praises of "their city."

This has been especially true during the Centennial observance. It's safe to assume that 99 per cent of the populace have identified with the Centennial and have become self-appointed promoters. This highly successful yet surprisingly inexpensive venture has taken the city and surrounding area by storm.

The idea for the Centennial Celebration was first broached by Mayor Ted Rand and got off to a flying start when the Common Council designated two community-minded citizens, Richard M. Hollenbeck, sales representative for Niagara Mohawk Power Corporation and Tony C. Malara, manager of Radio Station WWNY as co-chairmen of the Centennial Committee.

Their initial step was the appointment of an Executive Committee and monthly chairmen to organize the special programs and activities to be held each month throughout the year.

From the outset, this has been a labor of love for key personnel and the hundreds of citizens who either volunteered or were recruited for this gigantic project.

According to Dick Hollenbeck, upwards of 1,500 people are working on the Centennial. "Cooperation has been nothing short of phenomenal."

Hollenbeck is immensely proud of the fact that this is strictly a "do-it-yourself" project. "We felt that we could save a lot of money and do as good a job of promoting this Centennial as could any of the professional promotion outfits, and I think we've proven our point."

Members of the upper echelon are easily identifiable at Centennial functions and on the streets of Watertown in their bright red blazers carrying the Centennial patch.

Among the more important aspects of the celebration has been the publishing of an impressively-done Centennial magazine, 10,000 copies of which will be given away free to Watertown residents.

In addition, heritage plaques have been placed on more than 40 city landmarks that

are 100 or more years old. For the souvenir seekers, the committee has provided hundreds of silver coins retailing at $7.50 and several thousand brass coins at $1.50.

For the younger set, coloring books depicting the history of Watertown have been made available.

By far the biggest attraction is the huge birthday cake on display in Public Square. The three-tiered "cake," 16-feet square, is made of fiber glass and cheese cloth and is the handiwork of carpentry students at Jefferson Vocational-Technical Center. The cake was unveiled Feb. 1 and was to have come down after one month. However, it generated so much interest that it was decided to leave it up for the duration of the celebration.

"It's been repainted once," says Dick Hollenbeck, "and is in surprisingly good condition, considering the weather, etc. That cake cost us only $165 but has given us thousands of dollars worth of publicity."

As for the monthly programs, it has been and will continue to be one special event right after another, including band concerts, parades, exhibits of century old articles and materials, barbershop concerts, essay contests, art shows, historical pageants, visits by the mayors of Watertown, South Dakota and Watertown, Mass., etc.

Long known as the "Garland City" and as the metropolis of Northern New York, Watertown is actually commemorating the 100th anniversary of its becoming an incorporated city on May 8, 1869.

The community has a balanced economy based on small diversified industry and trade from a large dairy farming and resort region. Heavily contributing to the economy base are several major industries which manufacture papermaking machinery, paper products and air brakes.

It has a non-partisan City Council presided over by the energetic mayor, Ted Rand, and city manager form of government.

In addition to its attractive downtown park area, known as Public Square, the city boasts of a fine developed park of 200 acres that features a zoo, swimming pool, golf course, etc.

A number of flourishing concerns were doing business in Watertown more than 100 years ago. These include the Agricultural Insurance Company, Knowlton Brothers, Inc., Jefferson County Savings Bank, the Watertown Daily Times, the Woodruff Hotel, and the James R. Miller Clothing Store.

Knowlton Brothers, Inc., manufacturers of special industrial papers since 1804, is Watertown's oldest industry. It is the third oldest paper mill in the United States in uninterrupted operation on the same site. Since 1808, when the firm's predecessor established the Pioneer Mill, Knowlton has been a leader in the development of special industrial papers.

Aside from Knowlton Brothers, the city's industrial community includes Black Clawson Manufacturing Company, Aco Machinery; New York Air Brake Company, a unit of General Signal Corporation, which has helped build the proud heritage of Jefferson County over the last 78 years; Fisher-Gage, Inc., a precision die-casting company that moved from Ontario in 1964; Chesebrough-Pond's, Inc., Faichney Instrument Division, which is presently building a new clinical thermometer plant; Hall Ski-Lift Company; Bomax, Inc., manufactures of small electric motors, a recent acquisition of Gould National Lead, and others.

The city has many famous landmarks including the Arcade and the century-old dam at the Knowlton plant but perhaps the best known of them all is the ornamental fountain in Public Square which dates back to 1853 or 1854.

The fountain came close to disappearing from the scene in 1959, but was restored through the efforts of public spirited citizens and officials and foundry workers at New York Air Brake Company.

The fountain was originally set up during the administration of Joseph Mullin. It was originally dubbed "Cary's Punch Bowl" because it was advocated by Benjamin Cary, a member of the village board of trustees.

In the early morning hours of August 22, 1959, it was knocked down by two reveling out-of-town firemen. The two men told police they climbed to the top of the 15-foot high fountain "to see where the water came from."

The lion's share of the credit for restoring the fountain which was dedicated on May 31, 1960, went to officials of the New York Air Brake Company and representatives of Local 78, International Molders & Foundry Workers of North America, AFL–CIO, who donated labor and material for the project. It was decided that the new fountain would be constructed of cast iron sections molded from parts of the original structure.

Two men who were deeply involved in Local 78's restoration effort nine years ago are still active in the union at Air Brake: Antonio Castro, then president of Local 78 and Clarence Pringle, corresponding secretary who was then vice president.

Early in the 1920's, Watertown businessmen united with village leaders to advertise the Thousand Islands on a regional basis through a single agency. This was the beginning of a long continuing effort on the part of Watertown to promote the tourist and vacation business within its trade territory.

The next eventful project undertaken was to get a State Regional Park Commission established to help boost the Thousand Islands area. Watertown civic leaders used their influence to have such a commission created by Congressional legislation in 1932. First chairman was Charles A. Winslow, a past president of the Watertown Chamber of Commerce, who later became mayor of the city.

The Thousand Islands Park Commission now has under its administration 17 well-developed parks ranging from Sackets Harbor to Massena.

The Thousand Islands Bridge was another area asset promoted during the depression years. Watertown civic leaders, headed by civil engineer William T. Field, successfully promoted the project of a bridge across the St. Lawrence at Collins Landing, to be built and financed by a bridge authority whose members would be appointed by the county government.

Executive Secretary of the Bridge Authority these many years is W. Grant Mitchell. The Authority's secretary is Clinton W. Marsh of Watertown, a member of the Centennial's Executive Committee.

What about the labor picture?

Veterans in various building trades view the volume of construction in Watertown, stemming from 1969 starts, as the biggest for any single period in the city's history. The package of local projects is expected to provide at least three years of employment, almost on an uninterrupted level, for those in the building and allied trades.

The man with his finger on the labor situation in Watertown is the highly respected Milton Frey, business manager of Carpenters Local 278, AFL–CIO, president of the Central Trades and Labor Council and secretary-treasurer of the Adirondack and Vicinity District Council of Carpenters of the United Brotherhood of Carpenters and Joiners of America.

"The outlook for employment is bright," says Frey, "taking into consideration the possibility of problems caused by weather and delays in the urban renewal negotiations."

As for labor-management relations in the Watertown area, Frey notes that the labor record has been good and "our relationship with management has been equally as good."

Frey doesn't share the opinion of some area executives that the building boom will bring about a shortage of labor in the building and allied trades. "I do not foresee any labor shortage. . . . In the past, there have been very few times when we have experienced a lack of workers. The possible exception would be in July and August and would involve those with special skills."

"When these jobs are ready to go," Frey says, "we will be able to scour the 14-county area covered by the Adirondack and Vicinity District Council . . . we have a big area to draw from."

Frey, who has been business agent of Local 278 for 17 years, maintains his office in the Watertown Labor Temple which houses the following organizations: Adirondack Carpenters Pension Fund; Adirondack Carpenters Welfare Fund; Building and Construction Trades Council; United Brotherhood of Carpenters and Joiners of America; International Brotherhood of Electrical Workers Local 910, AFL–CIO; Jefferson, Lewis and St. Lawrence Counties Central Trades and Labor Council, AFL–CIO; Plumbers and Steam Fitters Local 117, AFL–CIO; Laborers Union Local 322, AFL–CIO, and the Truck Drivers and Helpers Local 687.

The multi-million dollars worth of physical assets now invested in Watertown, the additional millions committed to expansion and new construction by governmental agencies and private business, combined with the organized effort now directed toward creating more industrial employment opportunities combine to assure a bright future for Watertown.

OUR ENVIRONMENT: COMMITMENT OR COMPLACENCY

HON. LOWELL P. WEICKER, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. WEICKER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

OUR ENVIRONMENT: COMMITMENT OR COMPLACENCY

(Keynote address by Congressman LOWELL P. WEICKER, JR., 4th District of Connecticut, before the Southwestern Connecticut Girl Scout Council Conference on Natural Resources, Hartford, Conn., Monday, August 11, 1969)

In Ohio, they say that anyone who falls into the Cuyahoga River does not drown. He decays. This river caused a fire because of its oil slick.

The Potomac River reaches Washington as a clear stream. It oozes from the area with 240 million gallons of waste per day.

Yellow-brown is the color of the Charles River in Boston. Sailboats in college regattas seem to crawl, rather than drift over its murky depths.

Of 62 beaches along Lake Erie's U.S. shores, only 3 are rated completely safe for swimming. Even wading is unpleasant because 30,000 sludge worms may be found in each square yard of lake bottom.

To breathe for half a day in New York City is similar to smoking a pack of cigarettes.

Industries fill Lake Erie with 15 billion gallons of wastes. The lake is being strangled by lack of oxygen. Weeds are the only form of life which survives.

When you dive into Long Island Sound you are diving into 196 million gallons of waste that comes from 46 municipal plants, 59 industrial plants, and 7 federal installations every day.

In many instances we have abused natural resources to the point where it is no longer possible to repair the damage. This situation is a direct result of our nation's lack of will and wisdom rather than a lack of ability to solve these pollution problems. In our na-

tional list of priorities, conservation of our natural resources has always ranked low. Clearly, what this country lacks is a resolute national commitment to solving the pollution crisis. Nothing less than a total commitment will solve the problems of dirty air, clogged rivers, inadequate waste treatment and destruction of public lands.

It's too easy to put off appropriating funds to preserve our national resources. And we have been guilty of doing so for too long.

Truthfully, our national attitudes are not much different from the attitudes we exhibit at home. Given the choice of a new septic field or a color television set, the average American will opt for the tube. And yet, the future value of his home is much more dependent on that septic field than on the initial oohs and ahs of his friends viewing a Saturday night special.

So the question must be asked as to whether or not this generation of Americans is interested in the future value of their nation's natural resources and national beauty and clean environment or whether we will continue to indulge ourselves in an orgy of resource revelry.

What is the situation today? The tremendous growth of population and expansion of industry have doubled the waste. Less survives to be wondered at, while our capacity for wonder is leapfrogging. You and I just now can see tell-tales of past negligence. We can't let the problem slide by anymore. It could be that talk sufficed to meet yesterday's commitment. But today, the distance has closed and we're standing eyeball to eyeball with the truth—and that is that our commitment must be in the form of action and money.

Traditionally, the Federal Government has not played a large role in conservation. The citizen sector took the initiative. When sent to research expenditures, my staff found it difficult to pinpoint Federal conservation spending before 1965. That's only 4 years. But waste and pollution problems existed 10 years ago. They existed 50 years ago. They have existed since the industrial revolution. Landmark conservation bills have been few and far between. The 79th Congress enacted the coordination act which protected wildlife in connection with Federal drainage and water projects. Then the 89th Congress passed the Federal Pollution Control Law which provides benefits to state and local communities. This also helps in protecting wildlife habitats in streams, lakes, marshes, and coastal waters. Legislation has increased somewhat in recent years. The Water Quality Act of 1965 was followed by the Clean Water Restoration Act of 1966.

The national interest is interlocked with the problem of preserving natural resources. This makes it a federal, local, state, industrial, and individual responsibility.

Federal financial commitment has been minute in the past. In 1967, only 2% of the federal budget was spent on natural resources. In 1968, it dropped to 1.9%. And in 1969, still only 1.9% of the federal budget was spent on natural resources.

The past few years have not been encouraging. Specific federal programs would be more meaningful if they had sufficient funds.

There are five prime areas of conservation: wetlands reclamation and land acquisition, air pollution, water pollution, and wildlife preservation.

Wetlands reclamation received attention in the 90th Congress. This attention was all talk and no action. While we're waiting for bills to reach the floor of the House which would provide money for the national wildlife refuge fund, valuable marshes and swamps are being filled in. This causes wetlands animals to flee the area and upset environmental balance. Originally we had 140 million acres of swamp and marshland in the U.S. Recent investigations show we have about 76 million acres left. Drainage of these areas is proceeding at an alarming rate: in the 12 year period 1943–1954, nearly one million acres were drained and lost to marsh-wildlife production. When we unthinkingly plot the destruction of a wildlife habitat, we are undermining the whole structure of one part of our natural resources.

In the second area of land acquisition, we do not have a very bright picture. There have been many bills concerned with parks introduced into the House, but they have no financial muscle. In 1969, 15 million dollars less than requested was given to the National Park Service. The National Park Service received one-half the amount it is supposed to from the land and water fund.

Encouraging efforts have been made in the third area, air pollution. The Department of Health, Education, and Welfare has set up a National center for air pollution control. Another good sign is the 96 million dollars appropriated for the clean air act. Also, tax incentives have been given for the control of air pollution.

Of course, I must confess to wondering why those that make the mess shouldn't clean it up without a carrot paid for by the American people. Money for air pollution has increased from 5 to 32 million dollars for the states to set standards in 70 air quality control regions. The major attack on air pollution in 1970 has been preceded by a 150% increase in state and local expenditures on air pollution since 1965. In addition, 45 states now have air pollution statutes compared with only 17 states before 1963. This shows concern at the local level. However, federal research will be needed to provide the scientific basis for air quality standards and to develop more effective equipment to control air pollution. Emphasis will continue to be given to research and control activities related to pollutants from automobiles which account for approximately 60% of all air pollution. With the increasing number of automobiles on the road, carbon monoxide in the air would be expected to increase 50% by 1980, if left uncontrolled. New controls required by federal regulations on 1970 and 1971 model cars will prevent an increasing amount of these harmful wastes from ever being emitted to the air. However, the controls alone will not be sufficient to achieve the low level of auto exhaust emissions believed necessary for health protection in our cities.

The fourth area is water pollution. Some important legislation has occurred in this area. The water quality improvement act has passed the House and has been reported to the Senate.

This bill would finance the building of municipal waste treatment plants. A 50 million dollar revolving fund to provide for financing effective waste removal would be set up. The Secretary of the Interior would set up standards of performance for marine sanitation devices.

Practically every important water resource in this country is polluted to some degree. No one can say just how much it will cost to clean up the nation's polluted waters and to keep the still-clean waters from becoming polluted. At today's prices, the bill could run as high as a hundred billion dollars. When we shortchange water pollution control, we have agreed to give our children a toilet bowl, rather than the clear spring that was left to us.

In the Department of the Interior, for example, the 1969 budget for the Federal Water Pollution Control Administration for waste treatment plants was 214 million dollars. It is the same amount for 1970. In the Department of Agriculture, water and waste disposal grants totalled 28 million for both 1969 and 1970. When taken by themselves, these may seem like large amounts of money to be spent to clean up the nation's waterways. They aren't. In a recent four volume report for the Federal Water Pollution Control Administration, it was estimated that approximately 25 billion dollars will be needed over a five year period for municipal and industrial waste treatment works and sewer construction in order to launch a meaningful cleanup of our nation's waterways. These estimates did not even include cleanup costs for dealing with problems of combined sewers, agricultural runoff, mine drainage, or oil pollution. Programs proposed by 40 states indicate that municipal waste handling investments from 1969 to 1973 amount to 6 billion dollars, roughly equal to that spent during the last five years. At the same time, costs of plant expansion and replacement have climbed by about 20 million dollars a year in the last four years and may exceed the costs of new plant construction during 1969. What this means is that if construction costs continue to rise as they have in the past, and this seems likely, total clean water costs are expected to amount to 28 billion dollars in the next five years. The gap between what is needed and what we are getting is frighteningly obvious.

In the fifth area, while man neglects his natural resources he is not the only one who suffers. The wildlife of North America is being pushed back as the wilderness disappears. Many species have totally vanished from existence, and many more are in danger. How many of you, if you have visited National Park and Preserves, have seen alligator, panthers, eagles, wolves, and falcons? These are well known animals our fathers and grandfathers once took for granted as part of their surroundings. Now many of these species exist only in zoos. Indeed, the time is not too far off when you will be parents. But if we continue at this rate, your children may know these animals only through textbooks, for they will have vanished from the scene. Our wildlife is an indispensable part of our heritage and it must be protected. I was shocked by a recent Bureau of Sport Fisheries and Wildlife Study which listed 89 species of wildlife: 14 mammals, 46 birds, 8 reptiles, 21 fish, which are now threatened with extinction. Equally appalling is the long list of extinct species which once were a part of the fauna of North America.

The picture is bleak, common sense tells us that. But the Federal Government is beginning to put its house in order so it can adequately deal with environment control.

The President has recently created the Environment Quality Council. This council is a cabinet-level advisory group which will provide the focal point for this administration's efforts to protect all of our natural resources. The Council will review existing policy and suggest ways of improving it. In other words, it's an effort to unite all the government operations into an efficient coordinating body.

A national policy must include the following to be effective: First, environmental quality must be considered in a worldwide context, extending in time from the present, far into the future. Second, purposeful, intelligent management to recognize and accommodate the conflicting uses of our environment must be a national responsibility. Third, information required for systematic management must be provided in a complete and timely manner. Fourth, educational efforts developing are essential in individual citizen understanding and appreciation of environmental relationships and participation in decision making on these issues. And finally, science and technology must provide management with increased options and capabilities for enhanced productivity and constructive use of environment.

We need money. There is no question about that. We can do everything else, but if we don't have funds, we won't solve the problem. I'm not talking just about milking the taxpayer either. Industry and business must take more initiative and responsibility than they have in the past. For years our environment has been sacrificed to individual laziness and corporate profits. Our rivers have

provided the dumping ground for garbage, chemicals, and other waste products. That which is burned is poured into the air in the form of dangerous gases which, after a long period of time, can seriously impair health and shorten life.

Some industries have responded. Others have made token gestures. Most, however, will not risk even the smallest investment in the future of the environment because it might mean some loss of profits. Nobody's fooling anyone on this account—it will amount to some loss in overall profits. Any expense does that. The thrust of public opinion must be strong, because laws alone cannot police all the activities of government, industry or your neighbor. And actions have to be backed by finances. In its latest report to Congress, the Federal Water Pollution Control Administration stated that over the past fifteen years, private industry and business had contributed 700 million dollars to public facilities for water pollution control and $2.2 billion to waste treatment facilities of their own. New plants usually are equipped with waste control facilities, but most older plants have no facilities and do little in this area. It must be considered that by meeting minimum standards, our waterways could be kept clean, assuming that they were clean—which they are not. There is inadequate private response to address the task of compensating for the almost irreparable damage done in the past.

According to the Department of Commerce and the National Air Pollution Control Board, there is only 400 million dollars worth of air pollution equipment sold in a year. New industries, in publishing the amount of their profits used for conservation, will sometimes include the entire cost of the plant, saying that the entire factory is contributing to reduction of air pollution. How is that possible? If you drive through any city, you have to roll up the windows to be able to breathe. Four-hundred million dollars is a very small percentage of the total profits of all industries. Industry must be willing to invest in cleaning up the air and water. In short, the business community has an obligation to preservation of natural resources which it, by and large is not facing up to. Good environment is profitable.

We have to decide on how much progress toward achieving the zenith of our own comfort should be exchanged for the rape of our environment. As the pollution increases, people will demand more cars, more houses, more refrigerators, more boats, more one-way containers, more flip-tops, more airplanes, and so on. This means more pollution and more garbage and more wastes.

The task is monumental. It increases when you consider that misuse of our natural resources is expanding each year. As technology increases, new pollutants and chemicals are fed into our air and waterways. These in turn need specific scientific research for each pollutant.

I think we all know, as was the case with the moon landing: that when the nation commits itself to a goal, that goal is achieved. Why not apply the lesson that we relearned from the success of Apollo 11 to the crucial conservation problem on this planet.

The underpinnings of reaching our goals must be a greater care for future man and hard cash.

What I am asking for is nothing less than a total commitment on the part of each citizen of this nation to be prepared to act as well as pay for the preservation of our environment.

In my capacity as a representative of the people of this state and nation, I will work for the cause of conservation at the federal level.

I am deeply impressed with your concern and awareness. It is unparalleled by any other generation in our history. Each of you here has made a commitment to the preservation of our environment and it is an excellent beginning. But we will not solve the pollution until the commitment is total and national. It is your task to return to your communities and get your friends, neighbors, and legislators committed to the goals discussed here today. Your actions and hopes will create the realities of the future.

There is a popular song that was at the top of the charts recently and it begins: In the year 2525, if man is still alive . . . This is a pretty grim outlook. It is up to each one of you and it is up to me—all of us—to make sure that man does survive.

REVENUE-SHARING AS A MEANS OF MODERNIZING STATE AND LOCAL GOVERNMENT

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. REUSS. Mr. Speaker, current discussion of revenue-sharing is sharpened by a recent editorial broadcast on Boston's radio and TV station WBZ:

WITH STRINGS ATTACHED

We've long urged federal revenue sharing with states and communities. So basically we back President Nixon's plan to get this type of program started. But we've always envisioned revenue sharing as a way of bringing about some basic changes in the way state and local government operations are run. This is an issue President Nixon has ducked. And we think the final version of his revenue sharing program should be amended to include some definite reform provisions.

Accepted standards of state and local government operations have been spelled out in a whole series of public and private reports in the past few years. The federal government obviously can't make these changes from above. But there's no excuse for it to subsidize obvious waste and inefficiency.

Here in Massachusetts substantial progress has already been made toward reforming the structure of state government. The big needs now are for strong administration, real political leadership and a major upgrading of the personnel system. At the local level, though, darn little has been done, here or elsewhere. Prospects for action are still dim without some outside prodding. And there's no better prod than the danger of being cut off from a new and expanding revenue source.

Rep. Henry S. Reuss of Wisconsin, one of the early Congressional backers of revenue sharing, argues that the Nixon plan would be a "crutch to perpetuate ineffective state and local government." Instead Mr. Reuss would like to see it as a catalyst to bring about badly needed reforms. We think he's right. We hope many of you will back him up, too.

The editorial sets out quite rightly the view that revenue-sharing should be seen as a means of bringing about some fundamental changes in the way State and local governments operate. But it is in just this crucial respect that President Nixon's revenue-sharing proposal fails.

First, it seems that the States are to be given their money at once, without being required to undertake any reforms, indeed, without even being required to develop any plans for reform.

Second, the pass-through formula will apparently make all units of general local government eligible for a share of the money, thus assuring the most archaic jurisdictions and the tiniest of suburbs of support while failing to create any incentive toward consolidation.

Third, the formula for distributing funds within the State will do little to alleviate the scandalous disparity between the revenues of various localities with the same population. Community X may at present receive far more revenue than Community Y simply because it has several wealthy income-tax payers, or a vast public utility installation, or a sales tax generating shopping center. Moreover, Community X may have set minimum building cost limitations which in effect zone out poor people, particularly those with children. But if each unit of local government is to receive a sum "based on its share of total local government revenues raised in the State," rich Community X will get still richer, and poor Community Y will get only a litte less poor. Although the Nixon administration's proposal would permit States to develop alternative distribution plans, I see little incentive in the proposal for States to change present inequitable distribution formulas.

H.R. 11764, a bill introduced by me this year to make revenue sharing a "catalyst" for needed reforms, would provide block grants to the States and localities for a 3-year trial period, of $5 billion, $7.5 billion, and $10 billion, respectively. For later years, annual contributions at the $10 billion level are envisaged. There is only one big initial string attached to these funds—that the State develop in good faith a program setting out plans to modernize and vitalize its local governments and the State government.

Each State wishing to participate in the revenue-sharing plan of H.R. 11764 would develop a modern government's program over a 2-year period. H.R. 11764 would authorize $50 million to cover the full cost of all State planning.

The bill would create four regional coordinating committees of Governors—Eastern, Southern, Midwestern, and Western—also financed by Federal planning funds. Draft State programs would be completed within 18 months, and then forwarded to these Governors' committees for review and suggested improvements. The regional coordinating committees, after 6 months of dialog with State planners, would by majority vote send to the President those State government programs which they found reflected "sufficient creative State initiative" to qualify them for Federal revenue sharing.

Within a year, the President would make his own independent finding as to whether a State's modernization program qualifies it for revenue sharing. In reaching his decision, the President would be authorized to seek the advice of the Advisory Commission on Intergovernmental Relations, an independent and respected body of Federal, State, and local officials created by Congress in 1959. Only States whose programs were approved by both the coordinating committee of regional Governors and the President would be eligible for block grants.

In order to qualify for revenue-sharing grants, a State's modern govern-

ment program must include enough reforms to demonstrate bona fide "creative State initiative." The list of possible reforms includes recommendations made over the years by such organizations as the Committee for Economic Development, the U.S. Chamber of Commerce, the Advisory Commission on Intergovernmental Relations, the Council of State Governments, the National Municipal League, the National League of Cities, the Mayor's Conference, and the National Association of Counties.

These reforms are at three levels—interstate, State, and local. They would involve constitutional, statutory, and administrative changes.

Reforms at the interstate level include regional agreements among States, and interstate compacts, for cooperative efforts in health, education, welfare, and conservation, for the government of metropolitan areas overlapping State lines, and for dealing with other interstate regional problems.

At the State level, possible reforms include the short ballot, longer terms for constitutional officers, annual sessions of the legislature, adequately paid legislators, the merit system, modernized borrowing powers, rationalized boards and commissions, improved tax systems—including a progressive income tax—and assistance to local governments.

A first set of reforms at the most important local level would be designed to make local government operations more efficient, economical, and responsive. These reforms would include reduction of the number of counties, towns, and other unnecessary local units, promotion of all forms of metropolitan government and true home rule, adoption of the short ballot, modern borrowing power, the merit system, and decentralization of local government in order to make it more democratic and humane.

A second set of local government reforms would be aimed at removing economic disparities between various local governments, and supporting current efforts by big-city mayors and the Federal Government to save the central city. Among current inequities to be corrected are local zoning regulations which keep out low-income housing, or in some cases all homes. Related reforms would entail the revision of State grants-in-aid for local health, education, welfare, and housing activities, as well as State formulas for sharing of tax revenues, in order to eliminate preferences given to wealthy communities at the expense of poor communities.

Other economic reforms which have been proposed include easing restrictions on local taxing and borrowing powers, improving local tax administration, authorizing local governments to use nonproperty taxes, and furnishing State financial and technical aid to metropolitan areas for planning, building codes, urban renewal, and consolidation.

If H.R. 11764 were enacted in 1970, States qualifying for Federal block grants could begin receiving payments as early as 1973—the first year when a sizable Federal fiscal dividend can reasonably be expected. The only "string" on the block grants would be the demonstration of State initiative through the filing of modern governments' programs. These programs would be screened by the Governors themselves, and then reviewed by the President. There would be no statutory strings with respect to compliance with the State plans. However, some incentive to follow through on the plans would be provided by the requirement of annual reports to Congress and by the fact that the initial program would run for 3 years only.

For the initial 3-year period of 1973–75, the sums stipulated for revenue-sharing are in the annual range of $5 to $10 billion. They would be authorized and appropriated by the usual congressional processes. Some have argued that a trust fund would be preferable in that it would give the States more assurance that funds would be available on a continuing basis. In H.R. 11764, I have opted for the annual appropriations process in the belief that Congress, for better or worse, must be the final arbiter of national priorities. Continuity in revenue-sharing is indeed vital, but Congress should probably retain the power, in a fiscal pinch, to share adversity between revenue-sharing and such competing claims as direct Federal spending, or the level of private spending as reflected by the Federal tax bite.

H.R. 11764 would allocate revenue-sharing funds on a basis which would make funds available via the States to cities and urban counties of more than 50,000 population, with the most money going to those of over 100,000 population. The allocation to each State and its localities would be based on population as a percentage of total U.S. population, but with an adjustment for relative tax effort, and a credit based on the State's revenues from its income tax. By giving extra weight to revenue from State individual income taxes, States would be encouraged to increase their reliance on this type of tax, which has not yet been adopted by a third of the States, and is only very modestly used by a large number of others.

Under H.R. 11764, allocation of funds to localities would proceed as follows: The share of each large local government within the State—cities and urban counties of over 50,000—would be derived by the ratio between its own local tax revenues and the total revenues from all State and local taxes in the State. Cities and urban counties would be entitled to these shares of their State's revenue-sharing payments: if population is 100,000-plus, twice the ratio; if population is 50,000 to 100,000, the product of the ratio times the percentage by which its population exceeds 50,000. In 1960, there were 310 over-500,000 cities, with 63.4 million inhabitants, and 407 over-50,000 counties, with 103.1 million inhabitants. Without double counting, the aided population was 121.7 million. Thus, only 717 of the Nation's 80,000 local units would be directly aided—avoiding staggering administrative complexities.

On a nationwide basis, this formula using 1966 statistics would allocate 65 percent of the revenue-sharing payments to the State governments, 22 percent to the cities, and 13 percent to urban counties. Based on past performance, a large portion of the States share would be rechannelled to local areas. In the case of a large urban State like New York, the percentages are respectively 22 percent, 67 percent, and 11 percent. In the case of a rural State, Wyoming, the percentages are 99, 0, and 1, respectively. In the case of a combined rural-urban State, Tennessee, the percentages are 47, 26, and 27 respectively.

The great advantage of this allocation formula for the localities—which was devised by the National Advisory Commission on Urban Problems headed by former Senator Paul H. Douglas—is that it would give smaller communities an incentive to consolidate into more workable metropolitan systems. By basing the formula on local taxation, it favors local governments that try to provide adequate services, and seeks to allocate payments between cities and urban counties which have overlapping boundaries.

I have outlined the essential features of H.R. 11764 in order to demonstrate how revenue sharing can serve as a catalyst to creative reform rather than as a mere crutch for our outmoded State and local governments. When the Nixon administration comes forward with all the details of its revenue-sharing proposal, I hope that we will find that it has changed its mind in some important respects, and come around to the view that revenue sharing should be used as an incentive to large-scale and progressive reforms at the State and local level of government.

RESOLUTION ADOPTED BY GEORGIA OILMEN'S ASSOCIATION

HON. ROBERT G. STEPHENS, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. STEPHENS. Mr. Speaker, the Georgia Oilmen's Association has adopted a resolution expressing the concern of its membership over the methods used by the Internal Revenue Service in the collection of the Federal income tax. This resolution calls for a complete reassessment and reevaluation of the Federal Revenue laws.

I think this resolution will be of interest to all of the Members of Congress. I submit it, therefore, for insertion in the RECORD:

RESOLUTION BY GEORGIA OILMEN'S ASSOCIATION

Whereas, The Officers and Directors of the Georgia Oilmen's Association have a vital and growing interest in government financing and the method of providing the revenue for such purpose, and

Whereas, the Georgia Oilmen's Association is now gravely concerned over the loss of certain constitutional guarantees to many citizens of our great nation, and

Whereas, the method of collecting federal revenue under the present Income Tax Laws is too complex and oppressive for compliance by the average citizen of this country.

Now therefore be it resolved that the Georgia Oilmen's Association petition the members of Congress from the Sovereign State of Georgia to encourage, promote and actively support a complete reassessment and reevaluation of the Federal Revenue Laws, and

Be it further resolved that the Georgia

Congressional Delegation be requested to give its most serious consideration to adoption of a National Sales and Gross Receipts Tax in lieu of the present income tax with the elimination of all such Federal Income Tax Laws as may be possible through the adoption of such procedure, and

Be it further resolved that the members of Congress from the State of Georgia be requested to use all means at their disposal to insure the constitutional rights of the individual and the privacy of one's affairs in the enactment of all Federal Revenue Laws, and

Be it further resolved that the Georgia Congressional Delegation, and the news media, be furnished a copy of this resolution.

Adopted this 18th day of June 1969, at Atlanta, Georgia.

BUDDY M. NESMITH,
President.

Attest:

HARRISON W. BRAY,
Executive Director.

TAX REFORM

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial piece from the Boston Herald Traveler for August 13 relating to the actions of the Congress with respect to tax reform:

THE INVESTOR

(By Edson B. Smith)

QUARTER EARNINGS BELOW ESTIMATES; TAXES, LABOR COSTS RISE RAPIDLY

The second-quarter earnings in the cases of many important companies were not as good as had been generally expected. Labor costs, and particularly taxes, have been moving up more rapidly than have prices in several industries.

Declining earnings plus continued monetary stringency and the highest interest rates on record have made the going tough for the stock market. Most Wall Streeters have given up hope on Vietnam. Apparently today Russia is the only hope of persuading the North Vietnamese to quit. In the meanwhile there is little sign of the inflation slowing down. Stocks and bonds go down, so do business profits. But the prices of goods on average continues to rise.

The Nixon economists and the Federal Reserve have said they wanted to dampen inflationary expectations. There is little to indicate that their efforts have been successful but they have dampened about everything else, including the security markets and the feelings of business men about profits in the months ahead.

This exhibition Congress has been putting on about tax "reform" has made many investors sick at their stomachs. A lot of people thought that when they voted for Nixon last fall and he was elected we were about to get a decent conservative government. One thing which is increasingly clear is that Nixon can't control the left-wing gang in Congress, which seems to be getting worse than ever.

While Wall Street at the beginning of May was none too happy about bonds, the outlook for stocks and for business was generally deemed O.K. Now it is getting so one needs a magnifying glass to find even a little bull.

OIL COMPANIES TO FIGHT BACK AT "REFORMS"

The Texaco earnings for the second quarter of 1969 were definitely disappointing, $1.28 a share compared with $1.38 a year before. Gross was up but wages and taxes were up more with the resultant loss in net.

At last reports Congress was busily engaged in trying to cut the depletion allowance for the oil companies. They try to hold the price of gasoline and fuel oil down and our politicians at the national level slap them with more taxes.

Everybody with an ounce of brains knows that the combination of the labor unions and the tax collectors is going to boost the price of gasoline and other petroleum products. The Chase National Bank of New York, which has a department which is really expert in matters pertaining to the oil industry, says that profits are too low now, which is amply demonstrated by the current Texaco and other leading oil company figures.

Pretty soon the price of petroleum products will start upward. The people that run companies like Texaco and Shell are not going to sit idly by and let forces over which they have little or no control hurt them financially.

Secretary of Labor Shultz recently warned that a lot of men are pricing themselves out of jobs by the exorbitant wage demands. One of two things is bound to happen. Either prices are raised to offset rising costs or men are fired. And when a company's profits go down, the tax collectors' take drops proportionately.

Obviously one of the things there is no shortage of in the United States today is fatheads.

HOW TO LOSE A WAR

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. JACOBS. Mr. Speaker, with reference to the recently unearthed secret plan of the administration to end the war, does the following sound familiar?

[From the Indianapolis Star, Sept. 10, 1969]

HOW TO LOSE A WAR

The proposal to settle the Vietnam war by 18 House Democrats including 11th District Representative Andrew Jacobs Jr. should make Hanoi happy.

The plan calls for free elections in South Vietnam with the participation of all parties—including the National Liberation Front (NFL), the political arm of the Viet Cong.

The 18 House Democrats also urged that all foreign troops be withdrawn on a gradual, reciprocal basis following the elections.

How to get negotiations underway to accomplish all this was not included in the statement of the 18. It did call for a pre-election cease-fire, banning military operations and terrorist acts.

This is a totally unrealistic program. In the first place the development of the NFL is the work of Ho Chi Minh who attempted, following the partition of Vietnam in 1954, to capture the government of South Vietnam by political means. When this failed the acts of terrorism began. Villages were brought under the control of guerrillas armed from the north, brought in from the north and commanded from the north. This brought the plea from the late South Vietnam President Diem which led to the first American advisers being sent to Vietnam. Since then North Vietnamese regulars have invaded South Vietnam. Aided by the guerrillas they have conducted attack after attack culminating in the current offensive against the cities of the south.

The original aim of the NFL to win the south by political means failed. That led to a military attempt to seize control. So any agreement by the U.S. or South Vietnam which would allow their participation in the affairs of South Vietnam would be handing the NFL its original goal. It would be an admission to the world that the U.S. had failed in its commitment to South Vietnam.

It is possible the NFL might not win in a first election. But in the confusion of war and in the war's wake, what would be left to stop an infiltration of "voters" from the north? Who could stop the same terrorist tactics from influencing the vote of others, if the "foreign troops," meaning the U.S., had been withdrawn?

The proposal of the House Democrats, if accepted, would cause us to suffer a political defeat. It would hand to the Communists the objective they have sought since the beginning. It is a way to give Communist aggression another victory.

BARRATT O'HARA, A GREAT MIDWESTERNER

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. McCLORY. Mr. Speaker, Barratt O'Hara, oldest Member of the 90th Congress and its only Spanish-American War veteran, was one to whom the words "first" and "only" were often applied. Although a native of Michigan, most of his life was spent in the State of Illinois—a life of public service—and it was thus I came to know and respect him. Under the leave to extend my remarks in the RECORD, I wish to comment on this son of the great Midwest.

Much has been said and written since his passing, most of us are familiar with his adventurous role as a schoolboy explorer in Central America, particularly in the jungles of Nicaragua and Costa Rica. A teenager, he later enlisted in the 33d Michigan Volunteer Regiment to fight with the Cubans seeking their freedom from Spain. He was able to lay aside his uniform and return to high school to be graduated with honors, but he could not put aside the gratitude of those for whom he fought and he was awarded the Order of Military Merit by the Republic of Cuba.

There were the years in newspaper work, in the editor's chair from the Mississippi to the Great Lakes. After attending the University of Missouri and Northwestern University at Evanston, Ill., he began the study of law and graduated from the Chicago-Kent College of Law in 1912. That same year he was elected Lieutenant Governor of Illinois—the youngest in its history, a mere 30 years of age. He often served as Acting Governor when Gov. Edward F. Dunne was out of the State. Admitted to the bar in 1912, he resumed the practice of law in Chicago, in 1917, following his term in office of Lieutenant Governor.

It was in his role of alumnus of the Chicago-Kent College of Law that I knew him first. A student at the same law school 20 years later, I joined in the admiration of and respect for him as one of the most colorful and successful members of our alumni. He had been chief officer of a film company in Hollywood from which he resigned to enlist in the military service with the entry of the United States into the war with Ger-

many. He served as a major and as a division judge advocate.

On his return to civilian life, he resumed law practice and served as an attorney for the city of Chicago. He served as a radio commentator over WCFL—the voice of the American Federation of Labor—for a number of years. After less successful attempts, he was elected to Congress in 1948, serving in the 81st, 83d, and subsequent Congresses—the last of which was the 90th. It was in the Congress that his wealth of experience could be well utilized. As a member of the House Committee on Foreign Affairs and of the Subcommittee on Africa, he was warm and understanding in his attention to the developing countries. As a delegate to the 20th General Assembly of the United Nations, he gave conscientious service

For more than three decades, I have followed the career of Barratt O'Hara. Alumnus, fellow alumnus, fellow lawyer, fellow citizen, eloquent orator, and dedicated public official. It was my good fortune to be here when he was praised by his colleagues on the 50th anniversary of his career as an elected public official. He accepted our attention with characteristic humility and graciousness. Mellowed by the years, his devotion was undimmed, and his loyalty to his traditional background and his constituents was undiminished.

He has moved forward to answer a rollcall that we cannot hear and to receive an award we cannot see. For him adjournment and rest deserved.

JOEL PERWIN WINS NATIONAL COLLEGIATE DEBATE CHAMPIONSHIP

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. FASCELL. Mr. Speaker, several years ago I was pleased to be able to call to the attention of our colleagues in the House the accomplishment of a young constituent of mine, Mr. Joel Perwin of 500 Santurce Avenue, Coral Gables, Fla.

At that time Mr. Perwin had won the Florida State championship in debate and went to Omaha, Nebr., to represent Florida in the national high school debate competition.

Last summer I again heard from Mr. Perwin as he was about to enter his junior year at Harvard University. In the time that had elapsed, he had won many championships and been named best speaker in a number of tournaments. The Miami Herald's coveted Silver Knight Award had been bestowed on him.

But last summer young Mr. Perwin set his sights on the greatest prize of all for a debater. He wanted to win the national collegiate debating championship. I am proud that he received his first information on the national topic "Resolved: The Executive Control of U.S. Foreign Policy Should be Significantly Curtailed," from my office.

It was a long and often frustrating year for Joel Perwin. Victories in the routine tournaments were hard to come by, but he never lowered his vision of the final goal. He and his colleague qualified to represent their region of the country at the national championships, and entered the grueling 4-day competition in New York.

Mr. Speaker, I am proud and happy that, at the end of that tournament, Mr. Perwin and his colleague were judged to be the best collegiate debaters in the Nation, giving Harvard its first national championship in many years.

Mr. Perwin deserves the congratulations and respect which is due those whose persistence and determination combine with talent to bring them to great accomplishments.

I think it only fair to warn other aspiring debate champions that Joel Perwin has recently written again for information on the coming year's national collegiate topic. I know our colleagues will join me in wishing him congratulations and success in the coming year.

PRUDENT COURSE

HON. BENJAMIN B. BLACKBURN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. BLACKBURN. Mr. Speaker, all of us desire peace and I am sure none of us desire it more than President Nixon.

Peace, however, is not always easy to come by and peace at any price can be too costly. Therefore, the President must move carefully and prudently in the quest for it.

The Atlanta Journal of August 28 carried an editorial that makes this point very well:

PRUDENT COURSE

President Nixon's announcement that he will defer a decision on further withdrawals of U.S. troops from Vietnam is the only rational approach to the upsurge of Viet Cong attacks.

The President made his initial unilateral offer to withdraw American forces from Vietnam as a conciliatory gesture toward the Cong. He clearly indicated that any sort of favorable response from the enemy would bring about further troop withdrawals.

The initial offer was ignored for awhile and then denounced. But a lull of a sort did descend on the battlefield and this was interpreted as a favorable response from the Cong.

The enemy's decision to break this lull and escalate hostilities could only serve to give President Nixon pause.

To continue to lower our strength while the enemy was increasing the intensity of his attacks would be little short of foolhardy.

Mr. Nixon is as anxious as the most ardent dove in Congress to terminate the fighting in Vietnam—perhaps even more so, for he has more at stake.

But the difference is that Mr. Nixon realizes the United States cannot simply cut and run, as some doves seem to think. We have a position of trust and we have responsibilities which we cannot eschew.

And as much as the President would like to see us out of the Vietnamese abyss, he realizes that it must be accomplished in orderly fashion and with a modicum of self-respect.

Consequently, for Hanoi to step up operations just at the time when the President is supposed to announce further troop withdrawals constitutes a well-considered slap in the face.

Mr. Nixon took the only course open to him in deferring his decision.

To proceed with the announcement of further withdrawals in the face of escalated enemy action would be tantamount to waving the white flag of surrender.

Mr. Nixon has taken the prudent course.

AIR FRANCE, ALITALIA, AND BRITISH OVERSEAS AIRLINES SHOULD BOYCOTT OPENING CEREMONIES AT DAMASCUS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. PUCINSKI. Mr. Speaker, my attention has been called to the fact that on September 15 the Syrian Government plans to open its new airfield at Damascus.

The Syrian Government is arranging a colorful program of festivities in connection with the opening of this new air facility.

Among those who have been invited to participate in these opening ceremonies are three international carriers that operate substantial flights into the United States. These are Air France, Alitalia, and BOAC.

It would be my hope that all three of these airlines would boycott the opening of the Damascus airfield in Syria until such time as the Syrian Government releases the two passengers who have been held hostage by the Syrian Government since the TWA airliner was hijacked to Syria more than 10 days ago.

It is inconceivable to me that these three international airlines would dignify the opening ceremonies of an airport in a country that is the first nation to seize international passengers as hostages for a bunch of hoodlum hijackers.

The hijacking itself is indefensible but the fact that Syria would be a party to this hijacking by illegally detaining these two Israel passengers on an American carrier is contemptable.

I call upon the management of Air France, Alitalia, and British Overseas Airways, in the name of decency, to announce they will not participate in the opening ceremonies of the airport at Damascus until these two Israel citizens who were legitimate passengers on an American carrier are released forthwith by the Government of Syria.

If these three airlines do participate in these opening ceremonies, I am going to call upon the International Association of Machinists and all other labor organizations in the United States to refuse to handle any work on aircraft belonging to these three airlines landing at American fields.

I have called for a boycott of Syria until these two American passengers are released. I cannot see how three international airlines which do a substantial traffic in the United States can remain aloof to the fact that two passengers on an American airliner hijacked in midair and taken to Syria continue to be held hostage by the Syrian Government in violation of every code of moral conduct by nations.

Mr. Speaker, it is my hope that the Governments of France, Italy, and Britain will impress upon these three airlines which carry the flags of these respective countries to refuse to participate in the Syrian ceremonies.

The detention of these two American passengers in my judgment is an act of international piracy and deserves the strongest condemnation by all nations.

CARGO DECLINE STIRS FEARS OF SMALL SHIP COMPANIES

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. FEIGHAN. Mr. Speaker, for the past 8 months I have included in the RECORD a number of statements and articles on the deplorable condition of our merchant marine, which has been allowed to deteriorate and dwindle, while the Soviet Union is placing a high priority on the building of their maritime industry. The merchant marine is our fourth line of defense, and it has performed exemplary service whenever there has been a call to arms.

Another example of the bleak future facing a maritime industry is the once profitable two-way hauling of ocean cargos between the United States and India by four American steamship companies, which is now almost extinct. Why? The Indian Government now has a fleet of fast ocean freighters which our foreign aid program indirectly brought into being. And so the U.S. propellers churn. Where to? Either toward extinction or healthy revitalization.

Further details on this subject are found in the following New York Times article by George Horne published on the 31st of August entitled "Cargo Decline Stirs Fears of Small Ship Companies".

CARGO DECLINE STIRS FEARS OF SMALL SHIP COMPANIES

(By George Horne)

An important segment of the merchant marine is facing a serious crisis, with the threat of ship lay-ups and possible bankruptcy for numerous small companies, operators warned last week.

Nearly 40 ships have been made idle in recent weeks, most of them World War II-vintage vessels on the verge of obsolescence.

One operator wrote a letter to Federal authorities and warned that various shiplines would have some 50 vessels in idleness for lack of cargoes by this week.

FOREIGN-AID CARGOES OFF

The companies are unsubsidized concerns, tramp operators, mostly small outfits with one or two ships that depend almost wholly on Government-aid cargoes and military shipments for their existence. There are however, some larger lines facing the same problems.

For the most part, they blame the Government for retaining in service, particularly in the Vietnam emergency sealift, a fleet of Federally owned warbuilt ships that were withdrawn from the National Defense Reserve Fleet bases during the height of the Vietnam operation.

But they also say that the volume of foreign-assistance cargoes has sharply declined in the last few months.

There is considerable bitterness among the threatened operators, who feel that they are being slighted by the Navy's Military Sea Transportation Service. At the height of the Vietnam sealift in 1965 and 1966 they responded to tonnage calls and put their ships in the emergency service, and now the Navy is letting them "whither and die" they said.

At the peak, the M.S.T.S. was using 172 of the old vessels withdrawn from reserve and patched up and made operable at a cost of more than $400,000 each. At the same time, the Navy agency had 239 ships under charter from various companies, the small ones and the big ones.

The reserve ships were being operated for the Navy by commercial concerns, under what is known as General Agency Agreements.

According to figures available last week, the fleet of G.A.A. ships is now down to about 70 vessels, and the chartering of privately owned ships has been reduced to about 140 craft.

Thus, the industry does participate in all of these operations in one way or another, but the critics of the Government say that as long as one privately owned ship is idle, the Navy should not be employing a Government vessel.

They have appealed to Maritime Administrator Andrew E. Gibson, in the Department of Commerce, and he has taken the matter to Under Secretary of the Navy John W. Warner, who is, Mr. Gibson said in a telephone interview, doing "everything that he can" to reduce the Government fleet.

Rear Admiral Thomas King, deputy commander of M.S.T.S., said last week that there was a "firm schedule" to withdraw the G.A.A. ships "as circumstances permit." But he added, "it has to be done with judgment."

Admiral King said that berth liner ships carrying parcel M.S.T.S. cargoes, together with outright charters of private freighters and tankers, were carrying about 80 per cent of the agency's entire sealift.

But the affected industry also complains that M.S.T.S. is keeping its charter rates for private ships at levels below what it costs them to operate their ships.

All of the lines say that their costs have increased by about 15 per cent in the current inflationary advance, but owing in part also to this year's wage rises for seamen. The M.S.T.S rate for a C–2 class vessel is around $3,520 a day but many owners have escalation clauses to cover wage increases. Some of the small lines are refusing to charter; instead they are laying up their ships, and a few have taken a cargo on a one-way voyage that ends in the sale of their ships for scrap in a foreign port.

The plight of the private vessels is worsened by their age and inability to compete in the world market for regular commercial cargo. Prohibitive insurance rates on old ships inhibits them. Many of them are close to a juncture at which expensive survey and repairs must be incurred. Moreover, a number of the critic companies are thinly financed, and the Navy is calling for a showing of financial stability before granting long-term contracts.

In both the shipping industry and the Government, bankruptcies are regarded as inevitable, just as they were in the aftermath of the Korean conflict in the 1950s, when more than 50 companies, mostly those relying on a one-ship operation, went out of business or failed.

The gloomy picture in this segment of the fleet is a part of a whole chapter in merchant marine deterioration. Although the country has many fine ships built by the hard-core subsidized segment (with as many 20-knot freighters as all the other major maritime nations combined), the main body of the fleet is old and worn out. In another year or two, 80 per cent of the merchant marine will be past the 25-year useful life span.

What worries the small independent lines, the tramp operators and some of the larger unsubsidized companies like States Marine-Isthmian, which owns fifty war-era vessels, is what they consider to be the inconstant support from the Government, particularly the Navy.

"One thing we can't survive," said A. Theodore DeSmedt, president of States Marine-Isthmian, "is governmental competition. They want us to be there if they have an emergency. The question we ask is this: for a future emergency do you need us, do you need conventional break-bulk ships, and if so, what support will you give us now, so we will be ready?"

Not all the irritation of the small lines is aimed at Federal agencies. They also complain that subsidized companies, already sustained by programed Government assistance, nose out the unsubsidized operators in competing for non-commercial cargoes because they have better fleets, including new tonnage, which only the aided lines can afford to build.

MEMORIAL TO A GALLANT MARINE

HON. JAMES R. GROVER, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. GROVER. Mr. Speaker, the loss of a son is always a cause for family sorrow. But how much more so when the loss of the young man occurs on a foreign battlefield under the cruel and frightening conditions of modern warfare. Indeed, such a tragedy is often attended by bitterness and despair.

Recently I received a letter from the parents in honor and eulogy of their fallen hero son. In its brevity and simplicity it is an expression of love for a son and faith in our great country so moving I am constrained to place it in the CONGRESSIONAL RECORD as a permanent memorial to their son, and to honor the families and sons in my congressional district who have similarly demonstrated courage and devotion to our country; those who have made sacrifices and endured anguish far beyond the understanding of most of us.

The letter is as follows:

Representative JAMES GROVER,
Capitol,
Washington, D.C.

DEAR SIR: Our Beloved and Precious Son Robert, a very brave and heroic Marine was killed in action April 16, 1968.

This obituary seems so light but its impact is heavy. In his short 20 years of life he lived and accomplished much. He loved his family, friends and college. He left all to serve his country which he loved best.

He was at Khe Sanh throughout the 77 day siege. His Battalion took the worst beating in Khe Sanh. After surviving the siege and being sent out continuously on search and destroy missions, He lost his precious life five days before He was to leave, in a battle that His Buddies told us "as bad as Khe Sanh was this last one was truly Hell."

We feel it would be fitting and proper if it is possible to have a flag that has flown at the Capitol, to be flown at our home in Honor and Memory of our Precious Son Robert D. Cicio.

Respectfully,

NELLIE and VITO CICIO.

Mr. Speaker, I will indeed send a flag to Mr. and Mrs. Cicio, and one which will be flown over the Capitol, in honor of Marine Robert Cicio, beloved son and patriot.

THE WAR

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. BINGHAM. Mr. Speaker, Mr. Pete Hamill, one of the most stimulating columnists and reporters in New York, has written a very moving and justifiably angry column on some of the human aspects of the war in Vietnam. This column, on a subject about which so much has been written that it seems all the phrases would be worn thin, stands out from the torrent of words. A number of my constituents were as impressed with it as I am, and feel it deserves wider attention. For the RECORD, I am, therefore, submitting a copy of Mr. Hamill's article, "The War," from a recent issue of the New York Post:

THE WAR

(By Pete Hamill)

The day was fine and lovely, one of those late summer New York days when all the girls are beautiful and all the men are polite. In dark afternoon saloons, there was warm talk about the Mets. Men headed for the parks to play ball with children. On the piers, you saw longshoremen taking off their shirts to spend a few sweet hours watching the barges slice up the rivers. It was a day made for small wonders, but Roy Peterson, Gerald Silverstein and Richard Doria were not here to celebrate them. Roy Peterson, Gerald Silverstein and Richard Doria are dead.

They died in the swamps and muck of Vietnam, and their blood is on our hands. We have rather given up on stopping that war; it has become some strange and terminal disease, one that seems out of human control. The slick diplomats sit in Paris, Richard Nixon and his agents sit in San Clemente, and every week the best young people we all know are shipped out to die.

It is Richard Nixon's war now, but nobody seems to care. Nixon got a lot of publicity by ordering 25,000 men home, but there was little notice that at that rate it would take 23 years for us to get out of Vietnam. Some nerve of moral outrage seems to have died in us; the Green Berets get involved in a gangland-style murder, and we read it as if it were a movie, and not the act of men from a democracy. The troops of Company A, sick and bone-weary, their nerves shredded by too much death and slaughter, refuse to move out and their action is treated as a one-day curiosity, instead of one of the most damning judgments yet made about our filthy commitment.

Already there are 38,000 young men dead. There are hundreds of thousands who are maimed and crippled, men with steel and plastic where their bones once were, men with poisonous dreams in the dark of night, men whose eyes will never see a flower in spring, men who will never play ball with their children at dusk because it takes arms and legs to do so. Those young men will carry the infection of the Nam across all the summers of their lives.

Roy Peterson, a Pfc. in the Army, will hear no brass bands at Seattle; he will never loll on the corner of E. 17th St. and Av. S in Brooklyn, watching the girls go by, or talking about the Mets. Warrant Officer Gerald Silverstein will not walk the Grand Concourse with his wife, or play a radio on a stretch of summer sand, or feel himself tickled by the rub of love. SP/4 Richard Doria will never hold a son in his arms, or feel wonder, or have a beer with his friends in White Plains. For them, the war is over. They had the worst luck of all; to be young and brave in a bad time.

And yet we owe them something. We owe them the promise that no more of their friends will die. It should be our duty to change all of this around, to stop this slow and filthy dance on the killing ground, and let our young men live out their lives. It is a measure of how much Vietnam has corrupted our sensibilities that we seem unable anymore to act on such promises.

The other night in Brooklyn I was drinking with some young men, all of whom had survived the Nam. Not one could think of anything he had done there which was sweet and honorable. They hated the war when they were there; they hate it more now.

You can con a generation just so much. And these young men know now that they were conned, that the brave politicians had never had the guts to bring this war to an end. They know that if every Congressman, Senator and employe of the Defense Dept. were sent to Vietnam as troops, the war would be over tomorrow. If Mendel Rivers had to carry an M–16 up Nui Lon Mountain he wouldn't be so brave with his mouth. But we know how wars are put together: old men, rheumy with bitterness, corruption and power, start the wars; young men fight them.

And this time we have asked them to fight on the wrong side. Our allies are the most debased, corrupt government in Southeast Asia, a collection of blackmailers, thugs and totalitarians. They are fighting for the integrity of their Swiss bank accounts; when the war is over, they will lie on the Riviera; Roy Peterson, Gerald Silverstein and Albert Doria will not share their champagne.

When my brother John was there as an airborne medic earlier this year, he found himself searching the bodies of North Vietnamese soldiers who had been killed somewhere near Bong Son. In the pockets of one of them he found a wallet. The wallet contained pictures of the dead man's wife and children, and a magazine photograph of John F. Kennedy. There was no way to find out why, but I would certainly have preferred to talk for a few hours with that young Vietnamese than with Melvin Laird. That, of course, will never happen because like 38,000 of our brave children, he too was dead.

WASHINGTON, D.C., TRANSPORTATION PROBLEMS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. EDWARDS of California. Mr. Speaker, some time back the City Council of the District of Columbia under pressure from this Congress bowed to congressional demands for the construction of the bridge and freeway system. In return the District believed funds for construction of a much needed subway system would be freed. Those funds have not been freed and the public and journalistic reaction to the arbitrary demands of Congress becomes more bitter.

So that we may see ourselves as we are seen by the public, I ask that a letter published in the September 6, 1969, edition of the Washington Afro-American be reprinted in this RECORD along with an article published in the New York Times on August 24, 1969. Both are representative of the reaction to the congressional use of force in this dispute:

CASE AGAINST FREEWAYS

Dear AFRO:

President Richard M. Nixon would surely be well-advised to keep the following points in mind as he and Department of Transportation Secretary John A. Volpe go forward with their new freeway program in the District of Columbia. For example:

1. A local newspaper pointed out that "most Washingtonians who would be displaced are black and most suburbanites are white, and the suburbanites would presumably make greater use of the roads. Everyone who has studied the problem at all knows that these roads are for white suburban commuters, and question the use of 90–10 Federal funds to build commuter roads, disguised as interstate highways.

2. The second victim of President Nixon's new road program was the D.C. City Council, it is now clear. The Black United Front, for instance, has asked those black councilmen who voted for the Nixon highway program, the Rev. Jerry Moore, Sterling Tucker, Joseph Yeldell, and Mrs. Margaret Haywood, to send their resignations to President Nixon, and have also demanded home rule. This issue will heat up.

3. The first victim of President Nixon's new highway program for the District is peace and stability in the District of Columbia. More black citizens and their families will be displaced by Pres. Nixon's highway program than were displaced by the Eisenhower-Nixon Southwest Urban Renewal Project in 1953. 23,500 citizens were displaced from the SW urban renewal project, 70 per cent of them low-income Blacks.

4. The shape of the dismal future in the District was predicted at a St. Louis meeting of the American Road Builders Association by Richard J. Whalen, a writer for the Saturday Evening Post and a recognized national authority on the Federal Highway Program, who said that black citizens of Washington, D.C. will refuse "to allow white men's highways to run through black men's bedrooms. And behind this refusal lies raw, violent, physical power."

5. Rep. Augustus F. Hawkins of the Watts area of Los Angeles has introduced a new bill, H.R. 13487, "to reduce the number of homes and small businesses destroyed by Federally-aided programs which use eminent domain powers to excess," a measure which is long-overdue in the District of Columbia.

This bill should be supported by all citizens opposed to the destructive new road program approved by the City Council, and by those who realize that home ownership and "a piece of the action" will stabilize black residential and business areas. This bill would provide the black business areas on U Street and elsewhere in the District the same kind of favorable zoning given the white areas to prevent slum and blight.

City planners in Tokyo have now provided high buildings to relieve pressure on the soaring price of land which will make it possible to compete with the suburbs which, as here, are getting the jobs and new housing. We can and should learn from other cities from Los Angeles to Tokyo, how they use land and prevent slums and blight and rebuild burned out areas devastated by war, arson, slums, blight, poor planning, etc.

6. The Evening Star, which was largely responsible for the new Nixon Highway Program, published on August 10, 1969, page A–6, a map showing the freeway related to the Three Sisters Bridge in a tunnel under K Street. This route would not displace a single family or business. However, if this freeway is built in the Florida Avenue-U Street corridor, thousands of black citizens and hundreds of black small business will be displaced. President Nixon must see to it that this freeway is built in a tunnel under K St., and citizens, black and white, of the

District and of suburban Virginia and Maryland must join together on this issue, to make certain it is built there and not in the black areas.

7. Secretary of Transportation Alan Boyd dropped the Three Sisters Bridge and its related freeway. The Washington Post (Aug. 19) said: "ECTC's view was lent some legitimacy by former Transportation Secretary Alan S. Boyd. He once recalled publicly that the North Central (Freeway) had been shifted from the predominantly white Wisconsin Avenue corridor to a predominantly black area of Northeast Washington." Secretary Boyd also said that the Wisconsin Avenue corridor is the logical route for the North Central. He said white political clout moved the freeway.

We are convinced that the study of the North Central Freeway required by the Federal Highway Act of 1968 if carried out in a fair and objective way, as it must be, will show one of two things (a) that it is not needed, or (b) that Secretary Boyd was right and that the Wisconsin Avenue corridor is the logical place to build the North Central.

Clearly, the North Central should not be built in Northeast Washington and, wherever it is built, it should be built in a tunnel to avoid displacement of families and businesses—just as the Evening Star has said the freeway related to the Three Sisters Bridge will be built in a tunnel under K Street. Wisconsin Ave. surely deserves to have the same protection as the Evening Star would provide for K Street—and this goes for all areas traversed by the North Central and the Three Sisters Bridge freeway connector.

8. The Emergency Committee on the Transportation Crisis has labelled as "an unprecedented intervention" in court matters President Nixon's statement, in a "Dear Bill" letter to Chairman William H. Natcher of the House Appropriations Subcommittee on the District of Columbia, that he has directed Attorney General Mitchell and Transportation Secretary Volpe to help the D.C. Government "vigorously defend" any law suits attacking the new Nixon Highway Program.

Surely, such manipulation of the courts—coming on top of the plans of President Nixon to build the North Central Freeway, and the Freeways related to the Three Sisters Bridge, in the black areas of Washington to protect and preserve the white areas—are the very things which will heighten racial tension and harden the resolve of District citizens in Northeast Washington, and in the Florida Avenue-U Street corridor, to preserve their homes and businesses.

At a time when so many people of both races have been working for good race relations, it is clear that President Nixon has been very ill-advised, indeed, to take positions and advance programs which are so clearly destructive of the homes and businesses of black citizens.

President Nixon should be the first to recognize that his Administration, as well as the courts, will suffer if the courts come to be dominated by the highway-parking-trucking-big-business-white-only lobbies, and the suburban country club set, which are pushing the new Nixon Highway Program. The courts will undoubtedly react strongly to any suggestion that they are the "willing tools" of the white suburbs against the inner city.

And, President Nixon owes it to the black citizens of Washington to take special and definitive steps to avoid the kind of thing which took place in Nashville, Tennessee. Here is what the Saturday Evening Post wrote about the Federal Highway Program in Nashville on December 14, 1968—

"A three-mile segment of the inner loop of Interstate Highway 40 will pass through North Nashville, the city's oldest ghetto, destroying or seriously disrupting 234 colored-owned businesses with a gross annual volume of $11,700,000. These represent more than 80 percent of all the colored-owned businesses in Nashville's home county . . . As I–40 marches through the ghetto, and feeder streets such as Jefferson are widened, the bulldozer will level about 650 houses, 27 apartment buildings and several churches. An area of almost 100 square blocks will be walled off. Even those businesses not marked for physical destruction face financial ruin as their customers flee.

"The route of I–40 was briefly discussed at only one poorly advertised public hearing in May, 1957. For a decade, when colored people inquired about it, they were told that the route was 'preliminary' and 'subject to change.' Without further hearings, the state quietly committed $10 million to engineering studies and land acquisition. In a suit that they fought to the U.S. Supreme Court, the colored people, organized as the I–40 Steering Committee, contended that inadequate public hearings and the lack of any study of the economic and social consequences of the highway violated federal law. Beyond that, they charged that the right of way was chosen on a racially discriminatory basis. (Note—there has been no such study here.)

". . . The expressway is needed, so the local, state and federal governments maintain, to speed through traffic across the state from Memphis to Knoxville. In practice, the road will be most useful to white commuters from the suburbs of East and South Nashville on their daily trips to work in West Nashville's growing industrial complex. The unemployed and underemployed colored people of North Nashville, who number one in four of the working-age population, will be able to sit on their crumbling porches and watch the white men's cars whiz by. In countless ways the expressway will remind the colored people that they stand outside the 'system' that built it. The construction of Nashville's self-destructive expressway is a symptom of the deepest crisis of the American environment."

9. Many diverse groups have aided in fighting the destructive freeways in Washington, D.C. These groups include the two old-line citizen and civic Federations, the Midway Civic Association, the Kalorama, and DuPont Circle, and Georgetown, Citizens Associations, the Emergency Committee on the Transportation Crisis, the Democratic Party, the Committee for the Rights of the Washington, D.C. Business Community, the Committee of 100 on the Federal City. The Democratic Party put the D.C. freeway issue on the ballot last year and the citizens demanded a referendum to decide freeways by a vote of 93,000 to 4,000.

The Federation of Citizens Associations on July 24 (it is largely white) recommended that consideration of additional gateways and freeways in the District of Columbia "be deferred until the rapid transit system is in operation and the need for such additional freeways has been demonstrated. Included in the programs which we recommend be deferred are the Three Sisters Bridge and the North Central Freeway." This clearly is not just a cause for black citizens.

The D.C. Federation of Civic Associations voted on July 25 to participate in a lawsuit, if necessary, to stop construction of the Three Sisters Bridge and the North Central Freeway as a price for a start to the subway system. The Evening Star (July 26) also reported that the Federation voted to lobby on Capitol Hill against the Three Sisters Bridge and its related freeway, and the North Central Freeway.

These are the groups, representing all but a tiny handful of District citizens, which the Post and Star regularly denounced as "noisy extremists." Most of those pushing the freeways and parking plans are white suburbanites, whom these papers support.

10. The Emergency Committee on the Transportation Crisis (ECTC), which has fought the freeways hard and well, will begin circulation of charts in the Florida Avenue-U Street corridor in a few days showing the homes and businesses which will be destroyed to make way for the freeway connector to the Three Sisters Bridge, we have been advised by R. H. Booker, chairman, and Sam Abbot, publicity director. Buildings to be taken include the headquarters building of Pride, Inc. at 16th Street and U Street, NW.

11. Rep. Hale Boggs, a leading Democrat in the Congress, on August 11 in a speech on the House floor, called for the formation of an ad hoc committee here composed of civic and citizens groups and individuals which will bring all factions together to meet with top Federal officials. It is high time that such an all inclusive ad hoc committee was formed to deal with the highway issue, instead of letting the freeway issue be dictated by the highway-parking-trucking-big business lobbies which are big contributors to the Republican Party. Rep. Boggs helped stop the Freeway in New Orleans, after two were stopped in New York. The issue was aptly framed by Rep. Edwards (D-Calif.) in a speech on the House Floor on August 11, in which he said this about the situation here:

"I am ashamed of the recent misuse of Congressional power in this District, I am ashamed of the use of blackmail, withdrawal of funds, aid threats used to blackjack the City Council of Washington, D.C., into accepting a freeway plan and the Three Sisters Bridge.

"I wonder if this House of Representatives might consider allowing the citizens of Washington to have their views represented in our deliberations. In particular, I would suggest the Congress allow the people of Washington to vote on the freeway and on the bridge—a referendum as has already been proposed—and that Congress abide by the wishes of the people of Washington. We are, or at least we are supposed to be, a Republic and we do, or at least we are supposed to, represent the wishes of the people.

"For those who decry civil disorder, and I am one of them, I would remind them of the duties of government. In December 16, 1773, the people of Boston made known their feelings about taxation without representation. I do not recommend such a party to the people of Washington, D.C., but I do hope they will be allowed to make their wishes known to this Congress and that this Congress will respond to them."

MRS. SARAH E. ELLIS,
Chairman, Committee for the Rights of the D.C. Small Business Community.
GEORGE FRAIN,
Delegate, D.C. Federation of Citizens Associations.
CATHERINE MCCARRON,
Past President, DuPont Circle Citizens Association.
PHILIP BROWN,
Delegate, D.C. Federation of Citizens Associations.
SYLVIA L. KOHRN,
Property Owner, Silver Spring, Md. and Washington, D.C.

DISTRICT OF COLUMBIA, TO GAIN SUBWAY, ACCEPTS BRIDGE AND FREEWAY IT DID NOT WANT

(By Paul Delaney)

WASHINGTON, Aug. 23.—The District of Columbia, after decades of controversy, is getting a new subway to help solve its transportation problems. It also will get a $105-million Federal contribution to its budget. Its authority to tax real estate and personal property will not be tampered with.

But it will also be given a new bridge across the Potomac River and another freeway, which its City Council does not want.

The passions over the issue are so strong that they have produced a physical clash that resulted in the arrest of two elected officials.

The arrests came earlier this month during a meeting at which the council, bowing to Congressional pressure, voted to approve a package deal in which it, in effect, accepted

the bridge and the freeway as the price for winning the subway and other benefits it wanted.

FIGHT FOR HOME RULE

To Washington citizens, the freeway-subway battle is symbolic of the long fight for home rule.

When President Johnson issued a 1967 executive order that established a new city government under the Reorganization Act, most officials knew they were not really taking any authority for running the city away from Congress. But many had hoped that Congress would not seek to thwart the new City Council if it was acting in a united fashion to carry out the clear will of the people.

Now, such leaders as Vice Chairman Sterling Tucker say that the freeway-subway fight has made it clear that the city is still under the rule of a national legislature that it can neither elect nor greatly influence.

They fear that the present city government may have been permanently damaged and may never gain the confidence of the people.

"Of course our image suffered," commented Mr. Tucker. "It may come to the point where we all might have to resign, the Mayor and council."

"CONGRESS PREDOMINATES"

Councilwoman Polly Shackleton remarked: "The significant thing about the fight was that Congress showed us who was boss. Everybody was much too optimistic that we had power and really were a City Council. But when we get into a crunch, Congress predominates. That's the way it is. We should have known it."

Adding to the frustration of District residents is the fact that antifreeway forces are winning some battles against new urban roads in such cities as Philadelphia, Baltimore, New Orleans and New York.

The bridge plan was strongly backed by Washington merchants, who believed the proposal would bring carloads of surburban shoppers into their downtown stores.

But it was vigorously fought by residents who said its approaches would obliterate a scenic section of the historic Georgetown shoreline and further congest crowded city streets. Many black residents feared the freeway would sweep through their neighborhoods, displacing hundreds.

RELUCTANT ACTION

The council, making it clear that it was acting against its will, finally voted 6 to 2 to accept the bridge and freeway, with the provision that an alternate freeway route would be studied. Thus the council cleared the way to get the subway, whose funds had been held up in an 18-month fight with Congress.

Throughout, Representative William H. Natcher, Democrat of Kentucky, who holds a key voice over District of Columbia funds, was adamant: no bridge, no subway.

Funds for the bridge and freeway had been included in the original transportation plan approved by Congress for the city, and he apparently believed that it was a good program with construction well under way and that the council opposition was irrelevant.

The lines in the freeway-subway fight were clearly drawn. On the one side was the nine-man city council, appointed by the President but representing the city's largely black populace. On the other side was Mr. Natcher, intervening on behalf of Congress.

NAMED BY JOHNSON

The council, composed of six Negroes and three whites, was named originally by President Johnson and told to "act as though you were elected." The members worked hard at that assignment, often championing the black community.

Mr. Natcher, from the conservative tobacco-and-corn country around Bowling Green in south central Kentucky, holds the purse strings of the city as chairman of the House Appropriations subcommittee on the District.

The new City Council, taking office in 1967, was directed by President Johnson to work with the National Capital Planning Commission to develop a major comprehensive transportation plan for the District. The commission and the old form of government, the three-man Board of Commissioners, had never been able to agree on a plan, though freeway construction was proceeding from plans adopted by the old board.

In a series of public hearings directly and indirectly involving freeways, testimony from public groups was overwhelmingly against the Three Sisters Bridge and the North Central Freeway. Support for the freeway project was voiced by the Metropolitan Board of Trade and several representatives of trucking concerns.

PROJECTS ELIMINATED

Responding to what appeared to be the expressed demands of the people, the new council and the newly constituted planning commission adopted a plan that omitted the bridge and freeway, thereby eliminating the two projects specifically called for by the Highway Act of 1968.

That act was the basis of Mr. Natcher's persistence. He would not tolerate the council's defying an act of Congress. He then tied release of money to begin construction of the $2.5-billion 98-mile subway to the start of construction of the bridge and finding an alternate route for the freeway.

The council, in its opposition, was acting on direction of President Johnson, who noted that he would have vetoed the act if he had thought the council would have to follow what he considered to be an illegal attempt of Congress to tell the District it had to build a bridge and freeway it did not want. Freeway foes have already notified the city they intend to file court suits to test the legality of the provision of the act that forces the city to build the bridge and freeway.

The first indication that some members of the council were sympathetic to the cause of the freeway foes came during consideration of the 1969 budget. A motion to cut freeway money out of the budget lost by only one vote.

Two months later, in February 1968, a Federal court ruled that the city had violated an old statute in failing to hold public hearings on freeways, and work on four projects was stopped.

ORGANIZATION REVIVED

Those two events put new life into an organization that had been fighting freeways for several years, but with little success—the Emergency Committee on the Transportation Crisis.

The committee's leaders were R. H. Booker, a 28-year-old dashiki-wearing black clerk with the General Services Administration, and Sammie Abbott, 58, a slightly built white resident of Maryland who operates a business here.

The committee exerted a major influence on the council and its first chairman, John W. Hechinger, owner of a chain of hardware-lumber stores who was converted to the cause of the black poor in Washington and kept the pressure on the entire city government.

But Congressional overseers of the District were accustomed to be obeyed. Two men accustomed to carrying out Congressional orders in the District were Mayor Walter E. Washington and Deputy Mayor Thomas W. Fletcher. They urged a compromise, and Mr. Fletcher at one point accepted the Congressional plan in a deal that Mayor Washington later disclaimed.

THREE VACANCIES

After the election of 1968, it was felt that President Nixon would fill three vacancies on the council, including those of chairman and vice chairman, with persons who would accede to Congress. But he did not.

He appointed as chairman Gilbert Hahn Jr., a Republican lawyer and former money raiser for Republicans in New York City; as vice chairman, Sterling Tucker, a Democrat who is an Urban League official, and as the third member, the Rev. Jerry Moore Jr., a Republican, pastor of a middle class black Baptist church a few blocks from the White House.

Mr. Hahn was not committed either way when he took office in March, but a month later he came out forcefully against the projects "because my clients, the people of the District, don't want them."

With this stand, Mr. Hahn, whose family owns a chain of shoe stores in the Washington area, gained many supporters and the confidence of both white conservatives and black militants.

CONGRESS DEFIED

The Hahn-led council defied Congress, taking on all challengers. Corporation Counsel Charles T. Duncan ruled that Mayor Washington could let contracts for the Three Sisters Bridge without council authority.

Mr. Hahn dared the Mayor to do it.

But Congressional pressure mounted and appeared irresistible to a majority of councilmen.

In Washington the freeway-subway issue had been made part of nearly every issue. The budget was in jeopardy. Programs were being cut from appropriations, and revenue proposals were threatened. The pressures mounted. When Mr. Hahn finally called a meeting for Aug. 9, the end was already in sight.

After the meeting was disrupted and violence broke out, 14 persons were arrested, including Mr. Booker and Mr. Abbott. Also jailed were Julius Hobson, a member of the school board, and Bruce Terris, chairman of the District Democratic Central Committee. Ironically, Mr. Hobson and Mr. Terris are members of the only two political bodies directly elected by the citizens of Washington.

After the vote, Mrs. Shackleton a tough former District Democratic national committeewoman and Councilman Stanley J. Anderson, the two who cast the two dissenting votes, both broke down and wept.

"This whole episode shows that we are a creature of Congress, a kind of amoral creature," Mr. Tucker said. "Our political soul belongs to someone else."

TRIBUTE TO THE HONORABLE CHARLES S. JOELSON

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. REUSS. Mr. Speaker, I am pleased to pay tribute to the Honorable CHARLES S. JOELSON as he leaves the House to become a judge of the Superior Court of New Jersey.

I know that Mr. JOELSON will exhibit the same kind of insight, creativity, compassion, and diligence in his new judicial role that he did as a legislator. Through his exemplary work on the House Education and Labor, and Appropriations Committees, Mr. JOELSON gained a richly deserved reputation as a man of integrity, responsibility, and high intelligence. Possessed of such qualities, he is a valuable addition to the New Jersey bench.

Personally, I wish Mr. JOELSON the best as he departs the House. However, it is saddening to know that his considerable wit shall be absent from the House floor. His legislative ability also shall be missed.

Mr. JOELSON is a truly dedicated public servant, one who has never ceased to

strive in the public interest. Aside from his distinguished 9 years in the House of Representatives, he has been a deputy attorney general in the State of New Jersey. Mr. JOELSON entered public life 20 years ago as city counsel for the city of Paterson, N.J. His record speaks for itself.

CHARLES JOELSON has set an admirable example, both in word and deed, for his House colleagues during his tenure. Perhaps this has been his most valuable contribution to this body. It is as a model of excellence in public service that we who remain in the House shall continue to know him.

SMOKING DDT

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. OBEY. Mr. Speaker, many years ago the poet Carl Sandburg wrote a poem called "The Fog," which became quite popular and is quoted often. It goes as follows:

The fog came in on little cat feet. It sat looking over harbor and city on silent haunches, and then moved on.

Recently I read two small items which reminded me of that poem.

One was an editorial in the Wausau Record Herald. It told of research at North Carolina University which found that DDT residues in cigarettes and cigars are six to seven times as high as that permitted by the Food and Drug Administration for leafy products such as cabbage, lettuce, and spinach.

Another article appeared in the latest issue of Conservation News, published by the National Wildlife Federation. Quoting from information received from the Wisconsin Department of Natural Resources, and entitled "DDT Cuisine," it gives pointers to every camper and fisherman who looks forward to cooking a Lake Michigan trout on the day he catches it. Again, the problem is DDT, and the residues of this pesticide which are found in the fatty tissue of trout and other fish which live in the waters of Lake Michigan.

The idea of smoking DDT or providing recipes for cooking it out of fish would undoubtedly be funny, if the situation were not so serious. So, Mr. Speaker, it is not fog, but DDT which is lurking over harbor and city, lake and stream. It sits on silent but deadly haunches, and moves on from place to place, where it pollutes the environment and dooms the fish and wildlife with which it comes in contact.

Unfortunately, it is not difficult to turn Mr. Sandburg's beautiful image into a deadly one.

The articles mentioned above follow:

[From the Wausau Record Herald, Aug. 14, 1969]

SMOKING DDT

The surgeon general has identified certain substances in tobacco that can cause cancer, chronic bronchitis and pulmonary emphysema.

But there's even more bad news for smokers.

North Carolina University researchers have found 38 parts per million of DDT in cigarettes and up to 53 parts per million in cigars. In addition, it found 100 parts per million on the green tobacco leaf after harvesting.

It is interesting to note that tobacco is the only consumable agricultural crop that does not have a tolerance level specifying when the pesticide residue is hazardous. The tolerance level for DDT established by the Food and Drug Administration for similar leafy products, such as cabbage, lettuce and spinach, is seven parts per million.

These statistics are being used by Sen. Gaylord Nelson, D-Wisconsin, in fighting for a national ban on DDT. They may also be used to encourage the Wisconsin Legislature to take action on such pesticides.

Before recessing the Legislature had differing bills in the Senate and Assembly on the matter. Each was passed on a unanimous vote, but there was disagreement over details.

DDT is a non-degradable pesticide, the residues of which have even been found in penguins in Antarctica, not to mention the birds, fish and animals within this state.

We need a tough DDT control program, at the very least. At best, it should be banned.

[From Conservation News, Aug. 1, 1969]

DDT CUISINE

Wisconsin chefs confront a new challenge in the preparation of trout from Lake Michigan waters: how to keep the flavor in and the DDT out.

Wisconsin Department of Natural Resources has found that "up to 55% of DDT residues in fish taken from Lake Michigan can be removed before the fish are eaten." Gourmet fanciers of baked trout amandine eat at high risk to their well-being. Deep-frying was shown to reduce DDT residues by 55%; broiling by 36%; and baking by only 11%.

After you slide your first sizzling batch of trout out of the fry grease, the Wisconsin Department of Natural Resources suggest that you discard the DDT-saturated cooking fat before you plop the next rainbow into the pan.

NORTH BRADDOCK MARINE KILLED IN VIETNAM

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. GAYDOS. Mr. Speaker, it is with deep regret that I announce the death of another of our brave fighting men, Cpl. Carl S. Mikula, of North Braddock, Pa., who died of wounds received on August 24 in Vietnam.

We owe a profound debt of gratitude and appreciation to our dedicated servicemen who sacrificed their lives for this great country. In tribute to Corporal Mikula for his heroic actions, I wish to honor his memory and commend his courage and valor, by placing in the RECORD the following article:

DISTRICT MARINE KILLED IN VIETNAM

A North Braddock Marine, who hoped that his children "would never have to go through this (Vietnam) war," has died as a result of wounds he received in Quang Nam province, the Defense Dept. announced.

Cpl. Carl S. Mikula, 21, died Tuesday at Da Nang Hospital from wounds he received Aug. 24. He had been in Vietnam about 10 weeks.

Serving with the 1st Marine Division, Cpl. Mikula enlisted in June, 1968.

In a letter to his parents, Cpl. Mikula of 1305 Bell Ave., said the South Vietnamese "needed our help. From all this I can see that Americans are blind . . . they're all for themselves."

He was a 1966 graduate of Scott High School, North Braddock.

Surviving are his parents, Mr. and Mrs. Michael J. Mikula; two brothers, Army Sp/5 Michael G., Camp Roberts, Calif., and Thomas at home; and a sister, Stephanie, also at home.

NATIONAL SHUT-IN DAY

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. GAYDOS. Mr. Speaker, Americans have a tradition of honoring their heroes. Their exploits are extolled by the news media and, in certain cases, they are given ticker tape parades through the streets of our largest cities.

These public salutes, naturally, are reserved for national heroes. But we have many little heroes, people whose contributions to society and their neighbor often go unnoticed. Many times they do not receive the accolades they deserve.

One such hero is Earl Rutter of 3–A Garden Drive, in Turtle Creek, Pa., a man who has earned the title "Champion of the Shut-In."

Since March 30, 1939, Mr. Rutter has traveled hundreds of thousands of miles to bring a little happiness into the lives of people confined to their homes or hospitals. He has sent cards of cheer to thousands more and now maintains a mailing list of more than 3,000 names.

With his daughter, Doris, Mr. Rutter visits hospitals, sanitariums, private homes, or anyplace where they are needed. They entertain their shut-in friends with music and song, poetry and literature. Because of him, March 30, annually is recognized as National Shut-In Day.

I would like to draw the attention of my colleagues to Mr. Rutter's hobby and offer for inclusion in the RECORD copies of testimonials paid him, as well as a brief summary of his work with shut-ins:

THE STORY OF NATIONAL SHUT-IN DAY

(By William V. Mangan)

It has often been asked of Mr. Earl Rutter how he founded National Shut-In Day, March 30th. It is a story that goes back to the year of 1939. The year when one of the most unusual hobbies was conceived. This hobby has caused the founder to travel 134,000 miles. It has made a mailing list necessary that now consists of 3,000 names. To entertain such a hobby has cost thousands of dollars, and countless hours of time.

This is how this hobby came into being:

Mr. Rutter heard of Mr. Tom Russell, a resident of Juniata, Pennsylvania who had been confined to his bed with arthritis for twenty-four years. On March 30, 1939, Mr. Rutter with his 2½-year daughter Doris, called on Tom. Tom was so cheered by the Rutter's songs and musical selections that his gratitude was heart warming.

While returning home that afternoon from their visit to Mr. Russell, Mr. Rutter was amused at the personal satisfaction he felt from this act of kindness. He remembered there were many more people who were forced

to lead tedious lives of confinement. Could he help these people whose greatest need was variety and entertainment? Why not? So was born the hobby of visiting Shut-Ins and that's how Earl and Little Doris Rutter, Shut-In Entertainers came into being.

Earl and Doris sent cards, pictures, poems and any literataure they thought might bring a ray of sunshine into some shut-in's life. They brought their songs and music to anyone. They visited the hospitals, sanitariums, homes or wherever they were needed. Neither weather or distance discouraged the Rutters. Their act went on regardless. The demand was great and the requests were many. They spread sunshine wherever they went, which was an average of three nights a week.

Of course such endeavor became known to those of responsibility. They were nationally known as Earl and Little Doris Rutter, Shut-In Entertainers. March 30th was declared "Shut-In Day" and Mr. Rutter was recognized as the founder.

This is the story of Earl and Little Doris Rutter. The story of a man's desire to help his fellowman and the story of a hobby that is really worth-while.

HOUSE OF REPRESENTATIVES,
Harrisburg, Pa., June 20, 1952.

Mr. EARL RUTTER,
Turtle Creek, Pa.

TO YOU, EARL RUTTER: Truly a great American, the good American of the day, our country is indebted to you. Your work speaks for itself, and indicates the unselfish American you are—one that is doing something in his country above and beyond any call of duty.

For the past thirteen years, you have traveled about entertaining those that are shut-in—just to bring a little laughter and sunshine into the lives of others. Your hobby is an unusual hobby and also an expensive one, travelling, printing literature, etc.

You have purchased a moving picture projector to show pictures to those unfortunate Shut-Ins, and now you are trying to buy an ambulance to take the Shut-Ins to the ball games, to their family reunions, a drive in the country.

You are doing things for others, giving of your time and money, and doing things far beyond man's dreams. Your hobby is the most talked about in America today. You have never received any honors or citations or flag waving. I sincerely hope some day, you, Earl, for your outstanding work, will receive the highest honors that can be bestowed on man.

I have known Earl Rutter for many years, and have aided and supported his work in bringing happiness to the Shut-Ins. I introduced the bill in the Pennsylvania House of Representatives, proclaiming March 30 each year as Shut-In's Day in Pennsylvania. This Bill passed both Houses, and was signed by the Governor. This Bill also proclaims Earl Rutter the founder of Shut-In's Day.

Earl, may your deeds set a high standard for all persons to follow.

I sincerely hope that whoever reads this message will better appreciate Rutter's hobby.

With best wishes and continued success, I am

Sincerely yours,

J. P. MORAN,
Representative, 10th Legislative District, Allegheny County.

COURT OF COMMON PLEAS,
Pittsburgh, Pa., September 12, 1960.

Mr. EARL RUTTER,
Champion and Idol of the Shut-Ins, Turtle Creek, Pa.

MY DEAR EARL: I wish to be one of the many, many thousands of persons to congratulate you on your 22nd Anniversary of Earl Rutter Day, September 19, 1958, which is set aside by Governors and Mayors throughout this entire country in your honor.

Your tireless efforts, your vision in entertaining people who are shut indoors with sickness and physical disability brought about the founding of National Shut-In Day, which is observed throughout the country on March 30. Spending an entire lifetime in Turtle Creek, Pennsylvania, you give of your time and your zealous efforts, accompanied by your lovely daughters, Doris and Janet. During the past 20 years you have attempted to make this a better world in which to live. That is why every shut-in in Western Pennsylvania and hundreds of other municipalities consider you their idol. The impact of your efforts has reached every state in this country and even foreign countries.

Your name will always ring a bell not only with the sick and disabled but with all of us who want to see a better world in which to live. You are an unselfish American; you are always complying with the requests of the needy and the sick and render service far beyond the call of duty. You will never need a publicity agent or a television or radio program to give you fame for among 1/5 of the people of America you are greater than our President, than Governors, than Judges or Mayors, because yours is an unselfish sacrifice to make them smile and happy, and we all know that a smile goes a long, long way towards medical recovery.

We salute you today as a great American who believes in making others happy. May God bless you and your family and give you His richest blessings, Good Health and Long Life, to continue your fine work in the vineyard of the Lord.

Sincerely yours,

SAMUEL WEISS.

CUTBACKS IN ROAD CONSTRUCTION

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. DENT. Mr. Speaker, President Nixon's unprecedented call for cutbacks in road construction is just part of a plot to create planned unemployment. Highway funds are trust funds and will not help in any way to meet any budget deficiencies in the general fund expenditures. The only purpose served would be to squeeze or rather intimidate Congress into action, cutting back on social legislation and education, to vote for increasing taxes, put over 700,000 directly related workers on the streets and idle thousands of others supplying transportation, steel, and other vital supplies and services to the multibillion dollar construction industry.

In his latest statement the President has asked private industry, construction companies, and State and local governments to cut back 75 percent of the proposed spending this fiscal year. This would, in my opinion, put close to 4 million people on unemployment compensation for a while, and probably relief later. My Dad said many years ago, "It's a heck of a way to run a railroad."

Nixon will learn a lesson in economics at the expense of the workers of America. Given a choice, a worker is better off with more money than goods to buy, than unemployment, no money, and a surplus of goods. We have had that before. This is a memory we do not want to repeat. Anybody can start a ball rolling down hill, but few can stop the avalanche it starts.

Unemployment from cutbacks may well start the unemployment over the hill too fast to stop. The risks are too great. The results may well destroy what is left of our peace and tranquillity in our cities and streets. There is too little left now. Workers will not give up their homes and credit purchased homes, and so forth, as we did during the great Hoover depression. With reduced income, the workers will look for the cheaper imported products to meet their needs. More and more factories will curtail or close down their productions. If the automobile industry puts 7 to 9 million more vehicles on existing roads, we will all know how stupid this action by Nixon will be.

Of course, the real issue is whether our Congress can stop the spending by cuting into military spending and reasonable demands for Government savings in other areas, or whether the President can force the Congress to bow to his demands with the fearful threat of unemployment and depression. What can Congress do, rescind its tax increases, rescind its budget cuts, or take a chance that Nero will not burn Rome down to the gutter.

The President says it is to control inflation. This means that instead of paying $30,000 for a home, you will have your $30,000 home taken from you for the mortgage debt, or your car or your furniture. Remember that while inflation is undesirable and hurts the rich the most, a depression hurts the poor and in every instance in history, the rich become richer during depression. To save the rich man's dollar, Nixon would take the poor man's penny.

ROTARY AROUND THE WORLD

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. OTTINGER. Mr. Speaker, recently Dr. Mauro Baradi, the distinguished Philippine statesman, lawyer, and diplomat, delivered an address on the activities of Rotary International throughout the world.

I am sure our colleagues will find Dr. Baradi's remarks to be of interest and I am pleased to insert them herewith for inclusion in the RECORD:

ROTARY AROUND THE WORLD

(By Dr. Mauro Baradi)

I am delighted to be with you on this occasion. I feel at home among you, knowing that wherever Rotarians gather together, an atmosphere of understanding and fellowship prevails. This is particularly so in the case of members of the Rotary Club of Waterville who have individually and collectively rendered yeoman service to their fellowmen. To some of us, the year 1918 is significant; it marked the end of World War I and the beginning of a life of service of your Club. And 1969 is also memorable because it was during this year when the great American soldier and former President of the United States, General Dwight David Eisenhower passed away; furthermore, 1969 is also the 51st anniversary of the Rotary Club of Waterville.

It has been suggested that I give a talk on "Rotary Around The World." This is a

big order. However, we are aware that Rotary encourages and fosters "the advancement of international understanding, goodwill, and peace through a world fellowship of business and professional men united in the ideal of service." This is done through the International Service Committee of a Rotary Club with practicable methods of implementing the service, namely: 1. Education of Rotarians; 2. Club Programs; 3. International Contacts for every Club; 4. District Organization of International Service; and 5. Education of the Public.

All I can do at this time is to mention highlights of my observations as a traveler and as a Rotarian.

Manila, Philippines.—It is said that charity begins at home. Therefore, let me start with the country whence I came. The Philippines with a population of 34,656,000, lies 600 miles off the southeast coast of Asia; it consists of about 7,000 islands with a total area of 115,707 square miles, as big as the combined areas of Maine, Vermont, New Hampshire, New York, Massachusetts, and Maryland. Besides "Filipino" as the national language, English is widely used; Spanish and other languages are also spoken. The First Philippine Republic inaugurated in Malolos on January 23, 1899 was the first constitutional republic in Asia. The present Philippine Republic inaugurated in Manila on July 4, 1946, is the first modern republic in Asia and Africa after World War II.

Manila, with the famous Manila Bay and its glorious sunset, is the administrative capital and principal port of the Philippines. It is the headquarters of the Rotary Club of Manila which was organized in 1919; this is the first Rotary Club in my country and the first in Asia. On January 29, 1919, the Club held its first regular weekly meeting at the Manila Hotel. Since that time, this hotel has remained the registered meeting place of the Rotary Club of Manila which meets at luncheon every Thursday.

Those who were elected presidents of the Club include Carlos P. Romulo (1935–36), former President of the University of the Philippines and of the United Nations General Assembly (1949), and now Secretary of Foreign Affairs of the Philippines; Gil J. Puyat (1940–41), (1945–46), President of the Senate of the Philippines; and Conrado Benitez (1955–56), President and Chairman, Benitez & Company. The Club counts among its membership outstanding leaders in government, business, commerce and industry, and in other professions. And this is important because the Philippines where agriculture is the main industry, has already embarked on a nation-wide program of industrialization—cement-manufacturing, electric power plants, flour-milling, food products and beverages, fruit-canning, furniture and textile, medicinal goods and pharmaceuticals, metal and glassware, mining, oil-refining, paper-manufacturing, plywood and lumber, rubber-processing, and salt-making.

Not long ago, President Ferdinand E. Marcos of the Philippines who has rendered and is rendering fruitful service to our country and people delivered a thought-provoking address before the Rotary Club of Manila of which he is an honorary member. The occasion was in connection with the commemoration of the fiftieth anniversary of the founding of the Club. The President stated among other things, that there would be no further restrictions, no exchange controls and no devaluation in the country.

Rotary is synonymous with service in my country. Its civic activities are manifold and its influence widespread. As of 1968–69, there were 69 Rotary Clubs with 2,781 members in the Philippines. They have been very busy and are presently engaged not only in initiating and completing community projects but in improving the lot of the masses. Our dynamic President and his predecessors have repeatedly commended Rotarians for their valuable assistance to the nation.

Tokyo, Japan.—Tokyo, capital of Japan, with a population of more than eleven million people, is the world's largest city. Rotary came to the country in 1920.

The Rotary Club of Tokyo meets at noon every Wednesday, except on national and local holidays, at the Imperial Hotel. In 1940, the Club, due to circumstances, terminated its twenty years of existence. In spite of it all, the members expressed the earnest hope that the time might come soon when they could peacefully join again in world fellowship for the advancement of the Rotary principles. This hope was realized when in 1949, the Rotary Club of Tokyo was reorganized and first readmitted in the world family of Rotary from Japan.

In a meeting that I attended, the proceedings were in Japanese; although, I heard an American—a former resident of Nippon—deliver a talk in Japanese. And there I was, a Filipino whose countrymen suffered much during the years of Japanese occupation of the Philippines! Then as now, I have come to realize that warships and airships no matter how powerful, could be destroyed; on the other hand, true friendship is indestructible. Verily, I subscribe to the message of Rotary's Goodwill Song:

"Befriend your brother man,
Let hate and envy die
No more may war rage at our door
Goodwill forever more."

The Rotary Club of Tokyo lays stress on internationalism. Members who traveled abroad, returned home with glowing reports of the hospitality of other fellow Rotarians. In the Club's schedule of events in 1968, we found the following: Interact Week of Rotary International; Rotary Foundation Week of Rotary International; and Club Forum on International, Community and Vocational Services. Rotarian Kiyoshi Togasaki, former President of the Club, whom I previously met in Tokyo, Manila, and New York, is a personal friend. While President of Rotary International (1968–69) he gave a one-word positive motto for Rotarians: "Participate"—in your Club, through your work, in building your community, and in international contacts.

New York, New York.—I am a frequent visitor of New York City, first capital of the United States; in this city, the main offices of the world's largest corporations are located; and here too, we find the headquarters of the United Nations.

The Rotary Club of New York, the sixth club in Rotary International, was organized in August, sixty years ago. It meets at luncheon on Thursday of each week at Hotel Commodore. The classification of club members is one of the most numerous in Rotary—from abrasives exporting, burial services, medicine, on down to YMCA, to mention but a few.

The Club's committees are grouped into Club Service, Vocational Service, Community Service, and International Service. It has firmly established the New York Rotary Foundation to perpetuate Rotary's ideals through gifts, devises or bequests of money or property that may be made to the Rotary Club for educational, charitable or other philanthropic purposes. Students from many parts of the world have benefited from the work being undertaken by the Club's International Service Committee.

No one is more familiar with the nature and workings of Rotary clubs in this country than the American himself. Generally, the type of program at club meetings is the same; hence, the remark, "If you have seen one, you have seen them all." But at one of the meetings I attended, the Rotary Club of New York presented a different type of program—a panel type program with three leading representatives of the communication industry directing their questions to the co-authors of a book, *The Gap*. The big attendance was cosmopolitan in character. The question and answer method concerning the generation gap was informative and revealing to all parties concerned. Suggestions were made to hold similar programs in the future.

Rome, Italy.—Italy's capital, Rome, is often called the "Eternal City," and the heart of Italy. The city, a world within the greater world, is a great cultural, administrative, and educational center. This ancient and modern metropolis has an ever-expanding commercial and industrial life which is of continuing interest to the scholar, the artist, and the businessman alike.

The Rotary Club of Rome-Est. meets on Mondays at 20:30 o'clock at Hotel Quirinale, a historic edifice. The language spoke is Italian.

In one of the Club's meetings, I met Italians who served their Government in East Africa; they gave accounts of their journeys to distant lands and appreciated the Rotarian hospitality extended to them. H.M. Victor Emmanuel III, King of Italy, now deceased, was an Honorary Governor of a Rotary District in Italy.

The Club cooperated in organizing expeditions and offered food supplies, medicines, and financial help to the poor and the sick. It acted as host to numerous Rotarians and their friends who were touring Italy.

When asked in what way can Rotary best contribute to the advancement of international peace, Rotarians in Italy gave a two-fold reply: 1. by facilitating the intercourse and mutual acquaintance between business and professional men from the various nations and 2. by giving its members an opportunity to obtain directly from other members, sure and reliable information regarding conditions in their countries; by helping members of one nation to understand the problems, difficulties and troubles of others, and to appreciate better the contribution they all give and are able to give to the prosperity of the world.

Sydney, New South Wales.—Sydney, is the capital of the state of New South Wales. With a population of over two million, Sydney is Australia's principal port and largest city. It is the country's leading commercial and industrial center and serves as Australia's main air terminal and port of entry.

The Rotary Club of Sydney meets every Tuesday noon at the Trocadero. During its early years, it devoted its attention to fellowship among settlers. But the steady growth of Sydney attracted distinguished visitors who were welcome guests of the Club.

A regular feature of the Club's activities is the Friday meeting for fellowship. Here Rotarians and friends from far and nearby countries are afforded the opportunity to know one another better.

In Africa.—During my more than three years' (1962–65) tour of duty as Philippine Chief of Mission to Africa, South of the Sahara, and later as Philippine Ambassador to Nigeria, Cameroon, Ghana, Liberia, and Sierra Leone, I had the opportunity of getting acquainted and of mingling with Rotarians there. I saw Rotarians in action in the following capital cities: Mogadiscio, Somalia where I resided for four years (1956–1960) as Philippine Representative on, and as Chairman of the United Nations Advisory Council for Italian Somaliland; Nairobi, Kenya; Lagos, Nigeria where I became a member of the Rotary Club of Lagos; Yaounde, Cameroon; Accra, Ghana; Monrovia, Liberia; Freetown, Sierra Leone; Cairo, Egypt; Algiers, Algeria; and Tananarive, Malagasy.

Rotary came to Africa by the establishment of the Rotary Club of Johannesburg in 1921. For sometime, officers and members of Rotary Clubs were non-Africans. Since Rotary's membership is not exclusive as regards color, creed, or country, it has spread

far and wide. Thus, as of June, 1968, there were 13,302 Rotary Clubs with a total membership of about 633,000 in 143 countries and geographical regions.

In 1945, on the occasion of the fortieth anniversary of the founding of Rotary International, General Jan C. Smuts, then South Africa's Prime Minister, praised Rotary's world-wide service in the following message:

"Rotary has been in the van of the humanitarian trend towards greater social security in all democratic countries and the movement can find no more worthy cause for its unselfish endeavours than the application of its motto, 'Service Before Self,' to not only the national community but the international community as well."

In the case of some African countries which became independent in 1960, Rotary clubs were organized only recently. These clubs meet either at noon or in the evening at hotels, taverns, or halls. Some clubs have members belonging to fourteen or more nationalities. In this way, Africans are enabled to talk intimately with fellow Rotarians at home and are brought closer to their counterparts abroad.

Africans have asked me this question: "What do Rotarians do?" This same query was directed to George Bernard Shaw who was reported to have made the curt reply: "Rotarians go to lunch." This should not be taken as a criticism against, but rather as a compliment to Rotarians, for no world organization in our day, goes to lunch as does Rotary. By breaking bread together around tables under a common roof, men of divergent and even conflicting views could meet face to face and discuss their problems ever remembering that service is their common business.

Still the impression persists that Rotary is merely a luncheon club. This mistaken concept may be due to misinformation, lack of experience, and nonexposure to the Rotary ideal of service and its Four-Way Test of the things we think, say or do regarding truth, fairness. friendships, and mutual benefits.

It is inspiring to feel that a native of Africa, Mr. Justice Charles D. Onyeama, formerly of the Supreme Court of Nigeria and now a member of the International Court of Justice at The Hague, himself a past President of the Rotary Club of Lagos, has expressed in writing, his understanding of Rotary luncheon. Rotarian Onyeama stated:

". . . We, as a club, are comparatively young and have not much experience of Rotary work; for this reason, if for no other, it is important that we attend our meetings and involve ourselves fully in committee work. As has been said—and this cannot be said too often—the Rotary Club is not a luncheon club. The purpose of the luncheon is to provide an opportunity for meeting of all those who are interested in serving the community in which they live; our club is a *service* club."

At club meetings, I noticed a display of Rotary banners, District flags, and flags of many nations. An African colleague impressed me when he said that such a display was a three-in-one reminder: 1. the invitation for more Africans to become Rotarians; 2. the need for peace and stability among Africans; and 3. the desire to make a useful contribution toward world understanding and harmony.

Another African who seemed impatient, wished that Rotary came to his country earlier. He said his countrymen had urgent needs to meet and serious problems to solve; that there were not enough native hands to help their communities in order to lighten the heavy burdens which Africans had carried for so long.

Why should we care about Africa? This is one of the burning questions of the day. Rotarians are in a position to answer the question because they are committed in one way or another to serve humankind.

Lest we forget, the Africa of today is radically different from what it was yesterday. Way back in 1945, out of a total membership of 51 in the United Nations, only four were African countries. In 1960 alone, sixteen African countries became independent. By 1966, when the membership of the United Nations increased to 121, there were 39 African countries as members; these latter figures constitute almost one-third of the entire membership in the World Organization. African votes carry weight and their views on world affairs can not be disregarded.

The emerging African states subscribe to the purposes and principles of the United Nations, one of which is to develop friendly relations between nations based on equal rights and self-determination of peoples, and to use international cooperation in solving economic, social, cultural and humanitarian problems. Rotary which came into being forty years before the United Nations Charter came into effect, has a similar objective.

In the Charter of the Organization of African Unity formed in 1965, the African states likewise agreed "to promote international co-operation, having regard to the Charter of the United Nations and the Universal Declaration of Human Rights." These states place high priority to economic growth and development of trade. They prefer external assistance from the free world. They desire technical co-operation because of a shortage of trained and experienced men in their midst. In this connection, it is worthy to note the new program launched by Rotary—Rotary Volunteers Abroad—which "utilizes the talents of available mid-career or retired Rotarians to help resolve problems in developing countries in need of expert counsel in education, health, business, rural and community development."

One of the grievances against former colonial rulers is the fact that the latter "starved" education in most of Africa. Is it not ironical to find so much starvation and misery in a continent with so much wealth and potentiality? On this point, Smith Hempstone wrote:

". . . Africa produces 95 per cent of the world's diamonds, 39 per cent of the world's gold, 21 per cent of the world's copper, 77 per cent of the world's cobalt, 34 per cent of the world's manganese, and 70 per cent of the world's cocoa. It has enough iron, tin, chrome, and bauxite to supply the world's needs for years to come."

But Africa's most important resource is its own people—303 million and more—living in an area of 11,685,000 square miles. They are entitled to their God-given right to be free. They have valuable assets: capacity to endure, willingness to sacrifice, and anxiousness to learn, Like others, countries in Africa have long-time enemies: poverty, illiteracy, and disease. To fight these foes and minimize the evils connected therewith, the assistance of men of goodwill everywhere would be welcomed. Africans appreciate the value of friendship and here again, Rotarians may contribute their share and talents.

I have traveled by car, ship, and plane in five continents: 1. Asia, where the first Rotary Club was organized in 1919; 2. North America, where the premier Rotary Club was founded in 1905 by Paul P. Harris, lawyer; 3. Europe (continental), where the first Rotary Club was organized in 1920; 4. Australia, where the first Rotary Club was organized in 1921; and 5. Africa, where the first Rotary Club was organized in 1921.

My visits to Rotary Clubs and contacts with Rotarians around the world, were enlightening and reassuring; enlightening because I was enabled to understand why businessmen and professionals were enthusiastic in serving neighbors and friends for the common good. Rotarians by precept and example do preach and practice the Golden Rule, not the rule of gold. I became convinced that an organization like the Rotary, which is a worthy ideal in action, is bound to grow and glow as the years come and go.

A service club which labors incessantly to enhance international understanding, is indeed, a powerful and dependable ally in our unfinished task of bringing about the Brotherhood of man under the Fatherhood of God.

POSTAL REFORM

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. DULSKI. Mr. Speaker, the Wall Street Journal—one of the major recipients of special treatment by our postal system—has decided that "Congress is likely to reject any meaningful reform of the postal service."

I do not know where the newspaper got its information, but it is clear that it paid little or no attention to the nearly 4 months of public hearings on this matter which have just been concluded by our Committee on Post Office and Civil Service.

The hearings by our committee have been the most extensive in history. We have compiled a comprehensive record of testimony from every segment of our economy which is associated with or concerned about postal service.

To my mind, there is no question about the need for major reform of our postal system and I believe—notwithstanding the Journal's gloomy prophecy—that our committee will come forward with "meaningful" postal reform legislation this fall. Failure, if any, will not be due to any obstructions on my part.

The Journal, like other outspoken proponents of the plan to convert the Post Office Department into a public corporation, seems unable to see the woods for the trees.

The issue is postal reform—comprehensive reform. How we accomplish this reform is a detail which our committee will decide shortly—whether we convert the Department into a public corporation or whether we accomplish the same end by a massive reorganization of the present executive department.

It is interesting, of course, to have the Journal's views. It is a matter of record that there is no other national publication which receives the day-after-day special treatment from the postal service.

It has same-day delivery—by mail—in most cities and communities in the Nation. The Post Office Department has estimated the Journal's annual subsidy as about $9.4 million.

Mr. Speaker, following is the lead editorial which appeared in the September 9 edition of the Wall Street Journal:

POSTAL POLITICS

From all accounts Congress is likely to reject any meaningful reform of the postal service—an unfortunate but nonetheless predictable outcome.

The chief trouble with the Post Office, after all, is its thorough immersion in partisan politics. Congressmen enjoy playing for votes by manipulating postal rates and workers' pay, whatever the results may be in postal service.

So it can't be counted surprising that many Congressmen are cool to the Administration plan to turn the Post Office into a public corporation that would set its own rates and salaries, raise funds by selling bonds and largely balance its books. The lawmakers' rationalizations of their opposition, however, are likely to sound ingenuous to most citizens.

One contention is that the Post Office is not just a business but a Government agency with major public responsibilities that might suffer if put in the hands of a public corporation. It's surely true that the Post Office does have large public responsibilities, but it's equally true that in recent years it has become more and more inept at handling them.

Perhaps there are reasons to quarrel about the precise mechanics of prying politics out of the postal service. Yet a sensibly constituted and wisely run corporation could hardly fail to do a better job with the mails than the present setup has done.

The demands on the service are growing enormously. The Post Office now handles about 84 billion pieces of mail a year, more than double the figure for 1945, and the future trend is clearly upward.

Despite all of the talk of the coming wonders of Zip Code, the fact is that mail still is sorted manually into partitioned bins, in much the same way that Benjamin Franklin originally planned it. The speed and regularity of service steadily diminish.

The more candid Congressman may admit that they don't want to lose the campaign support of big mailers, companies that use the mails heavily for distribution of publications and advertising. If rates were set by a public corporation, these mailers no longer would find it necessary to curry favor with Congress—a development that most of the public could count as a blessing.

The postal unions also play a part in the opposition to the Administration's plan. The unions have grown accustomed to bargaining with legislators for higher pay, and then swinging electoral support to those lawmakers who befriend them. A postal organization that would end that sort of vote-buying surely would be in the general public's interest.

One of the more important advantages of the corporation plan is that it would at least make it possible to breathe fresh air into the system. Lawrence F. O'Brien, an early advocate of taking politics out of the Post Office, testifies to the need for change:

"When I became Postmaster General in 1965 I was confident that once I cleared out the deadwood and began to apply sound management principles, I could provide the kind of mail service that our citizens demand. I was in for a rude awakening. There was very little deadwood in personnel but whenever I tried to apply sound management principles, there was usually some antiquated law that prevented me from doing so."

Some of the anti-change Congressmen actually argue that postal reform is pointless since, under any system, the public would continue to blame Congress for shortcomings. If the lawmakers really are concerned about citizens' feelings, you would think they would be anxious for a change—almost any change—that might improve the mails.

Meanwhile the postal service continues to spiral downhill and rates go on rising. And there's no question at all about whom the public can blame for that.

ENGINEER OF THE YEAR

HON. BENJAMIN B. BLACKBURN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. BLACKBURN. Mr. Speaker, recently, it was brought to my attention that a fellow Georgian has been named "Engineer of the Year." Mr. F. R. "Bob" Prybylowski received this honor for his "outstanding achievements in engineering design, and his service to his profession and his community."

An active member of the Cancer Society, United Appeals, and the Heart Fund, Mr. Prybylowski has resided in Georgia for 20 years. He is recognized as one of the foremost bridge designers of the Southeast.

Mr. Prybylowski's achievements were cited in the following newspaper article which appeared on July 17, 1969, in the DeKalb New Era:

PRYBYLOWSKI IS GEORGIA'S ENGINEER OF THE YEAR

A Decatur resident, F. R. (Bob) Prybylowski, P. E., was named Georgia's "Engineer of the Year" at the annual meeting of the Georgia Society of Professional Engineers in Atlanta last week.

Prybylowski received the award for his "outstanding achievements in engineering design, and his service to his profession and his community."'

A Georgia Tech graduate, Prybylowski has been a partner in the Atlanta engineering firm of Prybylowski and Gravino, Inc., since its formation in 1959. Since that time the firm has been responsible for civil and structural projects of over $100,000,000 valuation. Their work as primary engineers on the Atlanta Stadium and the Cincinnati-Hamilton County Sports Stadium in Ohio, has received national recognition, including the American Institute of Steel Construction Architectural Award of Merit for the Atanta Stadium, and the Progressive Architecture Design Awards Citation for the Cincinnati Stadium.

Prybylowski spent five years as an engineer with the State Highway Department prior to the formation of his consulting firm, and is recognized as one of the foremost bridge designers in the Southeast.

Prybylowski was selected for the Georgia honor from four candidates who had been honored in their local areas during 1969 "Engineers Week" in February. At that time he was selected as the "Atlanta Engineer of the Year" and received special commendation from the Georgia General Assembly.

A native of Perth Amboy, New Jersey, Prybylowski has lived in Georgia for 20 years and currently resides at 209 East Parkwood Road, Decatur. He is a Past State President of the American Society of Civil Engineers and has been an active member of the Georgia Society of Professional Engineers, Georgia Architectural and Engineering Soviety, Society of American Military Engineers, Consulting Engineers Council of Georgia and American Concrete Institute.

FEDERAL HELP OR SELF-HELP?

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. SNYDER. Mr. Speaker, during a time when the dole approach to welfare is becoming totally discredited—and rightly so—and as we search for new approaches and ways out of the present welfare mess, I submit the following text of a broadcast by Mr. Ed Wimmer, president of Forward America, Inc., of Covington, Ky.—the public relations arm of the National Federation of Independent Business.

Ed Wimmer provides, through these broadcasts, some helpful insights into the problems and difficulties faced by America today. The text of the broadcast follows:

FEDERAL HELP OR SELF-HELP?

(By Ed Wimmer)

Before we get into tonight's main course, I would like to ask you a few questions which I hope will divert your attention away from whatever you may be doing.

1. Are you one of those people who believes that a country can continue to tax and spend and spend and tax in an expanding effort to support the artificial prosperity of a Welfare-Warfare State, and do you believe that if our present tendency to build bigger chain store systems, bigger unions, bigger farms, bigger banking corporations, and bigger government, also continues, that your children will inherit anything that even resembles free enterprise and constitutional government?

2. Have you half-made up your mind that individualistic capitalism won't work in our modern society? That the kind of middle class democracy we built around respected professional people and independent enterprisers (in all fields), and people willing to put in a day's work for a day's pay—with young people beginning small enterprises up and down the Main Streets of America—is no longer the American dream?

3. What are your convictions with regard to the propaganda that those who work and do business have an obligation to keep every man and his family on some kind of permanent relief, helping to pay his rent or build him a house, or should we have a job-making program, and say "here is your job; it may not be what you want, but it is a job, and whether you better yourself or not, is up to you. Your care is now your own responsibility, not that of your neighbor"?

4. How much basis is there to the charge of top educators, men in public office, commentators, publishers, business leaders, et cetera, who insist that "capitalism will die in the house of its friends from lack of support?" From competitive abuses? From monopolistic practices and political graft?

5. My final question: Are you, whatever your position in life, concerned enough about the monopoly problem, about urban renewal problems, civil rights, inflation, unfair foreign and domestic competition, the crime in our towns and cities, the wholesale murders in our Capital city—a rape a day, where government is made and taxes are passed; the 25 teen-age killings in Philadelphia this year—where the Liberty Bell hangs . . . Are you, I repeat, are you concerned enough to put up your cash and give some of your time to keep this country from going the way of Rome, of Germany before Hitler, or Britain today?

These are my questions. Now listen to what Pope Leo XIII wrote in one of his Encyclicals before the turn of the century:

"Let men try as they will. No strength and no artifice will ever succeed in banishing from human life the ills and troubles which beset it. If any there are who pretend—who hold out to hard pressed people freedom from pain and trouble, undisturbed repose and constant enjoyment—they cheat the people and impose upon them, and their lying promises will only grow worse than before. There is nothing so sad as to look at the world as it really is—and then look elsewhere for a remedy to its troubles."

The Pope was not advocating, however, that efforts be lessened in fighting poverty, ignorance, slums, graft, crime, child neglect, or other abuses. What he was driving at and what we have been driving at in all of these broadcasts, is that help that doesn't end in self-help, and create desires for betterment in this life, is not help at all, and it is why I have continued to argue that when people in our society keep hammering away on the theme of helping people without ham-

mering away at the same time on self-help, we are doing an injustice to that person aided, and to society itself.

A young man who is given an OEO training, for example, ought to sign a contract that he will, over whatever length of time is necessary, pay for that training when he begins to capitalize on his learning; so his earnings may be used to train others.

What is more harmful to human character than something which is constantly held up as being free—to which no future obligation is attached?

President Nixon should have kept saying what he did in one of his speeches:

"The ghettos of our cities will be remade when the people in them have the will, the power, the resources and the skill to remake them. They will not be remade by government billions. . . . The human and social conditions of the spirit are in large part dependent upon our laying the foundation for an economic structure that can support a rebirth of pride, individualism and independence."

The question ought to be, how do you create a foundation for "individualism" and "independence" with all the trends in agriculture, industry, labor, finance and government leading to the destruction of both?

In a recent broadcast I mentioned that the huge Litton Industries is financing a vast chain of National Farm Stores, predicated on the idea of literally swamping the rural towns of America with 40-acre complexes, tied in with Gulf Oil and other huge combines, and so located as to cover what they say in their own words "the entire agricultural economy". An official of National Farm Stores says there will be only 500,000 big farms in a few more years, and he further said:

"We feel that once the National Farm Stores centers are established, they will take care of all the needs of these farmers."

Litton Industries, a huge conglomerate, has absorbed company after company, and conglomerates like Littons were called by American Finance Magazine: "Wolves of Wall Street"—"Raiders"—"Take-over Titans"—and a leading columnist and commentator called them "Hogs". We have been joined by the National Farmers Organization, National Independent Bankers' Association, the Oregon Independent Retail Grocers' Association, and the National Association of Retail Druggists, in an all-out battle to stop the liquidation of the family farm, and the further spread of the conglomerates, combines and huge chains, and if we are unsuccessful, independent, individual capitalism in the United States is doomed.

There are those who say:

"The public is too dumb to be educated. Our kids are a bunch of long-haired bums. The members of Congress a gang of graft-takers. The giants are too big to fight. I have no time. We have spent our budget for this year. I would be willing, but my partner said no. I'm too busy now, you'll have to come back next year. I have a golf game this afternoon. I can't see you now. Et cetera. Et cetera."

But this has not stopped Forward America, Inc., and the National Federation of Independent Business, Inc., or the other organizations working with us, because we have learned that it is the minority who carry all the battles for freedom; that if they can be found in time, they will come through in time. We have auto dealers, druggists, meat packers, dairy plants, brewers, funeral directors, all types of retailers, great national concerns, bankers, doctors—people in all walks of life who have supported Forward America since 1932, winning one battle after another, and the Federation since 1943, with a membership now of over a quarter-million, in NFIB.

For those who would say that one more person added to our membership wouldn't mean too much, maybe I could relate that Dr. Harry Fagedes, a Cincinnati optometrist, came into our Covington office to discuss his concern over mergers taking place in his professional field. We prepared a release on the subject, and mailed it to all members of the Ohio Optometrical Association about to meet in convention.

This lone young man gathered a few friends together, aroused their enthusiasm, and for the first time an assembly of professional people in the field of optometry adopted a resolution calling for an end to mergers and consolidations; for support of the independent wholesale laboratories that faithfully aided in the development of the optometric profession.

A leading wholesaler sent out an open letter following this resolution, in which he said:

"It would have been a lot easier and more profitable for me to sell our quality service business to a single big company, and stop competing with the undesirables and mass produced, inferior prescription work, but we have decided to stay independent because we believe there is a place for quality minded wholesale houses in our business. All rumors that we are selling out, are untrue. We do care enough to stay and fight. Do you? If not, we'd like to know."

Ladies and gentlemen, the spirit of independent enterprise is not dead when one young man can walk into an organization like our own, and in 90 days help to bring about the foregoing results.

When you hear that old dirge that you can't win, that people don't care, that independents won't fight, keep in mind that society still rests upon the spiritual more than the mechanical basis, and so long as there are men who know this, and who know that the temple of liberty and justice, in all things, rests upon their individual and collective actions, a way will be found to take that action.

Who would have believed during the recent national elections that Mr. Nixon would appoint an Attorney General, William Mitchell, and an Assistant Attorney General, Antitrust Division, Richard McLaren, both of whom are now charged with being anti-bigness because they said (in the words of Mr. Mitchell):

"We do not want our little sized and smaller cities to be merely branch store communities, nor do we want our average consumers to be second class economic citizens. A community's independent businessmen should have an opportunity to supply community needs, its lawyers should have the opportunity to act as counsel, its unions should have the opportunity of negotiating in their own community for their members, and its consumers should have the opportunity to exercise local economic options in their choice of competing goods and services."

Under no other system but widespread, independent ownership of farm, home and business enterprise, wherever practical and possible, with local control over local affairs in government will such a way of life continue to exist.

This is why the National Federation of Independent Business, Inc. and Forward America, Inc. are fighting to save independent business. "The More the Enterprisers the Freer the Nation," is our slogan, and in the promotion of this idea it is hoped that more people will patronize independent business, helping in this way to build a better tomorrow.

When people patronize independent stores, for example, the profits on their transactions are ploughed back into the community in which they live. The merchant, as a rule, owns his home or is paying for one. He deposits his money in the local bank. Sends his children to the school and church of his choice, and for this reason he is more interested in better playgrounds, better parks and other community developments.

TRIBUTE TO HON. CHARLES JOELSON

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. RYAN. Mr. Speaker, I am delighted to join with my colleagues in wishing out departing colleague, CHARLES JOELSON, continued success and happiness as he leaves us to devote his unusual talents and ability to the judiciary. The qualities of mind and character, which have made CHARLES JOELSON a respected and effective Congressman, will be invaluable assets to the Superior Court of New Jersey.

Knowing of his deep seated desire for judicial service, I am pleased that CHARLES JOELSON's ambition has been realized. However, knowing the void which will be created among us in the House of Representatives, I am saddened because of our loss.

CHARLES JOELSON and I were first elected to the 87th Congress and have served together through five successive Congresses. His friendship and companionship have meant a lot to me, and I will miss him as a friend as well as a respected and admired colleague who could alway be counted upon to make a telling and effective contribution to debate. Intelligence and wit marked his comments both on and off the floor.

CHARLES JOELSON's leadership was particularly effective recently during the consideration of the fiscal year 1970 appropriation bill for the Departments of Labor and Health, Education, and Welfare. As a result of his efforts the Joelson amendment was adopted on the House floor, adding $894 million for educating the children of our country.

The length and variety of his public service running through a continuous period of almost 30 years have secured for CHARLES JOELSON a conspicuous and permanent place upon our public records. As a member of the Naval Intelligence Division in World War II, as the city counsel of Paterson, N.J., as New Jersey chairman of the National Institute of Municipal Law Officers, as New Jersey deputy attorney general, as acting prosecutor of Passaic County, as director of criminal investigation for the State of New Jersey, and as a Member of this House since 1961, he has consistently demonstrated both versatility and devotion to the public interest.

The House of Representatives and the Nation which it serves have benefited immeasurably from his devoted service. Let us not be content simply to deplore his loss, but let us resolve to bring about the necessary congressional reform which would make it possible to keep CHARLES JOELSON, and other talented and able legislators in the future, as contributing members of this body.

CHARLES JOELSON has been a crusading lawyer as well as an effective Repre-

sentative; he will be an able and conscientious judge. But above all, he will continue to devote his days and years to bringing the best that this Nation can offer to the citizens whom he continues to serve.

MARSHALL FIELD ELECTED PUBLISHER OF CHICAGO SUN-TIMES AND CHICAGO DAILY NEWS

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. PUCINSKI. Mr. Speaker, it was with great pleasure that I learned that Marshall Field has been elected publisher of the Chicago Sun-Times and the Chicago Daily News.

At the age of 28 he becomes one of the youngest publishers of any major newspaper in the Nation.

I have every reason to believe that young Marshall Field will follow with great competence the footsteps of his highly respected father, Marshall Field IV, and his distinguished grandfather, Marshall Field III, who founded the Chicago Sun, predecessor of today's Chicago Sun-Times.

The Field publications in Chicago have made a particular impact on young moderns and so it is fitting and significant that a young man of 28 should take the helm of these two highly respected publications.

As one who for 20 years had a very warm and friendly relation with the old Chicago Times and later the Chicago Sun-Times, before I was elected to Congress, I am particularly heartened by this election of Marshall Field.

It was my great privilege to work with his father when he took over stewardship of the Chicago Sun-Times and I also have fond recollections of working with his grandfather.

Both Fields had a great love for Chicago and both had an abiding desire to make their publication among the finest in the country.

I am sure the new publisher of these two outstanding newspapers will carry on the high standards of journalism set by his father and grandfather.

I am taking the privilege today of including in the RECORD an article which appeared in the Chicago Sun-Times announcing the election of Marshall Field as publisher of the Chicago Sun-Times and its sister paper, the Chicago Daily News.

The article follows:

FIELD IS ELECTED PUBLISHER OF SUN-TIMES, DAILY NEWS

Marshall Field has been elected publisher of The Chicago Sun-Times and The Chicago Daily News effective Oct. 1, Bailey K. Howard, president of The Newspaper Division of Field Enterprises, Inc., announced Monday.

At 28 years of age, Field is the youngest publisher of any major newspaper in the nation. The title of publisher of the two Field newspapers has not been used since the death of Field's father, Marshall Field IV, in September of 1965.

Commenting on the new publisher, Howard said:

"Three years ago Marshall Field began a five-year training program, working in each of the 23 subsidiaries and divisions that make up our parent company, Field Enterprises, Inc.

"His talent, probing curiosity and diligence have given him such an excellent understanding of the business that Marshall is ready to assume the position and responsibility of publisher now. Under his creative leadership, The Chicago Sun-Times and The Chicago Daily News will each continue to develop its own distinctive, strong image, and will achieve new challenging objectives."

ELECTED SENIOR VICE PRESIDENT

A year ago (Sept. 4, 1968), Field was elected senior vice president of The Newspaper Division and senior vice president of the corporate division of Field Enterprises, Inc. He had been assistant to the general manager of The Newspaper Division since October 1965.

In September 1965, Field was elected to the board of directors of Field Enterprises, Inc., to succeed his late father. He now serves on the boards of directors of all subsidiaries and divisions of the corporation.

Field's professional memberships include serving on the board of directors of the Bureau of Advertising of the American Newspaper Publishers Assn. He also is a trustee of the American Newspaper Publishers Assn. Foundation.

Because of his keen interest in learning through reading, Field accepted chairmanship of the Committee for National Library Week in Illinois this year. He is a member of the National Book Committee, Inc., and the Chicago Committee of the Chicago Council on Foreign Relations.

ACTIVE IN CIVIC AFFAIRS

In civic affairs, Field is a governing member of the Chicago Orchestral Assn. and a member of the board of directors of the Field Foundation of Illinois, Inc., the National Boulevard Bank of Chicago and the Lyric Opera. He is a trustee of the Art Institute of Chicago and of the Field Museum of Natural History.

While attending Harvard University, Field worked one summer in the editorial department of the Boston Globe. After graduation, he worked for Random House and later the New York Herald-Tribune. He resigned to return to Chicago when his father died in 1965.

In July, 1964, Field began his military service with the U.S. Army at Fort Dix, N.J., and was released from active duty on Dec. 11, 1964. He currently is a member of the Illinois National Guard.

The morning newspaper, The Chicago Sun, was founded by Field's grandfather, Marshall Field III, in 1941, the year Marshall Field V was born. In 1948, Marshall Field III merged The Sun with The Chicago Times into a daily and Sunday newspaper and became publisher of The Chicago Sun-Times.

Marshall Field IV, father of the present publisher, began his career in journalism on The Chicago Sun in 1946 as an apprentice. The following year he worked on the New York Herald-Tribune. He returned to Chicago in 1948 as assistant publisher and associate editor of The Chicago Sun-Times. In 1950, at age 34, he was appointed editor and publisher of the paper.

In 1959, Marshall Field IV bought the Pulitzer Prize winning Chicago Daily News from John S. Knight, and became president, editor and publisher of the newspaper. He simultaneously held the same positions on The Chicago Sun-Times.

The Chicago Sun-Times ranks today as the fifth largest morning newspaper in the nation. In the afternoon field, The Chicago Daily News is also in fifth place. The Chicago Daily News/Sun-Times Service is America's oldest auxiliary wire service, founded in 1898 as The Chicago Daily News Foreign Service. It provides Publishers-Hall Syndicate with a network of foreign and domestic correspondents and feature writers. Their dispatches are run in almost 100 client newspapers.

STATE ROLE IN OEO

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, OEO Director Don Rumsfeld recently enunciated an important step in the redirection of OEO to improve its services to the poor.

In a speech on September 8 before the State Economic Opportunity Office Directors Conference he outlined steps to bring the States into a fuller partnership with OEO. For the benefit of my colleagues I include the full text of his address as a part of my remarks:

STATE ROLE IN OEO

(Statement by Donald Rumsfeld)

As you are all well aware, we are midstream in a redirection and new emphasis for the efforts of the Office of Economic Opportunity.

The broad framework has been set down for the reorganization of headquarters OEO and we are now working the changes down through the individual divisions of the Washington and Regional offices. Although we are finding that reorganization of a government agency is a timeconsuming, somewhat painful process, it is moving along with steady progress. When complete, the agency will be better structured to perform the pioneering role the President has outlined for us.

At the same time, we have launched a study of the regions so the expansion from seven to ten regional offices can be accompanied by a thoughtful reorganization of our field operations.

Other recent major changes have included the delegation of Head Start and Job Corps and the elevation of Legal Services and Health Affairs to independent program divisions within OEO.

No less significant for the future of the agency in terms of productive change are the administrative steps we are taking to bring the states into a fuller partnership with OEO.

It has become increasingly clear in my first months in office that the resources available at the state level have not been brought to bear as fully as they might have been in the effort to build routes out of poverty.

The states have much to offer, yet they cannot contribute effectively without the opportunity for more meaningful participation. James Martin, representing the National Governor's Conference and the Council of State Governments in testimony before the House Education and Labor Committee last April, made this case. He pointed out that no new legislation is required because the existing OEO legislation provides in 15 instances for an active state role. But he added that full participation has not been encouraged by OEO officials.

In the future, there will be encouragement.

I sent a letter to your governors last week asking for their assistance in marshalling ideas and resources for the development of economic opportunity. Coordination and cooperation between OEO and the governors' offices are vital if we are going to enable underprivileged Americans to join in the economic benefits of our society.

Words like coordination, cooperation, and

participation can easily become lip-service phrases surrounding a policy of inactivity. But I intend to see that these words mean what they say in relationship of OEO to the states. There will be fuller consultation with the governors in OEO matters affecting their states.

This new posture for OEO is consistent with the overall Administration policy of giving states a greater share of the responsibility for the operation of government programs in our federally-structured system.

This reversal of the trend of three decades was a key point in President Nixon's speech to the National Governor's Conference in Colorado Springs last week. He said, "Washington will no longer try to go it alone. Washington will no longer dictate without consulting."

Regarding OEO, the administrative authority provided for in the Economic Opportunity Act will be exercised. After careful study and review, I have decided to take several steps to strengthen the state contribution to the poverty program.

Some of these changes are spelled out in a completely revised OEO instruction on the role of the State Economic Opportunity Offices, a draft of which will be mailed out to you and your governors for comment shortly. Among the changes are:

Greater involvement of the SEOOs in the regional funding plans for OEO-funded programs within each state.

Systematic consultation with the SEOOs in the training and technical assistance process.

Fuller participation of SEOOs in the monitoring and evaluation of OEO-funded programs.

A requirement that Regional Offices work out a joint agreement with the SEOOs on the coordination of field personnel activities.

Increased emphasis on the role of the SEOO as a mobilizer of state resources for use against poverty.

A clear statement encouraging a more important role for the SEOOs in state government.

Under active consideration are proposals for:

Achieving adequate staffing for SEOO offices.

Greater use of states for research and demonstration projects in areas where they have special expertise.

In-service training for OEO personnel on the workings of state government and, vice-versa, for SEOO personnel on the workings of the Federal government.

Where the added responsibilities imposed on the state offices require more staffing and resources, and where innovation and effectiveness have been shown, we will attempt to increase the budgets of individual state offices.

Some steps have already been taken in recent months to upgrade the relationship between SEOO offices and OEO. They include:

The initiation and funding of a program of poverty-oriented state planning grants in ten SEOOs.

Three pilot projects for State Special Technical Assistance (State/STAP) Programs.

An effort to strengthen the checkpoint system for processing grants.

A directive has been written and will be sent shortly to the regional offices and contractors for training and technical assistance. It sets forth their responsibilities for working with SEOOs in this area.

Another program which will receive major emphasis in the coming months is the Federal-State-Information Exchange System. As a result of a recent decision, this method of linking Washington and the states is being expanded to include half of the 50 states, and it has bright prospects for still further expansion.

In short, we are seeking a wide variety of ways to put substance into the oft-used phrase "a more meaningful role for the states." Details on the steps taken and those to be taken will be available in the immediate future.

Our firm intention to make the state-OEO relationship a day-to-day working partnership is also reflected in the reorganization of the headquarters office. Instead of an isolated office for state relations on the staff level, the new structure places the state liaison office directly in the major decision-making process of the agency.

A new State and Local Government Relations Division is being established in the Office of Operations. This means the views of SEOO directors will be heard in the development of OEO operating policy and procedure, since the Office of Operations will be headed by a presidential appointee with responsibility for most of the field activities of the agency. SEOO contributions will be fed directly to the man making the key decisions for field operations.

Another administrative action of importance to the states is the revision of the guidelines implementing the Green Amendment. We are presently working on new guidelines to rewrite the language which has been construed by some to have inhibited the use of the amendment by the states.

These changes all move in the direction of more effective working relationships for the states with OEO. But this is not the final word on this subject.

In two months, a nationwide evaluation of the SEOOs by the Midwest Research Institute will be completed. That study, along with the consultation I recently invited in my letter to the governors of the 50 states, will be carefully reviewed with an eye to still further improvements in their relationships.

Our partnership will not be a static. I am confident that it will continue to evolve as better ideas are found to make the Federal-regional-state-local system work more effectively for the benefit of the poor.

"PORQUE" PATTEN

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, September 8, 1969

Mr. DELANEY. Mr. Speaker, I was deeply grieved to learn of the passing of our friend and former colleague from Arizona, the Honorable Harold A. "Porque" Patten.

"Porque" was a warm and friendly person, who had a great many friends on both sides of the aisle. He was a valued member of the Committee on Armed Services, and the Committee on Veterans' Affairs. He worked with diligence and effectiveness to serve his constituents and the Nation, and contributed greatly to the work of the House of Representatives.

He was an outstanding athlete at the University of Arizona, and, after graduation, devoted his talents to the field of public recreation where he provided in tion, devoted his talents to the field of young people. He served with valor and distinction as a combat observer with the Army Air Corps in World War II and rose to the rank of major. After the war he maintained an active interest in veterans' affairs, and was proud of his service in the Air Force Reserve, from which he retired in 1960 as a lieutenant colonel.

Arizona has lost one of its finest citizens and a devoted public servant. The Nation has lost one of its outstanding patriots. We who were privileged to know him mourn the loss of a kind and gentle friend.

I extend my deepest sympathy to his wife, Mary, and his family.

A FADING SHADOW

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. FEIGHAN. Mr. Speaker, our merchant marine fleet, often referred to as "Our Fourth Arm of Defense," has been reduced to a shadow of its former self, especially in terms of international prestige.

The following brochure, published by the Labor-Management Maritime Committee, sets forth our Nation's maritime plight and outlines the response we must make to avert the continuance of the downward trend.

The brochure follows:

THE U.S. MERCHANT MARINE—OUR FOURTH ARM OF DEFENSE

Self-preservation is the first law of nature. Likewise, national perpetuation is the first and most basic law of any nation. Its freedom, its security and its national defense are protected by its military strength. All major conflicts between nations involve the sea lanes of the world. The possession of adequate sea power is thus imperative. Every major seagoing military mission must be backed up by maritime transport capability. This is the role of the U.S. Merchant Marine. For this reason it is aptly termed "our fourth arm of defense."

Today, except for the liner fleet, the U.S. Merchant Marine has diminished to a shadow of its former self while the nation remains indifferent to its plight. The degree of this indifference is in direct proportion to the peril the nation faces by continued maritime neglect. This brochure sets forth our maritime plight and certain corrective measures to offset the peril to our seagoing capability which in turn adversely affects our national security.

THE RUSSIAN DRIVE TO THE SEA

The Russian bear is already manipulating its sea power like marionettes in the strategic sealanes of the world.

The Soviets have boasted that "The flag of the Soviet Navy now proudly flies over the oceans of the world. Sooner or later, the United States will have to understand that it no longer has mastery of the seas". Its rapidly expanding merchant marine gives great credence to this boast.

The USSR is the fastest growing maritime nation on earth. It now presses Japan for fifth place and will rapidly continue to move higher.

It doubled its merchant fleet tonnage in the period 1961–65.

It is expected to expand an added 50% by 1970 for a total of 14 million DWT. This will overtake and surpass the U.S.

The USSR has been adding in excess of 1,000,000 DWT per year to its merchant fleet. The United States has been adding only 170,000 DWT annually in recent years up through 1967.

Well over 80% of the Soviet merchant fleet is *less than 10 years old*. Conversely, more than 80% of the U.S. merchant fleet is *over 20 years* of *age*. This means four out of every

five Soviet merchant ships are *new;* four out of every five U.S. merchant ships are *old.*

A Senate Committee on Commerce Report (December 1967) points out that in "outstanding orders for dry cargo vessels, the Soviet Union is now leading all competitors" (28% of the world's dry cargo ships on order). In 1968 Russia had 456 merchant ships on order. The U.S. had only 51.

The United States, because of budget privation and indifference to its national maritime policy, constructs an average of only 8 to 10 merchant ships a year for the foreign commerce under the 1936 merchant marine act.

The Soviet Union thus drives to the sea in a massive effort *to dominate it.* The U.S., meanwhile, drives toward a maritime graveyard with accelerating pace *to lose it.*

MARITIME GRAVEYARD

One segment of the merchant fleet does not have the mortuary tow attached to it—the liner fleet operating under subsidy contract. This segment remains strong and viable.

The Merchant Marine Act of 1936 (Section 101) declares "it is necessary for the national defense . . . that the United States shall have a merchant marine . . . capable of serving as a naval and military auxiliary in time of war or national emergency."

To that end, liner ships, constructed under such act are built with modern defense capability and with special defense features determined by the Navy.

To that end, subsidy contract lines have developed the RESPOND program to provide sealift capability to DOD on a short-of-war basis. This program commits all subsidy contract lines [and all others interested in the National Defense] to meet the needs of DOD in progressive steps up to and including full fleet utilization for the defense of the nation.

Both the Comptroller General and the Department of Defense have endorsed the RESPOND concept. It is similar to the highly successful CRAF program which commits the airlines to provide airlift capability to DOD.

It is now vigorously opposed by the owners of the "Rustic Relics"—the tottering GRANDFATHER SHIPS of World War II.

These owners have sought to exclude new fast ships of the contract-supported lines from the defense of the nation by imposing special penalties on their use. They are attempting to secure a monopoly on the carriage of all government cargo at high rates and guaranteed profit. Thus they hope to breathe a little more life in to the GRANDFATHER SHIPS.

The Acting Maritime Administrator rejected such preposterous attempts on February 28, 1968, when he refused to "impose a surcharge or penalty in the military charters of the newer ships."

His action sustains the concept that to perpetuate antiquated sea power is to risk the national security; that the desires of a small and decaying segment of the industry must not impair the national interest.

It is high time we strengthen our fourth arm of defense with an aggressive joint industry-government effort toward maritime improvement.

While the Russian Bear grows massive in size, the U.S. has struggled through two decades of inept maritime action. In this year 1969, another MOUNTAIN of effort must not again BRING FORTH A MARITIME MOUSE.

SADDLING THE NATIONAL DEFENSE WITH MARITIME OBSOLESCENCE

In a declared war of any major proportion, merchant ships to back up our military forces will not be the obsolete rust buckets of World War II.

They will be our new fast modern ships built chiefly by the contract-supported lines and other new ships yet to be constructed.

Both shipyard support and national defense features have been provided by Government under the Merchant Marine Act of 1936 for just such a purpose. Neither redounds to the operators who are committing over $2 billion in private funds for new ship construction.

The new ships are used substantially in supporting the Vietnam conflict, both on route and under direct charter.

However, Vietnam is a limited conflict, fought with Uncle Sam's hands partially tied behind his back. Such a military engagement does not justify the abandonment of all the nation's commercial sealanes to foreign flag shipping.

Were this done, much of it would never be regained. Nevertheless, subsidy contract lines have responded with ships for both military and commercial purposes.

Operators of old World War II fleets attempt to deprecate these efforts while boasting of their own Vietnam participation.

Actually, Vietnam was a Godsend to them. Many of their ships are so non-competitive in commercial operation that military employment, on a sizable scale, is a considerable bonanza. Since most unsubsidized ships are so old they can't qualify for commercial insurance at reasonable rates, the carriage of self-insured government cargo solves many shipping problems for an ill-fated fleet faced with accelerating decay.

Their attacks upon the contract-supported lines is a classic example of inconsistency. On the one hand, they charge them with doing too little in military transport and in the second breath attack the RESPOND program for providing too much.

One group called AUL (American Unsubsidized Lines) has been in the vanguard of this charge. Yet, as of December 31, 1967, the subsidy contract lines had approximately twice the AUL ships and twice their tonnage on charter to the military—39 vs. 20 ships and 455,000 DWT vs. 231,000 DWT.

The dissident carriers eulogize the performance of "the unsubsidized ships and World War rust relics which had been taken out of mothballs", but minimize "the amount of Vietnam-bound cargo carried by the subsidized segment of the fleet".

On one hand, they view with alarm the great amount of military cargo carried by contract-supported lines such as "automobiles, household goods and personal effects" and "food, clothing and medical supplies destined for military installations around the globe", and, on the other hand, criticize it for not carrying more.

They decry what they call "low" participation of subsidy contract lines in military transport, then complain because such lines are carrying too much of it worldwide.

They complain that the subsidy contract lines "were carrying only 17.1%" Vietnam military cargo (one isolated quarter of 1967) but object bitterly to the RESPOND program designed to transport more.

They decry their lack of modern ships to more effectively serve the armed forces but oppose increased participation by those who do possess them.

They have climbed upon a TEETER-TOTTER without knowing which end to ride.

While they TEETER on one side, THEIR AGING FLEETS TOTTER WITH THEM on the other; albeit over an abyss of decay and obsolescence.

OUR DEFENSE MUST NOT BE ALLOWED TO TOTTER WITH THEM TO DESTRUCTION.

DEFENSE AND THE DUAL SUBSIDY KICK

Some dry cargo carriers will be virtually forced from the seas in a few years; not by the RESPOND program; not by subsidy contract lines; but by technical obsolescence, higher insurance rates, heavy maintenance costs, and non-competitive ships.

Perhaps in a final effort to maximize profits before going wholly foreign, they now seek a corner on all military cargo. To achieve this they have gone on a DUAL SUBSIDY KICK from which neither the rulings of the Comptroller General nor the Acting Maritime Administrator have been able to extricate them.

U.S. Flag operators must build their ships in U.S. yards.

Shipyard subsidy, as its name implies, goes to U.S. shipyards to offset differentials in cost with foreign yards. Yet the dissident carriers demand it be reclaimed from those who never received it—the berth line carriers operating under the 1936 Merchant Marine Act. By this device they hope to disadvantage such lines and gain all Government transport business for their own aging fleets.

On February 28, 1968, the Acting Maritime Administrator advised them that their war-built ships were "not under any disadvantage vis-a-vis any other ship of comparable age", pointing out that capital costs of ships were comparable whether built under construction subsidy or sold under the 1946 Ship Sales Act.

He then rejected their concept of repayment of construction differential subsidy, holding it "would introduce an element, not of equity but of inequity".

In a previous attempt, these carriers sought repayment of operating differential subsidy from subsidy contract lines where military or aid cargo is carried. On October 14, 1966, the Comptroller General ruled that such support was for maintaining regular services on the route—not for carrying Government cargo. He held that such costs were not affected by partial lot Government cargo carried *incidental to the service.*

Subsidy contract operation under the 1936 Merchant Marine Act imposes limitations and obligations conceived in the national interest for maximum customer service.

These limitations and obligations, while publicly beneficial, serve to depress profits and offset subsidy payments without reference to partial lot military cargo carried incidental to service on the route. Such cargo *is,* therefore, not a factor in competitive rate making.

Ships chartered to the Government for full load carriage go off operating differential subsidy. Under such circumstance, dual subsidy simply cannot exist.

Those claiming that subsidy contract lines generally enjoy a high profit level due to military transport need only look at comparative rates of return on equity and long-term debt in both peace and war time operation.

Subsidy contract lines

Year:	*Percent of return*
1958	5.9
1959	3.2
1960	2.8
1961	2.8
1962	3.9
1963	3.9
1964	4.5
1965	3.3
1966	4.8
1967	2.3
1968	not yet available

The highest return was before the Vietnam war; the lowest in one of the heaviest war years.

Actually, the profit level of the subsidy contract lines ranks at the bottom of the 50 major U.S. industries.

An industry report [based on Maritime Administration data] shows the following comparisons for three representative years of return on "net worth and long-term debt" for subsidy contract and selected non-subsidy contract lines.

Subsidy contract lines

Year:	*Percent*
1964	4.6
1965	3.3
1966	5.4

Nonsubsidy contract lines

Year:	Percent
1964	6.5
1965	7.2
1966	9.5

Actually, one of the largest non-subsidy contract lines showed a return on net worth alone of 61.1% in 1965; 39.9% in 1966 and 48.9% in 1967. Such lines have high profits because they concentrate on carrying full ship loads of government cargo in older fully depreciated ships.

Nevertheless such lines operating with complete freedom from the limitations and obligations of subsidy contracts, have built no new dry cargo ships specifically for the foreign commerce.

It seems clear that the "dual subsidy" kick is without foundation. Governmental review at the highest levels has rejected it. In spite of this fact, the dissident carriers continue to beat the drum and sing out like Johnny-one-note—a false song for a false cause.

THE RESPOND PROGRAM—WHAT IT IS

The U.S.-flag Merchant Marine plays three vital roles:

1. Contributes to the economic welfare of the U.S. by (a) improving the balance of payments; (b) providing jobs and opportunities for U.S. capital; and (c) facilitating our national position in world trade.

2. Affects significantly our diplomatic-political position in world affairs.

3. Supports national security by providing sealift to the Defense Establishment and military forces.

In a peacetime situation national defense needs are small. The U.S. Merchant Marine consequently may center attention on economic and commercial activities.

In a full wartime situation, economic and diplomatic needs are integrated with those of the national security. The U.S. Merchant Marine is correspondingly integrated with the military forces as a fourth arm of defense.

In emergency situations short of full war, the several roles of the U.S. Merchant Marine are subject to conflicting demands. Vital commercial operations may be curtailed to meet military demands. Careful judgments are necessary in allocating fleet usage to conflicting needs.

The RESPOND program is an instrumentality to solve these problems through scheduled availability of sealift.

RESPOND provides five stages of quantitative sealift between all out peace and all out war.

Appropriate Government agencies may invoke the various stages in accordance with emergency or security needs.

Sealift may be provided as follows:

1. Complete ship usage through charter to Government.

2. Pre-emption of any space by the military on regular trade route operation.

3. Solicitation of military cargo by ship operators.

Ship utilization under all three methods is available to Government "on a graduated fleet percentage basis."

Availability

Stages:	Percent of capacity
I	20
II	25
III	33
IV	50
V	66
All out war	100

Private merchant fleet utilization is progressively coordinated with expanded ship assignments from MSTS and the National Defense Reserve Fleet, thus committing all segments of U.S. merchant sea power.

"Respond" is a responsible and responsive plan to help meet both the commercial and military commitments of the United States.

The fast, new ships of the subsidy contract lines constructed under the Merchant Marine Act of 1936 represent our best arm of maritime support to the nation's naval and military forces. Old ships of World War II vintage weaken rather than strengthen this logistic maritime support. By 1972, virtually all will be over 25 years old.

Efforts to saddle our future defense with such relics of a bygone age are futile and ill-conceived. We need to strengthen both our commercial and military sea power in the interest of both progress and safety.

The nation needs to build up its sea power capability by adopting a new realistic shipbuilding program. Such a program should insure participation by all segments of our U.S. merchant marine. The Labor-Management Maritime Committee supports such objectives.

THE BLACK MANIFESTO

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. ASHBROOK. Mr. Speaker, last week, meeting on the campus of Notre Dame, the Protestant Episcopal Church voted $200,000 to help in the economic development of Negro people. According to press accounts, the money would go to the National Committee of Black Churchmen with the unwritten understanding that the funds will be channeled directly to the National Black Economic Development Conference.

It will be remembered that the NBEDC met in Detroit, Mich., on April 25, 1969, and, among other things, approved the Black Manifesto which was read to the conference by James Forman, director of International Affairs of the Student Nonviolent Coordinating Committee. The conference was sponsored by the Interreligious Foundation for Community Organization of New York City, a foundation established several years ago which has as charter members a number of large religious denominations here in the United States.

As many churchmen now know, the Black Manifesto demanded of the "White Christian Churches and the Jewish Synagogues in the United States of America and all other racist institutions" a sum of $500 million as reparation for the wrongs done to the Negro people in the past. The demands were later increased to $3 billion.

In all probability, not too many churchgoers have had an opportunity to read the full text of the Black Manifesto and the prefacing remarks made by James Forman at the conference. A recent Gallup poll found that even among Negroes, only 21 percent actively favor his demand for "reparations," and speakers at the recent NAACP convention denounced his approach.

Part 19 of the hearings, "Riots, Civil and Criminal Disorders," by Senator McCLELLAN's Permanent Subcommittee on Investigations, carries both the opening remarks and the manifesto as it was delivered by James Forman in April. For those members of the various churches who might contemplate contributing to the NBEDC or IFCO, they would be well advised to read the Black Manifesto before deciding. To provide wider dissemination of this document, I insert it in the RECORD at this point:

BLACK MANIFESTO

(Presentation by James Forman, delivered and adopted by the National Black Economic Development Conference in Detroit, Michigan on April 26, 1969)

INTRODUCTION—TOTAL CONTROL AS THE ONLY SOLUTION TO THE ECONOMIC PROBLEMS OF BLACK PEOPLE

Brothers and Sisters: We have come from all over the country, burning with anger and despair not only with the miserable economic plight of our people, but fully aware that the racism on which the Western World was built dominates our lives. There can be no separation of the problems of racism from the problems of our economic, political, and cultural degradations. To any black man, this is clear.

But there are still some of our people who are clinging to the rhetoric of the Negro and we must separate ourselves from those Negroes who go around the country promoting all types of schemes for Black Capitalism.

Ironically, some of the most militant Black nationalists, as they call themselves, have been the first to jump on the bandwagon of black capitalism. They are pimps: Black Power Pimps and fraudulent leaders and the people must be educated to understand that any black man or Negro who is advocating a perpetuation of capitalism inside the United States is in fact seeking not only his ultimate destruction and death, but is contributing to the continuous exploitation of black people all around the world. For it is the power of the United States Government, this racist, imperialist government that is choking the life of all people around the world.

We are an African people. We sit back and watch the Jews in this country make Israel a powerful conservative state in the Middle East, but we are not concerned actively about the plight of our brothers in Africa. We are the most advanced technological group of black people in the world, and there are many skills that could be offered to Africa. At the same time, it must be publicly stated that many African leaders are in disarray themselves, having been duped into following the lines as laid out by the Western Imperialist governments.

Africans themselves succumbed to and are victims of the power of the United States. For instance, during the summer of 1967, as the representatives of SNCC, Howard Moore and I traveled extensively in Tanzania and Zambia. We talked to high, very high, government officials. We told them there were many black people in the United States who were willing to come and work in Africa. All these government officials who were part of the leadership in their respective governments, said they wanted us to send as many skilled people that we could contact. But this program never came into fruition and we do not know the exact reason, for I assure you that we talked and were committed to making this a successful program. It is our guess that the United States put the squeeze on these countries, for such a program directed by SNCC would have been too dangerous to the international prestige of the U.S. It is also possible that some of the wild statements by some black leaders frightened the Africans.

In Africa today, there is a great suspicion of black people in this country. This is a correct suspicion since most of the Negroes who have left the States for work in Africa usually work for the Central Intelligence Agency (CIA) or the State Department. But the respect for us as a people continues to mount

and the day will come when we can return to our homeland as brothers and sisters. But we should not think of going back to Africa today, for we are located in a strategic position. We live inside the U.S. which is the most barbaric country in the world and we have a chance to help bring this government down.

Time is short and we do not have much time and it is time we stop mincing words. Caution is fine, but no oppressed people ever gained their liberation until they were ready to fight, to use whatever means necessary, including the use of force and power of the gun to bring down the colonizer.

We have heard the rhetoric, but we have not heard the rhetoric which says that black people in this country must understand that we are the Vanguard Force. We shall liberate all the people in the U.S. and we will be instrumental in the liberation of colored people the world around. We must understand this point very clearly so that we are not trapped into diversionary and reactionary movements. Any class analysis of the U.S. shows very clearly that black people are the most oppressed group of people inside the United States. We have suffered the most from racism and exploitation, cultural degradation and lack of political power. It follows from the laws of revolution that the most oppressed will make the revolution, but we are not talking about just making the revolution. All the parties on the left who consider themselves revolutionary will say that blacks are the Vanguard, but we are saying that not only are we the Vanguard, but we must assume leadership, total control and we must exercise the humanity which is inherent in us. We are the most humane people within the U.S. We have suffered and we understand suffering. Our hearts go out to the Vietnamese for we know what it is to suffer under the domination of racist America. Our hearts, our souls and all the compassion we can mount goes out to our brothers in Africa, Santa Domingo, Latin America and Asia who are being tricked by the power structure of the U.S. which is dominating the world today. These ruthless barbaric men have systematically tried to kill all people and organizations opposed to its imperialism. We no longer can just get by with the use of the word capitalism to describe the U.S., for it is an imperial power, sending money, missionaries and the army throughout the world to protect this government and the few rich whites who control it. General Motors and all the major auto industries are operating in South Africa, yet the white dominated leadership of the United Auto Workers sees no relationship to the exploitation of black people in South Africa and the exploitation of black people in the U.S. If they understand it, they certainly do not put it into practice which is the actual test. We as black people must be concerned with the total conditions of all black people in the world.

"• • • no oppressed people have ever gained their liberation until they were ready to fight, to use whatever means necessary, including the use of force and power of the gun to bring down the colonizer. JAMES FORMAN.

But while we talk of revolution, which will be an armed confrontation and long years of sustained guerrilla warfare inside this country, we must also talk of the type of world we want to live in. We must commit ourselves to a society where the total means of production are taken from the rich people and placed into the hands of the state for the welfare of all the people. This is what we mean when we say total control. And we mean that black people who have suffered the most from exploitation and racism must move to protect their black interest by assuming leadership inside of the United States of everything that exists. The time has passed when we are second in command and the white boy stands on top. This is especially true of the Welfare Agencies in this country, but it is not enough to say that a black man is on top. He must be committed to building the new society, to taking the wealth away from the rich people such as General Motors, Ford, Chrysler, the DuPonts, the Rockefellers, the Mellons, and all the other rich white exploiters and racists who run this world.

Where do we begin? We have already started. We started the moment we were brought to this country. In fact, we started on the shores of Africa, for we have always resisted attempts to make us slaves and now we must resist the attempts to make us capitalists. It is in the financial interest of the U.S. to make us capitalists, for this will be the same line as that of integration into the main-stream of American life. Therefore, brothers and sisters, there is no need to fall into the trap that we have to get an ideology. We HAVE an ideology. Our right is against racism, capitalism and imperialism and we are dedicated to building a socialist society inside the United States where the total means of production and distribution are in the hands of the State and that must be led by black people, by revolutionary blacks who are concerned about the total humanity of this world. And, therefore, we obviously are different from some of those who seek a black nation in the United States, for there is no way for that nation to be viable, if in fact the United States remains in the hands of white racists. Then too, let us deal with some arguments that we should share power with whites. We say that there must be a revolutionary black Vanguard and that white people in this country must be willing to accept black leadership, for that is the only protection that black people have to protect ourselves from racism rising again in this country.

Racism in the U.S. is so pervasive in the mentality of whites that only an armed, well-disciplined, black-controlled government can insure the stamping out of racism in this country. And that is why we plead with black people not to be talking about a few crumbs, a few thousand dollars for this cooperative, a thousand dollars which splits black people into fighting over the dollar. That is the intention of the government. We say . . . think in terms of total control of the U.S. Prepare ourselves to seize state power. Do not hedge, for time is short and all around the world, the forces of liberation are directing their attacks against the U.S. It is a powerful country, but that power is not greater than that of black people. We work the chief industries in this country and we could cripple the economy while the brothers fought guerrilla warfare in the streets. This will take some long range planning, but whether it happens in a thousand years is of no consequence. It cannot happen unless we start. How then is all of this related to this conference?

First of all, this conference is called by a set of religious people, Christians who have been involved in the exploitation and rape of black people since the country was founded. The missionary goes hand in hand with the power of the states. We must begin seizing power wherever we are and we must say to the planners of this conference that you are no longer in charge. We the people who have assembled here thank you for getting us here, but we are going to assume power over the conference and determine from this moment on the direction in which we want it to go. We are not saying that the conference was planned badly. The staff of the conference has worked hard and have done a magnificent job in bringing all of us together and we must include them in the new leadership which must surface from this point on. The Conference is now the property of the people who are assembled here. This we proclaim as fact and not rhetoric and there are demands that we are going to make and we insist that the planners of this conference help us implement them.

We maintain we have the revolutionary right to do this. We have the same rights, if you will, as the Christians had in going into Africa and raping our Motherland and bringing us away from our continent of peace and into this hostile and alien environment where we have been living in perpetual warfare since 1619.

Our seizure of power at this conference is based on a program and our program is contained in the following Manifesto:

We the black people assembled in Detroit, Michigan for the National Black Economic Development Conference are fully aware that we have been forced to come together because racist white America has exploited our resources, our minds, our bodies, our labor. For centuries we have been forced to live as colonized people inside the United States, victimized by the most vicious, racist system in the world. We have helped to build the most industrial country in the world.

We are therefore demanding of the white Christian churches and Jewish synagogues which are part and parcel of the system of capitalism, that they begin to pay reparations to black people in this country. We are demanding $500,000,000 from the Christian white churches and the Jewish synagogues. This total comes to 15 dollars per nigger. This is a low estimate for we maintain there are probably more than 30,000,000 black people in this country. $15 a nigger is not a large sum of money and we know that the churches and synagogues have a tremendous wealth and its membership, white America, has profited and still exploits black people. We are also not unaware that the exploitation of colored peoples around the world is aided and abetted by the white Christian churches and synagogues. This demand for $500,000,000 is not an idle resolution or empty words. Fifteen dollars for every black brother and sister in the United States is only a beginning of the reparations due us as people who have been exploited and degraded, brutalized, killed and persecuted. Underneath all of this exploitation, the racism of this country has produced a psychological effect upon us that we're beginning to shake off. We are no longer afraid to demand our full rights as a people in this decadent society.

We are demanding $500,000,000 to be spent in the following way:

(1) We call for the establishment of a Southern land bank to help our brothers and sisters who have to leave their land because of racist pressure for people who want to establish cooperative farms, but who have no funds. We have seen too many farmers evicted from their homes because they have dared to defy the white racism of this country. We need money for land. We must fight for massive sums of money for this Southern Land Bank. We call for $200,000,000 to implement this program.

(2) We call for the establishment of four major publishing and printing industries in the United States to be funded with ten million dollars each. These publishing houses are to be located in Detroit, Atlanta, Los Angeles, and New York. They will help to generate capital for further cooperative investments in the black community, provide jobs and an alternative to the white-dominated and controlled printing field.

(3) We call for the establishment of four of the most advanced scientific and futuristic audio-visual network to be located in Detroit, Chicago, Cleveland and Washington, D.C. These TV networks will provide an alternative to the racist propaganda that fills the current television networks. Each of these TV networks will be funded by ten million dollars each.

(4) We call for a research skills center which will provide research on the problems

of black people. This center must be funded with no less than 30 million dollars.

(5) We call for the establishment of a training center for the teaching of skills in community organization, photography, movie making, television making and repair, radio building and repair and all other skills needed in communication. This training center shall be funded with no less than ten million dollars.

(6) We recognize the role of the National Welfare Rights Organization and we intend to work with them. We call for ten million dollars to assist in the organization of welfare recipients. We want to organize the welfare workers in this country so that they may demand more money from the government and better administration of the welfare system of this country.

(7) We call for $20,000,000 to establish a National Black Labor Strike and Defense Fund. This is necessary for the protection of black workers and their families who are fighting racist working conditions in this country.

(8) We call for the establishment of the International Black Appeal (IBA). This International Black Appeal will be funded with no less than $20,000,000. The IBA is charged with producing more capital for the establishment of cooperative businesses in the United States and in Africa, our Motherland. The International Black Appeal is one of the most important demands that we are making for we know that it can generate and raise funds throughout the United States and help our African brothers. The IBA is charged with three functions and shall be headed by James Forman:

(a) Raising money for the program of the National Black Economic Development Conference.

(b) The development of cooperatives in African countries and support of African Liberation movements.

(c) Establishment of a Black Anti-Defamation League which will protect our African image.

(9) We call for the establishment of a Black University to be funded with $130,000,000 to be located in the South. Negotiations are presently under way with a Southern University.

(10) We demand that IFCO allocate all unused funds in the planning budget to implement the demands of this conference.

In order to win our demands we are aware that we will have to have massive support, therefore:

(1) We call upon all black people throughout the United States to consider themselves as members of the National Black Economic Development Conference and to act in unity to help force the racist white Christian churches and Jewish synagogues to implement these demands.

(2) We call upon all the concerned black people across the country to contact black workers, black women, black students and the black unemployed, community groups, welfare organizations, teachers organizations, church leaders and organizations explaining how these demands are vital to the black community of the U.S. *(Revised and approved by Steering Committee) of the racist white Christian churches and Jewish synagogues. All black people should act boldly in confronting our white oppressors and demanding this modest reparation of $15 per black man.

(3) Delegates and members of the National Black Economic Development Conference are urged to call press conferences in the cities and to attempt to get as many black organizations as possible to support the demands of the conference. The quick use of the press in the local areas will heighten the tension and these demands must be attempted to be won in a short period of time, although we are prepared for protracted and long range struggle.

(4) We call for the total disruption of selected church sponsored agencies operating anywhere in the U.S. and the world. Black workers, black women, black students and the black unemployed are encouraged to seize the offices, telephones, and printing apparatus of all church sponsored agencies and to hold these in trusteeship until our demands are met.

(5) We call upon all delegates and members of the National Black Economic Development Conference to stage sit-in demonstrations at selected black and white churches. This is not to be interpreted as a continuation of the sit-in movement of the early sixties but we know that active confrontation inside white churches is possible and will strengthen the possibility of meeting our demands. Such confrontation can take the form of reading the Black Manifesto instead of a sermon or passing it out to church members. The principles of self-defense should be applied if attacked.

(6) On May 4, 1969 or a date thereafter, depending upon local conditions, we call upon black people to commence the disruption of the racist churches and synagogues throughout the United States.

(7) We call upon IFCO to serve as a central staff to coordinate the mandate of the conference and to reproduce and distribute en mass literature, leaflets, news items, press releases and other material.

(8) We call upon all delegates to find within the white community those forces which will work under the leadership of blacks to implement these demands by whatever means necessary. By taking such actions, white Americans will demonstrate concretely that they are willing to fight the white skin privilege and the white supremacy and racism which has forced us as black people to make these demands.

(9) We call upon all white Christians and Jews to practice patience, tolerance and understanding and nonviolence; as they have encouraged. advised and demanded that we as black people should do throughout our entire enforced slavery in the United States. The true test of their faith and belief in the Cross and the words of the prophets will certainly be put to a test as we seek legitimate and extremely modest reparations for our role in developing the industrial base of the Western world through our slave labor. But we are no longer slaves, we are men and women, proud of our African heritage, demanding to have our dignity.

(10) We are so proud of our African heritage and realize concretely that our struggle is not only to make revolution in the United States, but to protect our brothers and sisters in Africa and to help them rid themselves of racism, capitalism, and imperialism by whatever means necessary, including armed struggle. We are and must be willing to fight the defamation of our African image wherever it rears its ugly head. We are therefore charging the Steering Committee to create a Black Anti-Defamation League to be funded by money raised from the International Black Appeal.

(11) We fully recognize that revolution in the United States and Africa, our Motherland, is more than a one dimensional operation. It will require the total integration of the political, economic, and military components and therefore, we call upon all our brothers and sisters who have acquired training and expertise in the fields of engineering, electronics, research, community organizations, physics, biology, chemistry, mathematics, medicine, military science and warfare to assist the National Black Economic Development Conference in the implementation of its program.

(12) To implement these demands we must have a fearless leadership. We must have a leadership which is willing to battle the church establishment to implement these demands. To win our demands we will have to declare war on the white Christian churches and synagogues and this means we may have to fight the total government structure of this country. Let no one here think that these demands will be met by our mere stating them. For the sake of the churches and synagogues, we hope that they have the wisdom to understand that these demands are modest and reasonable. But if the white Christians and Jews are not willing to meet our demands through peace and good will, then we declare war and we are prepared to fight by whatever means necessary. We are, therefore, proposing the election of the following Steering Committee:

Lucious Walker, Renny Freeman, Luke Tripp, Howard Fuller, James Forman, John Watson, Dan Aldridge, John Williams, Ken Cockrel, Chuck Wooten, Fannie Lou Hamer, Julian Bond, Mark Comfort, Earl Allen, Robert Brown, Vincent Harding, Mike Hamlin, Len Holt, Peter Bernard, Michael Wright, Muhammed Kenyatta, Mel Jackson, Howard Monroe, Harold Holmes.

Brothers and sisters, we no longer are shuffling our feet and scratching our heads. We are tall, black and proud.

And we say to the white Christian churches and Jewish synagogues, to the government of this country and to all the white racist imperialists who compose it, there is only one thing left that you can do to further degrade black people and that is to kill us. But we have been dying too long for this country. We have died in every war. We are dying in Vietnam today fighting the wrong enemy.

The new black man wants to live and to live means that we must not become static or merely believe in self-defense. We must boldly go out and attack the white Western world at its power centers. The white Christian churches are another form of government in this country and are used by the government of this country to exploit the people of Latin America, Asia and Africa, but the day is soon coming to an end. Therefore, brothers and sisters, the demands we make upon the white Christian churches and the Jewish synagogues are small demands. They represent 15 dollars per black person in these United States. We can legitimately demand this from the church power structure. We must demand more from the United States Government.

But to win our demands from the church which is linked up with the United States Government, we must not forget that it will ultimately be by force and power that we will win.

We are not threatening the churches. We are saying that we know the churches came with the military might of the colonizers and have been sustained by the military might of the colonizers. Hence, if the churches in colonial territories were established by military might, we know deep within our hearts that we must be prepared to use force to get our demands. We are not saying that this is the road we want to take. It is not, but let us be very clear that we are not opposed to force and we are not opposed to violence. We were captured in Africa by violence. We were kept in bondage and political servitude and forced to work as slaves by the military machinery and the Christian church working hand in hand.

We recognize that in issuing this manifesto we must prepare for a long range educational campaign in all communities of this country, but we know that the Christian churches have contributed to our oppression in white America. We do not intend to abuse our black brothers and sisters in black churches who have uncritically accepted Christianity. We want them to understand how the racist white Christian Church with its hypocritical declarations and doctrines of brotherhood has abused our trust and faith. An attack on the religious beliefs of black people is not our major ob-

jective, even though we know that we were not Christians when we were brought to this country, but that Christianity was used to help enslave us. Our objective in issuing this Manifesto is to force the racist white Christian Church to begin the payment of reparations which are due to all black people, not only by the Church but also by private business and the U.S. government. We see this focus on the Christian Church as an effort around which all black people can unite.

Our demands are negotiable, but they cannot be minimized, they can only be increased and the Church is asked to come up with larger sums of money than we are asking. Our slogans are:

"All roads must lead to revolution.

"Unite with whomever you can unite.

"Neutralize wherever possible.

"Fight our enemies relentlessly.

"Victory to the people.

"Life and good health to mankind.

"Resistance to domination by the white Christian Churches and the Jewish Synagogues.

"Revolution black power.

"We shall win without a doubt."

THE DIPLOMA—WHAT IS IT REALLY WORTH?

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. PUCINSKI. Mr. Speaker, recently, the editorial pages of the Philadelphia Inquirer carried an excellent article by Mr. David Hapgood concerning the overemphasis we place on a college diploma in our society.

Not unlike the publish or perish syndrome under which university professors are placed whereby they are promoted by the number of articles they publish instead of the quality, or whether they have teaching ability, our students too are placed under a similar syndrome where emphasis is placed on a college degree and not whether or not they have a marketable skill.

Since education is the greatest growth industry in America, Mr. Hapgood quite properly points out the fallacies in our educational system. When more and more college graduates come into the market, the college diploma will start losing its value and there will be a demand for an even "higher" diploma.

Mr. Hapgood presents some provocative arguments concerning diplomaism, and I recommend this timely and excellent article to my colleagues.

Mr. Speaker, the article follows:

THE DIPLOMA—WHAT IS IT REALLY WORTH?

(By David Hapgood)

"Education is the greatest growth industry in America," proclaimed Dr. Grayson Kirk, the Lyndon B. Johnson of Columbia University, not long before the children of that growth drove him into exile. Neither the rebels nor Kirk connected the cause of the growth rate with the students' dissatisfaction. Both are the result of diplomaism.

Because diploma requirements are being attached to virtually every well-paid job, more and more students must attend universities that offer less and less in return for their time and tuition. Yet, ironically, no one in the campus turmoil advocates the abolition of the diploma.

In the genuinely democratic society, jobs and promotions would be awarded strictly on the basis of performance. But in the United States, the disease of judging people by paper credentials has been spreading rapidly and few occupations are still exempt.

Sports and the arts are virtually the only pursuits in which performance is the exclusive test of merit. Of all the paper credentials now on the market, the bachelor's degree is the one with the least meaning and the most power. It has become the almost indispensable passport to good jobs and to the advanced degrees that offer better ones.

IMMENSE POWER

The industry we call education is the greatest beneficiary of diplomaism. It is the most avid practitioner of diplomaism; in no field of endeavor, with the possible exception of the health industry, does reward have as little connection with performance as in education. The industry has acquired immense power as the agency that sorts out those who will be discarded.

"We operate the sluice gates of this society," a Columbia professor observed as he gazed down from his office at the now-silent battlefield before Low Library.

Education now spends $58 billion a year, second only to the military and coming up fast. (Some defense contractors like Raytheon and Litton have been buying into the school business as a hedge against the danger of peace).

Measured in time, the power of education is still more impressive. More than 60 million Americans are engaged full time in the industry; 57 million as students, three million as teachers and administrators. It may well be that the time devoted to school is growing faster than our life expectancy.

MORE YEARS?

The years in school are bound to increase, for the diploma system contains built-in forces for escalation that have nothing to do with learning. Sorting people out by diploma for their eventual employers works only as long as graduates are scarce. Once there is an ample supply of graduates, the diploma loses its value, and the system must escalate by requiring a "higher" diploma.

This escalation has already deprived the high school diploma of most of its monetary value as a job credential. Now the cry is college-for-everyone (a goal quite different from assuring equal access regardless of race or income in a non-diploma system, where one would be free to compete for jobs without the college credential). State and community colleges are sprouting like pizza stands. Graduate schools are booming and the end is not in sight. When the cornerstone of New York's University's new library was laid not long ago, President James Hester entombed in its concrete a prophecy that "advanced degrees beyond the Ph. D." are on the way.

"MUST" FOR TEACHERS

Diplomaism is supreme within the industry itself. Teaching ability is not a criterion for being hired to teach in a university or a school. At the university, the diploma you need is the Ph. D., a degree that proves little beyond your tolerance for boredom.

In the primary and secondary schools, you need a diploma from a school of education and you must have taken a list of prescribed courses. Again, whether you can teach remains an unanswered question. Anecdotes about diplomaism in the schools abound. A former Peace Corps volunteer in Latin America who is rated "extremely fluent" in Spanish cannot teach the language in Washington, D.C., because she did not take 20 credit hours in Spanish in college. Another girl, who majored in literature at Smith, taught for two years in Liberia, and had a master's degree from Columbia Teachers College, was turned down by Washington as an English teacher because she had not taken three courses in education methods.

Similarly, promotion in the industry is by credential, not ability. The university system actively discourages good teaching, while the schools are simply indifferent to proven talent.

The professor is promoted according to the number (not the quality) of his publications; if he devotes his time and energy to being a good teacher, his career chances are hurt. In most school systems, the only way a teacher can be promoted is by going back to the industry for graduate credits. With one kind of credit, he can get on a higher salary scale; with another, he can become an administrator at double or triple the salary, and escape teaching entirely.

On the rare occasions when diplomaism in education is challenged, forces in the industry mobilize like white blood cells to meet the threat.

POPULAR ATTITUDE

If the diploma system stands in the way of giving credit to human achievement, and if it sentences us to ever more years of passive boredom and frustration, then why not abolish the diploma?

The question is hardly ever raised, even among those most critical of the education industry. They believe in reforming the industry, but not in breaking its monopoly of access to the job market. Skeptics mock the diploma but do not challenge the system that produces it. The popular attitude is that school means learning and that learning is measured by the diploma. Let us then briefly examine the arguments commonly offered for the diploma system.

Our technological economy needs a growing number of people with advanced education, or: you have to get a degree to get a good job. The second half of the statement is unanswerable, but it does not prove the accuracy of the first part.

Of course many jobs do involve highly specialized skills. But that does not mean that the rigid diploma system—four years of college, followed by three or four years of professional school before you go to work—is the only or even the best way to produce people with those skills.

The common assumption is that employers have sound economic motives when they require a college diploma. That assumption needs to be revised as a result, mainly, of the landmark work of Ivar Berg of Columbia University.

EQUAL PERFORMANCE

Berg found that graduates and non-graduates doing the same jobs performed about equally well. In no case could any significant difference in productivity be attributed to education.

Two other students, Jaffe and Froomkin in "Technology and Jobs," found that "there is little, if any, relationship between changes in educational level and changes in output per worker." But Berg also discovered that the employers did not care about such comparisons. Most employers, even those who devoted considerable attention and money to personnel programs, made no effort to find out whether their diploma requirements made any sense.

Sometimes, indeed, their policies flew in the face of facts of which they were aware, as in six big manufacturing firms where "men with master's degrees who were designated by management as among the 20 percent of their scientists who were 'relatively most valuable in terms of present performance and potential' were paid an average salary which was $1000 less than paid to Ph.D.s who were reportedly less valuable."

The belief that changes in employers' tastes, not changes in the nature of the work itself, are responsible for the diploma race is supported by a study of the 1960 census by John K. Folger and Charles B.

Nam, "Education of the American Population." In surveying the decade from 1950 to 1960, a time of escalating diploma requirements, Folger and Nam concluded that only 15 percent of the increased demand for diplomas could be accounted for by changes in the nature of work. The other 85 percent, they found, was the result of added diploma requirements for the same jobs.

OPEN QUESTION

They suggest that "the growth of educational attainment in America is not so much the result of the demands of the economy as it is the belief that education is good in itself, and that educational opportunity is part of everyone's expectations." (Note the usual failure to distinguish between education as learning and education as going to school.)

Whether automation and computerization increase the demand for educated people is still an open question. What is already clear, from the spreading downwards on the skill ladder of diploma requirements, is that the nation is producing an oversupply of college graduates Economist Seymour Harris predicted that in 1949; he was hooted at then, but time is proving him right.

This new insight into how people are hired raised a question of exceptional theoretical importance, for it challenges a basic assumption about our system. Students of the capitalist order assume that business firms actions are motivated by the desire to maximize profits. Individual exceptions exist, and employers can make mistakes, but when a phenomenon is as general as the employers' preference for diploma-holders, the classical theory tells us that their preference must make economic sense.

To illustrate how this works in practice, I was told recently about an economist who is setting out to study "why" more educated employees are more productive.

When I asked why he did not begin by finding out "whether" they were in fact more productive, I was informed that this could be assumed from the fact that they were paid more. "Whether" was out of bounds as a question because it had supposedly already been answered in the marketplace.

HOLES IN ARGUMENT

At this point, believers in diplomas-for-jobs take a step backward and reply: all right, most education has no direct vocational value, but our economy needs people who have something called "general educational development." That term, coined in the United States Employment Service, means basic reading and arithmetic and a capacity for abstract reasoning. They then go on to scale "GED" to diplomas. The more time you have served in the institutions, the higher you rate on the GED scale. Then, having as usual assumed what they set out to prove, they tell us the economy benefits if we put in more years in school.

More hole than cheese is visible in that argument, when it goes beyond the commonplace that the nation has fewer jobs for people who cannot read and count. At most, a diploma for an elite university like Harvard suggests an intellectual ability needed for some pursuits—but the diploma requirement tends to rule out other ways of developing and measuring that ability. School is, in any event, an extraordinarily inefficient way to acquire what the job market supposedly wants.

James Coleman, of "The Coleman Report," estimates that high school students are mentally alert for an average of 10 minutes of the school day, and James B. Conant holds that high school—the point applies to college as well—is geared only to the 15 percent of students who are academically inclined.

And hardly anyone except Paul Goodman, that least orthodox of critics, points out that the greatest social need of this troubled country is for people with humane skills, skills which are discouraged in school. It may be that no institution contained in four walls is a good place to learn those skills.

"IT'S FOR CULTURE"

Now the believer, if he hasn't already abandoned us, will retreat to higher and foggier ground: school isn't for jobs—it's for culture. You go to school to learn civic virtue—good marks in citizenship. You soak up the values of our civilization—especially good old deferred gratification, that marvelous excuse for incompetence. If the first grader will only sit still for another 20 years, he'll discover why he's there. You also go to acquire an appetite for Western culture.

Reason can scarcely be brought to bear on such misty sentiments.

What remains is what the believer is reluctant to say: school is the place where the young are taught—programmed, in the current idiom—to behave the way adults want them to behave. The diploma proves you have conformed enough to be turned loose in adult society. The historic function of education has always been first to housebreak the young, with learning useful skills as a distant second. At most times in most places schooling has been in the hands of religious leaders, who were telling everyone how to behave. The main difference is that other cultures complete cultural indoctrination in a much shorter time than it takes in America.

The escalating demand for diplomas in the marketplace has made of education a huge, sluggish beast, as alert and competitive as a grass-eating dinosaur.

It need not pursue its food; the grass grows ever thicker in that warm swamp.

The school of education may be the worst way to prepare teachers—except, of course, for the way college teachers are produced—but it alone gives the diploma, and the enrollments keep rising.

BACKLASH FACTOR

The growing number of years of dependence imposed on youth as the price of the diploma is helping produce today's backlash.

Hardly anyone is proposing a revolution against the tyranny of the diploma. Paul Goodman, a lonely prophet, stalks the land, calling down anathema on the schoolmen, preaching less institutionalization and more freedom to learn. But about all the response Goodman gets is "puzzled looks."

The world that Goodman and a few others see in their dreams could be made reality by the abolition of most diplomas beginning with the bachelor's degree.

If degrees were deprived of their market value, then the schools that issue them would have to produce something in return for the time and money their clients now spend just for the diploma. A free market would prevail, and schools would have to compete with other ways of learning. Some people would choose to learn on their own, or by apprenticeship. Some would work for a while, then, having decided there was a branch of knowledge they need or want, would shop around for courses that could provide it.

It is this freedom to shop around that is the key. The life preserver of the incompetent teacher and the irrelevant course is the degree requirement—you have to take 120 points even if after 30 or 60 or 90 you've run out of good, well-taught courses.

FEW OPPONENTS

The diploma is a no more legitimate reason to say in school than that other great stimulant of the education boom, the student draft deferment.

Low students now sit through three years of law school hearing their professors say the law school isn't for learning the law (the law can always be "looked up") but for developing abilities to analyze and define issues, to organize facts, to present persuasive oral and written argument. Since some men possess these skills the day they enter law school, and others lack them when they leave, there is a lot of waste in the three years—and in the $11,700, according to the latest Yale figures, required to buy a law degree. There is no reason why these skills could not be appraised during a period of apprenticeship to a practicing lawyer.

The transition to such a world would of course be painful.

Denuded of the academic figleaf, we would all have to examine ourselves—and be examined by others. Personnel departments would have to learn how to examine their applicants' abilities instead of counting their diplomas. Educational institutions, especially the colleges, would truly be up against the wall. Hundreds of them would go out of business, and doubtless it would be necessary to provide insurance for unemployed professors and deans.

But the result would be a freer society, one much closer to the set of ideas we call the American Dream.

Such a revolution is not even on the horizon today. Only a small group of people are combating diplomaism. The trend is still in the opposite direction. In the absence of alternatives, the diploma is supreme. The price of not conforming is too high for any but a few wild men to pay. So the diploma mills grind on, and they grind exceeding bland.

REQUEST THE RETIREMENT AND RESIGNATION OF HON. WILLIAM B. CAMP, COMPTROLLER OF THE CURRENCY

HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. OLSEN. Mr. Speaker, with leave to extend my remarks in the RECORD, I wish to include a letter from a former Member, James H. Morrison, to me, a copy of his letter to President Richard M. Nixon, and a copy of a lawsuit that was filed here in Washington, D.C.:

WASHINGTON, D.C.,
September 10, 1969.

Congressman ARNOLD OLSEN,
Member of House Post Office and Civil Service Committee, Washington, D.C.

DEAR ARNOLD: I am enclosing a copy of a letter, together with a copy of a lawsuit that I have sent to President Richard M. Nixon, which is self-explanatory.

Having served on the Committee of the House Post Office and Civil Service with you for many years and knowing of your dedicated interest in federal employees, and what is required of them, particularly those appointed to a delicate and sensitive position, such as the Comptroller of the Currency, I would appreciate it, if you would place these enclosures in the Appendix of the Congressional Record.

Thanking you in advance and with best wishes, I am,

Sincerely,

JAMES H. MORRISON.

WASHINGTON, D.C.
September 9, 1969.

RICHARD M. NIXON,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: During the 24 years in which I served in Congress (1943 to 1967), I often defended the actions of various government employees and appointees.

Recently, however, I was approached by a very reputable and successful business man from Toledo, Ohio, who narrated to me a most amazing story thoroughly documented by written evidence clearly showing the rep-

rehensive villification and utterly false persecution of this man by the holder of a very high office within our government. The story related points to a totally unwarranted personal attack by the present Comptroller of the Currency, William B. Camp, in which he used the powers of his high office for personal sadistic satisfaction.

The present Comptroller, William B. Camp, personally called or corresponded with various officials of national banks throughout the United States, directing them to refuse loans to certain named individuals without regard to the purpose of said loans or the abundance of securities and other collateral offered to support these loans.

After having listened intently to the narrative, examined the documentation, and questioned the narrator, I have undertaken the representation of this outstanding and yet persecuted businessman, Mr. Thomas Donofrio. Mr. Donofrio has been subjected to, and is on the verge of utter business failure occasioned solely by the villification wrought on him by Mr. Camp in personally conveying to numerous bank officials Mr. Camp's unfounded opinion that Mr. Donofrio is a member of the Mafia or Cosa Nostra.

Availing myself of every resource at my disposal, I am unequivocally convinced that there is no truth whatsoever to Mr. Camp's allegations, and that acting outside of the scope of his authority as Comptroller of the Currency, while using the prestige of this high government office, he has for purely personal motives set out to ruin, not only Mr. Thomas Donofrio, but a number of other outstanding business leaders throughout the United States, such as Mr. Frank C. Anderson of New Orleans, Louisiana, a highly respected individual, whose father founded the well known cotton firm of Anderson-Clayton Company and Mr. Robert L. Moody, of Galveston, Texas, also a highly respected business man, whose father founded one of the country's largest insurance companies, namely, American National Insurance Company, as well as a large hotel chain operated in many cities throughout the United States.

During my 24 years as a member of Congress, many of those as chairman of the Sub-Committee on Civil Service of the House Post Office and Civil Service Committee, I have on numerous occasions defended the actions of a large number of employees of our government from the very top to the very bottom and did, during that time, praise the integrity of government employees generally.

In a continuing effort to support the high caliber and honesty of the vast majority of those men serving our government, I felt compelled to advise you of the heinous and despicable actions of Mr. William B. Camp, and earnestly request of you that you review the attached petition, which I have filed in the United States District Court for The District of Columbia, naming Mr. Camp as defendant in that action.

I sincerely hope that after you have reviewed the attached petition, that you will, in the interest of proper governmental personnel, request the resignation of Mr. Camp, who with 34 years of service, can retire on a substantial annuity.

Sincerely,

JAMES H. MORRISON.

UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLUMBIA—CIVIL DIVISION

Thomas F. Donofrio, 3970 West Bancroft Street, Toledo, Ohio. against William B. Camp, U.S. Treasury Building, 15th and Pennsylvania Avenues, N.W., Washington, D.C. Civil action No. 252169, filed Sept. 9, 1969.

COMPLAINT SUIT FOR DAMAGES-LIBEL-SLANDER

The claim for relief on behalf of Plaintiff Thomas F. Donofrio against the Defendant, William B. Camp is for a sum in excess of ($10,000) Ten Thousand Dollars and is within the jurisdiction of this Honorable Court, and suit in this court, is based on diversity of citizenship.

The petition of Thomas F. Donofrio, a resident of full age of majority of the County of Lucas, City of Toledo, State of Ohio, with respect represents that;

1. Defendant, William B. Camp is a person of the full age of majority and is a resident of the City of Rockville, County of Montgomery, State of Maryland, residing at 1397 Canterbury Way, Rockville, Maryland and is at present serving as Comptroller of the Currency, and prior thereto as Deputy Comptroller of the Currency having been duly and legally appointed to both offices, which offices, are under the United States Treasury Department, and are located at Fifteenth and Pennsylvania Avenues, Northwest, Washington, D.C. which agency of the United States Government was duly authorized and created by the laws of the United States of America, is justly and truly indebted to your Petitioner in the full and true sum of Two Million ($2,000,000) Dollars, together with judicial interest thereupon from date of judicial demand, for the following;

2. Petitioner has been the victim of many and certain vicious, malicious, cruel, false, illegal libels and slanders in the form of various and sundry statements which Plaintiff alleges were insitgated, made and done by Defendant, William B. Camp, the same being premeditated and made both personally from time to time in his office in his capacity as Comptroller of the Currency and also while he was First Deputy Comptroller of the Currency prior to the becoming Comptroller, during and in the years of 1969, 1968, 1967, and 1966.

3. That Plaintiff for the twelve years prior to 1966 had been successful in the business of mergers and acquisitions of various businesses, partnerships, corporations, banks, and various types of businesses in the various parts of the United States, and the stock of some of them were listed on both the New York Stock Exchange and the American Stock Exchange.

4. That Defendant at various intervals during the years 1966, 1967, 1968, and 1969, has continued to viciously slander and libel Plaintiff by telling various individuals, bank officials, public officials, officials in the Agencies of the United States Government, and others, that Plaintiff is a member of the Mafia and or Cosa Nostra, and therefore connected with the Underworld, which will be set forth in detail as to dates, places, and individuals, in the hereafter numbered paragraphs.

5. That on or about May 25, 1966, Plaintiff called on Mr. B. Mark Freid, an attorney for and Director of the National Bank of Commerce located in Fairfax County, Virginia about his client buying the controlling stock interest in the said bank, and Mr. Freid expressed interest in the offer and said that same had excellent possibilities. Mr. Freid signed an agreement in the form of a letter, confirming tentatively a sale of the said Bank stock on June 2, 1966.

A few days thereafter on or about June 19, 1966 the said B. M. Freid went to the office of the Defendant, in the Treasury Building in Washington, D.C., Fifteenth and Pennsylvania Avenues, Northwest and Defendant told Mr. B. M. Freid that Plaintiff was a member of the Mafia or Cosa Nostra and further read the riot act to him, for even talking or negotiating with Plaintiff about the sale of the said bank stock because of Plaintiff's connections with the Underworld.

At this time the Defendant told the same falsehood to Mr. James K. Evans, President of said Bank and Mr. Lawrence Hurwitz who was Chairman of the Board of the said Bank and who resides in New York City.

Plaintiff was authorized, by his client, to receive a $50,000 fee for arranging said purchase of this said Bank stock and this amount was lost when the sale was cancelled because of the untrue, libelous and slanderous statements made by Defendant about the Plaintiff as outlined above.

6. That on or about June 26, 1966 the Plaintiff personally went to the office of the Defendant who was then Deputy Comptroller General in his office in Washington, D.C. and told Defendant of libelous and slanderous and derogatory remarks that he was spreading and telling to Plaintiff's clients and others to Plaintiff's damage, financial detriment and harm. Defendant denied making any such statements and told Plaintiff that he blew-up the deal intentionally with National Bank of Commerce in Fairfax County, Virginia and further stated that if Plaintiff was looking to buy stock in banks that he should go to state banks because the Defendant further stated emphatically that he would block any national bank sale or merger that he Plaintiff had anything to do with.

7. That on October 4, 1967, Plaintiff had been so unfairly and outrageously damaged by the Defendant acting entirely out of the scope of his duties as the Comptroller of the Currency and thereby seriously interfering with and damaging Plaintiff's business, that Plaintiff wrote to Defendant the following letter dated October 4, 1967, quote:

Hon. WILLIAM B. CAMP,
Comptroller of the Currency,
Main Treasury Building,
Washington, D.C.

DEAR MR. CAMP: In the past several months a number of reliable people told me that you have made derogatory and slanderous remarks about me and my nationality and you have referred to me as a member of the Cosa Nostra. And it has recently come back to me that you have questioned my company's credit and my integrity and have so informed several banks that we do business with. Unless I receive a letter from you retracting these slanderous statements about my personal life, that will have an injurious bearing on my family, I intend to take legal action against you.

For your information, Mr. Camp, I was born in the city of Toledo, Ohio and have lived here all my life and have raised 3 boys that have attended the finest schools in Toledo. I live in the exclusive area of Ottawa Hills in the same house for the past 20 years. I have never had any police record and I don't even remember if I ever had a parking ticket. I live a clean life and I will not tolerate anyone, whether it be you or anyone else, making uncomplimentary remarks about me. I further wish to advise you that I have recently obtained a $1,000,000 life insurance policy from the Connecticut Mutual Life Insurance Co. I am sure that if I were a member of the Cosa Nostra or a racketeer that you refer to me as, Connecticut Mutual would never issue a policy of this size. I know of no one directly or indirectly that are members of the Cosa Nostra. I know nothing about the Cosa Nostra other than what I recently read in Life Magazine.

I am enclosing a copy of Dixie Roto Magazine, September 17, 1967. I would like to particularly call your attention to pages 24 through 30 dealing with Italian descent. Waiting to hear from you by return mail.

Very truly yours,

(Signed) THOMAS F. DONOFRIO.

A copy of said letter is hereto attached and made part hereof.

8. That on or about October 10, 1967, Plaintiff called personally on Defendant in his office in Washington, D.C. and requested an answer and apology of the above detailed letter.

9. That Defendant not only refused the request of the Plaintiff in the above letter to apologize, but has further refused to even

answer said letter up to and including the present date of the filing of this suit.

10. That on August 25, 1967, the Defendant, acting not within the scope of the duties of his said office, but with flagrant disregard to same, notified in writing all of the Directors of another national bank not to make any loans to the members of what Defendant designated as the Zimmerman Group, who had loans with the Underwriters Trust Co. of New York City, and among the individuals named by Defendant were Plaintiff, Thomas F. Donofrio, Wesley Alexander, Frank C. Anderson, Robert L. Moody, Louis J. Roussel, H. Earl Smalley, Malcolm Woldenberg.

Plaintiff avers that Defendant was incorrect in naming Louis J. Roussel, because Louis J. Roussel did not owe Underwriters Trust Co. anything then, or now, having never made any loans from this said bank, nor did he endorse or guarantee any loans with said bank, which shows gross negligence and a willful act by Defendant.

Plaintiff further avers that when the Underwriters Trust Co. requested its loans be paid when due, said loans were paid, and it is Plaintiff's belief that the Defendant, in a most irresponsible manner and without the scope of the duties of his Federal Office (not a state office) precipitated the calling of these loans by the New York State Banking Department, a state agency only, and in no respect under any jurisdiction of the Federal Office of Comptroller of the Currency by taking or causing to be taken at his direction, unilateral confidential information, out of context, from confidential national bank files and giving same, illegally, to the said New York State Banking Department to intentionally harm and injure Plaintiff and the other individuals listed above in this allegation.

Plaintiff avers that Defendant was incorrect in naming or calling the above individuals as a "Zimmerman Group" because same is non existent and Plaintiff believes that the "Zimmerman Group" as created by Defendant, is a figment of Defendant's imagination.

Plaintiff avers that there is a Mr. S. Mort Zimmerman, of Dallas, Texas, who is a highly respected business man and enjoys an excellent reputation in the banking and business fields and who gained this splendid reputation by paying and meeting his personal and business obligations promptly and when due.

That by such unwarranted and unlawful tactics, as set out above, Defendant has done all of these acts to willfully harm and injure and thereby discriminate against Plaintiff, Mr. S. Mort Zimmerman and the other highly respected individuals listed in this allegation, all of whom are outstanding business men and enjoy an excellent reputation in their respective communities.

11. That in notifying the said national bank referred to in the preceding allegation, the Defendant acted clearly in violation of his duties as required by law of the Comptroller of the Currency and in using Plaintiff's name in such a manner, Plaintiff was further damaged and was prevented from carrying on his business and was further damaged by having his credit further curtailed by this said illegal and unwarranted and unlawful act of Defendant.

12. The Plaintiff had several contemplated mergers with the friends of and with Mr. Lawrence Hurwitz who was an Executive Official in General Artis Corporation which mergers Plaintiff had been previously working on, with other companies which Mr. Hurwitz had been associated with and who owned the controlling stock, or substantial stock. Defendant had so poisoned the mind of Mr. Hurwitz, to the effect that Plaintiff was a member of the Underworld, and a member of the Mafia and Cosa Nostra that these several contemplated and planned mergers collapsed after Defendant's libelous onslaught against the Plaintiff as above set forth. These untrue attacks on Plaintiff by Defendant thereafter caused Mr. Hurwitz to refuse to even discuss any business with Plaintiff.

13. In July of 1966 Plaintiff negotiated the sale of the controlling interest of the common stock that was held by a group of stockholders in New York City in the Underwriters Trust Company of New York located at 50 Broadway and because of these libelous and slanderous, untrue statements made by Defendant, the Plaintiff had to get Mr. Bernard Zimmerman and a member of the firm and brokerage-house of Schieman, Hoskin and Trotta, who were members of the New York Stock Exchange in New York City to negotiate and front this transaction resulting in Plaintiff having to split his commission of $54,000 with said brokerage firm which resulted in a net loss in this transaction of $27,000 to Plaintiff. This stock was sold to Capital Bancshares Inc.

14. That in the latter part of July, 1966, Plaintiff went to Mr. Roger Elton an official and Vice President of the Franklin National Bank in New York City, along with Mr. S. Mort Zimmerman and told Mr. Roger Elton that they had just put through a deal and that Mr. S. Mort Zimmerman had just bought the Underwriters Trust Bank in New York City, by merging it with Captal Bancshares Inc. After this meeting Mr. Roger Elton talked to the Defendant over long distance telephone and told Mr. Camp that it was Mort Zimmerman and someone else who had purchased the said Underwriters Trust Bank of New York, and the Defendant said, "Oh I know who the other fellow was, his name is Donofrio and he is a member of the Cosa Nostra and represents the Mafia".

15. When Plaintiff learned about this phone conversation between Mr. Elton and Defendant, Plaintiff went to Defendant's office in Washington for the second time and confronted Defendant with the above account of his conversation with Mr. Elton.

16. That on or about October 13, 1967 Plaintiff again went to Defendant's office and Defendant in a screaming voice denied making any libelous and slanderous remarks about Plaintiff.

17. That on or about October 17, 1967, Plaintiff called on Mr. Robert Elton in New York City and gave him a copy of the letter as set forth in allegation (7) of this petition.

18. That on or about May 10, 1968, Plaintiff again went to see Defendant in Washington at his office and in the absence of Defendant he talked with his personal secretary, and gave her a copy of the letter set out in allegation (7) of this petition and again requested an answer from Defendant. His secretary replied that all she could do was to tell Defendant about their meeting. Again Defendant refused to answer Plaintiff's said letter.

19. That on or about June 10, 1967, Plaintiff met with a number of Toledo, Ohio, businessmen, headed up by a Mr. Phil Joseph, owner of a chain of supermarkets in Toledo, Ohio who requested the Plaintiff to make inquiries with a Mr. D. H. Overmeyer of New York City, who owned the controlling stock in the Progress National Bank of Toledo, Ohio, with an intent of buying a large block of the stock of the said Bank.

20. That on or about June 12, 1967, Plaintiff went to Washington, D.C. and discussed this sale of the said Bank stock with Defendant, explaining that the said Bank was on the verge of closing its doors, which would seriously damage many of the citizens of Toledo, Ohio, the depositors and stockholders, as well as the City itself.

21. That Defendant gave Plaintiff certain official forms and papers that were to be filled out by the proposed purchasers of the said Bank stock.

22. That on or about June 13, 1967, Defendant contacted Mr. William Kees, the President of the Progress National Bank and told him not to enter into any negotiations for any of this Bank's stock with Plaintiff and not to make any loans to Plaintiff regardless of what the collateral was, because of Plaintiff's membership in the Mafia and his Underworld connections. Plaintiff lost a commission of $60,000 when the above mentioned stock in the above mentioned bank was sold, but without Plaintiff having an opportunity to negotiate the said sale, which Plaintiff had originally started.

23. That on or about March 17, 1969, the Plaintiff received a letter from a Mr. David Ross, an employee of the Securities and Exchange Commission requesting information about Plaintiff's activities and stated that subpoenas were sent to his various clients and the businesses that he had had or was having business negotiations with.

24. That on or about April 4, 1969, Plaintiff met with Mr. David Ross in his office in New York City and requested to know why the above described inquiries were being made.

25. That the said Mr. David Ross asked Plaintiff if he knew any of the persons whose names he read off of a list. Plaintiff answered by saying he knew none of them personally. He then asked Plaintiff if he, Plaintiff, had any dealings or associations with certain Underworld persons who had headquarters in Las Vegas, Nevada, and Plaintiff answered in the negative, further stating that he had never even been to Las Vegas. The Plaintiff said Mr. Ross then said that he was told by the Comptroller of the Currency (the Defendant herein) that Plaintiff's name was linked with Underworld and Cosa Nostra members.

26. That Plaintiff on April 7, 1969 sent the said Mr. David Ross a copy of his letter to the Defendant, set forth in allegation (7) of this petition.

27. That on or about June 5, 1968 the Defendant using the same libelous and slanderous, and untrue statements did contact officials of the Underwriters Trust Company, 50 Broadway, New York City, not withstanding the fact that the said bank is not a national bank and therefore without and not under the jurisdiction of Defendant's office of Comptroller and by his libelous and slanderous statements to this Bank's officials, caused Plaintiff's loan of $50,000 and his wife's loan of $40,000 to be called and cancelled as a direct result of the malicious, vicious, libelous, and untrue statements made by Defendant about Plaintiff.

28. That on or about May 15, 1969, Plaintiff applied to the National American Bank of New Orleans, La., for a loan, with the assurances that he would put up ample, adequate and an abundance of stocks and bonds as security, and was told by the proper official of said Bank, that no loan of any amount could be made to Plaintiff, regardless of security, because Defendant had, as the Comptroller of the Currency, written to said Bank and instructed it not to make any loans and to liquidate existing loans as soon as possible, naming Plaintiff directly.

29. To further show how Plaintiff has been singled out by Defendant to willfully and maliciously damage him, Plaintiff avers that Defendant, as set forth in allegation (10) of this petition, also named a Mr. Malcolm Woldenberg, as being likewise unworthy to borrow any funds, but recently Defendant reversed himself, and allowed the said Malcolm Woldenberg to purchase controlling stock in the Mercantile National Bank of Miami, Florida which bank was under jurisdiction of the Defendant's Office of Comptroller of the Currency, all of which shows gross discrimination against Plaintiff by Defendant, and shows gross negligence and neglect in ascertaining facts.

30. That the Plaintiff denies that he is now or ever was or had been a member of the Underworld, Mafia or Cosa Nostra or any Underworld organization as has been stated by the premeditated, false, malicious, and libelous allegations by the Defendant in the

foregoing above numbered allegations of this petition, but on the contrary Plaintiff avers that he was given by direction of the Secretaries of the Air Force, the Army, and the Navy access to top secret and secret contracts and information of the Departments of the Army, the Navy, and the Air Force, listing him as follows on their official document: Donofrio, Thomas F. (Plaintiff herein).

Plaintiff further avers that he was treasurer and a major stockholder in the McKay-Davis Chemical Corporation which was the recipient of contracts for several million dollars with the Air Materiel Command, Dayton, Ohio, said contracts requiring the top secret security clearances of Plaintiff which top security clearance was given Plaintiff as set out above.

31. That as a direct and proximate result of the aforesaid libelous and illegal acts of Defendant the Plaintiff has suffered irreparable and permanent and serious damage in the past and present and will continue to suffer damage in the future, to his personal reputation, earning potential, public business stature and private stature, and has been subjected, along with his wife, and other members of his family to serious pain, misery, suffering and mental anguish and suffering at seeing his reputation destroyed, his business so severely damaged, and the resulting harm to himself and to his family, and has been damaged in the full and true sum of Two Million ($2,000,000) Dollars, for which amount the Defendant is liable unto Plaintiff as a result thereof.

32. That in all of these malicious acts of libel and slander made by Defendant naming and identifying petitioner personally and clearly doing so, with actual malice and with malice aforethought toward Plaintiff and with a premeditated desire to harm and injure the Plaintiff's family, his wife and three sons and with full knowledge that these accusations were false with the sole and full intention to injure and harm Plaintiff with willful intent, knowing said words were false and untrue; that Defendant conducted his office, using the same for his personal sadistic desire to injure Plaintiff personally and thereby to maliciously cause financial damage and ruin to Plaintiff's business and his reputation.

33. That all these libelous and slanderous acts done by Defendant against Plaintiff were made outside of the scope of the official duties of his office and that all of the said acts did not and do not fall within the scope of his official duties as Deputy Comptroller of Currency and as Comptroller of Currency.

Wherefore Petitioner prays that Defendant herein be served with a copy of this petition and be duly cited to appear and answer same, and that after due proceedings had that a judgment be rendered against said Defendant in favor of the Plaintiff in the sum of Two Million ($2,000,000) dollars together with legal interest from date of filing this suit until paid and for all costs of this suit and for all judicial demands and equitable relief in the premises.

BERNARD B. WOLSON,
Of Counsel.

TOLEDO, OHIO.
HERBERT CHRISTENBERRY, Jr.,
Christenberry, Bruneau and Miller.
NEW ORLEANS, LA.
F. D. V. DE LA BARRE,

JAMES H. MORRISON,
Attorney for Plaintiff.
WASHINGTON, D.C.

STATE OF OHIO,
County of Lucas:

Before me the undersigned Notary Public in and for the above mentioned County and State, personally came and appeared Thomas F. Donofrio, who being duly sworn deposed and said; that he is petitioner in the foregoing petition, that he has read same and all the allegations therein contained are true and correct to the best of his knowledge, information and belief.

THOMAS F. DONOFRIO.

Sworn to and subscribed before me this 2nd day of September, 1969.

ANGELA D. KIFER,
Notary Public.

My commission expires Dec. 9, 1971.

FREEDOM BECOMES ILLEGAL—JUDICIAL TYRANNY

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. RARICK. Mr. Speaker, can any responsible citizen contemplate a judge of the United States telling concerned parents that he was "not worried about education, just about integration" and that "there is no such thing as freedom of choice in Tangipahoa Parish.

It is small wonder that the concerned parents of schoolchildren are distraught over the denial of freedom by the Federal "takeover" of the public school systems. No dialog is possible when the parents are only interested in quality education, and the judge cares only about integration.

Justice is truly blind. A court spokesman who would convict a group of people because of the section of the country in which they live is just as guilty of judicial genocide as one who would convict individuals of one race, creed, or color because of their group identity—especially when the judgment considers individual facts and the merits of the case as irrelevant.

So that the bureaucrats and judicrats who have decided that denial of freedom of choice is progressive, I include several news accounts of the educational progress in the new Federal academies:

[From the Hammond (La.) Daily Star, Sept. 5, 1969]

STUDENT PLEA REJECTED; SCHOOL PICKETS PLANNED

INDEPENDENCE.—A biracial delegation of six Independence High School students was rebuffed by Federal Judge Alvin Rubin Thursday when they pleaded in person for return to freedom of choice for their protest-involved school.

And Thursday night a big crowd at Reimers Memorial planned to boycott area schools and threatened recall of some School Board members if they do not close the schools.

Joe Sinagra, spokesman for the student delegation, told The Daily Star this morning that Judge Rubin had said he was "not worried about education, just about integration."

Rubin said "there is no such thing as freedom of choice in Tangipahoa Parish," the students said.

The judge explained that he is beholden to rule against freedom of choice because of higher court rulings.

During their one-hour meeting with the judge in New Orleans, they described the problems that have arisen with the separated-sexes plan for Independence High. All the girls are at former Independence High. All the boys are at former Negro school, Burgher High.

Students and parents have complained that many courses are not available. One woman said that science and math-oriented classes are generally at the boys school and that English-oriented classes are generally at the girls school.

The girls' principal, A. B. Constantino, denied that this was a problem.

"We offer them what we can," he said, "and no one is getting left out."

Constantino answered "no" when asked if all courses offered last year have been offered to both boys and girls this year.

Rubin explained that class scheduling was not up to him, "that it was up to the school board."

It had been explained earlier that Rubin had nothing to do with the sex-separation plan at Independence. This was conceived by Independence members of the School Board.

Besides, Sinagra, other members of the delegation were whites Steve Mulkey, Diane Canale, Judy Rodriguez and Negroes Rossevelt Collins and Larry Jackson.

At the meeting in Reimers Memorial some 500 persons made plans to boycott the schools and to recall members of the School Board if they do not close down the schools.

Main speaker was Ned Touchstone, publisher from Shreveport, who said "people here shouldn't let the judges tell you what to do."

He called the judges actions unconstitutional and outlined a battle plan to halt integration of the schools. Included were boycotts of stores and businesses which do not go along with the plan, setting up pickets at the schools, and keeping children home. Two men from Reserve High School area told how their pickets worked.

Pickets were to be at Independence High today and at Hammond and Ponchatoula schools Monday, when classes are slated to begin.

Another meeting was held in Tickfaw Thursday night. Several persons called The Star this morning, asking whether Tickfaw schools had been closed. He said he had been ordered not to send his children to school today "because Rubin had given Independence a good break and we want to get one, too."

[From the Amite (La.) Tangi Talk, Sept. 3, 1969]

JUDGE DISMISSES SCHOOL SUIT

Judge Alvin Rubin of the U.S. District Court here has denied a motion for a new trial in the integration suit calling for a racially, non-discriminatory and total unitary school system in Tangipahoa Parish.

The suit filed by Joyce Marie Moore, et al., and had named as defendants the Tangipahoa Parish School Board.

Rubin also dismissed contempt charges against board president C. P. Schwartz, superintendent of schools Dewitt Sauls and personnel supervisor M. H. Hendry, Jr., who were charged with dismissing six non-tenure teachers whose services were "deemed unsatisfactory," according to the board.

The board was advised of Rubin's action at a meeting last week.

In other action, the board:

—Voted to amend its resolution requiring all new teachers to take the National Teacher's Examination, to include all teachers (including E.S.E.A. teachers) with less than two years of service, and score 500 on the common examination as a provision for continued employment.

—Authorized Sauls to reassign teachers in order to attain a 60-40 ratio of white to Negro teachers in each school in conformity with a recent court order.

[From the Baton Rouge (La.) Morning Advocate, Sept. 7, 1969]

GUARDS ARE POSTED AFTER FIRES ERUPT AT TWO LOUISIANA SCHOOLS

Watchmen were posted Saturday night at schools in Tangipahoa and Washington parishes after fires were discovered at Amite High and Franklinton Elementary.

The Amite structure was gutted. Some equipment and materials were saved. Damage at Franklinton was estimated between $3,000 and $5,000.

Deputy state fire marshals and arson investigators were reported investigating at both schools for clues as to the origin of the two blazes.

No one at Amite wanted to be quoted on the investigation.

However, Franklinton Fire Chief Earl Brown said he found what he believed to be some type of liquid poured on the floors just inside doors of the elementary building where the fire broke out. The building housed the lunchroom, two classrooms and a large storage area.

The blaze was discovered and reported to Franklinton firemen about 1:45 a.m. Saturday. The fire was contained some three hours later.

WITHDRAWS BOYCOTT CALL

Meanwhile, the Committee of Concerned Citizens in Washington Parish withdrew its call for a boycott of classes. The group said it felt the boycott had served its purpose and the organization was turning to legal means to combat federal desegregation guidelines.

The committee declared it did not want to hamper education opportunities for students of the parish.

Ward 3 school boardmen in Tangipahoa met Saturday morning and planned a program for keeping the some 700 now-displaced Amite High students in class.

Boardman M. L. Richardson said Amite High students in grades 9–12 will attend classes at Amite West Side High. Lunches will not be served because of the overload and classes will be dismissed at noon.

An estimate of damages at Amite High was placed at $500,000.

Supt. Dewitt Sauls observed: "Mostly, the walls are all that is left." The second floor was "completely burned out," he said.

The fire had a "good start" when units first arrived after word was received at 10:40 p.m. Coming to assistance of the Amite firemen were equipment and men from Hammond, Roseland, Independence and Ponchatoula.

A group of students arriving back at the school from a football game in Franklinton discovered the fire and alerted authorities. The students began dragging and carrying out books, trophies, desks, records and equipment.

Deputies finally had to order the students to stay out of the blazing school because of the danger of falling objects from the roof and upper floor.

Flames were extinguished at 7:30 a.m. Saturday, firemen reported. They, however, still poured water on the smoldering structure throughout most of the morning.

Three Hammond firemen and one from Amite were treated at Lallie Kemp Hospital, Independence, for smoke inhalation and exhaustion during the battle. They were all released and in good condition.

The auditorium, where officials believe the blaze originated, is located near the center of the school. The building was erected around 1927.

Tangipahoa board president C. P. Schwartz said night watchmen were ordered posted at all school buildings in the parish in light of the Amite and Franklinton fires.

Similar action was taken by the Washington Parish School Board in Franklinton.

[From the Baton Rouge (La.) Morning Advocate, Sept. 7, 1969]

EVANGELINE, E. ASCENSION SCHOOLS HIT

Schools in east Ascension Parish were ordered closed Saturday by the school board at the same time a federal judge ordered the Evangeline Parish School Board to show cause why it should not be held in contempt for closing its schools.

Ascension Supt. W. C. Brunson said his board met in special session Saturday afternoon and notified U.S. Dist. Judge E. Gordon West in Baton Rouge of its action. The federal jurist was asked to return freedom of choice to schools on the east side of the Mississippi River.

Schools in west Ascension will remain open, the board decreed.

In Lafayette, U.S. Dist. Judge Richard Putnam set Sept. 15 for Evangeline boardmen to reply to the order.

WOULD NOT COMPLY

Evangeline schools were closed by the board, rather than comply with the U.S. court's desegregation orders.

If found in civil contempt, the nine school board members named in the district court order could be fined or sent to prison.

Evangeline Parish has nine predominantly white schools and five all-Negro schools, the department said. In the 1968–69 school year, under a freedom of choice plan, 68 of the 3,300 Negro pupils in the system attended classes with 5,600 white pupils.

On Aug. 5, the district court ordered the school board to pair Negro and white schools and assign students to them on a nonracial basis, the department said. The order allowed freedom of choice to continue until the 1970–71 school year for high school and kindergarten pupils at Ville Platte schools but called for immediate desegregation of all others.

The Evangeline school board tried twice to win stays of the order but both attempts were rejected by the U.S. Supreme Court. The board now has an appeal of the Aug. 5 decision pending before the Supreme Court.

On Sept. 2, the day schools were scheduled to open, the school board approved a resolution suspending operation of classes until the Supreme Court decides on its request for appeal.

In its petition to Judge Putnam, the Justice Department said the "acts and omissions" of the school board "were such as to have the necessary effect and have had the effect of frustrating the implementation of the district court order of August 5."

Those named in the show cause order were school board president Fulton J. Bacon and board members Vories Morein, D. M. LaFleur, L. M. Ortego, Roy Aguillard, Harold Monier, Roderick Perron, H. P. Dupre and Joe Forman.

TRIED IN GOOD FAITH

The superintendent said the Ascension board advised West that implementation of the court order on the east side of the river had been attempted in good faith. But, six days, the plan was proving to be unworkable, he said.

Brunson said the board declared school patrons in east Ascension feel their freedom has been denied.

The judge was asked to make freedom of choice the plan for all schools—on both sides of the river.

He did not know how long the schools might be closed, Brunson said.

Pickets appeared at east Ascension schools all last week after educational plants were opened Sept. 2. Boycotts have pretty proven to be effective as some white students were registered, then taken out of school by parents, and other parents just did not send children to school.

Two schools reported no attendance during the week.

The Ascension board was the second to close its schools within two days.

Friday, the St. Landry Parish School bowed to pressure at a meeting attended by some 2,000 persons and ordered postponement of classes.

[From the Bogalusa (La.) Sunday News, Sept. 7, 1969]

COMMITTEE WITHDRAWS APPEAL FOR BOYCOTT OF SCHOOLS HERE

The Committee of Concerned Citizens yesterday withdrew its call for a boycott of Bogalusa schools.

In a statement released over the signature of Chairman Benjamin W. Miller, the committee said that it feels the boycott has served its purpose and that continuation of the boycott "would not be in the practical interests of our children".

The committee, which seeks a return to last year's freedom of choice school integration plan, said it would continue to fight the current U.S. District Court order in other ways.

In this connection, Vice-Chairman C. W. Jarrell said a delegation from the committee will go to Washington in a week or two, armed with the freedom of choice petitions circulated during the summer, to seek an opportunity to present the committee's case to officials high in the Justice Department, Supreme Court or White House.

The committee's statement follows:

"The Committee of Concerned Citizens was formed for the purpose of keeping our schools open under 'freedom of choice.'

"We believe that the people of Bogalusa want their children to get the best education available under the best possible conditions.

"This committee has urged the people to express their disapproval of this plan which the court has imposed upon us through a boycott of the public schools.

"However, at this time we feel that a boycott of the schools has served its purpose, and that any further boycott would not be in the practical interests of our children.

"We appreciate the efforts of those people who have supported the committee through a boycott. But any further boycotting will be the choice of the individual parent.

"We urge the people to understand that the committee has not disbanded and that other plans are being made at this time to continue our fight for freedom of choice.

"We continue to ask the people to support this Committee's efforts as we seek to remedy the situation which exists in our schools."

[From the Gonzales (La.) Weekly, Sept. 5, 1969]

SCHOOLS IN EAST ASCENSION CLOSED FOR LACK OF PUPILS

Pickets appeared at all East Ascension Schools on opening day protesting a court order which will prohibit a "Freedom of Choice" plan similar to other school districts in this and neighboring parishes.

The boycott of the schools have closed most of them. The school board in a meeting with the citizens last night had nothing new to report on the situation according to a school board member.

Mr. W. C. Brunson in a question and answer program on a Tv station stated that some phone calls of a threatening nature had been received by some employees of the school system and that four schools were closed, Galvez Dutchtown, E. A. Elementary and St. Amant for lack of pupils.

A suit filed by East Ascension Group for School Freedom in the local board was removed by the U.S. District Court from the state court to the federal court. The case will be tried in October.

Padlocks were put on Galvez and St. Amant elementary schools some time before school was to open Tuesday morning. They were still on Wednesday morning.

Mayor Pasqua called for a limited curfew Friday night after a negro youth received minor wounds in Gunplay at the Hancock station on Burnside st. after a day of tension.

About 3:00 P.M. Friday a Negro was killed when he ran his car in front of a freight train. According to Sheriff Waguespack the negro and one of the white pickets had exchanged words downtown and the negro left saying he was going to get a gun. A gun was found in the car.

Sheriff Waguespack put into effect a ban on the sale of Beer and Liquor in the Parish, which is still in effect and an 8:00 P.M. to 6:00 A.M. curfew is still in effect in Gonzales.

[From the Bogalusa (La.) Sunday News, Sept. 7, 1969]

MEETING CALLED TO KEEP PINE HIGH SCHOOL OPEN

PINE.—A meeting has been called for 7:30 tomorrow night at Pine High School, designed to show interest in keeping the school open in the face of a report that the school might be closed if there is trouble over integration of the faculty.

Pine, which has an all-white student body, has several Negro teachers for the first time this year. Pickets appeared at the school Friday, and some disturbance was reported.

The group of local residents who have called tomorrow night's meeting said they have been told that U.S. District Judge Frederick J. R. Heebe has stated that he will order the school closed and its students transported to classes elsewhere if trouble continues.

The statement issued last night by the Pine group follows:

"Through this article an appeal is being made to all patrons of Pine High School who are interested in keeping the school open for the purpose of educating their children, to attend a meeting in the school's auditorium at 7:30 Monday night.

"Word has come from Judge Heebe that unless some reports of positive action on the part of the local citizens, rather than reports of trouble and turmoil, are received by him within the next week, he will close the doors of the school permanently.

"Each patron is urged to consider that in the event this should take place, public education for his children would be available only by transporting them long distances to schools which have much more serious integration problems than those at Pine.

"The time for decision is now. The high school is open for the education of children today. But unless the local patrons immediately face the problems before them, they will have to seek education for their children elsewhere in the near future.

"Help keep your school open by displaying your sincere interest through your attendance Monday night."

[From the Bogalusa (La.) Sunday News, Sept. 7, 1969]

EVANGELINE MAY GET CONTEMPT CHARGE—"RECESS" DECLARED IN ST. LANDRY

OPELOUSAS, LA.—Demonstrators chanting "close the schools . . . close the schools" pressured the St. Landry Parish school board Friday into placing public schools in recess for "the time being."

The board asked the Justice Department to come see the situation for itself.

A crowd of about 3,500 persons first converged in the school board offices to protest desegregation procedures in the parish that is about evenly divided between white and black students, then, when there was no more room inside, forced the board into the auditorium of Opelousas High School.

The vote to postpone Tuesday's opening of the school was taken in the tension-charged atmosphere of the auditorium, but the board later met quietly in its own offices to make the decision to call on the Justice Department.

School board president Floyd Andrepont read to the crowd a telegram which had been sent by the Justice Department civil rights division.

The message advised the board it was aware citizens might try to pressure the school board into shutting down schools rather than have them open on a non-racial unitary basis this fall for the first time.

But, said the Justice Department, it had a responsibility to enforce the federal court integration orders new this fall to 37 Louisiana school districts, and it would not hesitate to use "whatever legal means" necessary to enforce the order.

Some individuals in the crowd screamed they would burn down the St. Landry schools if the board did not shut them down. One board member said the schools would be closed at least until Wednesday.

There are 23,300 students in 43 public schools in the parish.

Earlier this week a similar angry crowd of 2,000 forced the Evangeline Parish School Board to close classes involving all 9,000 of the parish's school age children.

Jerris Leonard, chief of the Justice Department Civil Rights Division, sent word Friday he was considering filing contempt of court charges against the Evangeline School Board for failing to open schools this fall.

A group called Citizens Committee for Quality Education had vocal representatives at meetings which closed both St. Landry and Evangeline schools. The group seeks a special session of the Louisiana Legislature to repeal compulsory school attendance laws so parents would not be prosecuted for keeping their children away from newly desegregated schools.

At Lafayette, a federal court has granted a continuance to seven Negro students accused of disrupting the orderly desegregation of their high school in New Iberia.

Iberia Dist. Atty. Knowles Tucker filed suit against the seven because they "refused to abide by the reasonable directives of the school principal . . . did lie in wait for other students and committed assault and battery on them."

Students returned to Westlake High School classes Friday under the eyes of armed guards. The school was closed Wednesday when discipline problems occurred due to new desegregation conditions.

More than 1,000 parents attended a meeting of the Iberia Parish School Board Friday, which then voted to re-establish freedom of choice integration in four elementary schools, a move previously okayed by a federal judge. The board also voted to ask the federal courts to permit zone freedom of choice throughout the parish.

SWAZILAND'S INDEPENDENCE DAY

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. POWELL. Mr. Speaker, the Swazi people are among the latest and smallest group of Africans to attain national independence; they reached that goal only a year ago, proclaiming their independence on September 6, 1968.

Swaziland is a small country in southeast Africa, east of the Republic of South Africa and west of Portuguese Zululand. Its territory is less than 7,000 square miles, with a population just under 400,000. The country is rich in natural resources, producing asbestos, iron, coal and even some gold. It is mostly an agricultural country, and its principal products are sugar, citrus fruit and rice, all of which are grown under irrigation.

The Swazis had enjoyed a rather favored status under the British, and until recently were under the South African administration. In 1966 the British granted them internal self-government, and their king was recognized as head of state. Finally on September 6, 1968, they opted for full sovereignty. It was recognized as such and on September 24 Swaziland was admitted into the United Nations as an independent state. On the first anniversary of their Independence Day we wish the Swazi people peace and prosperity.

THE TECHNO-POLITICS OF SPACE

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. TEAGUE of Texas. Mr. Speaker, Mr. Robert Hotz of Aviation Week and Space Technology offers a most interesting editorial in the August 25, 1969, issue of that magazine. Mr. Hotz reviews the recent achievement of the Apollo 11 lunar landing and Mariner 6 and 7 flyby of the planet Mars. He points to the international implications of these achievements by the United States and the awareness of the Soviet Union to the need for technological leadership in our world today. Significantly, Mr. Hotz recognizes that we must not shrink from the challenge of space and that the future of our Nation may well depend on the technological leadership and benefits that come from such programs as our national space effort.

The editorial follows:

THE TECHNO-POLITICS OF SPACE

(By Robert Hotz)

The last month of achievement in space technology has provided another lesson in the little understood area of techno-politics. This time it is the United States image that is shining brightly all over the third planet. The small step of an American astronaut on the moon truly projected the feeling of a giant leap to almost all mankind. In addition, the amazing duet of Mariner 6 and 7 in their close reconnaissance of Mars provided scientific pioneering of equally epic flavor.

Not since the end of World War 2 has America stood so tall around this globe. Our European correspondents report that Apollo 11 crowded everything else off the front page of foreign newspapers and almost monopolized television for weeks. President Richard M. Nixon was a first-hand observer of the international charisma generated by Apollo 11 during his recent globe-girdling tour. He noted that the fantastic welcome accorded him in Communist Romania was in large measure a tribute to the intrepid trio of Apollo 11, as evidenced by the many pictures of the astronauts which were waved at him along his route through Bucharest.

But it was not always thus. There are many who can recall those bitter days, less than a decade ago, when it was the Red Star of Moscow that lit the vastness of outer space. The sickening shock of the first three Sputniks and the tidal wave of acclaim they brought to the Soviet Union should not be forgotten. Nor should the glory that reflected from the manned space flight pioneering of Yuri Gagarin in Vostok, the first three-man

Voskhod crew and first EVA of the Voskhod 2 flight dim with the passing of time.

The origins of the impetus that pushed the Soviet Union into pioneering space exploration are still misty to the Western World. But it is clear that Nikita Sergeyevich Khrushchev was an unorthodox politician by Soviet standards. He needed a major, bold, spectacular enterprise to refurish the international image of Soviet Communism as the dynamo of the future. It had faded into a symbol of gloomy, medieval regression under Stalin's post-war regime. It seems likely that Sergei P. Korolev, the guiding genius of the Soviet space program, sold it to Khrushchev as an effective measure to achieve this image change.

History has recorded how well it worked. Almost overnight the Soviet Union blossomed as a major technical power. The brilliance of its technical image was enhanced by the contrast with the United States. There, an aging conservative leadership never did comprehend the significance of space technology, and its bumbling policies contributed to some unnecessarily humiliating technical failures.

Nikita Khrushchev felt so confident over Soviet triumphs in space technology that he laid down a direct challenge to the United States and asked the world to choose which system—Communist or American—was demonstrating the best understanding of the dynamics of the future and which indeed would provide the best launching pad for the aspirations of mankind.

Jack Kennedy, too, decided to hitch his political career to the star of space technology. Elected President by a hairline margin, buffeted by early disasters such as the Bay of Pigs and the Soviets' first manned space flight, he chose to accept Khrushchev's challenge in space. President Kennedy used the target of landing American astronauts on the moon and returning them safely before the end of the decade as one measure toward reviving the dormant spirit of American pioneering. History must record, too, how well this worked. The world knows full well that in this direct challenge of space technology the Soviet Union has been surpassed by a significant margin. It knows, too, that Americans will not shrink from any task they regard as important and that they still have the ability to achieve whatever they must.

There is a certain breed of cat in this country that constantly deplores the spirit of fierce competition between the U.S. and USSR that has resulted in such tremendous progress in the first decade of space exploration. If these philosophers had their way, the U.S. and the USSR would join in some vaguely cooperative effort aimed at some dimly perceived goals in the interests of saving money and improving international relations.

They fail completely to understand how space technology has become a basic sinew of national power, a dynamic spur to the economy and an important yardstick by which to measure competing systems—in short the techno-politics.

The Soviet Union is encountering both political and technical trouble with its space program. Khrushchev's successors lowered his national priority for space, probably as another method of disassociating themselves from his policies. The 1966 death of Sergei Korolev, still in his prime at 59, also had its effect as the scope of his towering leadership became fully outlined by the gap he left.

But the Soviet Union will not shrink from continuing the fierce competition in space technology. It cannot afford to without also abandoning its pretensions of international leadership. Undoubtedly, lights have been burning late in the Kremlin as the debate rages over what new course to set for Soviet space technology. The Soviets are not easily deterred by temporary failure, are used to coming from behind and have a keen appreciation of the international stakes in this game. They are in space to stay and will play second fiddle only by necessity, not by choice.

That is why the leaders of this country must deliberate so carefully in setting the space policy of this nation for the 1970s. Space technology has now matured to the point where no single spectacular goal will serve its purpose, as did the Apollo program in the 1960s.

The possibilities for its future development have expanded into many key areas that offer positive returns in both economics and science on the investments already made. Determining a sound national space policy for the next decade is a far more difficult and complex problem than setting the Apollo goal was in 1961.

Yet a great deal of the future growth and health of this nation depends on how wisely this course is charted in the next few months.

IN DEFENSE OF REPRESENTATIVE KOCH

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. CELLER. Mr. Speaker, I have read the exchange of remarks which took place on September 4 between Mr. WATSON, my esteemed colleague from South Carolina, and my colleague from New York, Mr. KOCH, both distinguished and honorable Members of this House, on the subject of the death of Ho Chi Minh.

Previous to their exchange, Mr. KOCH, under the 1-minute rule, had submitted a statement urging that the death of North Vietnam's leader be used to extend a hand of friendship to the people of Vietnam and as an occasion to initiate a cease-fire. It is my belief from the exchange between Messrs. WATSON and KOCH that our colleague from South Carolina misconstrued Mr. KOCH'S remarks so that Mr. WATSON'S response misstated the intention of those remarks. Mr. KOCH specifically referred to Ho Chi Minh as a tough and dedicated Communist and no fair-minded person could interpret those remarks to be a eulogy of the deceased leader of the North Vietnamese. I do not believe Mr. KOCH intended his remarks to have this meaning.

Clearly, Mr. KOCH did not praise the North Vietnamese leader; he only urged that we understand the feelings of the people in Vietnam toward Ho Chi Minh. And it should be noted that, in the past few days, our own Government has given enough credit to the cease-fire proposal so that we have agreed to honor a modified cessation of hostilities.

No doubt, there continues to be a division in this House on our continuing military role in Vietnam. And each of us surely has the right to express his position. But it would be manifestly unfair in supporting our own position to misinterpret the statements of any colleague. The gentleman from South Carolina is an honorable Member of this House, for whom I have genuine respect and regard and I am sure he has misunderstood the nature of the statement of Mr. KOCH.

I do indeed hope the episode is closed and forgotten and that both gentlemen will adhere to the esprit de corps that exists in the House.

A REAL SUCCESS STORY

HON. JAMES HARVEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. HARVEY. Mr. Speaker, we have often heard that our country has reached great heights and enjoyed success because its people were willing to sacrifice and had tremendous faith in the future. It was this individual effort, through our free enterprise system, that has contributed to the greatness of our Nation.

To me, an excellent example of this faith and sacrifice is embodied in the success story of Joan and John Bintz, whom I am proud to count as friends in Saginaw, Mich. The September 1969, edition of the Farm Journal carries an article which relates best the planning, the sacrifice, and the confidence of this young couple to turn a small 80-acre fruit farm into a business which has an investment of about $500,000 and a permanent payroll of 10 employees with over 50 working at peak periods. The article will be included at the conclusion of my remarks.

The Bintz success story is known not only throughout Michigan, but the Midwest and elsewhere. It just is not too often that you hear of a seven-tow, night-lighted ski resort on the slope of a "mountain" made by man on land as flat as a Kansas prairie.

I join with Farm Journal in saluting Mr. and Mrs. John Bintz. They have a pioneer spirit which should be copied by others. The article follows:

EIGHTY ACRES THAT GREW TO $0.5 MILLION

(By Frank A. Cooper)

Fresh out of ag school and the Armed Services, John Bintz, 26, refused to believe that the small family farm was doomed. He and his father had 80 acres, mostly in apples, on a county road near Saginaw, Mich.—miles from a main highway. Even so, people would drive out to buy their fruit.

One day in 1958 young John took a look at their business and concluded that what it needed was some hard, smart retail selling. He and his wife, Joan, began to plan.

Today, just over 10 years later, cars full of customers flow into a 40-acre parking lot which he rents across the road, and on busy weekends it takes two deputy sheriffs to handle traffic.

In the process of selling apples, John operates an old-fashioned cider mill, a commercial bakery, a general store, a gift shop, a candy factory—and finally a 7-tow, night-lighted ski resort on the slope of a "mountain" he built himself on land as flat as a Kansas prairie. To build the 160-foot high slope, he excavated a 7-acre lake, which he is developing as a recreation area. And adjoining it, he acquired land for an 18-hole golf course.

He had a permanent payroll of 10 employees with over 50 working at peak periods. His investment is about half a million dollars.

All this from a small 80-acre farm may sound impossible. But that's the genius of salesmanship. Here briefly, is what happened.

Not content with selling apples from a roadside stand, John and his father scoured the country for an old fashioned, commercial-sized cider press. They found one nearly 100 years old. John, his father, and his foreman, Harold Maier, built a big Swiss chalet-type building of rough native timber to house the press, leaving plenty of room for visitors to watch the press in operation.

John invited newspapermen to come for a look; several big-city papers ran feature stories. Crowds of curious people dropped in, they took apples and cider back home with them, and the Bintz's one-stop recreation center was on its way.

Since cider and doughnuts are natural companions, John bought a used doughnut machine and sold a glass of cider and a doughnut for 15c. The doughnuts were so good that visitors started buying them by the dozen.

John's mother wondered if people wouldn't buy homemade bread as well. Apple-conscious John decided to try it, but with cider instead of water in the dough. Nok Bintz "Cider-Bread" has become a favorite "specialty of the house."

Some of the simplest ideas proved most profitable. John took a look at the swarms of kids playing around the place and the thought hit him—caramel-candied apples. He and his foreman contrived a hollow, realistically painted "apple," 12' in diameter, made of cement plastered over chicken wire, with a sales window built into it. On some Sundays they sell as many as 5000 caramel apples at 15c each.

Even before they built the cider mill, John's mother had noticed that women usually stayed in the car while men came to the roadside stand. So she started a gift shop.

It caught on at once and quickly grew into something more. An old-fashioned "country store" complete with hard candies scooped out of barrels. A gourmet shop is stocked with exotic foods including quality jellies, jams and preserves.

One thing bothered the Bintzes. Theirs was a good-weather-only operation. The winters were dead.

So though his land was flat John Bintz decided to build a ski slope. The first year he scooped up a hill 90' high, the second year pushed it to 120', and now he has a miniature mountain of 1,500,000 cubic yards of earth 160' tall with snow machines as insurance against uncertain weather. He built a ski lodge and opened for business.

Restless John Bintz tried other things. He has 10 acres of irrigated raspberries where families can pick their own. Hundreds come, often for a full day's outing.

Two horses and a bobsled take visitors for rides around the farm in winter. There is a wagon for summers. Many bring the youngsters just for that, but of course they buy apples.

"Much of our success can be attributed directly to Joan," says John. She knows the business as well as I do." Joan handles advertising and publicity, supervises the bakery and candy factory, and is in charge of the ski lodge. It's the kind of family partnership that proves a "small" farm can be successful.

CONGRATULATIONS ON MOON LANDING FROM YUGOSLAVIA

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. PELLY. Mr. Speaker, I received a post card from Yugoslavia recently, addressed to American Congress, Washington, U.S.A., which I sent to the Library of Congress for translation.

This translation has been completed, and because of its address to all Members of Congress, and because of the text of the message from behind the Iron Curtain, I ask that it appear at this point in the RECORD:

Esteemed Ladies and Gentlemen: On the occasion of the successful conquest of the Moon by your astronauts, please accept my most heartfelt greetings, my most sincere congratulations and best wishes for further great successes of NASA in the study of our natural satellite.

Mr. HRVOJE VELEBIT,
Vela Luka, Korcula, Yugoslavia.

RED EMBASSY DIPLOMACY

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 10, 1969

Mr. RARICK. Mr. Speaker, days following the ransomed release of U.S. Ambassador Elbrick, who was kidnapped by Communists and held hostage, Mr. Arthur F. Burns, counsel to the President of the United States, and his wife and son attended the Bulgarian Embassy reception marking the 25th anniversary of communism—politely termed socialism—in Bulgaria.

Counselor Burns is reported to have wanted to show his son a typical night on the town of Washington so he selected this Red Embassy party.

Also reported in attendance was the Ambassador of Czechoslovakia and representatives of the Soviet Embassy and together they sipped red and white Bulgarian wine.

If any agreements were entered into between the President's counsel and the Communist diplomats to refrain from kidnapping any more U.S. representatives, let us hope the Red terrorists operating around the world will respect such commitments.

A news article follows:

[From the Washington Post, September 10, 1969]

BULGARIA PROVIDES NIGHT ON THE TOWN

(My Dorothy McCardle)

Counselor to the President and Mrs. Arthur F. Burns wanted to show their son a typical night on the town in Washington. So they took him to an embassy reception last night.

As it turned out, Dr. Burns was the top-ranking Administration official at the 25th anniversary reception at the Embassy of Bulgaria on Van Buren Street.

For Joseph Burns, a 31-year-old economics professor, this was his first visit here since his father became top White House adviser to President Nixon. It was also a homecoming to a town he knew well as a school boy, first at Bethesda-Chevy Chase High School and then at St. Albans from which he graduated. He now teaches at the University of California at Los Angeles (UCLA).

"Did your son take up economics under your influence?" Dr. Burns was asked.

"No, I took up economics under my son's guidance," quipped one of the top economists of the country.

The Burns family and all the other 300 guests enjoyed the menu. They sipped red and white Bulgarian wine, tried Bulgarian cheese, salad, cabbage and grape leaf rolls and then tackled American dishes—ham, turkey and steamship rounds of roast beef.

For the occasion, Bulgarian Ambassador and Mrs. Luben Guerassimov had a supply of a 35-page illustrated brochures about Bulgaria. The brochures described the anniversary as marking the "advent of socialism in Bulgaria, an event without parallel in the thirteen-centuries-long history of the Bulgarian people."

Two ambassadors who will shortly give parties at their embassies to say goodbye to Washington were there—the Ambassador of Tunisia Rachid Driss and Dr. Karel Duda, the Ambassador of Czechoslovakia. Representatives from the Soviet Embassy also were there.

TRIBUTE TO THE LATE HONORABLE BARRATT O'HARA

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. REUSS. Mr. Speaker, our former colleague, the late Barratt O'Hara, was a man of unceasing energy and sharp intelligence whose career in both public and private life was marked by uncommon versatility and achievement.

Mr. O'Hara's 18-year career in Congress began in 1948, when he was 66 years old. In itself, this is a remarkable achievement. Barratt O'Hara's long legislative tenure was the culmination of a full life of service to his country that began in 1895 when, at age 15, he ran away from home to volunteer to fight in the Spanish American War.

This adventuresome spirit characterized Barratt O'Hara. He accepted diverse challenges with untiring diligence and energy. At age 30, he was elected Lieutenant Governor of Illinois, the youngest Lieutenant Governor in that State's history. Before entering the House, Barratt O'Hara enjoyed careers as a motion picture executive, radio commentator, and lawyer.

As a legislator, he was an early advocate of civil rights legislation. The first chairman of the Subcommittee on African Affairs, he strove to promote African self-government and self-development.

This was the many faceted career of Barratt O'Hara, a lifetime of dedication to the elimination of human misery and suffering.

Mr. Speaker, those of us who served with the late Barratt O'Hara are richer for our association with this man of such varied interests and exceptional ability. Throughout his life, his deeds embodied all that is great in America.

I am honored to pay tribute to Barratt O'Hara. We shall all sorely miss our former colleague. All of us and his loved ones may be consoled in the knowledge that Barratt O'Hara's memory shall never grow old, but shall forever represent the breadth of vision and depth of human concern that marked our late colleague's entire life.

TRIBUTE TO CHARLES S. JOELSON

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. DELANEY. Mr. Speaker, I am pleased to join my colleagues in paying tribute to the extremely able gentleman from New Jersey, the Honorable CHARLES S. JOELSON, who is retiring from this body to accept appointment to the Superior Court of his State.

For the 9 years it has been my privilege to serve with "CHUCK" in the House, I have been deeply impressed with his insight into highly complex legislative proposals, as well as his lucidity and eloquence in debate. He has demonstrated to an exceptional degree the qualities of prudence and sound judgment, which will be of inestimable value to the citizens of New Jersey as he carries on his new responsibilities in the highest tribunal of that great State. He has been a diligent and dedicated legislator who has served his constituents, his State, and his Nation with uncommon ability and great distinction.

His genial and warm personality, spiced with gentle humor, will be greatly missed in this Chamber. We wish him well.
